Reverting to Belgium, one of the most interesting skirmishes of the past week appears to have been that which took place at Dinant, about fifteen miles due south of Namur, on August 16. It seems to have been a rather more determined attack than most of the outpost affairs, for an artillery duel of some hours preceded the advance of the German infantry. Concerning the strength of the latter, however, we have no information. The attack was repulsed by the forces of the Allies after sharp fighting, and with losses that are admitted to have been severe. The affair has special interest because it may possibly afford an indication of an attempt on the part of the German forces to repeat the tactics used in the war of 1870-71, an attempt to enclose Namur in the same way that Metz was cut off in the previous war. This purpose might well be effected by a southward swing from Charleroi simultaneously with a westward movement from Dinant.

Dispatches concerning the conflict between Austria and Servia have been vague and contradictory. On Saturday a Reuter telegram from Nish, Servia, stated that after incessant bombardment along the entire frontier line of the rivers Save and Danube, the Austrians had forced an entry into Sabac, on the Save, thirty-seven miles west of Belgrade, and into Losnitza, on the river Drina. Subsequent reports from Vienna, by way of Amsterdam, confirmed this dispatch, but from Servian sources on August 16 it was stated that the Austrian forces which had succeeded in crossing the Save had been driven back with heavy loss. On Tuesday a dispatch (dated August 17) from the Servian Premier to the Legation in London was published, stating that the Austrians were completely routed in the mountains near Sabac, with a loss of 15,000 men and fourteen guns.

There are no developments of great importance to record in the naval situation. The movements of the British and German fleets in the North Sea are guarded with absolute secrecy, and presumably the German fleet is still bottled up in the neighborhood of Heligoland. That its offensive power is paralyzed is evident from the fact that commerce has been resumed between England and the Scandinavian countries. On August 12, Rear-Admiral Sir Christopher Cradock, of the British cruiser Suffolk, off the port of New York, announced that the Atlantic Ocean was clear for shipping as far south as Trinidad. In the Adriatic the Austrian fleet is reported to have taken refuge from the combined French and British fleets at Pola. An official statement issued by the British Admiralty declares that the French fleet has made a sweep of the Adriatic Sea as far as Cattaro, and that a small Austrian cruiser has been sunk.

A noteworthy point, which it would be a mistake to emphasize too strongly, as we have accounts from only one side, about the engagements that have taken place in Belgium is the extreme value that aeroplanes appear to have been to the Allies. In this respect, according to the accounts that have come to hand, the French and Belgian armies seem to have been far better served than the German. Aeroplanes played an important part in the fighting around Liège, and time and time again in subsequent encounters of the advance guards of the respective armies we read of their use by the Allies in locating the enemy with remarkable accuracy. The German air scouts appear to have been less fortunate. The French and Belgian scouts seem to have been generally successful in making their reconnoissances and getting back to their own lines unharmed, whereas there have been frequent reports of German aeroplanists being shot or captured. On the face of it it looks as if the special guns used by the French army against aircraft were superior to the corresponding German weapons.

Foreign Correspondence

ENGLAND AT WAR—PICTURES OF THE SITUATION FROM TWO CORRESPONDENTS—A SOBER SPIRIT.

LONDON, August 7.

By the time these lines reach New York, you will know all about the happenings of the next week or ten days, which we now are endeavoring, so futilely, to forecast. All that I can attempt is to give some account of the effect in London and its neighborhood of the declaration of war and of the attitude and temper of the people.

The extension of the bank holiday for three days was a sagacious and effective move, which met with general approval, notwithstanding the infinite amount of petty, and sometimes ludicrous, inconveniences which it caused. Thousands of well-to-do persons found themselves temporarily penniless under embarrassing circumstances, without being able to replenish their purses. But the compulsory suspension of business—much of which had come already to a standstill—furnished a breathing space for reflection and gave pause to incipient panic. Now the nation at large has had time to pull itself together in a measure, and to give leisurely attention to the action of the Government, which has been prompt and reassuring.

There was no general excitement over Austria's provocative treatment of Servia. The significance of it was not apparent to the multitude. Germany's proclamation of war against Russia brought about an awakening and references to Armageddon. But even then the full seriousness of the crisis was not grasped by the public, until the neutrality of Belgium was threatened and it was realized that the Ministry was almost a unit in making this a *casus belli*. The climax came with Sir Edward Grey's announcement of Great Britain's ultimatum to Germany. At midnight on Tuesday every one knew that England would be in the fight before morning, and the whole atmosphere was electric with suspense.

You will have heard, doubtless, that the crisis was greeted with demonstrations of vociferous patriotism. All the newspapers here—especially those of the halfpenny variety—devoted much space to these ebullitions of popular enthusiasm. It is true that there were large crowds in front of Buckingham Palace, before the Government buildings, in Parliament Street, in Trafalgar Square, and in some other principal centres of traffic. The National Anthem was sung in thunderous choruses, and the King and Queen were cheered again and again when they appeared on the balcony of their private rooms in the palace.

What was really impressive and encouraging to the thoughtful observer—it was the subject of wide comment—was the sober silence which fell upon the entire community the next day. Every intelligent man and woman, the whole social fabric, appeared to labor beneath a load of solemn realization of heavy national responsibility. The holiday makers on the highways vanished as if by magic. In the shops, in the houses, on the sidewalks, there was but one topic of conversation. All faces were grave and all tones hushed. But nowhere was there any sign of discontent, mistrust, or irresolution, least of all of political criticism or of boastfulness.

The approval of the action of the Government was unanimous even in circles where for months it had been the object of the bitterest denunciation. There can be no question that the Cabinet have the solid bulk of the nation behind them. Especially are they commended on all sides for having forestalled Germany in declaring hostilities without waiting to be forced into them and for their foresight in effecting a naval mobilization—while as yet there was no evident need of it—under the guise of summer manœuvres and a review in honor of the King. There is a rumor that this was done on the suggestion of Lord Kitchener.

Now that hostilities have actually begun, the pervasive feeling is one of hopeful confidence, not of arrogant assurance. Much is expected of the fleet, of course, and there is great faith in the strategical ability, resourcefulness, and nerve of Jellicoe, but there is no blinking of the fact that there are terrible possibilities in the German navy. The argument most in favor is that the greater force ought in logic to prevail. But it is to be noted that the mobilization of the land forces here is on a scale that has never been dreamed of before. It is plain that an attempted invasion is not regarded as a mere nightmare. Very little is said about it in the newspapers, but the preparations for land defence in ease of marine disaster are extraordinary. Large numbers of police have been drafted from the big cities to take the place of soldiers engaged in semi-civil duties; the utmost energy is displayed in gathering reeruits for the regular army, the Territorials, and the various militia organizations.

Time-expired reservists have been recalled to the colors, every postman who has ever done military service has been recalled to the ranks, and the vacant places filled with telegraph boys or qualified boy scouts, and on all sides there are printed appeals to able-bodied men to take up arms. Minor harbors and estuaries are being hastily fortified, seaside villas in the line of gun fire from distant forts have been demolished by the dozen, big guns and wire entanglements have been mounted at all sorts of hitherto unguarded points of the coast, and all the trunk railways are busy day and night in transporting men, stores, and ammunition to the remotest parts of the island.

Commissions have been offered to undergraduates in the universities and the older boys in such military schools as Haileybury; retired officers have been invited to rejoin their old regiments, and naturally are jumping at the opportunity. All age limit for military service has been virtually abandoned, and it is plain that the authorities are straining every nerve to provide an efficient substitute for the expeditionary force which is to go to the relief of Belgium.

No longer is there any apparent disposition to put unbounded confidence in the inviolability of the "silver streak." If it is not altogether certain that there is full justification for Sir Edward Grey's assertion that "we are ready," there is abundant evidence in the rapidity and smoothness with which the arrangements for mobilization are working that the Government has not been caught altogether napping. Meanwhile, there is Kitchener to supervise and drive the machinery, while 'Bobs" is in all councils. One of the happiest features in the whole dismal outlook is the instant, if temporary, reunion of Ireland in a burst of patriotic enthusiasm. It is strange to hear the names of Redmond and Carson linked in terms of glowing admiration.

Already the British public is learning, by unwonted experience, its first practical lessons in the anxieties and inconveniences consequent upon a state of war at the doors, and threatened invasion. It is a melancholy fact that the educated classes, or the classes which are commonly credited with a modicum of education, have been setting a very bad example to those less fortunate than themselves. It might have been supposed that they would perceive that the surest way of promoting a panic is to exhibit signs of it. Of course, they have long been reading doleful propheeies that Great Britain, if engaged in a general war, would inevitably soon feel the pinch of famine; but they ought also to have known—the facts in the case have been long and frequently discussed in the daily press—that at the present juncture she happens to be uncommonly well provisioned.

It has been officially declared that no unusual shortage of food is likely to oceur within four to six months, that the harvest is a good one, and that there is no good reason for fearing that the channels of supply from the West will be permanently or seriously interfered with. In any case the very worst and most selfish policy that could be adopted by intelligent, moneyed, and patriotic citizens would be to create a run upon the provision market and to monopolize the stores in hand. And yet in the first few days of perturbation this was just the course of action which they adopted. On all sides the substantial householders—there were honorable exceptions—proceeded to accumulate all the food they could lay their hands on. I know of several instances in my own suburban neighborhood of rich folk ordering one hundred pounds' worth of meats, flour, and groceries. Naturally, in a few hours, the retailers were utterly unable to meet the demands made upon them. Of eoursc, they, one and all, raised their prices, and the laboring folk had to pay more or go without. Fortunately, the evil was so acute and flagrant that to a certain extent it remedied itself. The big middlemen, unable to fill their orders, closed their stores, and the smaller men refused to sell except for ready cash. Then the newspaprs raised an outcry, and the Government promptly took the matter in hand.

Much mischief has been done, but the situation is easier, and there are signs that the offenders are beginning to recover their senses. Greedy retailers, who reaped rich harvests for a day or two, arc already discovering that they have lost many of their best customers. But in two or three days the cost of living jumped up about 20 per ecnt., and it will be some time before it will fall to its previous level. The action of the Cabinet in promising to insure cargoes of grain and meat is received with universal approbation.

Doubtless the cable has informed you of the exciting times in the Atlantic steamship offices. I need not, therefore, dilate upon them. The withdrawal of the German liners has brought an influx of stranded Americans into the steamship quarter adjoining Trafalgar Square. Many tourists, short of funds and with useless tickets, are in perilous condition. There is not a vacant berth to be had for many weeks on any boat carrying the American flag and all the English Atlantic boats are equally full. Then there is the probability, amounting almost to a certainty, that many of the fastest British steam-

ers will be commandeered by the Government for the expeditionary force. What will be done with their passengers no one can even guess as yet. Moreover, there is the possible chance of a big British defeat in the North Sea and a consequent irruption of German cruisers into the Atlantic. It is not necessary to anticipate trouble, but nevertheless it is not absolutely certain that the faith of the English in their ability to guard the Atlantic trade routes will be justified by the event. Just now the American flag is a very precious possession on the high seas.

J. Ranken Towse.

London, August 5.

The middle of last week found me holidaying at a quiet village on the coast of Devonshire. I had often seen, passing the cottage where I was staying, two or three trim young fellows in coast-guard uniform, cycling two or three times a day between their homes in the village and the look-out station. On Friday morning the local gossips were all agog with the news that these men had been called off to Devonport to join the naval reserve. Similar demands had been made on all the other coast-guard staffs in the neighborhood, and the look-out stations themselves had been left in the care of the women.

Travelling back to London later in the day, I saw and heard few other indications that anything unusual was afoot. I could get nothing to eat on the journey, and when I reached Paddington there was a long delay through the difficulty of getting a porter. But that was another story. It happened to be the second day of a two days' strike of the Great Western restaurant-car staff. Many of the other railway servants had struck sympathetically—not, like the dining-car men, by going out, but by staying in. Their scheme was a curious one, and had an element of the humorous in it, if one's personal inconveniences were not annoying enough to blunt one's appreciation of a joke. Their policy was to give the railway company trouble by working strictly according to the official rules.

There is a rule, for instance, forbidding "flying shunts." This means that carriages must not be coupled up while they are in motion, but the men must wait until each succeeding car has come to an absolute standstill. But the "flying shunt," dangerous as it is, takes place many times daily, or the work never would be done in the required time. On Friday, however, every car was brought to a dead stop before the next was coupled, with the result that the process took twice as long as usual.

Again, when a railway servant supplies a train with water or attends to the lamps, he is accustomed to jump from the top of one car to the next. The rules prescribe that his duty is to descend the steps, walk to the next car, and then climb up again. These instructions were scrupulously followed on Friday. In consequence of all this unprecedented obedience to orders, big excursion trains for the west of England started from the London terminal as much as an hour and a half late.

A palpable sign of the times this morning is the decrease in the size of several of the London daily papers. Journals which usually issue twelve or sixteen pages are today content with eight. No readers want anything but war news, and of even war rumors there is yet only a limited supply. A large part of the decrease is clearly attributable to the great and sudden falling off in advertisements. Clothing manufacturers are calling attention to their "Active Service Kits," but other business houses are cautious about spending money in appeals to a public that is being urged on all hands to economize. Perhaps, too, the need for economy is impressing newspaper proprietors themselves with the desirability of cutting down their costs of production.

Many English visitors to the Channel Islands have found amusement at the extreme frugality of the inhabitants, who often make use of the front gardens of their villas for the growing of potatoes and other marketable produce. It is possible, however, that this example may now be followed at home. The secretary of the Royal Horticultural Society writes to the papers this morning to suggest that, in view of future needs, the smallest plots of ground should be planted with such food plants as it is possible to sow at this season. Turnips, beets, carrots, and onions are especially recommended. Farmers, too, are advised not to leave vacant any land that might profitably be used in this manner.

There is a saying among Englishmen that if you were to stand beneath the big clock at Charing Cross railway station for five years you would meet all your friends. Any American with a wide circle of acquaintances among his compatriots might have met a good many of them by taking up his position there for only the last three days.

One of the notice-boards at this station has been giving eloquent testimony of the condition in which many of these refugees made their flight across the Channel. It is the board which publishes bulletins, usually quite insignificant, about the incoming boat trains from Dover and Folkestone—how many passengers they are carrying, whether they are running late, and so on. Yesterday evening the notice relating to the boat from Ostend had these items: "Passengers, 686; luggage, number of pieces, 206." More than three passengers to every single piece of baggage! When one thinks of the normal equipment for a Continental tour, it is clear that many of these unlucky travellers must have realized more vividly than ever before why the Romans called baggage "impedimenta." As soon as the train came in, the impression made by the notice-board was deepened as one observed how quickly the arrival platform cleared—such a large proportion needing no assistance from porters, but pouring through the barriers at once with nothing but light bags in their hands.

It would seem incredible that as late as yesterday there could be any nook or corner of Great Britain into which a knowledge of the crisis had not yet penetrated. Last night, however, a friend of mine discovered such a refuge from the turmoil. He thought of a widow lady of his acquaintance, a woman of education living with her daughter in a suburban home not eight miles from Hyde Park Corner.

Remembering that she was of a somewhat nervous temperament and had no men folk to talk things over with, he thought it would be a kindness to call and reassure her against any tendency to panic about food supplies, and so on. To his surprise he found her perfectly calm. His surprise became amazement when he learned that she was unaware that anything was happening out of the common! She had heard somehow that there was trouble somewhere in Europe between two of the Powers, but did not know which.

H. W. H.

A Duke Among the Wits

PART TWO:—THE PROFESSION OF WIT, ITS ORIGINS AND KINDS; WHARTON AMONG THE WITS OF TWICKENHAM.

IV.

We have followed the crooked course of Philip Duke of Wharton in politics and religion; but it is not for these things we remember him now. The wandering court of James knew too many of his kind to allow him any distinction in these things. He is remembered rather as a lord among the wits, and for his few years at Twickenham. And what, we ask, had he to do in that galley?

Now, the wits were not a new folk. Their progenitors had come up to London from the universities in the days of Queen Elizabeth, attracted thither by the playhouses, and bringing with them a plentiful baggage of genius with a small portion of learning. How they lived, and roystered, and peopled English literature with their visionary creations, we know from the stories of Marlowe and Greene and their fellows. The later drama found its material in their descendants, the merry rogues who used their "understanding, travel, reading, wit," as money in the purse for buying the joys of the town. "Means?" exclaims one of Fletcher's delightful rascals; "why, all good men's my means. My wit's my plough, the town's my stock, tavern's my standing-house, and all the world knows there's no want. All gentlemen that love society, love me; all purses that wit and pleasure opens, are my tenants; every man's clothes fit me." And the genius of the dramatist was like the life of his hero; it was not "wit without money," but it was without principle and without rule save the law of abundant, irresistible vitality:

> As I do love the man that lives by his wits,
> He comes so near my nature.

The tradition was carried on by the writers of the Restoration, but with a difference. The new wits fall into two pretty well defined classes, united, however, by the irresponsibility and immorality which they inherit in common from their ancestors. In the one class are the initiates of the court, who employ their genius, not, as Fletcher did, in the service of a rollicking full-blooded life and indiscriminate emotions, but for the creation of a world of artificial exclusions. Here every jest is an intended rapier-thrust at the conventions of respectable society, laughter is a sneer, and pity a miracle. These men refined the license of Fletcher into a philosophy of licentiousness. In the other class were those who wallowed in what Swift called the "thick sediment of slime and mud" at the bottom of Helicon; the scurrilous creatures of whom it was said by the "facetious" Tom Brown, their proper spokesman: "Our wit, generally speaking, is debauched." These men did not stab virtue, but merely bespattered it. Reading Tom Brown and his like, one gets the notion that

wit is a convention in which scandal, drunkenness, and lechery take the place of faith, hope, and charity—but the greatest of these is scandal. He and his fellows introduced one element at least which was to be almost constant with the followers of the new school—"the faithful attendant of wit, ill-nature," as Walpole named it, echoing the sentiment of Butler, that "there is nothing that provokes and sharpens wit like malice."

In the case of a man like Brown this ill-nature was a mere wantonness; he belonged to the diseased beings who were afterwards described by a writer in the journal *Grub Street:* "The morsure of these worms, which we call wit-worms, are much of the nature of the biting of mad dogs: which makes the afflicted follow their noses directly, and snap at everybody they meet." There was something else needed to give this malice the true ring of the wit of Twickenham, something which had already been brought to the devil's brew by contemporaries of Fletcher who had not genius enough to preserve their names in literature. In the preface to the collected edition of the "Memoirs of the Society of Grub-Street" it is said that the original members of that fraternity were a set of writers "who, for the cheapness and obscurity of lodgings, resided in Grub Street, in the seditious times of King Charles I, and from their garrets and cellars dispersed those false reports and reasonings which were very instrumental in stirring up the people at last to a rebellion." So important was this ingredient of polities that these "Grubeans," despite the oblivion that has overtaken most of them, have some claim to be regarded as the true begetters of wit, as the word came to be used with a very specific meaning. But they did not long maintain their monopoly. It was Butler who turned the tables with a vengeance against the rebels of Church and State, transmuting politics into literature. But the author of "Hudibras," if not a rebel, was ribald, and there were some honest folk who sighed to see all the wit of the world running atilt from every angle against the decencies of life. So, in one of his sermons, "Against Foolish Talking and Jesting"—it is really a delightful literary essay—we find Barrow calling on the men of virtue to take possession of the "lepid way":

> It is wit that wageth the war against reason, against virtue, against religion; wit alone it is that perverteth so many, and so greatly corrupteth the world; it may therefore be needful, in our warfare for those dearest concerns, to sort the manner of our fighting with that of our adversaries, and with the same kind of arms to protect goodness whereby they do assail it. If wit may happily serve under the banner of truth and virtue, we may impress it for that service: and good it were to rescue so worthy a faculty from so vile abuse.

V.

The lesson was heeded. Presently came my Lord Shaftesbury, who would purge wit of its grosser humors and elevate it into an elegant philosophy. Henceforth laughter was to be your only syllogism, and the ability to endure ridicule was to be the supreme test of truth and virtue. So far Barrow might have followed the fulfilment of his prayer, with dubitation perhaps, yet without indignation. But the criterion was to be applied also to enthusiasms and to any departure from the calm self-sufficiency of gentility with results which would have disgusted Barrow as much as they did actually alarm the later opponents of a genteel Deism, from John Leland, and Thomas Brown (not the scurrilous "Tom"), and Dr. Warburton, down to Cardinal Newman. It may be worth while to stop long enough to read a few sentences from Leland's criticism, written when the war of the wits was pretty well over, and time had come to take account of the dead and dying. His words have considerable historical interest, and are, indeed, not without some meaning for those of us to-day who like to make "humor" the test of all virtues in life and literature:

> He not only expressly calls ridicule a test, and a criterion of truth, but declares for applying it to everything, and in all cases. . . . And though he doth not approve the seeking to raise a laugh for everything, yet he thinks it right to seek in everything what justly may be laughed at. He declares, that "he hardly cares so much as to think on the subject of religion, much less to write on it, without endeavoring to put himself in as good humor as possible," *i. e.*, treating it, as he himself expresses it, in a way of wit and raillery, pleasantry and mirth. . . .
>
> The best and wisest men in all ages have always recommended a calm attention and sobriety of mind, a cool and impartial examination and inquiry, as the properest disposition for finding out truth and judging concerning it. But according to his Lordship's representation of the case, those that apply themselves to the searching out truth, or judging what is really true, serious, and excellent, must endeavor to put themselves in a merry humor, to raise up a gayety of spirit, and seek whether in the object they are examining they cannot find out something that may be justly laughed at. And it is great odds, that a man who is thus disposed will find out something fit, as he imagines, to excite his mirth, in the most serious and important subject in the world. Such a temper is so far from being an help to a fair and unprejudiced inquiry, that it is one of the greatest hindrances to it. A strong turn to ridicule hath a tendency to disqualify a man for cool and sedate reflection, and to render him impatient of the pains that is necessary to a rational and deliberate search.

Such were the elements which entered into the dizzy game of wit when stout Queen Anne gave her name to English literature. It was a field of battle—a kind of general tournament, like the "gentle and joyous passage of arms of Ashby," described by Scott in "Ivanhoe," wherein the combatants were divided into two main parties, but in such a way as to leave each knight pretty free to follow his own personal feud. Now, politics seemed to make the grand division in the Battle of the Books, when Whig and Tory joined in a mighty mêlée; but at other times politics was lost to sight in the natural antipathy of genius and dulness, or even of virtue and vice. And at the end reputations lay dead and dying about the trenches at Twickenham like the bodies on any well-fought *champ de bataille.* What carried such a man as Wharton, a peer of the realm, to whom a great career in Parliament was open, into this medley? Well, mere idleness and force of imitation, in large part. "If it were not for a rainy day," says Swift, "a drunken vigil, a fit of the spleen, a course of physic, a sleepy Sunday, an ill run at dice, a long tailor's bill, a beggar's purse, a factious head, a hot sun, costive diet, want of books, and a just contempt of learning—but for these events, I say, and some others too long to recite (especially a prudent neglect of taking brimstone inwardly), I doubt, the number of authors and of writers would dwindle away to a degree most woful to behold." Most of these causes were magnificently operative with the Duke of Wharton, and he had also as mad a lust of praise as any of "great Cibber's brazen brainless brothers."

VI.

He had commenced author, to use the contemporary idiom, at a tender age, and had continued on occasion to indite lampoons and ballads which, for the most part, are rather above the average scribbling of the day. One of his ballads, which Mr. Melville signalizes as his "most noteworthy literary composition," is in fact a capital piece of fun, as may be guessed from the opening and closing stanzas:

> God prosper long from being broke
> The Luck of Eden-Hall.*
> A doleful drinking-bout I sing,
> There lately did befall.
>
> To chase the spleen with cup and can
> Duke Philip took his way,
> Babes yet unborn shall never see
> The like of such a day.
>
> The stout and ever-thirsty Duke
> A vow to God did make
> His pleasure within Cumberland
> Three live-long nights to take.
>
> . . . . . .
>
> Thus did this dire contention end;
> And each man of the slain
> Were quickly carried off to bed,
> Their senses to regain.
>
> God bless the King, the Duchess fat,
> And keep the land in peace;
> And grant that drunkenness henceforth
> 'Mong noblemen may cease.
>
> And likewise bless our royal prince,
> The nation's other hope;
> And give us grace for to defy
> The Devil and the Pope.

Wharton had also played his part as patron, notably in the case of Young, who repaid the generosity by cancelling a fulsome dedication when his benefactor was an exile and by preaching the morals of the

*Referring to a famous cup at the home of his cousin, Sir Christopher Musgrave, the breaking of which was to foretell the fall of the house.

"Night Thoughts" at him. Such was the Duke's "constant bounty which no friend has made." It is something in the annals of literature to have furnished the model for Young's Lorenzo—not to mention Richardson's Lovelace, if we may believe Anna Seward.

It was something also to have associated his name with the select band who were fighting the battle against dulness from the headquarters of Pope and Mary Wortley Montagu at Twickenham. In 1722 Wharton leased "The Grove," which lay about a quarter of a mile from Pope's villa, and here he made his home until he left England never to return. In these years he entered the arena definitely as a political pamphleteer by managing and in part writing the *True Briton*, a semi-weekly journal, which purposed ostensibly "to animate every honest mind to lay aside those Party Resentments, which, in time, must end in the Ruin of this Island," but which seemed to the Government so far from impartiality that they suppressed it after the seventy-fourth issue. Now, too, he appears to have been most furiously engaged in the social contest. And with what desperate earnestness the game was played we may gather from a chance remark of Horace Walpole's on Lady Stafford, who, as daughter of the Comte de Grammont and "La Belle Hamilton," was by birth an heiress of the world's wit. "She used to live at Twickenham when Mary Wortley and the Duke of Wharton lived there too," he writes; "she had more wit than both of them. What would I give to have had Strawberry Hill twenty years ago? —I think anything but twenty years. Lady Stafford used to say to her sister, 'Well, child, I have come without my wit to-day'; that is, she had not taken her opium, which she was forced to do if she had any appointment to be in particular spirits."

Naturally, the Duke's activities in this noble sport were not pent up in a country village, and, in February, 1724, Lady Mary, sending the news of London to her sister, tells of a band of "twenty very pretty fellows" who called themselves the "Schemers," and met regularly three times a week to consult with Wharton as a "committee of gallantry." "'Tis true," she adds, "they have the envy and curses of the old and ugly of both sexes, and a general persecution from all old women; but this is no more than all reformations must expect in their beginning." But Twickenham was the centre of the hottest fighting, and Lady Mary had good reason for knowing the Duke's prowess as a "Schemer." It was even hinted that hers was the attraction that lured him thither, and Lady Mary herself declared that Pope's jealousy of Wharton was the cause of her quarrel with the wicked wasp. Whether that charge is true or not—probably literary jealousy had more to do with the quarrel than amatory—the marriage of gallantry and wit ran no smooth course with the Lady and the Peer. Indeed, the lady had good reason for resentment. When she wrote a set of melting verses on the death of a young bride, the Duke parodied them with a bit of insulting scurrility which shows only too plainly the savage grossness underlying the polish even of the Olympians. That was bad enough, but the outrage became intolerable when the Duke amused himself at her expense with one of the common practical jokes of the day. Lady Mary tells the story in a letter to her sister:

> Sophia [the Duke] and I have an immortal quarrel; which though I resolve never to forgive, I can hardly forbear laughing at. An acquaintance of mine is married, whom I wish very well to: Sophia has been pleased, on this occasion, to write the most infamous ballad that ever was written: . . . and Sophia has distributed this ballad in such a manner as to make it pass for mine, on purpose to pique the poor innocent soul of the new-married man, whom I should be the last of creatures to abuse.

It needed a strong man to play the game of wit in that fashion, and it is not hard to understand why life at Twickenham, and indeed in England, should have become impossible for Wharton, even apart from his political vagaries. A few months after the placable letter just cited, Lady Mary is again writing of her gallant rival:

> Sophia is going to Aix la Chapelle, and from thence to Paris. . . . We are broke to an irremediable degree. Various are the persecutions I have endured from him this winter, in all which I remain neuter, and shall certainly go to heaven from the passive meekness of my temper.

So the Duke of Wharton passes out of the literary life of England. The meekness of Lady Mary—others had a different name for it—endured the strain for fourteen more years, and then she, too, partly by the venom of Pope's satire, was driven from the land; both Peer and Lady lost in the battle where the little captain of Twickenham was wielding his "terrible swift sword." But neither was the victory long. The year after Lady Mary's exit the wife of another Edward Montagu, Mrs. Elizabeth, is gossiping thus to a friend: "Lady Shadwell saw Lady Mary Wortley at Venice, where she now resides, and asked her what made her leave England; she told them the reason was, people were grown so stupid she could not endure their company, all England was infected with dulness." The writer adds charitably that by "dulness" the exile meant her husband, whom she had abandoned. That gentleman was dull enough and mean enough, in all conscience, to afford his wife excuse for such a synonym; but when one thinks of the change from Lady Mary to Mrs. Elizabeth Montagu, and of the difference between the society that fought and bled at Twickenham and the insipid circle that purred about the "Queen of the Blue-Stockings," one is inclined to believe the Lady meant precisely what she said. The twilight of the wits was come:

> Thy hand, great Anarch! lets the curtain fall,
> And universal Darkness buries All.

P. E. M.

Books and Men

THE EPHEMERÆ OF WAR.

If laws are silent during the clash of arms, how still must letters be! When the face of the earth is undergoing change, when the nations' armies confront one another along a line estimated at any length up to three hundred miles, when there is no seaport so lowly, no summer resort so humble, that it cannot indulge in the luxury of hearing "heavy firing" at least once a day, when the long-drawn and terrible cry of "Wextra!" (for "Wuxtry" is a myth) comes bellowing down the street at intervals of half an hour —when all these things are happening, who cares to read of books? However much you would like to do so, to steep yourself in literary calm is beyond your power.

What books can you read or discuss, without having your mind brought back to the one great and terrible subject? Shakespeare? His pages are full of alarums and excursions —"Once more unto the breach, dear friends!" is recalled to your memory, and you pause to reflect that the besiegers and besieged of Harfleur are now fighting side by side. Thackeray? You must not open "Vanity Fair," or you will hear the guns of Waterloo, as Waterloo itself is hearing them again. As for Kipling—

> The earth is full of anger,
> The seas are dark with wrath;
> The Nations in their harness
> Go up against our path!

If you shrink back to the classics, even there you are not safe. For, as Mr. Don Marquis has pointed out, you cannot read a page of Cæsar's Commentaries without being reminded that: *Horum omnium fortissimi sunt Belgæ . . . proximique sunt Germanis, qui trans Rhenum incolunt, quibuscum continenter bellum gerunt.*

What literature has the war itself produced? The Poet Laureate has written a poem, and Mr. Stephen Phillips has written a much better one about the defence of Liège. Mr. Alfred Noyes has abandoned his pacific attitude, and, in verse, commended England's war. Mr. William Watson upbraids the Kaiser in a really powerful sonnet, and Mr. H. G. Wells, who is certainly not a jingo, rejoices (in vigorous prose) at the coming downfall of "Krupp worship, flag-wagging, and all the sham efficiency which centres at Berlin." Mr. Henry Newbolt's solemn invocation to England in the *Times* is the finest of the occasional poems I have yet seen. And Mr. Bernard Shaw hastens to strip away any illusion of patriotism or nobility from England's or any other country's share in the conflict, and to nerve his fellow-citizens for the test by reminding them again that he holds them to be hypocrites.

Behind the veil of censorship how many books are making! Now we get confused reports of battles that turn out to be skirmishes, and rumors of battles that may be

very real indeed. It will be months before we can know. Nations that hold dominion over palm and pine cannot go to war without sending the echoes of their thunder to the uttermost parts of the earth. And stranger, more appealing to the imagination than all, is that great fleet which moved silently away, and has disappeared into the North Sea, where it remains to guard the liberty of Europe, as its predecessor, more than a century ago, stood guard against the war-lord of that day.

Here, we have aroused a newspaper controversy. At the beginning of the war even the sensational papers could not keep ahead of the real events. The facts were exciting enough, without embroidery. It shows how hardened we are, in a few weeks, to news that two months ago would have agitated the world: England declares war on Austria, and in the tumult of battle news the event is hardly noticed. Japan's threat to Germany is thought worthy of as much space as a cavalry skirmish.

There was, at the outset of the disturbance, no indication in the American newspapers of any hostility towards Germany. The Kaiser was hailed as the man who might make peace. When the terms of the Austrian ultimatum to Servia became better known, and when it was seen that Germany was backing Austria in a course that led straight to war, the belief in Wilhelm II as a peace-maker wavered. His invasion of Belgium swept away all doubts, and created an aversion that found expression in speech, in editorial articles, and in cartoons. Germans might call Russia "barbarous," France "revengeful," and England "jealous," and they could, to some degree, as current slang goes, "get away with it." But the spectacle of the nation which has kept Europe for forty years resounding to the tramp of her big boots and the rattle of her sabre, now engaged in cutting her way through the bodies of the Belgians—this was revolting to all but Kaiser worshippers.

These, asserting that there exists a conspiracy against Germany in the American press, have issued the *Fatherland*, a weekly, "devoted to fair play for Germany and Austria." Its cover represents two club-like sceptres crossed on a field of red. The German eagle, the two-headed eagle of Austria, and the American eagle are also displayed. (What the devil does the American in that galley?) The *Fatherland* is all that is to be expected of a war-time periodical. Opening with a poem to "Wilhelm II, *Prince of Peace*," by Mr. G. S. Viereck, in which the monarch is called on to smite nearly every one, but especially the Czar, France ("the harlot of the world"), and England ("the serpent of the sea"), the new magazine lays about itself right lustily, and hits every head in sight. So far, it is America's only special contribution to the literature of the war, but it has made one mistake. It deals in English, not German, mustard.

EDMUND LESTER PEARSON.

News for Bibliophiles

A PAMPHLET ERRONEOUSLY ATTRIBUTED TO BENJAMIN FRANKLIN.

In August, 1772, there appeared in London a pamphlet of sixty-one pages with the title: "Report of the Lords Commissioners for Trade and Plantations, on the Petition of the Honorable Thomas Walpole and his Associates, for a Grant of Land on the River Ohio in North America, with Observations on, and Answers to, the foregoing Report." The usual history of this pamphlet, which may be found in any edition of Franklin's works, under the title of "Settlement on the Ohio River," is as follows: In 1769 there was formed a company of Americans and Englishmen for the purpose of purchasing land on the Ohio. The name of the most distinguished financier of the association, Thomas Walpole, was given to the company, which in the end determined to petition for sufficient land to found a colony to be called Vandalia. This plan was opposed by Lord Hillsborough, the Secretary for the Colonies, who with the Board of Trade drew up the unfavorable report printed in the above-named pamphlet, and this would naturally have put an end to the plan of the company, had not Dr. Franklin written such an answer that the Privy Council was convinced of the value of the proposed settlement. The rest of the story is based on the account of the pamphlet which was printed by Almon in his "Biographical, Literary and Political Anecdotes of Several of the most eminent Persons of the Present Age" (London, 1797, Vol. II, 303). The passage is worth quoting:

> Lord Hillsborough was so much offended by the decision of the Privy Council, that he resigned upon it. He resigned for that reason only. He had conceived an idea, and was forming a plan, of a boundry line to be drawn from the Hudson River to the Mississippi River, and thereby confineing the British Colonies between that line and the Ocean, similar to the scheme of the French after the peace of Aix-la-Chapelle, which brought on the War of 1756. His favorite project being thus defeated, he quitted the ministry. Dr. Franklin's answer to the Board of Trade was intended to have been published; but Lord Hillsborough resigning, Dr. Franklin stopped the sale on the morning of the publication, when not above *five* copies had been disposed of.

The most significant points in the story are that this pamphlet was written by Franklin and that its appearance defeated a well-developed western colonial policy of the Secretary for the Colonies, who in his chagrin at his defeat resigned. The pamphlet has become, therefore, of more than literary interest, for its appearance has been connected with the innermost workings of the British Ministry. Thus is history written. The truth is that the pamphlet was not written by Benjamin Franklin, that Hillsborough had determined to resign several weeks before the pamphlet was published, and that its presentation of arguments in favor of settlements west of the Alleghanies had no influence of any moment upon the decision of the British Government.

The true originator and organizer of the Walpole Company was a Philadelphian Quaker, Samuel Wharton, a member of the firm of Baynton, Wharton & Morgan, Indian traders and land speculators. In the autumn of 1768 this wily schemer was sent to London by a company of merchants who had suffered from the depredations of the Indians at the outbreak of the Pontiac Conspiracy to obtain from the British Government consent to a tract of land ceded as a compensation by the Indians. Shortly after his arrival he was received favorably in both financial and political circles, for he was recognized as a man well-informed on American affairs, and London at the time was looking for opportunities to speculate in colonial lands.

The steps by which Wharton built up the company are not known; but from the results certain facts of importance can be inferred. His first associates were found undoubtedly among financial circles, such as Thomas, Richard, and Robert Walpole, Moses, Naptoli, and John Franks. To these he added certain important names among the colonists, as Sir William Johnson, Benjamin Franklin, Sir William Franklin, Joseph Galloway, and the agents of the colonies were represented in the persons of Grey Cooper and Richard Jackson.

The Quaker politician, however, knew that other influences besides financial were needed to get his plan through the Ministry, so he added to his company some of the powerful under secretaries of the departments; Thomas Bradshaw, who exercised great influence with the Duke of Grafton, the head of the Ministry, was soon brought in, as were the crafty John Robinson and Robert Wood, both under secretaries of the Treasury.

The influence of the Walpoles naturally led the company to seek support from the Grenville faction, which at the moment was in opposition, but which was so soon to be taken into the Ministry. Their recruit from this quarter was no less a person than George Grenville himself, whose share was represented, after his death, by his brother, Earl Temple. The first representative of the Ministry to join was Lord Camden; and a great friend of the King, the Earl of Hertford, needy of pocketbook, lent his influence for a share. Such were a few of the fifty names in the list of the company which lies before me.

From the very first negotiations with the Ministry the leadership in the company was in the hands of Samuel Wharton, a position he maintained until all hope of obtaining the grant was lost through the outbreak of the American Revolution. At first everything moved smoothly. It was at Lord Hillsborough's suggestion that the company determined to ask for sufficient land to form a new colony. Lord Hillsborough later explained that his advice was given in the expectation that the Board of Treasury would place such a price on the grant that the company could not afford to make the purchase; but the price was set at the moderate sum of £10,000, so that the Secretary for the Colonies was obliged to find other means of preventing the establishment of the western colony.

His next move was to arouse the colony of Virginia, which would be shut off entirely on the west by the new colony. The Virginians, such as George Washington, Patrick Henry, the Lees, and others interested in land speculation, were naturally aroused by the danger, and they found in their new Governor, Lord Dunmore, an appointee of Hillsborough's, a ready ally; but all they were able to accomplish was of no immediate avail, for changes in the British Ministry made that body more favorably disposed to the colonial project.

In the beginning of the year, 1770, Lord North became the leader of the Ministry; and during the course of the year, after the death of George Grenville, several of his faithful followers were brought into the ministerial cir-

cle, which was now composed principally of three factions, the King's friends, to which faction Lord North and Lord Hillsborough belonged, the Bedford faction, and the former followers of Grenville.

Historians have been inclined to think of Lord North's Ministry as being exceptionally united through its loyalty to George III; but this was far from being the case. The Bedfordites—and they had always been supported by the followers of Grenville—were never satisfied with a subordinate position and had never been on the best of terms with the King's faction. They, therefore, watched their opportunity to overthrow Lord North. The best account of the ministerial intrigue, which was to place the project of the Vandalia colony nearer a realization and to call forth the pamphlet under consideration, is to be found in a paper written by William Knox, Under Secretary in the Colonial Office and faithful follower of Lord Hillsborough, and this narrative supported by other testimony is the basis for the following account:

The Colonial Secretary's opposition to the erection of a western colony was sufficient to prevent further steps being taken in the matter. It was, therefore, necessary to obtain more powerful influences than were yet engaged. The votes of the Bedford faction would be sufficient, and Samuel Wharton bought this faction by giving shares in the company to the Earl of Rockford, Southern Secretary and Lord Gower, President of the Council. There were, however, other reasons than financial—weighty as this was in the case of Lord Rockford—for their acceptance of the shares. An opportunity to overturn Lord North lay in the situation. Hillsborough was North's right-hand man, and the resignation of the former was likely to bring about that of the latter, in which case Lord Gower would probably be made first Minister. George III, who had always been anxious to justify the Treaty of 1763 by the development of Western America, was easily induced to interest himself and to get word to Hillsborough that he desired a report on the Vandalia plan.

It was then that Lord Hillsborough came out boldly in opposition to the colony, declaring that he would resign in case his policy was overthrown. He tried to persuade Lord North to take active steps, but the latter found that nothing could be done in the face of the King's attitude, and not caring to make Hillsborough's cause his own offered no opposition to the Bedford cabal. The unfavorable report of the Board of Trade was drawn up under Hillsborough and repeated the well-worn arguments against inland colonies. It was a perfunctory performance. because everybody knew what the outcome was to be. "When the report came down to the Council," writes William Knox, "Lord Gower declared he should be open to evidence against it, and Wharton was allowed to have a copy, and to make and print observations on it, before it was considered." These observations written by Wharton are those universally attributed to Franklin. As the majority of the Cabinet had decided how to vote, they were easily convinced by Wharton's arguments and determined to advise the King that the grant ought to take place. In accordance with the programme, Lord Hillsborough resigned, but the Bedford cabal gained nothing by this, for Lord North's interest with the King was sufficient to bring about the appointment of a personal friend, Lord Dartmouth, to the vacant position.

Correspondence

THE MOHONK CONFERENCE.

To the Editor of The Nation:

Sir: It seems incredible that any such impression as is set forth in the letter of your Paris correspondent, published in the *Nation* of August 6, should have been created by the Mohonk Conferences. The Conference never accepted Mr. E. D. Morel's book, "Morocco in Diplomacy," in any way. The Conference assumes no responsibility for the papers which are presented by speakers, and certainly not for the details of those papers. It is essentially a *conference*, and wide freedom is given to speakers, who often represent the greatest possible divergence of view. At the close of each Conference a platform is adopted, nearly always unanimously, which invariably is conservative in the extreme. Many statements of individual speakers go unchallenged for lack of time, and many more because they are so obviously personal or partisan as to require no comment from a body which seeks to offer a forum for temperate presentation of fact and opinion rather than for the debate of matters of divergent opinion.

No one thoroughly conversant with the Mohonk Conferences can fail to appreciate the sanity and catholicity which has from the beginning characterized them.

Ethelbert D. Warfield.

Keene Valley, N. Y., August 8.

THE "ANTI-GERMAN" PRESS.

To the Editor of The Nation:

Sir: The haste in which the Powers of Europe have rushed to arms is exceeded only by the haste in which the anti-German press of America is seeking to place the blame for the commencement of hostilities. Indeed, the *Nation* of August 6 has fixed the responsibility of the whole affair upon the German Kaiser, not only before the determining facts are at hand, but in spite of the fact that all reports thus far, as everybody knows, have come almost entirely from Germany's enemies.

Every lover of peace will share with the *Nation* its abhorrence of war, but to place the blame at this time upon any one nation is to forget or ignore the most patent facts of history, and to disregard the motives and conditions that have brought upon the world the present deplorable catastrophe. The whole argument of the *Nation*, in common with the stock argument against Germany, is based upon two assumptions, both of which are unwarranted: It is assumed that England, in her dealings with other Powers, has been actuated by unimpeachable motives, or at least by motives more just than those of Germany, and that therefore her conduct should be regarded as a criterion from which to judge the motives and conduct of that nation. In the second place, to carry the argument of the *Nation* to its logical conclusion, it assumes that English civilization is superior to that of Germany, and therefore contemplates with alarm the triumph of German arms and the establishment of Germany to a position of power and influence equal to that of England. In other words, Germany must not grow, even in the peaceful arts, to a dominant position in Europe, for the criticism of Germany on the ground of its numerous battleships cannot be justified without twice condemning England with a fleet nearly twice as large.

It is high time that some of England's apologists should give reasons why she should be arbiter of Europe. What assurance had Germany in the present crisis that England was not playing her old game of setting one state against another; of forming unholy alliances, not for the peace of Europe, but for her own gain? By what facts of history or by what process of reasoning are we to conclude that the official England of to-day is not the same England that violated the treaty of 1783, and sent an insolent note to the State Department concerning the Trent affair during the most critical period of American history, while sons of Germany were fighting by thousands for human freedom in the army of the North; or the same England which more recently united with Russia to depose an American financier from the government of Persia, to prevent that struggling state from winning its independence? Does memory not reach back to England's manipulation of Balkan diplomacy to its own interest, regardless of the sacrifice of life, or to the more proximate fact that she was the first to recognize Huerta, to the embarrassment of our own Administration?

The *Nation* virtually admits that France drew Germany into the conflict (p. 148), relying upon England for support in accordance with the *entente cordiale*—which agreement, be it remembered, was directed against Germany, while the Triple Alliance was not directed against any particular Power. In view of this fact, it is difficult to see how Germany could well have prevented what you call a "challenge to England." Again, in accusing Germany of violating Belgian neutrality, you disregard the fact that the British Foreign Office had previously laid down terms to Germany restraining her from operating in the Baltic against Russia, and against France on its north coast. There are also reports to the effect that Belgian neutrality was violated openly by France and England. Time alone will determine the truth or falsity of some of these reports, and until that is determined the principle of neutrality might well be adopted by the American press. Besides, too much is made of the mere fact as to who *first* violated Belgian neutrality. When threats are made on every side, when scouting parties cross border lines, when ships of commerce are being mounted, fleets ordered home or to port, and armies mobilized—fleets and armies that have been building for but one purpose for a quarter of a century—it is idle to ask, for it matters little, who first threw off the mask.

So far as England and Germany are concerned, the causes of their difference are easily explained. The crime of Germany, decreed by England as such, lay in its growth and prosperity during the last two decades. This growth first aroused the jealousy of England—for Germany had nothing to be jealous of—when she found her trade and commerce slipping away from her and passing into other hands. As envy begets envy, it acted and reacted on both sides of the Channel; was fanned into flame by a thousand incidents, great and small, from the Cabinets and cafés of London and Berlin, until the masses came to believe there was a real grievance to be righted. It is a sad commentary upon the statesmanship of both

Germany and England that the delusion of different interests for each nation was not dispelled. It is more unfortunate still that the large nations of western Europe should believe that battleships are a necessary concomitant to industrial and commercial development when exactly the reverse is true; but here again England is at fault for setting the example, for if armaments are to decide the cause of one nation, other competing nations must adopt the same methods, and there was nothing left for Germany but to follow England or maintain a position of inferiority. England felt that Germany was following too close, and the result, whatever may have been the immediate cause of hostilities, is before us, with all the ghastly horrors of militarism. Since the final outcome, however, may mean either Slav or Teuton supremacy in western Europe, it is difficult to see why Americans should wish the annihilation of Germany, or give moral aid and support to Great Britain in its unholy alliance with a civilization in which, if it triumphs, we ourselves can have little in common.

KARL F. GEISER.

Oberlin College, August 11.

[The *Nation* is glad to publish letters like Professor Geiser's presenting a point of view from which we ourselves wholly dissent. To reply to what we must regard as the obvious fallacies in Professor Geiser's argument would be to repeat the substance of several of our editorial articles. But we may point out that this correspondent follows Professor Münsterberg in ignoring the fact that Germany refused to take part in the conference proposed by Sir Edward Grey—this at a time when such action might have prevented the war. Likewise, it should be noted that to assign jealousy as the cause of England's and, as Professor Münsterberg does, of America's attitude also, is to deal loosely with the facts, besides adopting a tone far from conciliatory.—ED. THE NATION.]

TRAVEL IN NEW ENGLAND.

TO THE EDITOR OF THE NATION:

SIR: A terrific blow is about to be aimed at our already staggering transportation system in New England. May the travelling public not in some way rise to its defence?

Many of us recall vividly the old conditions of travel in New England, when through connections were a matter of uncertainty. A Connecticut man journeying to Vermont or New Hampshire spent hours of tedium in the Springfield station. A New Yorker bound for Maine wound through the streets of Boston, and usually took a troubled nap at the North Station. Northern New Englanders came south—but not often—with equal difficulty. In a word, through traffic was haphazard and primitive.

Furthermore, a rate of two cents a mile was a dream for travellers to the north. The tolls ranged from two and a half to four or five cents. A run to the White Mountains required several sorts of mileage books—if one attempted that form of economy—and scalpers thrived. Even in parts of Massachusetts, Rhode Island, and Connecticut, a decade ago, three or four cents a mile prevailed.

At present, whatever may be said against the New Haven management, numerous through trains connect New York, Connecticut, and Rhode Island with northern Massachusetts, Vermont, New Hampshire, and Maine. Travel to the north has become easy and convenient. Also a single mileage book, at a rate of two cents a mile, carries one to remote corners of the mountains or to distant stretches of the Maine coast. Altogether the improvement in conditions of traffic in this section has been enormous.

Whether the New Haven Railroad system is a combination in restraint of trade or an organization for the furtherance of trade, it apparently rests with the courts to determine. From the standpoint of the traveller, however, the proposal to divorce the New England Railroad from the New Haven sounds preposterous; and the proceedings to separate the Boston & Maine exceedingly dubious. Under proper governmental supervision, may not a single leading railway system in a section—like a single trolley system in one of our cities—work for the public convenience and benefit?

Most of us have come to feel that the reign of the high hand in New Haven affairs has been ended; and that the new management can be trusted to coöperate with legislators and citizens in efforts for honest efficiency. If, as seems plausible, the affiliated trolley and navigation lines ought to be made independent organizations, at all events the railway system proper needs, not a staggering blow, but the encouragement and backing of those who believe in travelling throughout New England with safety, economy, and convenience.

W. L. SQUIRE.

Wethersfield, Conn., July 31.

CARD CATALOGUES.

TO THE EDITOR OF THE NATION:

SIR: I suppose most librarians will be inclined to pass over the gentle and undoubtedly clever gibes of Mr. Edmund Lester Pearson anent card catalogues in your issue of July 30 with the remark, "It amuses him and don't hurt us." But in my retirement I feel like coming to the support of my brethren who are bearing the heat and burden of the day in regard to one or two points. The extent of these catalogues and the space taken to house them must always be in proportion to the size of the library and the adequacy of the cataloguing. As to the latter, the zeal of the librarians in furnishing all needed guidance may have o'erleapt itself, but the multiplication of entries to meet various points of view is certainly an amiable fault, and one that should be condoned by a journal given, as is the *Nation*, to observing the fulness and adequacy, or the opposite, of the indexing of books it has occasion to review. And with high ideas of the value of good cataloguing, it is difficult to see why one need object should even 10 per cent. of a library's capacity be devoted to the catalogue, a proportion which, I imagine, has nowhere as yet been reached.

When one considers all the elements that enter into the making and arranging of entries of author, title, and subject for a collection of hundreds of thousands of volumes, it is apparent that complications will arise, destroying all hope of a facile simplicity. The transliteration of Oriental names (Mr. Pearson cites "Tagore") is one of the most difficult *cruces* in the whole matter. All this being so, is it not to the credit of the libraries that they are more and more employing "interpreters to make them clear"; that is, reference librarians to help the inquirer in the use of the catalogue and of bibliographies and other helps?

Unlike Mr. Pearson, who has "no method to suggest whereby they [catalogues] may be kept smaller," I have one, the one I advocated in a letter to the *Nation* a generation ago; a method which has been largely followed in a good many libraries. It is the omission from the catalogue of a great many "analytical" entries, the purpose of which may be better served, through the help of a reference librarian, by bibliographical works and indices now increasingly available.

W. I. FLETCHER,
Librarian Emeritus, Amherst College.

Quaker Hill, Conn., August 11.

CARLYLE'S TRANSLATION OF LEGENDRE'S GEOMETRY.

TO THE EDITOR OF THE NATION:

SIR: It may interest some of your readers to know that the very rare translation of Legendre's Geometry by Thomas Carlyle mentioned by Sir Leslie Stephen (Ency. Brit., Vol. 5, p. 350) was published by Oliver & Boyd, Edinburgh, 1822, under the "editorship" of David Brewster, F.R.S., the name of the "translator" appearing nowhere in the book. We may infer from Sir Leslie Stephen's statements that the translation was made when the youthful and struggling Carlyle had given up teaching and was writing articles for the Edinburgh Cyclopædia, of which Brewster was editor. The copy which I have before me was picked up by the late Prof. G. W. Jones on a visit to Edinburgh over twenty years ago, and was left by him to the Cornell mathematical seminary library. It contains the names of several owners, and the following pencil note by the second-hand bookseller: 'Very rare; translated by Thomas Carlyle; Brewster only 'superintended' the translation." In the editor's preface, it is stated that an "Introduction on Proportion, by the translator, has been prefixed to the work." For clearness and terseness of exposition these eight pages on proportion well merit the praise from Augustus de Morgan quoted by Sir Leslie Stephen.

It is known that Carlyle was a diligent student of mathematics at the University of Edinburgh under Playfair and Leslie, both of whom were distinguished geometers. It is curious that in the article on Sir David Brewster in the Britannica the Introduction and Notes to the English edition of Legendre are attributed to the editor, the facts being that the Introduction is the translator's, and the appended Notes are the original author's. Moreover, in the article on Legendre the translation is attributed to Brewster. The Notes are enriched by a special contribution from Legendre, written for the English edition, containing a reply to certain British writers who had found fault with the logic of his treatment of the theory of parallels. The interest of this vigorous reply is not diminished by the fact that Legendre's ingenious attempt to give an *à priori* proof of Euclid's postulate of parallels has not stood the test of more searching modern logic.

JAMES MCMAHON.

Ithaca, N. Y., August 7

Literature

BABYLONIAN CULTURE UNDER FOREIGN INFLUENCES.

Babylonian Records in the Library of J. Pierpont Morgan. Part II. By A. T. Clay.

Following close upon the heels of the first comes a second volume by Professor Clay of cuneiform texts from the considerable collection of such material obtained by the late Pierpont Morgan, whose activity as a collector led him into so many and various fields. In this volume, Professor Clay selects fifty-six tablets of a legal character, dating from the latest division of Babylonian history, when the country was in the hands of Greek governors, known as the Seleucids, and their successors, the Arsacids, comprising the period of 312 to 65 B. C. Up to the present comparatively few documents of this period have been published, so that Professor Clay's contribution is of great value in throwing light on social and commercial conditions during the three centuries preceding our era.

To many it will come as a surprise to find the continued existence of Babylonian culture, despite the Persian conquest by Cyrus in 539 B. C. and the Greek conquest by Alexander in 333 B. C. Such, however, was the tenacity of the civilization which had enjoyed a continuous sway for several thousand years that it was able successfully to withstand foreign influences. Not only did the Babylonian language continue to be used, at least officially, despite the fact that from the seventh century on Aramaic had become current among the population; but the religious beliefs and customs maintained their hold on the people, the temples and an elaborate priesthood were kept up, and though no doubt Greeks and Persians introduced some changes in the forms of government, the ancient laws were retained and social conditions were not modified in any essential particulars. The proof of this is furnished by Professor Clay's publication. The texts all come from the ancient city of Uruk or Erech, represented by the Mound Warka, which retains in its name a tradition of the ancient place. Temples and shrines in Uruk are referred to in the documents, and, indeed, with few exceptions, the texts are temple archives, dealing with property that belongs to a temple or with income derived from a temple.

The chief deity of Uruk was the god Anu, and it is, therefore, not accidental that in the thousand names or so occurring in the text, a large percentage contain the names of this deity as an element, while the name of the chief goddess, Nânâ, whose temple, known as E-Anna, "the heavenly house," was one of the oldest as well as one of the most famous shrines of ancient Babylonia, dating back to the earliest period, is also found as an element in several hundred names. The other chief deities of the Babylonian pantheon, Enlil, Ea, Marduk, Sin, Shamash, Nergal, etc., are likewise represented both in proper names and in direct references to their shrines or to offerings made to them. The officials mentioned are those with whom we are familiar from documents of an earlier period, and the legal formulæ are precisely the same as we find them to be centuries earlier.

It is interesting to note, also, as a further proof of the pertinacity of customs in Babylonia, that in the days of the Greek supremacy the temples continued to be business establishments, dealing in estates and slaves. What is more, officials of the temple trafficked in their incomes derived from offerings and sold their rights to render temple services and to receive the income accruing therefrom. No less than nineteen documents, as Professor Clay points out, are concerned with transactions of this nature. In addition to this, however, a large number of other commercial matters are dealt with in the collection, such as lease of houses, deeds of gift, sales of slaves, divisions of estates, deeds of release, exchange of properties, records of debts, and warranty deeds. Of special interest is one of the documents, No. 53, in which a certain Nikanor, son of Demokrates, dedicates a five-year-old slave girl, Arakhuna, to the "divine sanctuary." The formal assurance is given that the dedication gift is unencumbered through any previous disposition of any kind, and that in case this does not turn out to be correct, Nikanor agrees to forfeit one mina of gold for the benefit of the "divine sanctuary." The expression used, *bît ilâni*, which is literally "house of the gods," recalls the Hebrew *beth Elohim*, "house of god," and suggests a designation of a sanctuary due to Hebrew or Aramaic influence, for the plural use of "gods" seems to have acquired the same force of "god" in general, as in the Hebrew phrase, where Elohim is likewise a plural. Professor Clay appears to have overlooked this parallel, which furnishes an explanation of the Babylonian phrase occurring elsewhere in these texts, *e. g.*, No. 34, obverse 2, and No. 45, obverse lines 2, 4, 9, etc.; nor is he quite right in explaining a somewhat similar phrase, *ilâni bîtishunu*, which occurs in a good many of the texts after the enumeration of deities, as "gods of their houses" and as a reference to minor deities not specifically mentioned. It is necessary to take into consideration the word *gabbi*, "all," which is invariably attached to *bîtishunu*, "their houses," so that the whole phrase means "all the houses of the gods," and refers to the sanctuaries of the gods mentioned.

The occurrence of Greek names in the text above referred to leads to a consideration of what is perhaps the most significant feature of the texts, namely, the proof furnished through the many Greek names of predominating Greek influence in Babylonia. Professor Clay, in his Introduction, has collected a list of these Greek names, and it is interesting to note among them such well-known forms as Ariston, Artemidoros, Demetrius, Diodoros, Nikarchos, and Alexander. The transliteration of these foreign names into the syllabic cuneiform writing (which has no vowel) furnishes some interesting features. So it is significant that the famous Alexander appears without the expected ending *os*, being written *A-lik-sa-an-dar*—an indication, therefore, of a popular pronunciation of the name, precisely like the form given to the name in Latin literature. The final ending disappears in some other names, as, *e. g.*, *Ba-as-si-ia*, which is no doubt Pasias, *Di-e-mu-uk-ra-te-e*, *i. e.*, Dêmokrates. On the other hand, we have *An-ti-'u-ku-su* (Antiochos), *Di-du-ur-e-su* (Diodôros), *Ni-ik-ar-ku-u-su* (Nikarchos), where we have even an overhanging vowel beyond the final *s*, though no doubt this overhanging *u* was not actually pronounced. A very happy identification is the somewhat strange form, *Ni-ik-ku-u-la-mu-u-su*, with Nikoleos (*i. e.*, our "Nicholas"), where again we have the overhanging vowel. The *m*, which has also the sound *v*, represents a consonant between *e* and *a* in the Greek name, as in modern Greek *basilevs* for *basileus*. In regard to the puzzling *Is-sa-ru-u-tu-nu* (with a number of variations) which Professor Clay hesitatingly explains as Isorodon (though such a form does not occur among Greek names), the suggestion may be made that it may be due to a metathesis for Issadurunu, which would give us Isidôron.

As a further illustration of the commingling of Babylonians with Greeks that was taking place during the Seleucid period, we have statements in the texts regarding persons who bear two names, a genuine Babylonian one by the side of a Greek one. Sometimes the Greek name is the second one, as in the case of a certain Nânâiddin (signifying "the goddess Nânâ has given"), "whose second name is *Di-me-ti-ri-ia*," *i. e.*, Demetrios; at times we have the reverse, as in the case of *Di-i-pa-tu-u-su* (probably Diopostos), "whose second name is Anu-uballit" ("Anu gives life"). In the former case, we may assume the individual to have been a Babylonian, or at least the son of a Babylonian father, in the latter a Greek, or the son of a Greek father, who had married a Babylonian woman. A curious custom, which appears to have risen from the example of two names in the case of the offspring of mixed marriages, is the occurrence of individuals who bear two Babylonian names, *e. g.*, a certain *Anu-balat-su-ikbi* ("Anu has commanded his life"), "whose second name is Anu-zêr-idden" ("Anu has given offspring").

There are several important historical problems arising from the dates attached to the tablets, which Professor Clay briefly discusses without reaching in all cases satisfactory solutions. The impression made by the Seleucid governors of Babylonia on the country was such that, even after they had been replaced by the Parthian Arsacidæ, the Seleucid era beginning in the year 312 B. C. continued in use. So, *e. g.*, we find a document, No. 52, bearing the double date, "year of 109 Arsak' King, which is the year 173," *i. e.*, the 109th year of the Arsacidian era, beginning 248 B. C., equals the 173d year of the Seleucid era, *i. e.*, 139 B. C. The Jews, likewise adopting the Babylonian custom, con-

tinued to use the Seleucid era in their official calendar many centuries after the end of the Seleucid rule.

To discuss the chronological questions, however, would take us too far afield, just as we cannot for lack of space consider the specimen translations of selected texts given by Professor Clay in regard to which some differences of opinion might be set forth. Needless to add that the translation as a whole betrays the thorough study which the author has given to his subject. There are few living scholars who have published so many legal documents of all periods of Babylonian-Assyrian history as Professor Clay, and the results of his prolonged study of the legal formulæ contained in them are to be seen in his most recent translations. To mention, however, one point, we doubt whether Professor Clay has correctly understood the phrase which he renders "to work the clay," occurring in a text, No. 53. The sign used for "clay" also means *duppu*, "tablet," and the phrase would seem to be the technical one for preparing the clay tablets for the use of the temple. In No. 45, obverse 9, there is an official whose title is expressed in the very same terms, "maker of the clay of the sanctuary of Uruk." Since No. 53 records the gift of a slave girl five years old to the temple, it is hardly conceivable that she was assigned to do this work, as Professor Clay's rendering might lead us to suppose. It would seem rather that the slave-girl is offered in payment of a vow on the part of her master to prepare clay tablets, the vow being indicated in the opening phrases, "for the life of the king, for the life of himself, for the life of the people [*i. e.*, the household], and for the life of his city (?)." The slave-girl is designated as "a maid of *taturru*." Professor Clay renders *taturru* as "possession," which is correct, but it is not clear whether he recognized that the term appears to be the technical designation for a child of a slave "born of the house" (as the Biblical phrase has it), and therefore belonging to the master of the mother-slave.

A word should be said in conclusion of the exquisite autographed copies of the texts. Professor Clay's reputation as an expert copyist of cuneiform texts is so well established that commendation of his work would be superfluous were it not for the fact that in his latest volume he has even surpassed his former accomplishments. It is quite within the proper limits to say that never has an edition of cuneiform texts been published superior to this beautifully clear and regular reproduction of the original tablets.

It is to be hoped that the generous policy of the late Pierpont Morgan in thus making the treasures accumulated by him accessible to scholars will be continued.

CURRENT FICTION.

Telling the Truth: A Novel of Analysis. By William Hewlett. New York: Fox, Duffield & Co.

The author evidently thinks this book very daring; in fact, it is rather mild in comparison with the high-flavored fiction to which the younger English novelists are accustoming us. The form is autobiographical. A successful novelist is supposed to undertake to tell the whole truth about his own life. From childhood he was, it seems, recalcitrant. He early perceived that his father was a fool, his mother a weakling, and his sister a heartless prig; religion a mockery and social convention an elaborate fraud. He lost no opportunity of conveying his impressions, was cast out of a virtuous home, became a journalist, an actor, and finally a well-rewarded maker of realistic novels. On his way to that comfortable eminence his chief pleasures were confessedly of the senses. He had twenty mistresses, following one infatuation of more note. He then fell seriously in love with a married woman, whose only scruple was lest she should give herself to him without the full sanction of her own heart. She is adored by her husband, but has never really found herself able to respond to him. Finally, the moment comes when she realizes that she does really love our hero, and she at once notifies him and her husband that there must be a change of partners. "She holds, with me," says the complacent novelist, "that only by severing the tie that blnds her to a man she does not love can she regain her self-respect. There will be no marriage, whatever course Sir Ralph may pursue. The sacrament of marriage can profane itself, but nothing can sully the supreme and holy sacrament of love." We suspect that it is a very young gentleman who gives utterance to these now almost time-honored sentiments in a key so ingenuously shrill.

The Lights Are Bright. By Louise Kennedy Mabie. New York: Harper & Bros.

This is a well-told story of business rivalry, of love, and (rather self-consciously) of the Middle West. It makes frank, but not offensive, use of the machinery of melodrama. There is a beautiful heroine, heiress and owner of a great steel mill. She lives with a malden aunt of the old-school order, who duly serves her purpose by affording comedy relief. The mill has a manager of the stalwart and true type. His name itself, John Sterling Ames, is a guarantee of his worth. He is much older than our Theodora, in love with her, and bound that she shall never, never know. She, adoring him, mistakes his self-command for coldness; hence the usual pretty pickle of romance. The mill has a deadly rival, the Lake City Steel Company. This malign corporation is under the secret control of a multi-millionaire, who is none other than our old acquaintance, the wicked financier. He determines to buy out Theodora, or to put her out of business. But, of course, he does not come to her with a business offer. He prefers sending spies and thieves to steal the books of the mill, and otherwise harass Theodora's John. The chief of these emissaries is another familiar figure, the villain from one of New York's oldest families. His manners, we are assured, are exquisite; unluckily, they do not lend themselves to reproduction in black and white. An elaborate plot removes Theodora from Ames's influence by way of a voyage on the Great Lakes, and places her apparently at the mercy of the wicked financier and the villanous aristocrat, his agent. But here Theodora shows her quality: the lesser villain is confounded, and the greater, by means of a virtuous sort of blackmail on the part of Ames, is forced to give up his designs. This sounds commonplace enough, but the book is better than its plot. Certain of the minor characters have far greater reality than the principals, and the Lake atmosphere, a setting for human action as distinctive as that of coast village, prairie, or bayou, is conveyed with a good deal of force. The title, it may be said, is derived from the call of a lookout on a Lake freighter.

The Trend. By William Arkwright. New York: John Lane Co.

A young English composer has scoured Europe in vain for a singer fit to create the title rôle of his "wonderful cantata on Giordano Bruno"—the requisite combination of vocal and spiritual gifts is positively not to be found among world-famous tenors—when, strolling at nightfall upon the London streets, he happens upon a ragged youth singing celestially. He accosts the prodigy, and, finding him to be equally angelic in appearance and disposition, and conveniently unhampered by family ties, straightway adopts him and takes him down to Derbyshire, where, amid peaceful country scenes, the education of the fairy child proceeds apace. Bill Solesbee, whom cultural influences promptly converted into William Soulsby, proves a most edifying combination of humility, docility, and original inspiration. The local clergyman, after being entreated: "Oh, sir! I want words, sir! Please learn them me, and to speak properly, arrange 'em properly," obligingly consents to shepherd this hungry mind through the dictionary and "Paradise Lost." The composer has no trouble in teaching him to sing the desired rôle to perfection, and although he finds him quite incapable of profiting by any technical instruction in the art, is compensated for this disappointment by the curious melodies which his protégé's subtle ear detects in woodland sounds. In a few weeks the young genious is ready for fledging, and preparations for the production of the cantata are under way. But the vitality of the phenomenal lad is already on the wane. When his adored benefactor cuts short his protestations of gratitude by the remark that "he would have done the same for any one with such a voice," he imme-

diately begins to pine away. The additional shock of realizing that his idol is infatuated to the point of marriage with an extremely mundane young woman still further weakens his hold on life, and upon the final note of martyr's triumph which concludes the cantata's highly successful *première*, this other-worldly spirit takes its flight. The plot *per se* is much more entertaining than the book, in which the wings of mystical fantasy are made to carry a heavy load of argumentative dialogue. Seldom, even in Johnsonian days, were characters in a book so inveterate in discourse upon abstract themes.

The Woodneys: An American Family. By J. Breckenridge Ellis. New York: The Devin Adair Co.

When we meet the Woodneys, they are on the point of suffering a series of reverses comparable to those that gave the Vicar of Wakefield large opportunity for resorting to the consolations of his philosophy. But they do not quite reach the point of actual distress. A near relative has been provided for just this contingency. Happily divorced, enjoying a generous alimony, she arrives on the scene in good time to checkmate the evident determination of fate to afflict the inoffensive Woodneys with all the troubles that can well be crowded into a few weeks. Her excuse for existence, however, is sadly marred by a sudden turn for the better, brought about by a miscreant who, through the clumsy device of a long and unnatural letter, undoes the part of the evil he has wrought. Nobody, whether a divorced relative or an anonymous thief, seems to be able to do much for Robert Woodney, the son, whose attempt to carve his way in New York is a pitiable failure. The book, although not the first work of its author, is crude. The Woodneys are not alive, nor if they were would they be a typical American family, even of the unrefined and unlucky sort. For the undiscriminatingly sentimental, there will be some pleasure in the reunion of the divorced couple, which, like the rest of the story, is most artificially managed.

Two in the Wilderness. By Stanley Washburn. Philadelphia: J. B. Lippincott Co.

The exhilarating experiences of a trip by canoe and horseback through the wilds of British Columbia are here combined with a situation of man and maid which has been a favorite with romancers since the days of Arthurian legend. Theirs is, in fact, the story of Gareth and Lynette transplanted to the last American frontier. The defenceless but arrogant damsel who resents finding herself thrown upon the mercy of a chance protector is, of course, the pampered daughter of a wealthy Easterner. The knightly protector who, while meekly suffering under her disdain, still continues to serve her in all chivalry, is, all unknown to her, the self-exiled heir to many millions, who, after seven years in the wilderness, has at last "made his strike," and is even now on his way back to the paternal arms. The author, more expert in treating of trails and woodcraft than in describing the melting of minds to love, has, perforce, reduced the psychological situation to its simplest terms. Under the necessity of protracting the process till the very end of the journey, he keeps his hero endlessly reiterating, "She is far too fine for a rough backwoodsman like me," and rushing off into the forest to hunt fresh meat for her supper, while his heroine's resolve to maintain social distinctions is forever giving way to the recognition that here is a far better specimen of manhood than her New York beau. Manifestly this is no book for the student of erotics; but those who love to follow a rough trail, even vicariously, and can get a pleasurable thrill out of hearing how, by a few strokes of the axe, a spruce tree may be converted into a gigantic umbrella for a rain-drenched maiden, will find it a cheerful story, unvexed by moral perplexities, and as mentally relaxing as those beds of fresh-cut pine boughs upon which, we are told, these two wayfarers reposed soundly.

HUMAN PERSONALITY.

Work and Wealth: A Human Valuation. By J. A. Hobson. New York: The Macmillan Co. $2.00 net.

This book is an attempt to value anew the things that are usually grouped under the term "economic goods" and services and to substitute for the money measure usually applied thereto a standard of "human valuation" expressing "costs" and "utilities" in terms which are directly referable to human personality, both individual and social. In that it lays much more stress upon the "spiritual" side of personality than is customary in discussions of these matters, Mr. Hobson's book should be particularly welcome to the economic student who, whether or not he agree with the conclusions expressed, can hardly fail to be refreshed by the atmosphere in which the subject is immersed. The "average man"—so dear to the average economist—is no friend of Mr. Hobson's, for, as he intimates more than once, to borrow from Mrs. Gamp, there "ain't no sich a person." While it is clear that for a perfect valuation of the "goods and services" of human life there is necessary a *Weltanschauung* with a definite theory as to the end or purpose of life, and while Mr. Hobson definitely renounces at the outset all effort at so complete a "valuation of life," the standard of desirability which he adopts is probably as good as any obtainable after such renunciation. "The best escape from this predicament," he says, "is to start from some generally accepted concept which indicates, even if it does not express fully, the desirable in life. Such a term I take to be 'organic welfare'" (p. 12).

Although this concept (taken, as it is, in a biological sense) may seem to be in danger of overemphasizing the physical at the expense of the spiritual in human activities, Mr. Hobson strives gallantly to avoid this mistake in making his equations of individual cost and utility:

> [The] "organic" point of view avoids two grave errors common to the more mechanical treatment of an economic science which has subordinated man to commercial wealth. It insists upon regarding the productive effort which goes into any work of production and the satisfaction which proceeds from the consumption of any product not as a separate cost and a separate utility, but in their total bearing upon the life of the producer or consumer. . . . Nor is this all. Current economic science has not only treated each cost and each utility as a separate item or unit of economic power, it has treated each man as two men, producer and consumer. . . . The standpoint of organic welfare reduces to its natural limits this useful distinction of producer and consumer, and enables us to trace the true interactions of the two processes. In a word it obliges us to value every act of production or consumption with regard to its aggregate effect upon the life and character of the agent (pp. 13-14).

These contentions seem to be justifiable. But a "social interpretation" must also be achieved, and this is attempted by Mr. Hobson in the later portion of his book. He carries the same "organic" concept into his interpretation of the needs of human society, which he regards as a true "organism" in a strict biological sense, adopting the analogy of a body and its component cells. There are three possible views of human society: the extreme individualistic view, which considers society as purely "a means or instrument for achieving the ends of personality"; the extreme "social" view, which considers the individual existence as quite subordinate to that of society, and the middle view, which slights neither the individual nor the "social" group. From the "individualistic" point of view, society, if an "organism" at all, is of extremely low organic structure; the more nearly the biological analogy holds, the higher must be the organization and the more subordinate the individual component cells to the structure as a whole. Mr. Hobson is aware of the importance of human personality. He admits that the biological analogy is not perfect. Nevertheless, society must, he says, "be conceived, not as a set of social relations, but as a collective organism, with life, will, purpose, meaning of its own, as distinguished from the life, will, purpose, meaning of the individual members of it." Consequently, it becomes of great importance to consider economic processes, "not only in their bearing upon individual lives, but in their bearing upon the welfare of society." He continues:

> Indeed it is difficult to see how any reasonable person can confront the grave practical problems presented by the industrial societies of to-day, such as those contained in individual, class, sex, national differentiation of economic functions, without realizing that the hypothesis of humanity as itself a collective organism can alone furnish any hope of their rational solution. . . . Human welfare will be not merely the welfare of human beings

taken as an aggregate, but of society regarded as an organic unity (p. 17).

Mr. Hobson, despite his appreciation of individual personality—one would almost infer from what he says in more places than one that his psychology contemplates at least a possibility that there is such a thing as the human soul!—definitely leans to the notion that on the whole the "social soul" is more important. It is to the reconstruction of human society in such a way that true "social values" shall be set up as a standard, and that mankind in general shall in the light of these "values" pursue and achieve true "social" ends, that he wishes to summon and direct human effort. The problem is to reconcile and harmonize "individual" wills to the "social will" and to find "individual motives" in "social service." Mr. Hobson's ideal "commonwealth" in its main features greatly resembles the "coöperative commonwealth" of the intelligent Socialist:

We have sketched a growing order, harmony, and unity of industrial life, concerned with the regular supply of economic needs for mankind. Were such an order effectively achieved in accordance with the rational and equitable application of our human law of distribution (and the law as Mr. Hobson sees it is practically that of the classic Socialists: "to each according to his needs"), the economy of industrial processes would be accompanied by a corresponding economy of thought and emotion among the human beings engaged in this common coöperation. This social economy demands, as we have seen, the substitution of social welfare for private profit as the directing motive throughout industry. But it does not imply a completely socialistic system in which each productive process is under the direct and exclusive control of society (p. 290).

How is the harmony between individual wills and the "social will" to be brought about? It is in the attempt to answer this question that Mr. Hobson is least satisfying. His theory is that we must rely upon the biological analogy for our solution. The social organism has its own collective instincts. Being an organism which is at best somewhat low in the biologic scale (p. 358), society is mainly governed by instinct; man, on the other hand, has gradually developed his instincts into what is called reason—for Mr. Hobson apparently recognizes no clearly dividing line between the two. We are to suppose that society's "instincts" are to become more clearly and "rationally" expressed and the "collective will" more clearly apprehensible by and convincing to the individual "reason," and thus in one time both will work in harmony to the desired end. Mr. Hobson rightly points out that "democracy" justifies itself on this theory of the biological analogy; only upon such a theory can a rational faith in democracy as the term is nowadays used be securely based (p. 351).

This is all very logical, but, one must admit, not very convincing. Mr. Hobson does not as boldly face the root-difficulty of "human nature" as does Mr. Wells in that passage towards the close of "New Worlds for Old," where, admitting that "Socialism" is "against human nature," he describes human nature as the "Ishmael of the universe." Was this, perhaps, recognition by him of "original sin" and its consequences? There is a huge difficulty inherent in the concept of rational, self-conscious, reflective personalities as cells in an evolving organism—this is really Mr. Hobson's basic assumption—and it is this difficulty which renders in large measure ineffective the concluding chapters of his book. Nevertheless, one should be grateful to him for his insistence on the rights and needs of human personality and for the high plane upon which he has placed the discussion of a subject only too often treated on purely materialistic lines.

THE RECORD OF AN ADVENTUROUS CAREER.

Memories of Two Wars. By Brig.-Gen. Frederick Funston, U. S. A. New York: Charles Scribner's Sons. $1.50 net.

To those who revel in adventures and bloodshed, Gen. Funston's reminiscences will make a great appeal. A Marryat, a Cooper, a Lever might have envied the General the wealth of adventure upon which he can draw. None of their heroes, surely, ever faced death more frequently or more nonchalantly. His has been a charmed life, yet only a part of the experiences of this modern O'Malley are herein set forth. This is the story of his drifting into the army of Cuban liberation in 1896 as an adventurous son of Kansas, without prestige, or social or political influence, and of his becoming within a few months, on his merits, chief of artillery of the Cuban army, followed by his extraordinary rise in three years from colonel of a raw Kansas regiment to the rank of brigadier-general in the regular army of the United States at the age of thirty-six. Where else than in America could so romantic a career and so sudden an elevation be possible?

Let it be said at once that the General has told his often thrilling story in an admirably direct and simple style that recalls pleasantly the remarkable memoirs of our great soldiers of the Civil War—Grant, Sherman, and Sheridan. Whereas they dealt with great campaigns and vast battalions, Gen. Funston tells chiefly of regiments and individuals. That extraordinary adaptability, and the mental keenness and courage of the average American, which made him so fine a soldier in 1861-65, are shown here to have existed in the same notable degree among our volunteers in the Philippines in 1898-1901. But no sound mind of genuine humanity can put this volume down without a shudder at the slaughtering of human beings recorded. Gen. Funston tries to be fair to his enemies, and pays a handsome tribute to his comrades of the Cuban army who were so greatly misunderstood in 1898. But the callousness of the professional man-killer is evident, none the less, in his book, side by side with a vivid note of pain when the bullet pierces the brain, not of his enemy, but of his friend. What a difference there is in the point of view!

Here is proof enough, too, that all is still fair in war. The adventure of Aguinaldo, as told in this volume, shows clearly the extraordinary fertility of deception, the amazing imagination for planning, the remarkable endurance and readiness to risk a spy's death of Aguinaldo's captor. This exploit will be judged according to the moral standards of each of his readers. Heaven knows, when war is ever the "sum of all villanies," he who would especially cavil at Funston's methods on this quest of the Filipino leader must be hard pressed indeed. On the whole, the reader of this gory book lays it down with a better opinion of the narrator than he held before. Extraordinary as it may seem that a man untrained in war should have been promoted over the heads of a couple of thousand of trained soldiers—it is said that this never would have happened if Gen. Wheaton's dispatch recommending Funston for a regular brigadier-general had not been inadvertently given out at the War Department—it is clear that out of the adventurous boy who roamed Alaska and joined the Cuban army merely for the sake of adventure, has grown a man of force and power in his chosen profession, a genuine leader of men, simple and without boastfulness or immodesty over his extraordinarily successful career.

Notes

"The Promise of Life," by Howard Sutherland, is announced for publication in the autumn by Rand, McNally & Company.

Henry Holt & Company announce for autumn publication a translation of Selma Lagerlöf's "Christ Legends," by Velma Swanston Howard.

The Macmillan Company will publish shortly "The King of the Dark Chamber," by Rabindranath Tagore.

The Century Company announces the publication next month of "Little Eve Edgarton," by Eleanor Hallowell Abbott.

The following books are promised for publication in the autumn by the John C. Winston Company, of Philadelphia: "The Bend of the River," by Max Adeler; "The Quitter," by Jacob Fisher; "The Mary Frances Housekeeper," by Jane Eayre Fryer; "Sylvia's Marriage," by Upton Sinclair; "Myths and Legends," by Logan Marshall.

The University of Chicago Press announces as forthcoming: "Water Reptiles of the Past and Present," by Samuel Wendell Williston; "The Evolution of Early Christianity," by Shirley Jackson Case; "The Lincoln and Douglas Debates," by Horace White (Publications of the Chicago Historical Society); "The Origin and Teachings of the New Testament," by Ernest D. Burton and Fred

Merrifield; "William James and Henri Bergson," by Horace M. Kallen; "Papers of the Bibliographical Society of America," Vol. VIII, edited by A. C. von Noé; "An Historical Examination of Some Non-Markan Elements in Luke," by Ernest William Parsons (Vol II, Part 6, Second Series, Historical and Linguistic Studies); "Sunday-School Buildings and Equipment," by Herbert F. Evans; "A Graded Social Service for the Sunday School," by William N. Hitchins; "The Problems of Boyhood," by Franklin W. Johnson. To the University of Chicago Science series will be added: "The Evolution of Sex in Plants," by John Merle Coulter; "The Origin of the Earth," by Thomas C. Chamberlin; "The Isolation and Measurement of the Electron," by Robert A. Millikan.

The following titles are included in Frederick A. Stokes's September list of announcements of juvenile books: "The Boys' Motley," by H. W. Banks; "The Beard Animals," by A. B. Beard; "The Jolly Book of Boxcraft," by Batten Beard; "A Nursery Book of Science," by Ainsworth Davies; "The Human Side of Plants," by R. Dixon; "Uncle Sam's Modern Miracles," by W. A. DuPuy; "The Buccaneers of America," by John Esquemeling; "Margaret's Book," by Fielding H. Hall; "Boy's Book of Astronomy," by Ellison Hawkes; "How to Enjoy Pictures," by Ruth Head; "The Kewpies and Dotty Darling," by Rose C. O'Neill; "The Kind Adventure," by Stella G. S. Perry.

For the third volume of his "History of European Diplomacy" (Longmans; $6 net) David Jayne Hill has chosen the appropriate sub-title "The Diplomacy of the Age of Absolutism." In it he traces the main outlines of European diplomatic history from the ascendency of France in 1648 to the diplomatic bankruptcy of France after her loss of Canada and India and her failure to prevent the partitions of Poland and Turkey in 1772-74. It is decidedly a better volume than its two predecessors. Doubtless, the diplomatist of today warms more quickly to his subject in this later period, inasmuch as the territorial settlements and the diplomatic usages which were adopted in the long negotiations preliminary to the Peace of Westphalia are virtually the essential starting point for the modern diplomatist. In the century and a quarter following the Peace of Westphalia, the typical and the usually successful government was that in which absolute power was concentrated in the hands of a single powerful monarch or minister. By centring the attention, therefore, upon a few great diplomatists —Mazarin and Louis XIV, John DeWitt and William III, Dubois and Alberoni, Walpole and Pitt, Catherine II and Frederick II—Dr. Hill is able to tread a fairly easy path across the tangled maze of diplomatic endeavor of many lesser men. He thereby secures a unity and continuity which would have been impossible had he tried to take up the aims of all the rival nations. He wisely sacrifices completeness to clearness. In his selection of topics to be considered his judgment is broad and catholic. His style is simple and direct, and is enlivened by apt quotations from others and by happy phrases of his own. On the other hand, his authorities are often a little dusty. Over such an immense field he has not always been able to note fine points which have been established by recent scholars: Admiral Van Tromp, for instance (p. 10), sails down the Channel again with the apocryphal broom at the masthead. Being frankly based mainly on the secondary accounts of others, his work makes no original contribution to knowledge, except in so far as his synthesis shows the relation between absolutism and diplomacy. There are helpful bibliographies at the close of each chapter, but it is surprising that a recent ambassador to Berlin should think (p. 534) that Frederick the Great's "Œuvres" are included in his "Politische Korrespondenz." However, new American diplomatists are not likely to pack in their travelling bags a more satisfactory one-volume history of a period which it will do them no harm to know than is contained in Dr. Hill's thoughtful volume.

"My Days of Adventure," by Ernest Alfred Vizetelly (London: Chatto & Windus; 7s. 6d. net), comprises the entertaining reminiscences of a young English war correspondent during the Franco-Prussian War. The author was connected, as he states repeatedly, with a family of famous war correspondents, and consequently knew many interesting people by sight and even by acquaintance. He was only in his teens when the war broke out in 1870, but he had once been noticed by Napoleon III when helping secure some copy for the *Illustrated London News*. He stayed in Paris during the summer, heard on the boulevards of the terrible French defeats, was swept into the Palais Bourbon by the republican mob, which insisted on the downfall of the Second Empire, and experienced fifty days of the siege. He was fortunate in having a shrewd concierge, Saby, who provided tolerable food even during the scarcity; among other things Saby had had the wit, before the Germans closed in, to acquire some rabbits which multiplied with their usual fecundity, in spite of the Germans; so that he was soon able to sell *lapins* to Rothschild at ten dollars apiece. The account of Paris besieged, with many anecdotes, is the best part of the book. In November, thanks to the intervention of Mr. Washburne, the United States Minister, the author was allowed, with a band of other foreigners, to depart from the famishing city. He then followed the armies north of the Loire, and sent to the *Pall Mall Gazette* the first published English account of the hard fighting at Le Mans, of which he had been an eye-witness. The author's egoism palls somewhat, yet it is doubtless the unimportant details of how much cheese he ate, how cold he felt, and what he said to his father that make his rambling narrative readable.

John Addington Symonds was by no means a great writer, but he was an extraordinarily stimulating spirit. Whether in Greece, Italy, or Elizabethan England, he had the gift of making the past seem vivid, related to our own emotions, and important. Those who, like the reviewer, owe much to him, will admit with some reluctance the reservations made by Van Wyck Brooks in "John Addington Symonds: A Biographical Study" (Kennerley). Yet Mr. Brooks's estimate seems both just and sympathetic. Symonds was fundamentally a derelict æsthete, who sought escape from self in popularization, who ultimately achieved conviction in the task, and who entertained rather despairingly the hope that an accidental immortality might result from a single hit. This somewhat sporting attitude towards literature was largely a personal deduction from Whitman's philosophy of life. The wholesome influence of Whitman on the morbid Symonds is one of the curiosities of literature. It will never be thoroughly understood until some one deals frankly with Symonds's underlying vice. Since the matter is more than hinted at in the official memoir and avowed in semi-private publications, the present biographer seems to us unduly reticent or strangely ill-informed. Unquestionably, it was the ambiguity of Whitman's doctrine of male love that first attracted his British admirer. That such a curiosity should have been a stage towards a kind of moral conversion is surely worth noting. At Davos, in his long fight against consumption, Symonds attained a fairly patriarchal standing. His life there was so normal and serviceable that one must most regret the hectic enthusiasm that drove him to constant overproduction as a refuge from himself. Thus his writing assumes the air of an accomplishment, and his enthusiasm takes on the somewhat perfunctory vim with which one enters upon a favorite game. This produced the paradox that so copious and eager a writer is at his best, not in original production, but in translation. We agree with Mr. Brooks that the version of Benvenuto Cellini is likely to outlast the rest.

Mr. Brooks's essay is an excellent bit of criticism, written with sympathy, discrimination, and distinction. We quote his statement of the fundamental weakness of the gifted author of the "Renaissance":

> True literature strikes a middle term, where self and theme coalesce. In poems, essays, subjective work, theme is harmoniously submerged in personality, just as in really great histories and biographies personality is harmoniously submerged in theme. Symonds, not in his biographies, not in his *magnum opus*, reaches this point; certainly not in his poems and essays. He is not quite the true historian, the true biographer, who finds satisfaction in a just view of objects. In all his pseudo-objective books the history of the man or the epoch is, one feels, continually being utilized, restlessly, half-consciously, in place of strictly creative work, to test the point of view of its author. As a corollary, in his subjective work, his poems, his personal essays, one feels that the author is trying to get away from himself, to submerge himself in objects. He cannot find himself, because he cannot lose himself. Hence, this morbid shyness—getting himself by a kind of blunder into the foreground of his objective themes and on the other hand failing to subdue objects to himself: neither the literature of knowledge nor yet the literature of power, but always a fatal mixture of both.

The opinion seems to us eminently just, yet precisely this way of mixing himself rather indiscreetly in his works of scholarship gave them an uncommon warmth. They struck fire from impressionable young people, as few similar books have ever done. To have approached the Greek poets and the Renaissance under his somewhat fitful guidance may still seem a privilege, even when riper years shall have revealed a flickering brilliance in what once seemed a steady blaze.

Prof. Martha Hale Shackford adds one more to the lengthening list of mediæval texts in modern dress. The title, "Legends and Satires from Mediæval Literature" (Ginn; $1.25), is not to be strictly interpreted, for the volume contains, in addition to legends like the "Purgatory of St. Patrick" and the "Life of St. Margaret," and to satires like the "Land of

Cockaygne" (somewhat abridged), such various matters as the "Amorous Contention of Phillis and Flora," a twelfth-century debate, in the Elizabethan translation of Chapman; extracts from the "Bestiary" and the "Lapidaries"; and the romance of "Sir Orfeo" in its Middle English form. There is sufficient variety of matter and of manner to extend to the reader an agreeable invitation to explore further in the byways of mediæval literature, among which the notes point the way.

"Nantucket: A History," by R. A. Douglas-Lithgow (Putnam's; $2.50 net), is written, as the author explains, because "no systematic record of Nantucket has appeared since 1835, when Obed Macy's 'History' was published." Meantime, however, many books, historical, biographical, genealogical, and geographical, have been printed dealing in detail with various phases of the island's past, and to these the author-compiler acknowledges his debt, making his selections cover a wide range of time and events. Certain Nantucket experts also have contributed chapters covering their special fields, and the author has painstakingly made a chronological record of all the important events on the island during the latter half of the nineteenth century. When we read that "the names of more than twelve thousand descendants of Tristam Coffin can be traced. The ramifications of the family extend to England, to all the British dominions, and to every State of the Union," we begin to feel that there is a very large public to whom a new history of Nantucket will appeal. Special mention should be made of the chapter on Eminent Nantucketers. The reader may smile over the author's rhetorical flight in his introductory paragraphs; but to one who knows and loves the island this will appear no mere spread of flowery phrases. To him it is a sacred truth that "this freedom-hallowed spot has sent its natives to work in the cause of human progress, to achieve national distinction and reputation, and to reflect unsullied honor upon the place of their nativity."

A number of new volumes have recently been added to the series of Outing Handbooks, published by the Outing Company (70 cents net each). Of course, none other than Charles Frederick Holder, of Tuna Club fame, could be the author of the volume on "Salt Water Game Fishing." It is a very pardonable pride that leads him to mention in four or five different chapters the latest fruit of the Tuna Club's sowing in the passage through the Californian Legislature of an act protecting the spawning beds along Santa Catalina Island from the ravages of market fishermen. His chapters are spiced, naturally, with many references to his own and other exciting adventures in sea angling, a sport which in its higher development owes more to him than to any other one man who has ever lived. The subject of "Iceboating" is presented by Archibald Rogers, H. Percy Ashley, and Dr. William M. Stanbrough, under the editorship of Herbert L. Stone, editor of *Yachting*. The instructions given cover both building and sailing. The volume on "The Canoe," by Robert E. Pinkerton, after considering more narrowly matters of selection, care, and handling, branches out into a number of chapters on the general requirements of a canoe outing trip, such as tents, clothing, bedding, cooking outfit, and camp-making. A volume on "Tennis Tactics" is from the pen of Raymond D. Little, winner of the doubles championship in 1911. Mr. Little puts his emphasis on generalship and strategy, as the features of the game about which least has heretofore been written. The subject of "Taxidermy" is handled by Leon L. Pray, a practical taxidermist. After a very brief chapter on tools and materials, Mr. Pray takes up in order the mounting of the small bird, the small mammal, the game fishes and reptiles, the Virginia deer head, and the coyote, illustrating his directions with a number of diagrams in each case. For the one obvious criticism of the book one may go to Horace: *Brevis esse laboro, obscurus fio.*

"The Renaissance of the Greek Ideal," by Diana Watts (Stokes, illustrated; $5 net), is a large and well-printed quarto which develops a theory of exercise. Mrs. Watts's system grew out of the endeavor to analyze and imitate the poses of certain Greek statues, notably the Discobolus and the archer of the Ægina pediment. Her experiments convinced her that Greek training consisted in perfect control of the tense body, the position of head and torso remaining virtually unchanged in the most active movements, the work being thrown upon the balancing limbs. From these imitative studies she draws a series of exercises involving utmost accuracy of execution, tension throughout the movement, exquisite balance. Characteristic of the system is mounting a high block without bending the head and back. The feat seems to be a correct analysis of a famous marble of a charioteer. Some dozen movements, many of which are of a dance-like order, are fully described and illustrated by photographs and cinema series. By doing the exercises in a dark room with electric lights attached to her feet and the camera vertically above, Mrs. Watts obtained very interesting plans of her exercises. These came out in beautiful and regular curves, which the authoress regards as a demonstration of the correctness of the scheme. It may be said at once that the exercises are beautiful and extremely difficult. That they will do good to any sound person practicing them, Mrs. Watts, beginning after forty, proved in her own case. One must regret the too-ambitious title of what is in most respects a good book. The principle of tense balance is perfectly familiar to any fine dancer or figure-skater. The patterns of figure-skating much resemble Mrs. Watts's geometrical plates; in fact, her exercises, with due allowances, are often very like the skater's. As for the theory that a perfectly trained body is "tuned" to respond to the "cosmic forces," the history even of Greek athleticism hardly warrants such a belief. Unless the cosmic forces are purely physical or, as Mrs. Watts intimates, an indistinguishable blend of the mental and physical, those who have been in nearest touch with the world forces have not been trained athletes, but often aged or even invalid persons. Still the mysticism in this book may be taken or left, according to the reader's mood. An enthusiast for physical culture will find much to interest him in the system, and the archæologist will find hints of a very sensible method of interpreting the difficult postures represented by the ancient sculptors.

"Theological Symbolics," a posthumous volume by Prof. Charles A. Briggs (Scribner; $2.50 net), is a study of the official Christian creeds in the interest of church unity. The division of the subject indicates the author's practical purpose and point of view. Part I treats of Fundamental Symbolics, the classic ecumenical creeds officially accepted by all the larger bodies of Christendom. Part II is entitled Particular Symbolics, in which Professor Briggs analyzes and interprets the conflicting symbols which arose in the Protestant Reformation and subsequent divisions. In Part III, Comparative Symbolics, an effort is made to determine the consensus of doctrine in the symbols of the separated churches and to prove that adjustment and agreement is possible. Professor Briggs urges that a sufficient platform for reunion is found in the ecumenical creeds, in which the three great divisions of Christendom actually agree. He pleads for a supreme jurisdiction, under which "the subordinate jurisdictions representing each of the three divisions, and the particular jurisdictions into which each of these are or may be divided, may still retain their particular symbols and particular institutions without any interference whatever on the part of the higher jurisdiction." The example of the United States and the separate American commonwealths is cited. The desire to promote unity led Professor Briggs to minimize differences and to lay undue stress upon creedal statements in which various branches of Christendom appear to be in harmony, as well as to neglect many important differences in principle and point of view which have never found expression in official symbols. Modernism, both Catholic and Protestant, is something Professor Briggs did not at all understand, and since the real problem of Christian unity is the reconciliation of ancient and modern faith, there is a pathetic aspect of this scholarly and conscientious endeavor to promote harmony by harmonizing outgrown and discarded symbols. The student of the creeds will still need other manuals for reference to the exact language of the symbols, but will find in the present work valuable bibliographical material. As was evident in an earlier work of Prof. Briggs on the Apostles' Creed, he was unable to conceive a symbol as the outgrowth of the religious life and problems of a particular age.

The last issued double section of the Oxford English Dictionary goes from "shastra" to "shyster" and completes Volume VIII of that work, leaving parts of Volumes IX and X to be finished. These two volumes will be issued by Sir James Murray and his coadjutors, probably in 1917, the year of Sir James's eightieth birthday, as predicted by him last year. He published the first section, "A—Ant," in 1884, and it is to be hoped that he will live to see the noble work completed. Dr. Henry Bradley, of Oxford University, is the editor of the present section, and in his prefatory note says that the number of words recorded is 3,670, as against 1,525 in the Century Dictionary. This discrepancy is not nearly so great as it appears to be, because so many two-word compounds of practically self-evident meaning are included in the Oxford work. He also notes that this section is peculiar in that it records no words, except a very few phonetically abnormal ones, from Greek, Latin, French, or Old Norse, the initial of the words being the digraph *sh*. He might well have compared it with the group of words, occupy-

ing nearly two hundred pages, beginning with the digraph *ch*, where are found not merely words of Greek origin, the digraph being a purely Greek borrowing, but all sorts of other words, the digraph having become well Anglicized.

The section is marked by the absence of conspicuous finds in the mistakes of other books, but exhibits the immense superiority in citations and consequent sense-development of words having a really literary history that distinguishes this work from any other dictionary ever published. Some of the notable terms are *shed, sheen, shine, shirk, shoot,* etc. This class of words, with their citations, discloses an admirable, almost Biblical, accuracy of typography and great acumen and care in comparison; but an examination of the section discloses a lamentable lack of care in the treatment of a class of words of more technical or superficial importance. It is unfortunate that these words were not either omitted or else treated with such care as to make the dictionary a work of final authority. Related words should have been compared to see that they agreed and the other works of reference, which appear to have been used irregularly or ignored altogether, should have been used systematically. For example, the earliest and only citation given for *shuck* in the sense of "the shell of an oyster or clam," is: "1881 Ingersoll *Oyster Industry*"; but Bartlett noted the use of the term in this sense in 1859, and this Bartlett is cited under *shindig*, and elsewhere. *Shindig* is a common enough word in the United States, but no American citation except from dictionaries is given. The word is slang, but is marked only "U. S."; yet *shebang* and *shyster* are properly marked "U. S. slang." When correct information as to American usage is to be had for the asking, it would be better to give it. The interesting etymology for *shyster* given in the New International Dictionary as being: "E. dial., from Ir. *siostair* barrator," is ignored. The citations under *shirred* are enough to warn the editor that the definition under *shirr*, "To poach (eggs) in cream instead of water," is inaccurate. This is quoted from an American dictionary, but should have been cited and a correct definition given. Many cook books afford one.

Prof. Joseph Schick, whose pursuit of the Hamlet story led him into a veritable Shinar of Coptic, Kurdish, and the like, now appears in the current "Jahrbuch der Deutschen Shakespeare-Gesellschaft" (Berlin: Georg Reimer), with a version of this tale in Chinese. The hero, who, like Hamlet in Saxo's telling of the story, though the bearer of a letter intended to bring him to his death, luckily wins fortune and a bride instead, is in this case no less a person than the Buddha himself. The present text, probably ultimately of Sanskrit origin, comes from the middle of the third century of our era. The original is collated with all the affectionate enthusiasm which marks the author's "Corpus Hamleticium." This issue of the "Jahrbuch" of the Society, now in its fiftieth year, contains, among others, essays on "Shakespeare und die Impresa-Kunst," "Shakespeare und Haydn," "Shakespeare und das Burgtheater," besides the usual summaries of recent publications in this and related fields.

Science

LEGENDS OF THE SUN.

Sun Lore of All Ages. By W. T. Olcott. New York: G. P. Putnam's Sons. $2.50 net.

What more natural than that primitive man should speculate on the great problem of the origin and creation of the visible universe, the sun and moon in especial? His myths relate how that orb, without separate existence before the birth of the world itself, was built and set going by the god of light. In yet other legends the sun either sprang into being as the sacrifice of the life of a god or hero, or was rescued from a dungeon or cave by a champion. Perhaps the solar myths of the North American Indian are the most interesting of all, because of their variety and ingenuity. While the various tribes agree that the world was dark before the sun was made, the majority of them had each its individual tradition as to how the sun actually came into existence. The great tribes of the Northwest believed that the raven, their supreme deity, one day hit upon the sun quite accidentally and, realizing its probable value to man, beast, and plant alike, set it in the heavens where it has ever since remained; the Yuma tradition was that the great god Tuchaipa created first the world, then the moon, the light of which proving insufficient, he provided in the sun everything requisite for man's need. Especially interesting is a legend related in full by Jeremiah Curtin in his "Creation Myths of Primitive America," a purely imaginative product ranking high with the best examples of Grecian and even Egyptian mythology, and among the Yana Indians of California there is a somewhat similar myth; the Cherokee myth reveals the sun as arbiter of man's fate; a Ute myth tells how the sun had to be conquered and rendered subject to the will of man before it would perform its daily task in a regular and orderly way; the Apache myth, while agreeing with most of the other Indian myths as to traditional darkness on earth, due to the belief that in the beginning the only light in the world emanated from the huge eagle feathers that people carried about with them, relates how a council of the tribe was convened to devise a better system of lighting: result, a great experimental disc painted bright yellow and with its more successful successors placed up in the sky one after the other, goodness knows how. The Kootenay myth creates the sun out of a ball of grease, through the instrumentality of the Coyote or Chicken Hawk; and the Cherokee myth was more elaborate and even implies that the legend of the Deluge was not unknown. We must pass over the Yokuts and Mewans and Pomos and Wyandots to touch upon the novel Navajo legend of the creation of sun, moon, and stars, which reveals the widest imaginative range of primitive man. Mr. Olcott, in order to accentuate the quaint imagery of these myths, has followed their original language quite closely; and he shows conclusively that the Indian was ever a poet, the study of whose tribal legends reveals a charming beauty of expression.

Myths of the solar creation are added from the mythology of Japan, Norseland, the Eskimo, the Peruvians, and the Manicacas of Brazil, the Mexicans, and the bushmen of South Africa; the Maori, the Tongas, and the Dyaks; and the salient feature of most of them is their agreement that life existed on this very insufficiently illumined sphere ages before sun and moon were created and stationed in the heavens.

Then follows a most interesting chapter embodying the views of the ancients as to what sun and moon really were; in the early history of all peoples these bodies were deferentially regarded as human beings, connected with the daily life of humanity, influencing mysteriously man's existence and controlling his destiny, whether as ancestors, heroes, or benefactors transported to the heavens after a life of usefulness here on earth. This supposed influence was largely parental, the first objects of idolatrous worship in the history of humanity being the Great Father (solar) and the Great Mother (lunar). Although naturally distinguished as to sex, the sex assigned to these bodies is sometimes interchanged, as in Australia the sun was a woman, the moon a man. In Peru the moon was mother and both sister and wife of the sun, like Osiris and Isis in Egypt. The Eskimo makes the moon the younger brother of a female sun, the early Malays regard both as women, a tribe of South American Indians makes the moon a man and the sun his wife, while Tylor in his "Primitive Culture" tells us that the Ottawa Indians, in their story of Iosco, picture the moon and sun as brother and sister. As a whole, in North American myths the sun and moon are more frequently brother and sister than man and wife, whereas in Central and South America, and, in particular, in Mexico and Peru, sun and moon were man and wife, and often called grandfather and grandmother.

This confusion of sex, Mr. Olcott remarks, may have arisen from the fact that the day, mild and friendly, would naturally be ruled by a feminine sun, while the chill night would have its counterpart in stern man. In equatorial and sub-tropical regions, on the contrary, the burning and forbidding day-time sun is a man, while the mild and pleasant night is due to a womanly moon, climatic condition alone being responsible for the confusion. So in the Romance languages generally, following the Latin, sun is masculine and moon feminine, whereas in German the gender of these bodies is reversed, and in the Upper Palatinate of Bavaria the sun is still spoken of as Frau Sonne and the moon is called Herr Mond.

From the legend of sun and moon as husband and wife sprang many myths, chief among them the old Persian belief that

the stars are their offspring. Of course, the mythologic sun and moon no more lived happily together than man and wife do now; and the legends of their disputes and marital troubles are many, and it is most interesting to find among the bushmen, almost the lowest tribe of South Africa, the same mythology and celestial lore as among Eskimos, Australians, Egyptians, and Greeks. The culminating chapters of the volume relate to sun worship through all ages and in every clime; and these are followed by the wonderful sun-catcher myths, or legends that relate the fancied snaring of the sun, or retardation in its daily course, from Joshua to Weeseke-jak. Then come solar festivals, a remarkable chapter, and solar omens, traditions, and superstitions. "In short," says Mr. Olcott, "sun worship, symbolically speaking, lies at the very heart of the great festivals which the Christian Church celebrates to-day, and these relics of heathen religion have, through the medium of their sacred rites, curiously enough blended with practices and beliefs utterly antagonistic to the spirit that prompted them" (p. 248).

Following is a chapter on the solar significance of burial customs and the orientation of tomb and temple, for nowhere in the study of ancient rites and customs is the sun's influence on human affairs in greater evidence than in ceremonials attending the burial of the dead. Orientation played an important part in the rite of baptism as well as in many games and customs in vogue to-day: in the ring games of children, for instance, are obvious survivals of ancient sun-worship.

To many readers the last chapter, but one, on emblematic and symbolic forms of the sun, will be the most interesting of all, because these solar symbols enter largely into designs that embellish works of art whether ancient or modern; and as symbolism and worship are closely related, it is most instructive to trace these emblems and symbols to their sources through a study of ecclesiastic architecture, and the structural and artistic adornment of edifices dedicated to worship in very land. There are few modern edifices of the Christian Church but reveal the curious fact and bald incongruity of the combination of pagan symbols of worship with anti-pagan ritual. The symbolism of free masonry is briefly touched upon; in fact, the entire chapter, as well as in some sense the whole book, may be regarded as opening a rich field for further investigation, most fascinating, not only to the scholar, but to the antiquarian.

Whether the author has added anything to the worth of this exceptional book by a supplementary chapter on the Sun as Revealed by Science may be doubted. The work is well-nigh perfect without it, and must take instant place among the really significant books of the year. It is well made, handsomely printed, and fully illustrated, and contains a brief bibliography and fairly ample index.

Drama and Music

A FRENCH VIEW OF SHAKESPEARE.

Shakespeare et la Superstition Shakespearienne. By Georges Pellissier. Paris: Hachette et Cie.

It is always profitable to hear the other side in every case, and so this book may have its uses, although the sentence of unmitigated severity which the author passes upon the great poet is not likely to win the approval of many readers—at least, outside of France. M. Pellissier has at any rate the courage of his convictions, as will appear from the following paragraph of his introduction, in which he states the main theses of his book:

Ayons le courage de le dire, ce "dieu du théâtre" est un très mauvais dramatiste. Nous montrerons qu'il taille ses pièces à coups de hache, que l'invention lui manque, que son pathétique relève en général du mélodrame et son comique de la farce, qu'il n'observe le plus souvent ni la vérité matérielle, ni la vérité morale, qu'il ne sait pas composer un personnage, qu'il substitue des effets de scène ou des déclamations ampoulées à l'analyse psychologique, qu'il prend enfin la place de ses acteurs pour parler lui-même par leur bouche.

When we come to look into the execution of this formidable programme, we discover that at bottom the author is merely reviving the old quarrel between the classical, or rather neo-classical, and the romantic drama. Do you prefer the methods of Corneille and Racine, or do you prefer those of Shakespeare and the rest of the romantic school? This is, essentially, what it all comes to. Indeed, we do not believe that even in specific criticisms much that is new will be found in this volume. On the other hand, the writer has massed such criticisms in a way that no one else has hitherto undertaken. Herein lies whatever value the book may possess.

To illustrate the general spirit of the author's work, we may cite his objection to Shakespeare's free handling of time, whereby the events which fall within a single act are sometimes of such a nature as to require us to assume the lapse of hours or even days. We might remind M. Pellissier that Æschylus, in the "Agamemnon," and Sophocles, in the "Œdipus at Colonus," have been guilty of the same offence without impairing their fame, but what is the use of hauling out of the limbo of forgotten pedantries such objections as these? The same thing applies, for the most part, to his remarks on Shakespeare's frequent changes of scene—only here he might still further have taken into account the condition of the Elizabethan stage, on which, of course, there were no such shiftings of elaborate scenery as are necessary in the modern presentation of plays.

Another stumbling-block to our author is the loose structure which characterizes Shakespeare's plots, as those of the Elizabethan dramatists generally. As every one knows, these writers, in dramatizing the chronicles, novels, etc., that lay before them, did not aim at giving to their materials a rigid dramatic structure. They regarded abundance and diversity of incident as among the chief sources of interest in the drama as well as in prose fiction, and with this principle in mind they even went so far as to combine very often in their plots stories that were originally separate. The chronicle-plays furnish the best illustration of the procedure just indicated, but the same thing is observable, more or less, throughout the Elizabethan drama. Freedom and variety are certainly advantages of such a method, but apart from this, why apply the yardsticks of the neo-classical drama to productions that are constructed on entirely different principles? It is the same attitude of mind that leads M. Pellissier to condemn with particular severity the first scene in "King Lear." Nothing could be more preposterous from his point of view than to give dramatic form to this fairy-tale conception of a King who divides out his kingdom among his daughters in proportion to the strength of their protestations of affection for himself. The lover of the romantic drama might reply that the scene, after all, sets before us, in a form that strikes the imagination, one of the most frequent weaknesses of human nature. In such cases, however, it is better for the representatives of two different tendencies in art not to argue, but to go their respective ways in peace.

The author, it should be remarked, makes no distinction between the plays of Shakespeare's youth and those of his maturity, or between plays like "The Taming of the Shrew" and "Timon of Athens," which are only partially Shakespearean, and others that are wholly so. Similarly, he does not seem aware that scenes like those in which Hecate appears in "Macbeth" or Posthumus's vision in "Cymbeline" are very generally rejected as spurious. The matter, however, is of little importance, for "Hamlet" and "Othello" receive as hard measure at M. Pellissier's hands as the most inferior works that are printed in the collective editions of Shakespeare. We scarcely need add that the reading of this book is a difficult task. The rôle of Zoilus involves an intolerable monotony, and if our author has assumed it, he must suffer the penalty.

The war will have a paralyzing effect upon the musical activities of Europe. The Paris Opéra, already on the brink of ruin before immediate war was dreamed of, can hardly hold its own now; and it does not seem probable that the opera houses of Berlin, Vienna, St. Petersburg, London, Munich, and other cities will be able to open for a winter season. As for the soloists, those who can will no doubt be eager to come to this country for the coming season. Many of them, unfortunately, will have to serve in the armies of their country. Of the greatest of living violinists, Fritz Kreisler, this seems certain, for he is an officer in the Austrian

army. The conductor of the New York Philharmonic, Josef Stransky, is another Austrian subject who may have to follow the call to arms. As he was a physician before he became a conductor, he will probably be in the surgical department, safe from bullets. Among the other great artists who may be exposed to them are the Russians, Chaliapine, Godowsky, Josef Hofmann, Gabrilowitsch, Lhévinne, Safonoff, Siloti, Rachmaninoff—to mention only those best known in this country; the Frenchmen, Clément, Renaud, Saléza, Dalmorcs, Rothier, Dinh Gilly, Marcoux, Roussilière, Muratore, Dufranne, Thibaud, Huberdean; the Germans and Austrians, Goritz, Reiss, Burrian, Hensel, Braun, Weil, Knote, Slezak, Sauer, Wüllner, Burgstaller, R. Strauss, Max Reger, Muck, and many others; to which Italy would add Caruso, Sammarco, Ruffo, Scotti, Bonci, Amato, Toscanini, Polacco, etc.

It is too late to make any suggestions, but one cannot but wish that arrangements had been made for including all musicians in the army bands, for which they would be much better fitted than for carrying guns. Caruso has shown in "Pagliacci" that he is a virtuoso on the drum, and doubtless many of the artists named play one of the instruments used in military bands, or could learn one in a few weeks.

How important a rôle bands play in army life every one knows. In Russia alone there are 100,000 uniformed musicians, one-half of whom are actively employed in the Empire's one thousand regiments, the other half being in the naval and military schools. Ivan Narodny contributed an illuminating article on this subject to *Musical America* two weeks ago. There has been serious discussion, he says, as to whether it would be wise to reduce the number of these musical companies, which cost a great deal of money, but the military authorities have never dared to do so, knowing the seriousness of the results. "Music for a Russian soldier means more than anything else." Before the great battle of Mukden, Mr. Narodny heard a Russian soldier say: "Whether I am to be shot or I have the luck to remain alive, I know not—but I must hear my favorite march this fatal night. It is a stimulation to action, a solace to the soul."

The generals who know this effect of music on soldiers are the ones who have thwarted all attempts to banish music from the army. On this subject Mr. Narodny cites the late General Linevitch, commander of the Russian army, who expressed himself in this forcible language: "Music is one of the most vital ammunitions of the Rissian army. Without music a Russian soldier would be dull, cowardly, brutal, and inefficient. From music he absorbs a magic power of endurance and forgets the sufferings and mortality. It is a 'divine dynamite.'"

The Russian surgeons in the Russo-Japanese War said that the dying soldiers in the hospitals implored that a band might play for them that they might overcome the agonies of pain. Napoleon complained, after he was defeated in Russia, that it was the deplorable result of Russian winter and Russian army music. "The weird and barbaric tunes of those beastly Cossack regiments simply infuriated the half-starved Muscovites to the maddest rage, and they wiped out the very cream of the army," wrote the great conqueror in his notebook.

Art

VERMEER OF DELFT.

PART TWO:—AN ARTIST WHO PAINTED MORE LIKE A DREAMER AND A LOVER THAN LIKE A FATHER AND CITIZEN.

Jan Vermeer was also a most distinguished workman. Within his favorite scheme of straw yellow and blue, his planes of color are scrupulously accurate in atmospheric placing. Hals, had he given himself to work in little, might have shown an equal scrupulousness; no other Dutch artist did. Terborch effaces too much; Metsu lets his objects clash for lack of atmospheric subordination; De Hooch, with a wider range of color, sets himself a far simpler task. There never were more truthful interiors than those of Vermeer, and there never will be. The mere modulation of the apparently uniform tone of a wall, the sparkle of a gilt frame, the blue translucence of an open casement—of these effects, Vermeer is subtlest of masters. His modelling is highly simplified and discreet. Everything is kept rather flat, after a sort that at times will suggest the blander mode of Cézanne, and the form is suggested by the right distribution of large masses of light and dark and by the very accurate placing and texturing of the high lights. The textures are admirable, though never obtruded. Painting with a loaded brush, he yet keeps the surface relatively smooth. Within this smoothness are the most extraordinary modulations, so that a slight change of stroke or thickness will mean satin, fur, white porcelain, latten, or the Persian carpet which appears in so many of the pictures. Such bread and fruit as he painted quite incidentally you will seek in vain until Chardin. His contours or edges are most carefully graduated to accord with the background.

In general Vermeer eschewed the strong contrasts affected by his contemporaries. The blondness of his work gives it a very modern look, and in fact in its endeavor to cope with the actual effects of lighting without forced contrasts it is entirely modern in spirit. Certain eighteenth-century devices of heavy dotting or stippling, for coruscation—Guardi's habitual expedient—seem to have been first tried by Vermeer. You will find these loaded dots on almost any bit of still life, and particularly on the barges in the View of Delft. This fine but perhaps overestimated picture, for its quality is of a sort become rather usual to-day, well illustrates Vermeer's love of harmonious tone and avoidance of crass contrasts. The salmon-pink strand of the foreground and the pale blue of the haven are so nearly of the same value that in a photograph the waterline is found with difficulty. No other Dutch artist would have dared set this bit of true observation against the notorious fact that land and water are very different elements. The whole picture swims in air and diffused light. The red roofs glow between sky and water, as they do in nature, but with a depth no other Dutch painter has attained. The eye goes straight to the picturesque skyline of the town by virtue of the right placing and value of everything. There is no resort to the common device, which Goyen and even Rembrandt employed, of artificially darkening the foreground to lead the eye into the artificially irradiated middle distance. The attraction of Vermeer's picture, a splendid experiment which apparently he did not repeat, lies less in any implication of sentiment than in a quiet candor, probity, and fidelity to actual appearances.

Vermeer's figure composition, on the contrary, is highly conventional, though the convention again is legitimately deduced from facts. He builds his pattern out of rectangles—tables, chairs, casements, frames, floor-tiles cunningly assembled, against which the human figure serves either as an axis or as a contrasting arabesque. Sometimes, as in the Dresden Reader and the Studio, he hangs a curtain in the foreground, thus dividing the first plane into unequal rectangles. In the Love Letter, at Amsterdam, he makes a *coulisse* of several such rectangular forms, curtains and doors, and by displaying his scene far away in a tall slit, obtains an arresting, if rather sinister and uncharacteristic, effect. The convention is carried to the furthest point of refinement in the Music Lesson, at Windsor. The tall rectangles of casements and picture and mirror frames contrast with the oblong of the virginals high up in the picture. The tessellated floor repeats the geometrical pattern in a transverse sense. The figures of a girl and her auditor are skilfully set to break the severity of the scheme. A 'cello and a heavy rug trailing over a table are contrasting elements. Everything gives a sense of quietude and harmony. The respectful attitude of the man is rare in Dutch art, and wholly typical of Vermeer. Sometimes, as in the Amsterdam Reader, the rectangles overlap in interesting fashion, forming an elaborate fret. A more simple and normal use of this standard motive may be seen in the Charming Lady at a Casement, in the Marquand Room of the Metropolitan Museum. A table and map cut the wall into a sideways T (⊢), which is filled by the double S curves formed by the woman's outstretched arms and shoulders. There could be no satisfactory way of establishing a pattern, and the whole thing, with its lovely harmony of faintly shimmering blue and pale yellow, gives an early-morning peaceful impression, as of a day happily and well begun. The Studio, in the Czernin collection, which Mr. Hale regards as technically the finest Vermeer, shows a great variety of rectangles densely set about the map on the wall, with the figures arranged in piquant dissonantal relations to the general pattern.

Mr. Hale suggests that Vermeer may have drawn his rectangular-arabesque scheme from the study of Japanese paintings and

prints. The coincidence is indeed interesting, but the Japanese did not systematically employ this system of space division until a half-century or more after Vermeer's death. The scheme, after all, had become almost an academic requirement in Holland by 1660. Terborch, Metsu, and De Hooch employ it, often felicitously; Vermeer simply adds to it variety and refinement.

With fewest exceptions, the cool light ripples through Vermeer's pictures from left to right. Generally the brush stroke follows the direction of the light, across and not with the forms. Such ability to secure the modelling by painting fearlessly down the light is, Mr. Hale justly observes, the surest mark of an accomplished luminist.

It would be easy and not unprofitable to carry the analysis of Vermeer's style much further, but it may all be read in Mr. Hale's elaborate and convincing chapters. I wish merely to remind the reader once more that this marvellous technique is not a thing in itself, the casual product of an uncommonly accurate eye and hand, but the means of expression of a rare sort of man who was much more than a painter—his homage to the daily beauty that his womenkind brought into his home.

If I am right in seeing, with M. Van Zype, a painter of feminist type in Vermeer, the reader already knows a good deal what sort of person the artist was. But the reader must divest from the idea of feminism certain morbid features which it has acquired in recent time, and think instead of a cult of woman inspired only by a normal sensuousness and by a fine chivalry. It is the gentleman's attitude to-day, and it was a pretty rare one in seventeenth-century Holland. Vermeer's refinement and idealizing tenderness must have come to him by nature, but they may well have been strengthened by gradual processes of education which may be traced in his works, and confirmed by marrying young a woman whom he loved. We may fitly end where logically we might have begun, by seeking for Vermeer's artistic origins and inquiring what light they cast upon his personality.

To be sure, the contemporary poetaster, Arnold Bon, deploring the death of Karel Fabritius in a powder explosion, represents Vermeer as a phœnix, an *alter ego* of Karel, rising superbly from the powder reek, but this does not say that Vermeer was Fabritius's pupil. Still, modern criticism has grasped at the possibility of such a link between the mysterious and exquisite Fabritius and his younger friend, and by including the two in his great "Catalogue Raisonné," Hofstede de Groot has given great currency to what is rather an unlikely hypothesis. Many critics, following Thoré, assume that Vermeer developed under the influence of Rembrandt. Against this is the blondness of the work, its straightforwardness, and lack of fantastic quality. A more plausible theory is that he was the pupil of the accomplished chiaroscurist, Leonard Bramer, who had studied at Rome with the idyllic Elsheimer. In 1654, and later, during Vermeer's early membership in the Guild of St. Luke, Bramer was head man, and presumably a leading spirit, in the small artist circle at Delft. An Italianate taste is betrayed in the pictures represented in Vermeer's interiors. A Crucifixion, a Last Judgment, a Doubting Thomas, a Finding of Moses, and a Cupid attest the master's admiration for the grand style. The occasional poor Vermeers—they are so disconcerting that John Van Dyke needlessly evokes a pseudo-Vermeer in explanation—I mean the two pictures in the National Gallery and the Love Letter at Amsterdam as types—these poorer Vermeers suggest that in his later years he, too, was yielding to the general Gallic sleekness of which the Mierises were the most offensive exponents. Throughout, he seems something of an eclectic. In what may well be his earliest pictures, Christ with Mary and Martha, and Diana and her Nymphs, Vermeer is evidently composing his groups after the consecrated pyramidal formula invented in Italy.

The gravity of the New Testament scene is remarkable, the relief salient, but without giving much sense of air and space; the Martha pleading for the active life as she offers bread is a noble, amiable, and even pathetic figure; the pyramid made by the three forms is carefully established in three dimensions. At long range the picture might easily be taken for an exceptionally fine work of the Caracci school, and there we must seek its inspiration.

Still quite Italianate is the Toilette of Diana. The five figures are disposed as an oblique pyramid. Primarily the picture is a study in delicate light and shade, the landscape being merely perfunctory. Five buxom Dutch girls are nearly dressed after their swim. One shows part of an exquisitely modelled back. One kneels and is drying the modestly exposed feet of the lass who is designated as the Sylvan Goddess only by the crescent in her filleted hair. What is impressive about this little pastoral is the ritual gravity of these wholesome young creatures in their trivial actions—the delightful unconsciousness of it all. Among the Dutch painters, only Rembrandt, in the Finding of Moses, of the Johnson collection, has conceived anything at once so arcadian and so homely. There is an odd Correggian suggestion about Vermeer's group. Unquestionably he had studied classic Italian art both in engravings and in such derivative pictures as those of Rubens and Van Dyck. The travelled and cultured Leonard Bramer may well have inspired such studies. In fact, there may have been a moment when young Vermeer, too, might easily have slipped into a hazardous cosmopolitanism. But his lucidity and intellectual independence were no less notable than his flexibility. For him experimentation a-field was only the road to a finer native idiom.

In the big canvas, The Procuress, dated 1656, he is plainly finding the way. It is a bordel picture, of the sort which Frans Hals had made staple at neighboring Haarlem. Four quite unconvincing revellers are seen at half-length behind a table, over which falls a fur wrap and an Eastern rug. At the right an eager scarlet-coated gallant fondles a pretty wench from behind, thrusting a gold piece into her hand, which lies open on the table. Her face is untroubled, her air innocent, and while she receives the money, she carefully steadies a massive wine-glass with her other hand. At the right another long-haired celebrant grasps a glass, while clutching the neck of a viol, and grins rather aimlessly out of the picture. Between the two wastrels the shrewd face of a middle-aged procuress peers greedily at her ward. The color is a handsome if startling blare of scarlet, crimson, and yellow. The composition, the table occupying all the lower half of the picture, making an odd formal arrangement, and the frame crowding the heads above, is unexpected, piquant, restless—everything that Vermeer in his maturity is not. The sense of space and quiet is absent. Throughout, the picture suffers from over-emphasis. Vermeer brings to his uncongenial theme neither the moralistic unction of a Jan Steen nor the magnificent imperturbability of a Terborch. What is remarkable about the picture is the beautiful painting of the accessories and the endeavor to embody a thoroughly hackneyed matter in a novel and interesting composition.

At least it is the renunciation of the grand style. Mr. Hale thinks that the magisterial Milkmaid at Amsterdam may have followed this picture closely. Here the finished Vermeer is found. The serenity of his home, the charm of the serviceable women who kept it bright—here was the new and permanent vision. To the end of his short life Vermeer was to paint more like a dreamer and a lover than like a father and citizen. To lend truth and dignity to his dream he will spare no pains of acute observation and cunning craftsmanship. Is not this the very simple secret of Vermeer, most engaging of Dutch artists, consummate practitioner among artists of every time?

His home was full of music. Musical themes constitute the largest class of his works. Musical instruments are introduced into several others. His best pictures have something of the quality of a seventeenth-century motet. There is the same broad and generous harmony, those exquisitely balanced blues and yellows, in the details; something of the accurate, almost pedantic, construction of the whole in its calculated geometry. The glamour lies largely in this combination of breadth and spaciousness and lyrical sweep within a scrupulously formalistic framework. Such measured lyrism, with a tinge of preciosity, was a most characteristic artistic product of Vermeer's times—it is the specific note of contemporary French and English verse, and he himself is its most distinguished exponent in the art of painting.

Frank Jewett Mather, Jr.

Finance

THE NEWS AND THE FINANCIAL MARKETS.

At the end of business hours on Thursday of this week, the New York Stock Exchange will have been closed three weeks. This is much the longest consecutive suspension of business in its history. During the panic of 1873, the Exchange shut down in the middle of the day's business, Saturday, September 20; it opened at the usual hour on Tuesday, September 30, and that was the "record" until 1914. During this present three weeks' silence of the stock market, since July 30, there have been momentous happenings, and by no means all of them were in the category of war news. It is a problem of more than mere hypothetical interest, how stock market prices would have moved in response to each of them; for some day, the Stock Exchange must reopen.

If the Exchange had not closed on the last day of July, it is certain that an extremely violent break in prices would have occurred. Selling orders from Europe, with discretionary power for agents to sell 5 points, and sometimes very much more, below the previous day's close, were known to be overhanging. The closing of London's Stock Exchange would have turned the flood of panicky European liquidation on New York, and, though "bargain hunters" would undoubtedly have been most active, their buying could hardly have averted the break. There would quite possibly have been some Stock Exchange failures.

But it has been the rule in all of our greater financial crises that this extreme demoralization spends itself on the one day of helpless panic. On October 24, 1907, with money at 100 per cent. and stocks falling 5 to 10 points, there was talk of closing the Exchange. But on the following day, in the face of 75 per cent. money and numerous bank failures, a violent reeovery ensued.

The reasons for that recovery (as on all previous occasions of the sort) were knowledge that important relief expedients were preparing, and buying for account of foreign markets. The first of these influenees would have been at work on Saturday, August 1; Congress rushed through the emergency-currency plan that day, and the London news foreshadowed the remarkable series of relief measures which followed. But the other traditional influence for quick recovery could hardly have prevailed as it did in 1907 and 1893. This time, the whole world was simultaneously in a state of outright panic; something perhaps unprecedented.

Yet recovery from the worst must presently have come, even with Europe selling, for the relief measures took effect at once, quite altering the immediate outlook. Our sudden and large bank deficit of Saturday, August 2, would not necessarily have stopped that recovery; a similar bank statement, forty-eight hours after the panic day of 1907, did not check the upward reaction. But it is not so easy to say how the market would have acted, after England had actually declared war on Germany, on Tuesday, August 4.

It would seem certain that the unexpected check by Belgium to the advance of the German troops towards Paris must have sent prices up. It is true that, in 1870, the succession of easy Prussian victories over France caused a rise on the London Stock Exchange; that was because they foreshadowed early ending of the war. But similar German victories, last week, would have foreshadowed a critical military situation for Great Britain, which could hardly have failed of ominous reflection here. How prices would alternately have been affected by the railway rate decision, on the second day of the Stock Exchange suspension—news which we lately thought was to determine the whole movement of our finance—by the loss of $57,000,000 cash in the bank statement of August 8, by the monthly crop report of the day before, with its cutting down of 234 million bushels in the estimate on corn yield and of 29 millions on spring wheat; by the increase of 125,000 tons in the Steel Trust's unfilled orders for July, and by the District Court decision against he Harvester Company under the Anti-Trust law: all this is not so readily imagined.

The Stock Exchange's day-by-day reflection of the news from the Belgian battlefields might have given us something which the censor could not suppress. Imagining the stock markets of London, Paris, and Berlin now to be freely operating, and prices in each of them accessible, the cabled quotations would possess very rare interest. In the possible line of battle now impending stands the town of Waterloo; and it so happens that, when the famous conflict there was fought, ninety-nine years ago, the channels of information and the Stock Exchanges were open.

That battle was fought on June 18. British consols had fallen from 59½ at the opening of June to 56 that day. Communication, in those days, was slow; there was no telegraph, and London usually got its news from the Continent two days later. On the 16th the Prussians met their severe reverse at Ligny, and that was all the news that the City had, on the day of Waterloo itself. There will come a day or two when London, even with cable and telegraph, will have another such period of suspense.

Consols were at their lowest when Napoleon began the fight at Waterloo. On July 20, the London *Times*, in a double-leaded editorial, told that "a Mr. Sutton, who we understand owns the packets plying between Ostend and Colchester, had heard at Ostend the news of a great victory, and had ordered one of his vessels at once to sail for England, though without passengers; he himself crossing in her." Mr. Sutton thus seems to have brought the first news; but on the same day—again quoting the editorial statement of the London *Times*—"those who watched the operations of the Stock Exchange were persuaded that the news would be followed up by something still more brilliant and decisive; some houses, generally supposed to possess the best information, being among the purchasers."

What ensued was particularly interesting. Official news of the battle of June 18 reached London on the 21st, in Wellington's terse announeement of "the complete overthrow of the enemy's army." Consols advanced, yet they rose only 4 points in the next four days. Of French Government bonds, one Paris newspaper remarked, when the news of Waterloo came in, that "the rapid rise of the public funds, amidst our disasters, presents a vast field of meditation." They stood at 56 on June 14, when Napoleon left Paris for the front. They closed on June 30 at 65¼.

Winnipeg, Canada, F. R. Morris.

THE GREAT ILLUSION

A Study of the Relation of Military Power in Nations to Their Economic and Social Relations

By NORMAN ANGELL

Crown 8vo. 428 pages. New Edition, Revised, with Additional Material $1.00 net; by mail $1.10.

"Mr. Angell throws into the dust-bin the worn-out theories, the axioms of statecraft, the shibboleths of diplomats, the mouthings of politicasters, as to the necessity for war. And from this to a brilliant arraignment of standing armies and navies and war establishments of all kinds is but another step in Mr. Angell's altogether splendid monograph. To use a familiar phrase, no book of similar trend in recent years has caused so many thinking men to sit up and take notice."—*St. Louis Globe-Democrat.*

New York G. P. Putnam's Sons London

PAULINE'S FIRST READING BOOK. About Tom and Jane and their Naughty Friend. By LADY BELL. Square Crown 4to, pp. x+142. $0.60.*

"An excellent example of what is provided for little children in their earliest reading lessons.

"This book betrays manifest ability to gauge the child's ability, or inability, and every page contains matter that will not fail to attract as well as to develop the child's mind in its acquisition of reading. It is in story form throughout."—*Journal of Education.*

LONGMANS, GREEN, & CO.

INTERNATIONAL LAW

By T. J. LAWRENCE

Lecturer on International Law at the British Royal Naval College.

The fourth edition of this standard work includes the results of the Hague conferences and conventions, and is as nearly authoritative as the nature of the subject admits. Cloth, xxi+751 pages. $3.00.

A Handbook of Warring Europe

The New York Evening Post's

WAR GAZETTEER

which is to be issued on SATURDAY, AUGUST 22, contains all the fundamental information about the war, and is invaluable for one who is trying to understand the movements of the various armies and navies.

It gives the size, organization, and *personnel* of these, and has a table giving full details of all warships and airships owned by the various governments. It describes the fortifications on the borders between the fighting countries. It sketches the lives of the principal rulers involved, and states the reasons for the war and the international law on the subject. It treats every aspect of the war in special articles.

There are 36 pages, with photographs, maps, a colored cover, and many other features.

The Gazetteer will be sent to any address postpaid for 15 cents.

The New York Evening Post

Now Ready

OSCAR WILDE AND MYSELF

By LORD ALFRED DOUGLAS

The purpose of the book is to state the true nature of the friendship between Wilde and the Marquis of Queensberry's son; incidentally it presents an interesting view of the '80s. There are passages on the subject of Wilde's personal tastes and habits, his adventures in society, on the unpublished portions of "De Profundis," now deposited, unopened, in the library of the British Museum, and in general an estimate of the famous æsthete and littérateur that reacts against the general praise of late years. Illustrated. $2.50 net; by post, $2.70.

NEW FICTION

Henry Bordeaux, author of "Footprints Beneath the Snow," "The Parting of the Ways," "The Woollen Dress," etc.

"THE HOUSE"

Translated by Louise Seymour Houghton. The last of Bordeaux's books to appear in English, "La Maison," translatable as "Home," or "Our House," or simply "The House." Like all his books, it is true to his thesis of the importance of the family, the race, rather than the individual—the best aspects of French character. $1.35 net.

Mary Finley Leonard:
"THE LITTLE RED CHIMNEY"

A Timely Volume

RAILWAY MISRULE

EDWARD DUDLEY KENNA

To secure the new capital now refused by investors, and to expend it so as to produce not only adequate facilities, but low rates, is the problem discussed by Mr. Kenna. His twenty-five years of active experience as an American railway official, and subsequent study abroad, have led him to believe that the present competitive system is wrong, that the railway system must be regarded as a national institution, regulated as a necessary monopoly. The proposed solution, under either private or government ownership, is striking, but simple in its mechanism. $1.25 net.

BOOKS OF WAR TIME INTEREST

H. C. Chatfield-Taylor's
"THE CRIMSON WING"
A military novel of the Franco-Prussian conflict in 1870-71. $1.50 net.

The Nation.

NEW YORK, THURSDAY, AUGUST 27, 1914.

Summary of the News

The outstanding events in the European war during the past week have been the advance of the German armies in Belgium and the crossing of the eastern frontier of Germany by Russian troops. A more detailed account of these movements will be found on page 243.

On Sunday, failing to receive a reply to her ultimatum to Germany demanding the surrender of Kiao-chau, Japan declared war on Germany, and on Monday it was reported that the fleet had commenced shelling Tsing-tau, the fortified seaport of Kiao-chau. A message from the Kaiser to the garrison of Tsing-tau called on them to defend the place to the uttermost. It is reported that British, French, and Russian war vessels have joined with the Japanese in the blockade, and that British regiments have been ordered to co-operate with the Japanese on land.

Until war was actually declared, it was thought that Germany might seek to compromise the situation by ceding Kiao-chau directly to China, the United States acting as mediator in the matter and accepting the concession from Germany on behalf of China. China is said to have made tentative inquiries of the United States as to what its attitude towards such a proposal would be, but it is understood that the Administration refused to be a party to any arrangement of the kind except with the consent of both England and Japan. On Friday of last week a formal declaration of the policy of the United States was given to Japan. The Government asserted its intention of maintaining absolute neutrality, and at the same time put on record its understanding of the matter as being: that Japan's purpose was not to seek territorial aggrandizement in China; that the territory of Kiao-chau would be restored to China, and that Japan would act only in accordance with the terms of the Anglo-Japanese alliance; that in case of serious disturbances in the interior of China Japan would consult the United States before taking any steps beyond the boundaries of the territory of Kiao-chau.

Japan has been the only country, not already engaged, to enter the general war during the past week. Turkey and Bulgaria both made reassertion of their neutrality on August 19. Sweden has mobilized for the purpose of defending her neutrality, if necessary, and all parties are said to be united in favor of the extension of compulsory military service to two years. There has been much speculation as to the course that Italy would pursue, and reports have been current of mobilization. These reports, however, were denied in a dispatch to the London *Times* on Tuesday, which stated that Signor Salandra, the Italian Premier, had assured a committee of Deputies that no mobilization was imminent, and that if it did occur later it would not mean the abandonment of Italian neutrality.

The following nominations to Federal appointments were officially announced last week: James C. McReynolds, Attorney-General of the United States, to fill the vacancy in the United States Supreme Court caused by the death of Justice Lurton; Thomas Watt Gregory, of Texas, to be Attorney-General in succession to Mr. McReynolds; Frederic C. Howe, Director of the People's Institute, to be Commissioner of Immigration at New York.

The Administration bill introduced last week to insure American vessels and cargoes against risks of war was passed by the Senate on Friday and referred to the House. The bill provides for the creation of a Bureau of War Risks in the Treasury Department, and carries an appropriation of $5,000,000. The act may be suspended by the President whenever in his judgment the necessity for it shall have ceased to exist.

The Jones bill for Philippine independence was favorably reported to the House by the Insular Affairs Committee on August 20. Representative Jones, of Virginia, its author, announced his intention of pressing it during the present session of Congress.

The Administration bill proposing the creation of a $10,000,000 corporation, in which the Government shall be the majority stockholder, to purchase and operate ships in the foreign service, was introduced in the House on Monday by Representative Alexander, of Missouri, chairman of the Committee on Merchant Marine and Fisheries. A considerable amount of opposition to the bill has been expressed, and we state elsewhere our objections to the proposal. The measure, however, enjoys the support of the Administration, and the President on Monday reiterated his intention of pressing the bill to a final passage without modification of its essential features.

Efforts of Republicans and Democrats to come to an agreement concerning an adjournment of Congress in the near future have been abandoned as a result of the war. Chairman Simmons, of the Finance Committee, stated on Friday of last week that, inasmuch as Congress would have to be ready to meet any shortage in the revenue caused by the war, there could be no thought of adjourning at the present time.

According to a preliminary report published on Monday by the Commissioner of the Internal Revenue, receipts from that source were larger for the fiscal year 1914 than in any previous year. From all sources other than income and corporation tax, the amount was $308,627,619, less by $790,535 than the amount for the previous year. From the corporation and income tax, however, the amount collected was $71,381,275, or more than $36,000,000 in excess of the revenue collected from that souree in 1913. The total internal revenue up to June 30 this year amounted to $380,008,894, or about $35,500,000 more than in the previous fiscal year.

As a result of investigations by the Federal grand juries throughout the country into the artificial raising of prices of foodstuffs it is thought that prosecutions may be ordered by the Department of Justice in certain cases. It is stated, however, that the moral effect of the investigations alone has already been beneficial in holding prices down.

News from Mexico continues to be of a reassuring character. Gen. Carranza made his formal entry into the capital on August 20, and appears to have been enthusiastically welcomed. In a short speech he justified the revolution, and declared that the Constitutionalist army must henceforth be regarded as the army of Mexico, the Federal army having "forfeited its mission." It is understood that the Administration is well satisfied with the aspect of affairs in Mexico and with the success of the policy of "watchful waiting." Recognition of the new Government, it is thought, will not be long delayed. At the time of writing, no statement has been made as to the withdrawal of United States forces from Vera Cruz. There have been the customary rumors of differences between Villa and Carranza, which President Wilson on Monday characterized as the work of "interested parties who would profit by intervention." Identification of certain of the "interested parties" should not be a matter of great difficulty. On Monday, also, Gen. Villa issued a statement affirming his desire for "the strictest morality in government," and for the elimination in the future of military dictators. Among the administrative acts of Gen. Carranza have been the annulment of an issue of $60,000,000 of 6 per cent. gold bonds, authorized during the Huerta régime, of which $10,000,000 was in circulation; the reduction of the stamp tax by 50 per cent., and the ousting of the diplomatic representatives of Huerta.

The Bank of England's statement for the week ending August 20 showed that the bank had gained $24,700,000 gold during the week. On the other hand, its rediscounts for other banks had increased in the week by $119,600,000, and the ratio of its banking reserve to its liabilities was 15¾ per cent., as against 17⅛ and 14⅝ for the two preceding weeks, 40 per cent. at the end of July, and 58⅝ per cent. a year ago. In ordinary times the ratio of banking reserve to liabilities must be not less than 40 per cent.

His Holiness Pope Pius X died at 1:15 on the morning of August 20. The Pope had been ill for a week with bronchial catarrh, and his powers of resistance are said to have been impaired by anxiety concerning the European situation. His condition became critical on Sunday, August 16, and on the following Wednesday it was admitted that he was not expected to recover. Premature reports of the Pontiff's death were published in some of the evening papers on August 19. The Conclave for the election of the next Pope will begin on August 31.

The deaths of the week include: His Holiness Pope Pius X, Father Francis Xavier Wernz, S. J., August 20; the Right Rev. Mgr. Matthew A. Taylor, August 21; Edgar Thaddeus Welles, Judge David D. Shelby, August 22; John E. Lamb, August 23; ex-Gov. C. B. Jordan, August 24.

The Week

By chance there reach us at nearly the same moment three publications that seem almost sardonically timed. One of them is a pamphlet, "General Peace Treaties of 1914." Another is the latest report on the status of the movement for settlement of international disputes before a judicial tribunal. The third is entitled "The Churches of Christ in America and International Peace." It is a compilation that was to have been presented at the Church Peace Conference in Constance, Germany, August 2, 1914! What Germany was conferring about on that date, we do not need to say. The question is, however, whether what has occurred to make all these agencies working for peace seem so futile should be thought of as the deliberate and permanent attitude of civilization, or only a passing madness. On this point there can be little doubt. The organic thing, the enduring thing, is the upbuilding of the world by peaceful methods. War is cataclysmic, cutting athwart, for the time being, the whole normal course of the evolution of society, but bound to be pushed aside by the main movement of humanity.

What were the actual steps in the formation of public opinion in this country concerning the war? In the beginning there was no anti-German prejudice whatever. On the contrary, there was every hope that the Kaiser, on his return from the North Sea, would do all within his power to modify the ferocious attitude of Austria towards Servia. Above all, was there something like a strong American confidence, when it was known that England had appealed to the Emperor William to join in a general European Congress to prevent a war, that he would rise to the great opportunity. It was his refusal of Sir Edward Grey's appeal that first shook American faith in him and began to arouse suspicion. Little by little we became aware that he was all along privy to Austria's move so recklessly endangering the peace of Europe; that he blithely took the terrible chance of provoking Russia; and we noted the signs that the war party in Berlin, with the cry of "Now or never," was getting the upper hand. After that came the abrupt ultimatum to Russia and to France; and then it was no longer possible to prevent American sentiment from swinging very sharply against the course of the German Government. People here did not say, because they could not be sure, that the Kaiser really sought and caused the war; but they did affirm that he had it easily in his power to avert the war, and that he failed to do it. The proof of this was fully before them, and it is irrefragable.

Many of the reproaches addressed to Americans by their neighbors of German birth, natural as they are, even while unjustifiably bitter, are really an affront to our intelligence. It is assumed that we know nothing, and that they know everything. They should remember that the same evidence which was under their eyes was under ours. Americans can read. They know the just inference to be drawn from a given state of facts. They know how to discriminate in their admirations. No praise is too high for them of the Germany of science, of wonderful industrial organization, of commercial triumphs, of well-ordered municipal government; but between all this and the Germany of militarist infatuation, Americans are able to make a clear distinction. And it is a violation neither of neutrality nor of fair play nor of sound reasoning, if we in this country believe and maintain that it has been the prostration of the German intellect and conscience, all these years, before the foul idol of militarism that has at last opened the way for the rulers of Germany to put all her splendid civilization to the desperate hazard of war.

The spectacle of the Kaiser's fleet, held captive under the guns of Heligoland and Wilhelmshaven, while German commerce has been clean swept from the seas, recalls the happy phrases in which militarism is accustomed to clothe its designs. Swollen armaments on land were never intended for aggression, but for self-defence against unjust attack. So Germany's ambitious plans of naval expansion were only intended for the defence of Germany's vast sea-borne commerce. Pointing to the marvellous expansion of German trade, it seemed reasonable for the Kaiser's Ministers to argue that for every score of merchant ships launched from German dockyards there must be so many cruisers launched for the protection of the trading ships. It was an argument based on warfare conditions before the age of wireless and cable, even before the age of steam. When nations were at war at the beginning of the nineteenth century, merchant ships were out of touch with land for months, and voyaged under convoy. A protecting cruiser was then of real use. Great Britain might prey upon German ships in the South Atlantic, and German cruisers might have their way in the China seas or, for that matter, in adjoining stretches within the same sea. Control of the seas was then, as far as commerce was concerned, only partial control of the seas. The beaten nation could always save a bit from the wreck.

But how is it to-day when naval powers at war do not fling their battle-line across the hemispheres, but concentrate their biggest fighting ships for a single decisive test? Germany to-day is as powerless to protect her commerce as China is to protect hers, because she can spare nothing from her main concentration for operations elsewhere. A few random cruisers may be afloat in distant waters, but that is because there was no time to call them home. And these isolated units are of virtually no use, because wireless and high speed can always bring together against them the roving ships of an enemy who is superior in strength. As a defender of commerce, Germany's navy could not hope to be effective unless it was strong enough to beat the assembled fleets of Great Britain in a set battle. War on land or sea to-day is not affected by scattered victories or defeats. The account is balanced at the end when the decisive test has been made. The hundreds of millions' worth of German shipping taken by the British will be of little avail to them if the Kaiser's North Sea fleet should destroy the British fleet. Germany's navy, like all navies was built, not for the protection of commerce, but in the hope that it might be brought to an equality with England's fighting navy. And just as land armaments for defence brought about the present catastrophe on land, so her navy for the protection of commerce only brought Germany into collision with England.

The American people is not terrified by the Slavonic bogey. We do not concede that Germany, Austria, or any other Western Power is charged with the responsibility of defeating Slavonic aspiration to national form and expression. Not peril, but safety, comes of achieved nationality. Italy, distraught and divided, Germany, a thing of shreds and patches, Ireland, thwarted and discordant, Alsace-Lorraine, Poland, Finland, and Bosnia, wrenched from their congenial associations—these, by reason of their inner instability, threaten the peace and happiness of Europe. It has proved difficult enough for powerful nations to Romanize, Anglicize, Germanize, or exterminate scattered and uncultivated populations; small areas detached from organized civilizations have proved entirely indigestible. Germany

has not digested either Poland or Alsace; England is confessing its inability to assimilate Ireland. The Russianization of the non-Slavonic Europe is an utter impossibility, even if there were the least danger of its being attempted.

If national aspiration is something to be heeded as legitimate and wholesome, the race that aspires to unity must by the same token respect the unity of other states and nations. If the Teuton accepts and welcomes the integrity of a Slavonic state, precisely the same principle protects him from arbitrary aggression. The conduct of Germany is resented because, having gloriously vindicated her own nationality, she has in these latter days been content to play the part that Austria played in Italy and in Germany itself. America refuses to believe that if the achievement of Teutonic nationality is a blessing, the recognition of Slavonic self-consciousness is a crime. German diplomacy attached itself to an obsolete and impossible object when it undertook blindly to sustain Austria in its historic obstructive rôle. It discredited its own spirit when it permitted the annexation of an unwilling Bosnia and sanctioned the attempted humiliation of Servia. Would not an enlightened and modern diplomacy seek rather to discern and to work with the significant and permanent currents of feeling that have expressed themselves in modern Italy and modern Germany? Assuredly this were a nobler and more fruitful task than that of vainly endeavoring to snatch unnatural and perishable advantages such as go with the annexation of a sullen and alien people. The most enduring fame of Lord John Russell resulted from the steps he took to make a united Italy possible. Not until the diplomats of the Continent conceive their function along similar lines will the nations of Europe lay aside their fatal jealousies.

The map of Europe will show changes at the conclusion of the present struggle, but those experts are precipitate who are already drawing maps of a new Poland and snipping off the Austro-Hungarian map on the one hand, or drawing a Germanic Empire from the English Channel to the Adriatic on the other. Territorial changes in Europe cannot quantitatively measure the triumph of the Triple Entente or of the Kaiser. Where vast changes, measured in square miles, will take place is outside of Europe, and particularly in Africa. In this connection it is well to recall that in the diplomatic interchanges between Sir Edward Grey and the German Chancellor the latter was willing to grant as the price of British neutrality a promise that the territorial integrity of France would be respected, but that he would make no pledges with regard to the French colonies. France has a colonial empire of four and three-quarter million square miles, with a native population of more than forty millions, more than nine-tenths of it in Africa. Germany's colonies are more than a million square miles, with a population of 14,000,000, nine-tenths of it in Africa. Little Belgium has the Congo, a solid empire of 900,000 square miles, rich in natural resources, with a population of 15,000,000. Should the Netherlands be drawn into the vortex, she has her rich East Indian colonies at stake, 736,000 square miles, with a population of 38,000,000. And even Portugal, whose announcement of fidelity to the British alliance must have been read by many with a smile, has thereby thrown into the ring nearly 800,000 square miles of African territory with a population of nearly ten millions.

While the vigorous efforts of Senator Hoke Smith to further the Ship Registry bill and to obtain financial measures for carrying the cotton surplus may have contributed to his renomination over ex-Gov. Brown of Georgia, the result is rightly hailed as a general Administration victory. If there is any point at which ex-Gov. Brown and his ally, Tom Watson, have not attacked President Wilson's character and policies, it would be hard to find. They have taken advantage of the popularity of Underwood's stand to assail Senator Smith's vote for the repeal of the Panama tolls exemption. Watson has asserted that the Administration's Tariff bill is worse than the Payne-Aldrich measure, while the ex-Governor is a notorious protectionist. Both were until recently very bitter opponents of the country's Mexican policy. The most virulent allegations, however, have been that the Federal patronage has been distributed only among friends of Wilson. Appeals to race prejudice have also been made on the ground that a negro or two have been appointed to Federal office in the District of Columbia. Ex-Gov. Brown has heretofore had a reputation for invincibility in the State; his decisive defeat—125 out of 148 counties are reported against him—should be very gratifying at Washington.

In the approaching elections, State and Congressional, are the forces of evil destined to score a victory over the forces of progress—and particularly the forces of Progressivism—under the cover of European military operations? With the American people intensely absorbed in the news from European battlefields, can they be roused to the necessary vigilance against the political bosses which is the price of liberty? It is hard to imagine a Progressive campaign without an enormous publicity. But with Roosevelt relegated to the inside pages the task of rousing the public conscience becomes a formidable one, whereas the forces of reaction working in their favorite medium of silence and darkness can intrench themselves for the struggle. Shut off from access to the public ear, the Colonel is also deprived of his great issue as against the Administration—namely, that he is the man who does things, while Mr. Wilson is the schoolmaster who theorizes about things. Mexico was a hard enough blow for Mr. Roosevelt in this respect, but harder still is it to have Mr. Wilson engaged on the vast practical issues arising from the war—the upbuilding of an American mercantile marine, the conquest of new markets, the safeguarding of our financial system. As between Mr. Wilson and his most prominent critic it is not difficult to decide now who the man is that is doing things.

Last year's fiscal figures, now complete, are a poor basis for the reading of protectionist sermons. There have been new attacks on the Underwood bill apropos of the restoration of the old wall by war, but common-sense consideration of the facts will frighten no one. Almost seven-eighths of the increase in importations, or $69,000,000, was in foodstuffs. The total increase was $80,000,000, or 4 per cent., which does not seem abnormal when it is considered that the round increase in the year ending June 30, 1913, had been $160,000,000, and in 1912 had been $96,000,000. Exports fell off $101,000,000, or to about $2,365,000,000; but even then they were almost $160,000,000 more than in 1912, the last full Republican year. The whole set of figures is much what was to be expected of a period in which business conditions were disturbed from China to Peru, and in which high-tariff Canada suffered even more than low-tariff United States. Protectionists will probably try to make the most of the new influx of manufactured goods. Yet the importation of partly manufactured goods declined $30,000,000, and that of goods ready for consumption increased but $40,000,000.

The Republican Convention that adjourned at Saratoga on Wednesday of last week presented an odd mixture of new and old politics. In its endorsement of the short ballot, as in its reaffirmation of the principle that the Southern representation at national Republican conventions should be reduced, it exemplified the present-day willingness to make radical changes in traditional methods of political procedure. On the other hand, in its wholesale denunciation of Democratic policies in State and nation, it was as old-time as any of its predecessors. Unique features it did not lack. One of these was its "unofficial" character, despite which the struggle over the platform was as determined as the most official convention could boast. Another was the fact that it confined its energies to platform-making, as if there were no such thing as a candidate outside the realm of the imagination. And, finally, it made official provision for similar "unofficial" conventions in Gubernatorial years. Could political paradox go further?

By the successful revolt of the Progressives against Mr. Roosevelt's dictation of the nomination of Hinman for Governor of New York, a severe blow has been dealt the Colonel's reputation. We do not mean merely his prestige as a political leader. This is obviously pretty badly damaged when his own followers refuse to follow him. But it is Col. Roosevelt's luck which now seems to have failed him, and that is more serious. He no longer seems to have the fortunate touch. His selection of Hinman seemed at the time a brilliant stroke. It appeared to dish Whitman at the same time that it enabled the Progressives to get in out of the wet. Of course, Mr. Roosevelt put it all on high moral grounds. He certified to Hinman's fine and high character, and declared that he himself would vote for so noble a man and so stout an enemy of the bosses, even if another Progressive stood for the Governorship in the party primary. But now he angrily throws Hinman over. Why? Plainly, because the "deal" which was attempted has failed. Progressives complain bitterly of Hinman's wooing of the Republicans at Saratoga. But, poor man, that was part of his bargain with Roosevelt. If he couldn't get the Republican nomination, he was of no use to the Colonel. And so that little game is played out. Now we have it from Oyster Bay that fusion is anathema, and that there must be a straightout Progressive ticket. But the Colonel will not head it. Not he! He is still of the mind that the "numerical" argument against his party is too strong for the moral argument in its behalf. Somebody else must be put up for sacrifice, and then a tremendous fight made in every district of the State "against the bosses." The leaders well know, however, that the more terrifically the Progressives fight for their own party, the better chance they give to the bosses.

New York's first hunger-striker has surrendered. She has permitted her friends to give a bond that she will keep the peace —a course which was open to her from the beginning of her trial, but which she defiantly affirmed that she would never agree to. Miss Edelson was to go to jail only to starve her way out again, and bring the authorities into contempt. But the will of this woman encountered that of another, Commissioner Davis. Moreover, it was a contest of brains, as well as of will-power, and Miss Davis showed that she knew exactly how to bring the obstreperous I. W. W. sensation-seeker to terms. By shutting off absolutely all press reports concerning Miss Edelson while in confinement she deprived that lady of what she hungered for much more than for food—that is, notoriety, exploiting in the newspapers. It is one thing to go on a hunger strike in jail with the reporters hanging on your every act and word, but a very different affair to be left to be your own heroine in secret and in silence.

That a business administration for the city of Dayton does not mean a dehumanized régime is attested by City Manager H. M. Waite's report for the first six months. Adequate health service, free clinics, and pure milk stations have cut the death-rate of babies exactly in two. Two large parks have been opened to the public, with bathing, boating, and other facilities. Loan sharks have been sharply followed up, and a legal aid bureau established for giving free advice to the poor. A high-class symphony programme has been arranged for the coming winter, and half the season tickets sold. A civic plan board has been appointed, and sewer and water systems have been outlined on the calculation that Dayton's 125,000 will be 200,000 by 1934. There is also a list of savings, from $20,000 in the purchase of supplies and $12,000 on a single bridge to $1,700 in the collection of dead animals. It will be a short-sighted citizen who, if all the claims advanced by the city manager and certified to by the Bureau of Research are true, does not see in many payments from the city treasury a genuine public saving. The Bureau reports that the year will see the old deficit of $125,000 "reduced rather than added to."

Gen. Carranza's entrance into Mexico City last Thursday was the occasion of a popular demonstration, with cheering crowds, saluting cannon, and school-children singing a hymn entitled "Union and Liberty." For the moment, any rumors of Zapatist disaffection southwards, or on the part of Villa in the north, were stilled, and the First Chief's address dealt almost exclusively with policies of reconstruction. Among the many anti-Constitutionalist theories that are now stultified, it is clear that one of the silliest concerned the character of Carranza. The omniscient asserted that he was a mere benignant figurehead, who would be thrown aside whenever Villa chose to emerge; that he might himself think he was directing the revolution, but that the ruthless field-leader would become the fit successor of Huerta. Yet Carranza now has his hand firmly on the helm, and can boast that he gained his position with every regard to "the national dignity and honor." He is favorably placed to use the great opportunities before him, and there is a rising Mexican confidence in his ability. In reviewing his choice of Mexican leaders as on so many other points, President Wilson may smile to think that it was once a merry jest to ask what his Mexican policy was!

The third American city is no longer Philadelphia, but Buenos Ayres. According to its corrected census, the South American metropolis now has a population of 1,700,000. Forty-five years ago, when the first census was taken, the population numbered 177,000. This record of growth may do more to interest us, not only in Argentina, but also in the South American republics in general, than anything in the way of commercial opportunities has yet been able to do. In some respects Buenos Ayres is better than third among cities of the Western Hemisphere, as in tonnage and value of foreign commerce, in which she is second only to New York. That she possesses the finest theatre on either Continent, as well as the best-appointed newspaper plant and the most artistic street, is a fact that we shall still be slow to recognize. But when we read the statement, "Buenos Ayres is to have another subway," we are compelled to admit that there is an American spirit of enterprise in the South American capital.

THE HEART OF THE "WHITE PAPERS."

There have now been placed before the American public the White Paper containing the entire correspondence between Sir Edward Grey and the diplomatic representatives of Great Britain relating to the situation which culminated in the war, and also the official statement of the German Foreign Office upon that situation. To say that from these two documents it is possible to determine, in the largest and deepest sense, where lies the responsibility for the plunging of Europe into the fearful struggle now raging would be going too far. But it is not going too far to say that these papers suffice to settle that question beyond a doubt in the narrower and more obvious sense in which it is generally understood in current controversy. And they suffice because, without questioning either the trustworthiness or the completeness of either showing, one is led by both to the same conclusion.

The crux of the whole matter lies in the question whether Germany was or was not responsible for the extraordinary harshness and inflexibility of Austria's demand upon Servia, and for her refusal to budge from that feature of it which reduced almost to zero the possibility of all peace-making efforts on the part of other Powers—the rigorous time-limit of two days. To this question there can be but one answer. It is not necessary to challenge, for this purpose, the truthfulness of the assertion made by the German Secretary of State for Foreign Affairs that he knew nothing about the terms of the Austrian ultimatum until it was issued, for Austria had been assured in advance that whatever those terms might be, Germany would back her up in their enforcement. "We were able to assure our ally most heartily," says the German official statement, "of our agreement with her view of the situation, and to assure her that *any action* that she might consider it necessary to take in order to put an end to the movement in Servia directed against the existence of the Austro-Hungarian Monarchy would receive our approval." That the words we have put in italics were intended to give Austria warrant for action as provocative as that which she actually took—that there was not in the German anticipatory endorsement of such action the slightest reservation or warning in the interest of the peace of Europe—is evident not only from the absence of any hint of such reservation in the German paper, but also from the sentence immediately following the one just quoted: "We were fully aware in this connection that warlike moves on the part of Austria-Hungary against Servia would bring Russia into the question, and might draw us into a war in accordance with our duties as an ally." Not a word to suggest the hope or desire that such a collision might be avoided if possible; on the contrary, everything to indicate that the contingency was one to be expected as a natural consequence of Austria's move.

So far, then, from the German statement furnishing any modification of the judgment compelled by a perusal of the British diplomatic correspondence, it supplies the one thing needful for the absolute confirmation of that judgment. In the dispatches that passed between Sir Edward Grey and the representatives of England at the Continental capitals, there appears, from first to last, one unvaried and insistent note. Every effort is bent upon the endeavor to bring about some relaxation—any relaxation that might be managed, any relaxation that the German Government might be willing to second, or might choose to propose—of the ominous tension that had been produced instantly, and produced inevitably, by Austria's imperious demand. That this effort was not seconded by Germany is the conclusion that every one must draw from the correspondence; a conclusion all the more authorized because it is not impressed by any argument, or even any statement to that effect, but emerges in the reader's mind spontaneously and pervasively throughout the whole course of the communications. Yet, in the nature of things, there remained the possibility that a German presentation of the case might put a different face on the matter. This possibility is now removed; and the world knows, beyond peradventure, that the endeavor to find some composition of the trouble which might have averted the most gigantic of human wars was frustrated through the refusal of Germany to take part in that endeavor.

There is, indeed, one standpoint from which it is possible to place upon Russia the responsibility for having brought on the war; and this is, in point of fact, Germany's standpoint. There was one condition upon which Germany was willing to act with the peacemakers—namely, that Russia should permit Austria to deal with Servia as she pleased, subject only to the extremely tenuous and ambiguous assurance that the Slavic kingdom was to suffer no loss of territory. In the light of what had happened to Bosnia and Herzegovina, and especially in the light of what Germany had done to prevent any interference by Russia with the consummation of that happening, it was manifestly impossible for Russia to accept this condition without abdicating her place as a Power to be reckoned with in those international relations which most nearly concern her. "We gave Austria an entirely free hand in her action against Servia," says the German statement; and Germany's attempts to preserve the peace of Europe, if she may be said to have made any at all, must be dismissed as a nullity, since they were rigidly circumscribed by the impossible requirement that Russia, too, should give Austria "an entirely free hand in her action against Servia." Not the concession of all that Servia could concede without unheard-of humiliation; not her offer to submit what remained to international arbitration; not Sir Edward Grey's anxious and persistent pleading for the interposition of some kind of stay of sentence—none of these things moved Germany to change by a hair's breadth her attitude of giving Austria "an entirely free hand," whatever might befall the world in consequence.

If Germany is to be absolved from the charge of having brought this war upon the world, it must be upon wholly different grounds from any that relate to the transactions of the fateful days of the last week of July. And in their hearts, the Germans themselves can hardly think otherwise. In almost every serious defence of their country's course, there follows close upon the heels of any contention that Germany sought to avoid war the assertion that the war was unavoidable—and unavoidable because the conditions with which Germany was surrounded were incompatible with the national development to which she justly aspired. Into the merits of that contention we cannot undertake to enter; but the more profoundly this conviction is held by the exponents of the German cause, the hollower is the ring of their argument on the immediate question of responsibility for the awful ordeal of blood and fire and misery into which Europe has been plunged. The more completely they believe that their national future required that this agony should be laid upon themselves and upon all the peoples of the world, the more probable it appears that the one question which controlled the course of the Kaiser and his Ministers was the question of military opportunity; and what is thus rendered probable *a priori* is made certain *a posteriori* from the published documents—the German statement as well as the British correspondence.

STRETCHING THE POWERS OF THE GOVERNMENT.

We are all familiar with the extension of governmental powers in war time. Our own Civil War saw this on a great scale. The war-powers of the President are, as Rutherford B. Hayes once remarked after he had left the Presidency, a vague but vast deposit, of which no one can see the extent. To save the Union, Lincoln did many things which found their justification, not in law or Constitution, but in military necessity. At such a time, political theories and legal doctrines go by the board. The sole question is whether, after the exigencies of war have passed, the Government machine may be got back to its old working. This is admittedly difficult—almost impossible. The Civil War permanently changed, for good or ill, the American conception of the scope of our Government.

What we are seeing at Washington today, however, is an enlargement of the functions of Government in consequence of war, but not our own war! In this lies the novelty. The Administration is acting, and is proposing legislation, very much as if the clash of arms on our own territory compelled it to resort to exceptional measures. The historically minded might find a precedent for Mr. Wilson in the course of Jefferson, who took advantage of the war in Europe to make the momentous purchase of Louisiana from Napoleon. This was, of course, dead against Jefferson's theory of the Constitution. President Wilson may not be going counter to any of his own views about the limits of Federal power. He has given many signs of being a thorough believer in a strong Government. A few days ago, he quietly said to a delegation of anxious business men that they would find that the Government had ample powers to meet the emergency thrust upon us by the European war. And it is apparently on this assumption that he has urged one step after another—the voting of money for the rescue and relief of American tourists, aid of the banks, amendment of the shipping laws, Government insurance of war risks, and, finally, the buying of ships by the Government to end the congestion of our export trade. The whole makes an impressive exhibit of energy and resource, but also, it must be confessed, it is applying the powers of the Government in ways scarcely dreamed of before.

But what of the underlying doctrines? What of consistency with our past? We suppose that the President is not troubling himself with such questions. He would doubtless say that it is a condition, not a theory, which confronts him; that a great crisis is forced upon the country; and that his duty is simply to study the facts, work out a course of conduct in accordance with them, and let Constitutional theory go hang. This is usually the excuse of a man of action, as well as the defence set up for him by his friends. A good illustration is seen in the article on the late Joseph Chamberlain in the August *Fortnightly*. His public life brought him into paths going in opposite directions, apparently; and it is the effort of this apologist for him to explain his seeming inconsistencies by showing that he was intensely practical, that he took up each situation as it arose, grappled with all the facts, and then determined upon the thing to be done without caring whether it squared with his own past or was in harmony with the political principles to which he had given assent. This is a good working theory of a man who despised theories, but it has its weakness. The passionate devotee of "facts" must be mighty sure that he has got them right. Chamberlain believed in 1903 that the facts warranted him in going in for abandonment of English free trade. A contemporary comment, however, by the canny Campbell-Bannerman exposed the danger: "Don't be afraid of Chamberlain," he said to a group of alarmed Liberals; "he is certain to be all wrong about his facts."

If Washington appeals to the facts, to the facts let us go. It may be conceded that the question of the Government becoming ship-owner, for the time being, turns on matters of fact, but we must not omit to bring all the facts into the survey. What is the significance of the fact that private capital has thus far failed to come forward to buy the ships for sale? The inference is unavoidable that shrewd and careful men do not see their way through the business. Is the Government light-heartedly to incur losses from which they shrink? Can it do better than they in the working out of trade routes? Can it see the end of the experiment from the beginning more clearly than they? Then we need to know precisely the state of the case regarding the blockade of our grain and cotton exports. Is it being slowly broken? Can we now count upon disposing, after a little delay, of all we have to sell to England and the Continental nations—except Germany? And if it is a question of getting wheat and cotton into Germany, how can Government ships do it any better than private?

No one is more apt to fall into mistakes than your governmental Gradgrind who just dotes on facts. He has nothing but contempt for the "ideologue," yet he is himself one of the most arrant ideologues going. He has the idea that he knows it all. Yet the chief facts of all have a way of escaping his vision. He cannot see that a sound theory is itself a fact—the accumulated judgment of experience in regard to a whole set of facts—and that he will overlook it at his peril.

General principles may be thrown out of the window, but they infallibly come back by the door. And the very common feeling that the purchase of ships by the Government, at this juncture, would be a dangerous stretching of its functions, is only another way of expressing the fear that the advocates of the scheme have not taken all the facts into account.

THE DEAD POPE.

The common saying that the death of Pope Pius was hastened by the grief and profound dejection with which he was filled by the terrible war in Europe has at least the plausibility that it goes well with the known qualities of the man. Simplicity and unaffected goodness were his characteristic notes. A prelate after the mould of Victor Hugo's Bishop, raised to the headship of the Catholic Church, how could he fail to see in this loosing of infernal passions, not merely a denial of Christianity, but almost a negation of God? His last message to the Church was an exhortation to prayer that the warring nations might be brought to a better mind. It is said that he shut himself up to long hours of grieving meditation and prayer, so bowed and broken was his heart by the calamities wickedly spread over the whole of Europe. If all this, with his failing health, brought the end more quickly, who can wonder? It was a troubled world upon which a troubled Pope closed his eyes.

It was the engaging personal traits of Pius X which most impressed the imagination. In the extravagance of the first rush of mourning for him, some Catholics are speaking of him as one of the greatest of the Popes. Great in heart, certainly; but his reign will not be marked by the historian as one in which the statesmanship of the Vatican was at a high level. The kindly and benevolent old man, clinging with peasant-like affection to the society of his simple-hearted sisters, always displaying a child-like Christian faith, was a most at-

tractive figure, and drew to himself the warm personal admiration of many non-Catholics; but his talents were not of the sort that make a commanding Pope. Indeed, his very goodness, the simple wholeheartedness with which he accepted the teachings of the Church, were a handicap to him in the large questions which he was compelled to face. Believing implicitly that all religious truth had been for all time defined, how could he help setting himself against the inquiring spirit which underlay the so-called Modernist movement within the Church? Holding without a single wavering doubt that the Catholic Church was a divinely established institution, it was not possible for him to look upon the Separatist agitation in France and Portugal, and even in Spain, with anything except horror. Hence it was that Pius X so often appeared as one deploring the degeneracy and the evils of his time. He was more of a weeping prophet than a lion-hearted leader.

Guglielmo Ferrero had in the *Atlantic* a couple of years ago an article surveying the function of the Papacy. He showed how rare a combination of qualities is necessary in a Pope able to rise to the discharge of his varied duties. The Pope must be not merely the Holy Father, director of the Church. He has to be a statesman as well. From his position, he is thrown into very critical relations with the Italian Government and the life and political movement of the Italian people. In addition, he is inevitably brought into touch with public affairs in many nations. Questions of the utmost complexity and delicacy—questions which in their nature have more to do with statecraft than religion—are all the time referred to the Vatican. Bound to be in touch with all these high matters, *urbe et orbe*, the really masterful Pope requires to be scholar, saint, and diplomatist in one. Leo XIII unquestionably came nearer filling the arduous rôle than any of his predecessors for a hundred years. This, we believe, was Ferrero's judgment. He made no reference to Pope Pius by name; but at the end of his article there was a passage which undoubtedly looked towards the late Pope. If it should ever be, wrote Ferrero, that the Church should have a Pope who remained in his impulses and in his outlook upon the world simply a parish priest, the majestic power of the Papacy could not fail to be impaired for the time being, and its grandeur temporarily eclipsed. And it cannot be denied that Pius X always had upon him the marks of the excellent parish priest. He sincerely shrank from being made Pope. His heart was always with his beloved Venetians. He did his utmost to uphold the dignity and to meet the exacting requirements of his sacred office; but, while no one ever questioned his sincerity, or the soul of goodness that was mirrored in his countenance, it has been obvious that the princes of the Church have not felt in him a leadership commensurate with the needs of the day in which he lived.

Speculation will be rife about his successor. Already we have the lists of possibilities. If a strong Pope can be found, he was never more needed than now. The vote may easily fall upon a Pope of more shining abilities than Pius X, but it would be impossible to elect one of sweeter nature or sincerer piety than his.

REPUBLICANISM IN EUROPE.

Among predictions bred by the present war, none has been more recurrent than that of a coming renascence of republicanism in Europe. The explanation is partly American patriotism, which unthinkingly concludes that the shock of ruin will teach eastern Europe the political truths we have long known. Partly it is a confounding of democracy with republicanism—for there will inevitably be democratic reactions; partly it is the persistence of an opinion prevalent in Europe itself during the French Revolution, that she would some day be a confederation of republics. But its main looseness is in confusing the crisis of 1914 with those of 1789 and 1848, and in failing to contrast the last three decades with the decades preceding those undeniably republican years.

It is the plainest of world-facts that European republicanism since 1880 has been at a standstill; losing ground in many lands, it has definitely gained it only in Portugal. The main causes are clear. One is the utter failure of the republic in Spain and its chequered course in France. With this has been contrasted the success of Bismarck's statesmanship in Germany. He found her poor, weak, and divided; with the Prussian kingship his chief lever, and affronting every liberal ideal of France and England, he lifted her to dominant wealth and power. The German mind of 1888 was completely altered from that of 1848, the idealistic days of Schurz and Kinkel; nor has it since changed. A second reason is the improved personal character of royalty in Europe. The era when our tradition of republicanism was fixed was the era of the four Georges, whom no reader of Thackeray can believe England ever loved. Carlyle's comparison of the national veneration for a royal prince in 1640 and 1840 is familiar. Yet Professor Fisher, of Oxford, remarking in his recent Lowell lectures at Harvard that "the joint influence of Queen Victoria and King Edward" had made "the monarchy stronger and more respected, its place in a democratic polity more settled," spoke for many Continental sovereigns as well. Republicanism, again, is felt out of place in world politics. Wide colonies respect a sovereign whom they can visualize; "if this was a republic," Mr. Balfour said of England, in 1910, "in my opinion the Empire would sink into chaos." Agencies of modern communication, the newspapers and cinema, have done increasingly much to make one man beloved by the divergent peoples of Austria and Russia. Finally, it was the feeling that the family relations of rulers made for peace that mainly induced Norway to elect a King, while Björnson pleaded for a republic.

But still more important considerations should be weighed against republicanism in even the worst upheavals that may befall the defeated half of Europe. Even the ignorant classes recognize to a significant extent that the exact form of the executive is no index of political or civil liberty. In England and perhaps in Scandinavia the popular will reacts more swiftly than in America. No Socialists count monarchy incompatible with political progress; and, while those of France have declared Socialism and republicanism synonymous, those of Germany, Austria, and Italy would sternly deny such a sentiment. Their object has been to make head against wealth and privilege, not against hereditary rulers. Democracy, which Macaulay once said would see Britain the nest of fishermen and owls, has thus partially captured the Reichstag; it obtained universal suffrage in Spain in 1890 and in Austria in 1907. It is too busy with Parliaments to look at Kings. And turning from the political aspect, the new urgency of social problems has tended in the same direction. Once the ruler was the symbol of inequality, extortion, and waste, and the seat of all social soreness. Now the expense of a court is a trifle in a budget; and Cobbett and Morris, Marx and Jaurès, would pronounce many problems—that of labor and capital but one of them—a hundred times more important than the form of the executive.

The result is that European republicanism on August 1 was not vital; and many of the reasons we have reviewed will be valid or exist as prejudices, when the war is over.

Some are marked for destruction. Royal ties are shown not half so effective for peace as popular government like France's or England's. The popular love for even a monarch like Wilhelm may turn to contempt and hatred. There is an excellent prospect that Germany, Austria, and Russia may be temporarily sick of their rulers' part in *Welt-Politik*. Tottering thrones which depend on the widely instilled sentiment that real democracy is possible without casting off old dynasties, may face a reaction of revolutionary fierceness. But the field is one for speculation, not prediction, and speculation, too, of a cautious kind.

THE AMERICAN HOLIDAY.

"To pursue pleasure while you pretend to hunt health is one of the oldest and happiest subterfuges of the holiday-maker." In writing these words for *Harper's Magazine*, Harrison Rhodes does not mean to limit their application to this country, and so we are not forced to the usual course of explaining that the inheritance of the Pilgrim Fathers is still strong upon us. Long before there were such developments as American holidays, it appears, this subterfuge was in brisk employment at Bath, and it has survived, as one of the especially fit and useful inventions of the race, down to our day. It does more than supply the initial justification for running away from one kind of routine to another. This, indeed, is its least valuable quality. Its real importance is quantitative, and lies in the recognized fact that the health-hunter needs not only distraction, but plenty of it. The less able he is to stand anything else the more he demands of diversion. The contrary is equally true. The more diversion the harassed health-hunter has, the less able he becomes to endure anything else. The only cure for too much diversion is more of it.

If we are like the rest of the world in disguising our motive for "resorting," are we like it also in the way in which we perform the act? The answer to this question must be both yes and no. At the beginning, with that respect for Old World customs which even the attainment of independence did not destroy, we, too, "took the waters" in good eighteenth-century style. White Sulphur Springs, Saratoga—are not these names part of our history, made such by a full half-century of romantic chapters that are among our proudest claims to the possession of our share of the picturesque? By them, at all events, the alien observer would not have been impelled to write upon the monotony of American life, being estopped, indeed, by our similarity to Europe. Naturally, it was the Southern Cavalier that first felt the urgent need. And so, whether the dignified Washington set the fashion, or some one less notable, it became the habit of gentlemen in Virginia and Maryland to suffer from a twinge in the toe that sent the whole family "to the Springs." Ambitious New Yorkers imitated them, even when the journey from the city to one of the most popular of these resorts took twenty days. Not until 1839 was there the prospect of cutting the time to three days.

To what heights of culture these places might attain is shown by the advice of the pseudonymous "M. Pencil," who suggested that visitors take along a volume of Charles Lamb for light summer reading. What would publishers of 1914 think of that? But it would be quite erroneous to leave an impression of plain living and high thinking in accordance with that type of advice. Good Bourbon whiskey has been known to be drunk in these health-centres, and, incredible as it seems, not in addition to the waters so ostentatiously sought, but instead of them! Poker was not unheard of, and, while engagements were arranged in numbers out of all proportion to the number of marriages that followed, the latter were sufficiently numerous to make some of the Springs, as the Old White, noted for this feature alone. It is even said that within a few decades purses were made up in little Southern towns for the purpose of sending likely maidens and youths, too, to the love-laden air of the Old White. Any one who threaded the mazes of its walks, bearing such significant labels as Lover's Rest, Courtship's Maze, and Acceptance Way to Paradise, and emerged unsnared, could have deserved no better fate.

This is one side, and the more agreeable, of the picture. Some of it is American enough, but on the whole it suggests the Older World. The more undeniably American scene is less attractive, and, *miserabile dictu*, has our own Saratoga as a horrible example. Mr. Rhodes is uncompromising about it. Saratoga, he says, never was exclusive; "it was always democratically good-natured, vulgarly tawdry, and extravagant. It was the classic reproach of visiting foreigners that its ladies wore diamond ear rings in the daytime, and promenaded its sidewalks without hats, and in *décolleté* gowns." How much better are we to-day? "There is a deal of talk about how we nowadays live in the country like the English country gentleman. We don't." And we are reminded of the account of a great jewel robbery near a famous resort, in which was made the "astonishing disclosure" that a lady of the very highest fashion had been that evening entertaining at a "marshmallow roast." This shocks Mr. Rhodes, who mercilessly demands to know whether it is not better to be honest and admit that the real American vacation is largely devoted to candy. His figures allow of but one reply. We may take refuge, nevertheless, in his admission that, even at the older Saratoga, visiting foreigners as well as natives had a very good time, "in fact just that pleasant kind of welter of all the classes" at which we have always done so well. It is something that even in our holiday-making we do not forget our democracy.

OVERDOING LUCIDITY.

Hilaire Belloc has touched on the need of clearness in writing:

> Lucidity is the chief character of prose. Men write when they cannot speak. Men speak to be understood. . . .
>
> A German once said very wisely—though a little picturesquely—that by a sort of gravity our thoughts fell easily on to the paper and, against that gravity, rose with difficulty from the paper to the minds of our readers. All prose is made up of a sort of tiny translations from mind to mind, and only when the translations are very good have you lucidity.

No one can with justice contradict this. Yet the danger to the writer lies in making too much of it. Clearness, necessary as it is, should not be the single aim of prose.

That it is nowadays too frequently the chief ambition of the writer, is a fact to be faced. The absorbing passion for clearness is so rampant that it influences all forms of writing. Other qualities are sacrificed to it. But lucidity is a means to an end, not the end itself. It is something to be learned and then forgotten. The pianist, in the making, practices his scales and arpeggios; but when he gets to real music he should have some higher aim than merely to prevent his execution from being vague and smudgy. So the literary craftsman should make it part of his apprenticeship to say precisely what he means. But technical ways and means should be distinct from emotional effect.

One can hardly imagine Macaulay or Newman or Mill dipping his pen and saying to himself: "Now, above all else, I must be clear." Yet that is the effect given by much contemporary prose. It has become almost axiomatic that the average magazine reader is either unable or unwilling to think. Accordingly, too many authors assume that it

is necessary to do his thinking for him. Amenities of style are abandoned in the task of clarification. Far more thought is expended on how to be clear than on what is to be clear. Facts are not merely set before the reader to be pondered; they are assembled and hurled at him in phalanxes. The same statement is repeated, re-repeated, turned inside out, served up as paradox, harped upon like a theme with variations. This passion for lucidity is partly responsible for the decline of the essay. The true essay, from Bacon to Stevenson, aimed at something besides making an impression like die-cutting. It sought rather to stimulate the reader, to guide him into pleasant pastures of thought, and lure him down inviting by-paths of individual reflection. But the modern essay, like all else, must take some subtle thought or quiet conceit, and, with a roar, flog it about the marketplace. Nor have the short story and the novel fared better. The short story frequently adopts the searchlight method of making things clear, focussing every ray of style and manner in the attempt to make the situations or characters stir the reader solely by their distinctness. Frequently, this is successful; but, as in the case of the searchlight, high lights, and low lights, delicacies of color and form are nullified. And the novel, too, strives to be crystalline in a more leisured fashion. Sometimes, to be sure, it attempts the same assault-and-battery method as the short story. But just at present the determination seems to be to "play it safe," leaving nothing to him who reads. It is like an interminable moving picture which contains explanatory labels in addition to the pictures themselves. Indeed, many a modern novelist is like the dramatist who devotes so much matter to skilful exposition that he has nothing left for his play. "Tell them you're going to do it, tell them you're doing it, tell them you've done it!" may be a helpful rule for the playwright, but it should hardly be foisted on all literature. The great masters of fiction have refrained from doing everything for their readers, preferring to leave them a chance for their own reactions.

A mad hue-and-cry after clearness—and nothing else—is destructive. Mere sense is not a be-all and end-all. If it were, an electric motto flaming against a dark sky would be the masterpiece of art. Richness, flexibility, and variety of style are much; imagination, thought, and truth still more. Without these, the literature of clearness becomes nothing more than sounding brass and tinkling cymbal.

Chronicle of the War

When we wrote last week we were careful to point out the danger of over-estimating the value of the reported successes of the Allies in Belgium. Events have shown that the warning was not uncalled for, and to-day there appears to be a danger of going to the other extreme and assuming that the success achieved by the German forces in the great battle that has been in progress since Saturday indicates that they are invincible. One English paper, indeed, has already stated that "we may yet see before long the Germans march in earnest upon Paris." That the net result of the fighting during the past week has been to secure a heavy advantage for the German troops is not to be denied, nor is the importance of their victories to be underrated; but it is well to bear in mind that the German armies have only now, after severe fighting and heavy losses, arrived at the point where, according to what we may assume to have been the plan of campaign, they expected to be two weeks ago. They have still to pierce the formidable double line of French fortifications before they can commence the march to Paris. Meanwhile, time has been gained and the Russian army has penetrated a considerable distance into eastern Prussia.

For the sake of convenience we may divide the fighting which has taken place in Belgium into two stages: that which occurred previous to the occupation of Brussels, on August 20, which may be termed the preliminary stage, and that which has occurred since. It has not, perhaps, been sufficiently understood—indeed, it has only recently been definitely established—that almost the entire brunt of the fighting in the preliminary stage was borne by the Belgian troops alone, and that the French and British did not come into touch with the enemy until the latter part of last week. The Belgian retreat really began on the evening of August 18 from the neighborhood of Diest. On the following day there was severe fighting near Aerschot, twenty-three miles east of Brussels, in which the Belgians were defeated. Louvain was abandoned late that night, the Belgians falling back on Antwerp. The Germans entered Brussels without opposition on Thursday, and by Friday of last week the entire Belgian army, with the exception of the forces still holding out at Liège and the garrison of Namur, was safe within the defences of Antwerp, one of the most strongly fortified places in Europe. All that happened thus far was stated officially to be part of a preconceived plan of campaign of the Allies, the idea having been that the Belgian forces should hold the Germans in check as long as possible, while the French and British were concentrating, and that when the allied forces had chosen their battleground there would be an effective Belgian force in Antwerp menacing the right wing of the enemy in case he were defeated.

At the beginning of the battle which may be said to have started on Saturday, the right wing of the German army was in the neighborhood of Ghent and its front followed the line Brussels, Wavre, Eghezee, Huy, Luxemburg. The Allies, with their left resting on Lille, extended in an almost straight line west and east to Namur, then followed the Meuse to Dinant, Givet, and Mezières, and southeast to Longwy. It is evident that the French plan was to assume the offensive, for the fighting on Saturday, Sunday, and Monday took place almost entirely within Belgian territory. It commenced apparently with a battle along the line Charleroi-Namur, and it is obvious that the latter place was the principal German objective. On Monday came the news of a French defeat at Neufchâteau by the army under the Grand Duke Albrecht of Württemberg, of a battle at Mons in which the British troops were able to hold their own, and of the presence of German forces on the west of the river Meuse. This was followed on Tuesday by the startling intelligence that Namur had fallen or been evacuated. The fall of Namur, which, though not as strong as Liège, is more favorably situated for defence, after a resistance of only three days, is puzzling, and would seem to indicate an extraordinary brilliance in the German attack. The explanation, however, may be that the Allies, in danger of having their lines pierced, feared a juncture of the German forces on the Meuse and Sambre and the consequent isolation of the fortress, and that it seemed preferable that the garrison should evacuate Namur rather than be cut off, as was Metz in 1870.

In Lorraine, also, where an offensive movement was undertaken last week, the French have suffered reverses. After having advanced along a front extending from the Donon Mountains to Château Salins and penetrated as far as Morhange and Saarburg, which was taken on August 18, the French were unable to retain their position and retreated again across the frontier, their right resting on the Donon hills and their left on Nancy. In the same battle in which the forces of the Allies in Belgium were forced to retreat the left wing of the German armies defeated the French in Lorraine, capturing Lunéville, which is sixteen miles within the French border. That this was a serious defeat may be judged from the fact that the French were driven back a distance of thirty miles, from Saarburg to Lunéville, in three days. Mülhausen, in Alsace, which was retaken by the French on August 20, has been evacuated. A statement issued by the French War Office on Wednesday declared that operations in Alsace had been entirely abandoned.

The German and the French accounts of the fighting naturally differ considerably in detail, but the essential facts stand out, that the Allies have suffered reverses in the first important battle of the war, on the right and centre at Namur, Neufchâteau, and Diedenhofen, where the army under the Crown Prince is reported to have won a victory and pursued the French as far south as Longwy, and on the left in Lorraine. The fighting along this line will now be transferred principally to French soil, as is indicated by the official statement in Paris that "the French army will remain for a time on the defensive." Unfortunately another inference is also to be drawn from the events of the past few days; that is, that this is not likely to be the short war that was prophesied in many quarters. Lord Kitchener's speech in the House of Lords on Tuesday bore testimony to the fact that he sees the probability of a long struggle.

With the reverses to the Allies on the French-Belgian frontier, the situation on Germany's eastern frontier becomes of increasing importance. For the Allies the problem is to hold the German armies in check until the full weight of the Russian invasion on the east is felt and it shall become necessary for Germany to detach some of her forces to meet it. For Germany, the problem is more difficult, for success against the Allies, to be complete, must be immediate. Russia has now apparently completed her mobilization, and the army which commenced the invasion of eastern Prussia on August 16 is said to consist of about half a million men. Gumbinnen, twenty miles within the Prussian border, and Lyck were occupied on Wednesday or Thursday of last week, and later in the week the Russians were stated to have occupied Johannisburg, Ortelsburg, Neidenburg, and Soldau. There was a report that Insterburg, some sixteen miles west of Gumbinnen, had also been taken, but up to the time of writing this report has not been officially confirmed. Should the news prove true, it is important, as Insterburg is the strategic railway centre of East Prussia, eight railways converging on it.

The details of the fighting on the Prussian frontier are too vague to be accepted at their face value and come entirely from Russian sources, but it may be presumed that the invading army has not advanced from thirty to forty miles into Prussia without encountering some serious resistance, and therefore that the Russians have been generally successful.

It is somewhat ironical, since the attention of the world has been diverted from the original combatants in the war to the wider battlefields of Belgium, that the only battle which has so far been fought to a definite issue is that on the river Drina, which we recorded last week, and in which the Servian army gained a decisive victory over the Austrian. The reports of this victory have been amply confirmed, and the Austrian losses, as reported from Servian sources, seem to have been in no way exaggerated. The battle lasted four days and the numbers engaged were about 150,000 on either side. According to official accounts, the Austrian losses amounted to 20,000, and a number of guns were taken. If further confirmation of the Servian success were needed, it might be found in the official announcement in Vienna on Monday that Austria would now retire from the war with Servia to devote her attention to the struggle in the northeast. The announcement adds that "the attack on Servia is henceforth looked upon as a punitive expedition, and not as a definite war."

There is still little to record concerning naval operations. In the North Sea the situation remains unchanged. An official dispatch from Berlin, reported by the Reuter correspondent at Amsterdam on Saturday, declared the Baltic to be free from all hostile ships. Confirmation has been received of the report of the sinking of the Austrian battleship Zrinyi in the Adriatic ten days ago by a French warship. According to a dispatch from Antivari, Montenegro, to the *Corriere d'Italia*, the fortifications of Cattaro, the Austrian seaport in Dalmatia, on the Adriatic, have been completely destroyed by a bombardment by French and British warships.

Foreign Correspondence

CALM IN ENGLAND—EARLY PREPARATIONS FOR WAR—THE RESPONSE TO THE APPEAL FOR RECRUITS.

LONDON, August 11.

In the whirl of successive exciting incidents, of conflicting reports, and all the phenomena attending a condition of tense public expectation, it is difficult to reflect coolly, to discriminate between fact and fiction, and to report accurately the existing situation—a situation, moreover, that may be altered at any moment. But, up to the time at which I am now writing, the most obvious and most impressive feature of surrounding circumstances is the external popular calm.

For ten days the country has been alive with military preparations, for days and nights the railways have been transporting troops to the coasts; long lines of reservists and Territorials have been marching through the streets to their various destinations; horses, vans, trucks, and automobiles have been impressed into the public service; wholesale and retail trade have been demoralized by the abrupt withdrawal of ordinary means of transportation; shops and business firms have been deprived of a large proportion of their clerks; motor-'buses and trains have lost half their drivers and conductors; postmen and telegraph operators have been summoned to the field; large numbers of police have been assigned to military duty; all the machinery of every-day life has been subjected to sudden and exasperating interference. And yet, on the surface, there is nothing to denote that the nation is confronting the greatest crisis in its existence. Men and women go quietly about their affairs as usual, there are no crowds about the bulletin boards, the streams of busy pedestrians in the metropolis flow on as steadily as ever, and there is nothing to indicate that the whole air is charged with deadly foreboding.

It need not he supposed that this apparent indifference is but an exaggerated manifestation of the proverbial British phlegm. There is no general failure to comprehend the possibilities of the impending peril. The plain fact rather is that the realization of danger and responsibility is too deep and insistent among the solid classes of the community to permit distraction from the work in hand. There is no time now for anything but action. The nation has been solidified as by a stroke of magic, and the finer qualities of the Anglo-Saxon nature, qualities which have long been quiescent and which not a few observers thought to have disappeared, are beginning to reassert themselves. There is no boasting anywhere, no insane bragging about British invincibility, but a common admission that the coming fight is for national honor and liberty, that the issue is vital, must be met unswervingly, and settled, for good or evil, once for all. The dominant spirit is one of hopefulness and dogged resolution—a spirit fortified by faith in a righteous cause, and a belief—which has been illustrated by the crowded condition of churches last Sunday—that at least some of the angels will be found on the side of Albion.

Concerning the military ardor of the people at large, there is no room for question. The alacrity with which reserves of all kinds have answered the call to the colors has been astonishing. All estimates of their probable total have already been exceeded, and the recruiting offices around London and elsewhere are overwhelmed with applicants. To-day's estimate that 400,000 men are already in the fighting ranks—this, of course, is inclusive of the regular troops—is understood to be well within the mark. That Kitchener will get his additional 100,000 men is virtually certain, but months must elapse before they can be licked into serviceable shape, and no one can tell what may happen before then. But, whether justifiably or not, there is a rapidly growing confidence that the crowning trial of a hostile invasion of these islands will be averted, and that the British fleet may be depended upon to hold the Channel safe, if it can do no more.

I have just seen a private communication from the Admiralty authorizing fishermen to ply their trade in the English Channel and the Bay of Biscay. This, certainly, betokens confidence. And they have also given permission to-day for the exportation of coal to Italy, which, at this juncture, is a fact of great political significance. Before these lines reach you, you may know whether Italy has decided to throw her naval weight into our scale. This is what London is expecting her to do.

The presence of Kitchener in the War Office has been felt in the notable diminution of wild war stories in the newspapers. The reckless enterprise of the *Daily Mail* in issuing an extra on Sunday morning announcing a great naval battle in the North Sea, in which six English and nineteen German battleships were sunk, has already been the subject of angry comment in Parliament. It is announced that the author of similar journalistic canards—as mischievous as they are wicked and contemptible—will be held hereafter to strict account. This has established a wholesome fear of consequences in the souls—if they have any—of the publishers of the lesser yellow sheets. They have been reduced to the ignoble necessity of printing "No official confirmation" at the bottom of their sensational placards. This will soon put an end to one means of iniquitous profit. The *Times*, to its credit be it said, thus far has lived up to its best traditions, and is finding its reward in another vast increase in circulation. You find people reading it everywhere.

Just now nobody knows much of what is going on, and we are beginning to wonder how much news will be given to the public daily by the official bureau which has been established. Not a word has been printed about the manner or progress of the mobilizations of navy or army. The public only knew that all the railway terminals in London were held by the military, and that for three days troop-laden trains rushed north, south, east, and west by day and by night. The promptitude, the secrecy, and the order with which the Government acted were extraordinary. It is only now leaking out that preparations for war began three months ago. I know that some Naval Reserve officers were then assigned to their respective ships, and I am assured, on what I believe to be responsible authority, that Lord Kitchener went secretly to Belgium a few weeks ago to arrange with the Belgian headquarters staff about the disposition of our expeditionary force. A large part of that force was in Dover a week or so ago. The old place was thick with soldiers one night; the next

morning they had vanished. During the night they were all entrained for Folkestone, where they were put upon transports and dispatched. At the same time a fleet of great steamers, loaded to the bulwarks with khaki-clad soldiers, sailed out of Southampton. I heard yesterday, from a good source, that 100,000 British soldiers were in Belgium last Tuesday. The universal prayer here is that they may be able to give substantial aid to the gallant defenders of Liège. Praise of the Belgian soldiery here is rapturous.

According to a story whispered here, and widely credited, it was an Italian Ambassador at one of the Continental courts who gave a hint to the British Ministry weeks ago that a storm was brewing and was on the point of breaking. The report that the mobilization of the British fleet was accomplished then, secretly, under the pretence of a review before the King, is now accepted commonly as an established fact. The story that Winston Churchill, at Kitchener's instigation, ordered the mobilization without consulting his colleagues is also believed, but is, perhaps, less worthy of credence. One thing, however, is clear, and that is that the fleet was ready for action, and disposed according to the strategical plan of the Admiralty before Mr. Asquith followed his ultimatum to Germany with a declaration of war. The rapidity and smoothness with which all subsequent naval and military preparations have been conducted have excited general surprise and admiration. Almost for the first time in history Great Britain seems to have begun a campaign without disastrous preliminary blundering, and the startling energy with which she has thrown off her habitual lethargy is hailed as a good omen. Unluckily there is abundant opportunity yet for mistakes and misfortunes.

It is useless for me sitting here, before an impenetrable veil of secrecy and ignorance, to speculate upon the events of the near future. I can deal only with what lies within the range of my vision. To-morrow, or next week, the knowledge of a big victory or a great reverse may bring a wave of exhilaration or despondency. Now the course of daily life is shaping itself to its habitual channels. Confidence has been maintained not only by the demonstrated capacity of the Government in arming for the fray, but by its sagacity in checking panic by keeping holiday, its promised regulation of the news service, its promptness in suppressing conscienceless speculation in food, and by the simple, virile dignity with which it has confronted the emergency presented to it. All the shops are open, the cost of living has not appreciably increased, families are still flocking to seaside resorts for the summer holidays, without regard to hostile navies, and only in the frequent apparition of passing troops is there any symptom of endangered peace. Possibly no stronger proof of the general calm could be offered than the fact that the movements of the military along public thoroughfares are followed with sober interest instead of the usual noisy enthusiasm.

The immediate need is one of horses. It is said that foreign experts have been buying up all available stock of that kind in this country, and, of course, the credit is laid to Germany. Certain it is that some of the yeomanry organizations as yet remain ineffective for want of mounts. The official veterinaries are impounding useful animals everywhere. Livery stables and riding schools have been stripped and innumerable private carriages have been left horseless. Teams have even been taken from carriages and shop-wagons in the streets. In all cases a fair price has been paid for the animals, and no one is grumbling, although the inconvenience caused by this summary procedure is often great. The owners of gray or white animals are lucky, for they are left in undisturbed possession of their steeds.

The crowds of anxious stranded tourists in the offices of the various steamship lines running to America continue undiminished. Some of them, of course, have resources which insure them against anything more serious than temporary inconvenience and delay, but others are in an extremely awkward plight. It is simply impossible to find accommodations in any outgoing vessel, and many of these unfortunates are without ticket, money, or credit. They can only hope that the means taken for their relief may be prompt. The steamship people are doing their best for those to whom they are responsible for a return passage, but they do not know when any of their ships may be taken for transport service, and all those which they still control are "full up." The presumption is that other vessels will be chartered soon, if they can be registered under the American flag, but the prospect of even a few weeks' delay is a very serious one for the hundreds with neither tickets nor friends and empty purses.

J. Ranken Towse.

AN AMERICAN IN PARIS—DECLARATION OF WAR—STARTING FOR THE FRONT.

Paris, August 10.

Ten days ago, circumstances seeming to warrant, I bought a map of central Europe. To-day I need an atlas. No one foresaw ten days ago the terrible conflagration which has swept over this Continent and leaped across oceans. For the last two weeks, I have passed all the time possible in the streets and boulevards, at the stations and in the cafés.

Each of these days and nights has had a character of its own. For instance, on the evenings of Monday and Tuesday, July 27 and 28, the great boulevards were packed by enormous crowds, through which carriages and taxis moved like wreckage on a sluggish stream. But the crowd of Monday night differed from that of Tuesday: it was under a strain of uncertainty. No one was heard to laugh. By Tuesday night, a reaction had come. People felt surer that Russia would stand firm. There was much gayety, despite the mild riots due to the decision in the Caillaux case. The excitement increased steadily through Wednesday and Thursday, and by leaps and bounds on Friday and Saturday. The only topic of conversation was war, so much so that I overheard a serious little girl of seven say to a younger playmate: "Tu sais, si la Russie déclare la guerre, nous marcherons!" Those last two words, literally applied, would fit the courage which the women of France are showing.

By Friday night, a sinister impression of the inevitability of war had settled over the capital. I shall not soon forget the horror of this impression: it was almost as real as the smell of blood. What rendered the situation more tragic was that no one could be found who wanted war. By the morning of Saturday, August 1, thousands of vehicles of all sorts were transporting merchandise, and especially family furniture and heirlooms, to places of safety. Cabs were not to be found in sufficient numbers. Hundreds of people had to carry their own bundles, and one saw frequently a young wife and husband of the bourgeoisie carrying a trunk between them. In the afternoon, the thousands of auto-'buses almost all disappeared, converted into army wagons, and at about 4:30 o'clock the eagerly expected order for general mobilization of the forces of land and sea was posted. In the night we learned that Germany had declared war against Russia. Thousands of men, especially officers, left Paris before morning, dashing through the principal thoroughfares in automobiles and taxis. Even as late as two or three o'clock in the morning and in a quiet side street, one heard the rapidly nearing hum of an automobile, which swept by in a burst of air and sound and whirred away into the night. Some cafés did not close until three or four o'clock, and then only for a few hours. I saw the proprietor of a modest café in a populous quarter closing his doors at half-past one. His gray-haired wife was aiding. Their handsome daughter, after perhaps eighteen hours of continuous work, had sunk into a chair near the window. Before her was a glass of milk and a piece of bread, both untouched. Her dark eyes seemed fixed on some frontier at an interminable distance, and were filled with tears. She will long remain in my memory as the soul of France on the eve of war.

Few can remember another Sunday like that of August 2 at Paris. Troops everywhere, from the firm-knit infantryman in his garance colored pantaloons to the magnificent dragoons on horseback and the beautifully uniformed officers. The soldiers marched slowly—they had started in good season. They laughed and occasionally sang as they marched. It was interesting to watch their bright faces when an officer passed; they appeared to be proud of him, as of an older brother. At the stations, there was no confusion. Everything was done with calmness and order, much as at a successful fire-drill in a factory. The Gare de l'Est was, of course, the busiest place in the city. Unnumbered thousands, come to tell their "boys" good-by, occupied the square in front of the station and the neighboring streets. Lanes were kept open for the troops, who, before entering the gates, paused a moment to say farewell. The soldiers said good-by with a jollity which veiled their emotion, and, with a smile and a wave of the hand, they were gone. And the women? No less admirable was their attitude. Set faces, yes, but no sobs or tears. This was not the moment for weeping when the supreme peril of *la patrie* called upon all to be firm, and when, from that column traversing the court and disappearing inside the station, Jean or Pierre might turn around to show a smiling face and throw a final kiss to *petite maman*. Nor were the women of the rich less stoical. They were nearly all dressed with great simplicity and frequently in white. I saw literally hundreds of these elegant ladies kiss their husbands or brothers, hold them a moment at arm's length, and look at them with tender smiles, then kiss them again. Now he had entered the gates. She stood erect in the automobile, smiling and waving her hand. Later, there would be time enough to weep. On several occasions, I saw

automobiles returning with a single occupant after such an adieu. Generally it was a fleeting vision of a white-faced, beautiful woman, sitting erect in the depths of a limousine, but several times the image was that of a convulsed figure, pressing a handkerchief to its lips. One such figure I saw crumple down and disappear, probably in a faint, while the chauffeur sped on, and, dramatically, at that moment, a marching column on the other side of the street commenced again the immortal hymn:

Allons, enfants de la patrie,
Le jour de gloire est arrivé!

And this is only the velvet of war!

What a succession of pictures that Sunday! Here a group of young priests hurrying along to change their black robes for uniforms, for they too must do the service of men in defence of the fatherland. There, an officer in a hack, behind which follows a blooded mare. Her beautiful limbs are a-quiver with emotion, her ears in constant movement. A private soldier, fully accoutred, accompanied by his parents, stands on an isle of safety in the middle of the surging boulevard. He will be late for his train. He makes frantic signals to the passing taxis and hacks. But an officer, who is accompanied by a white-haired lady, sees the predicament. At a signal, his automobile stops, and in an instant he installs his guests, and the machine starts on. In the poorer quarter of the Rue Saint-Jacques, in front of a very humble shop, a young woman is seated on a stool. She is sewing. She is mending a tear in her husband's military coat. And in the midst of it all there are merry parties at the *mairie* of the fifth arrondissement—wedding parties, if you please. The generous wines of France are still to be had, and the bridegrooms start away to-morrow! The verb *partir* is being conjugated in all its living forms from one end of France to the other.

Raymond Weeks.

HOLLAND AND THE WAR—ANTI-GERMAN FEELING—THE IMPROBABILITY OF A SECRET UNDERSTANDING.

The Hague, August 8.

These are days full of anxiety for this country. Within earshot from its southeastern border the cannon roar. From the hills on which a week ago hundreds of holiday makers rejoiced in the pure air and the beautiful views, one now spies in the distance the smoking ruins, the burning houses of the little Belgian villages which lined so peacefully the shores of the Meuse and the Vesdre up to Liège, the manufacturing centre, the spire and chimney stacks of which one may discern in the distance from the Dutch hills—Liège, which may be but a smoking ruin itself, within a day, or an hour.

Long lines of wounded German soldiers, of wounded Belgian soldiers, of civilians, women and children, who in many cases have barely escaped with their lives across the frontier, are now on their way to Maestricht, to the same square at which in happier circumstances on Sunday next some thousands of Belgians would have gathered to assist at the great annual musical festival.

It has come as a surprise to everybody, the wirepullers-in-chief excepted. And it is not even certain that it has not been a surprise even to them, that they may not have thought to the very last minute that their mutual bluff would have the desired result.

Germany—once bound for war—had no choice, from the moment she determined to strike a blow at France, but to pass through Belgium. Every other direct route is barred by a series of fortifications. If the Belgians had been kind enough—or weak enough—to let the German army pass through their territory, the blow was struck and—this is the only theory of the German action that seems admissible here—France could have been dealt with before Russia was ready to fall upon the Fatherland.

The regiment which the Kaiser sent to safeguard the Dutch frontier from any infringement by his own troops is "Queen Wilhelmina's Own Prussian Regiment." On the other hand, "King Albert's Own Prussian Regiment" forms part of the army which attacks King Albert's town of Liège. Why is this?

The Dutch soil is respected everywhere, because, as the soldiers and officers say quite audibly, they "may not attack the country over which an Orange rules." And everybody knows how one of the Kaiser's most cherished titles is the (spurious) one of Prince of Orange.

The Dutch Red Cross helps the wounded indiscriminately, of course. But the German authorities are so brimful of courtesy towards these Dutch ambulance men that they send enthusiastic telegrams for the kind care received.

The marked difference in treatment between Holland and Belgium cannot but make many people believe in the real existence of that secret understanding between Holland and Germany which has so often in recent years been alleged to exist.

Yet if this explanation should gain a foothold in Europe and Holland stand as the Kaiser's helpmate, a revolution would be the immediate result. For it is clear that Holland feels with Belgium, with France; abhors the German proceedings. This is what the quarter of a million Dutch soldiers now with the colors think and say, and it is what the nation at large feels. I know Dutchmen who took service as volunteers in the Belgium army as soon as the attack on Visé and Liège became known. I know Dutchmen who would almost pray for an "accident" on the frontier of Holland and Germany which would make it necessary for this country to take its stand against "the Kaiser and his vandals," as they call them. Holland has never been a warlike nation, but I am almost convinced that the whole nation would prefer to go to war immediately rather than to bear the stigma of being the abettor and silent ally of Germany.

"Real independence is a great good, but the mock independence which is the inevitable sequel of a secret Germano-Dutch understanding is too dear at any price." So I was told this morning by a member of the Second Chamber, who is a prominent man in the peace movement and who cannot be suspected of any levity in matters like these. And he added: "I am certain that no such understanding exists or can exist."

I take his word for it, but there still remain the unprincipled and Machiavellian German proceedings!

For days the leading hotels in Rotterdam have been overcrowded by Americans returning from a visit to Europe. No doubt you will be hearing their stories at first-hand by the time you read this letter.

The staff of your Legation is working day and night—they are splendid! J. H. A.

The Middle-Aged Corinthian

SAILING FOR WISDOM VS. SAILING FOR SPEED—THE YAWL ADMIRABLE—NEWPORT AND WHALING—THE FOREFATHERS OF CORINTHIANISM.

The word *Corinthian* means a votary of effeminate vices and also an adept in the manly art of sailing one's own boat. It is the only sort of Corinthianism with which I have any near acquaintance, so naturally is my present theme. By limiting the subject to its middle-aged aspects I may seem to have abated its interest, but I think only apparently so. The problem of the young Corinthian, who is usually a racing skipper, is of opaque simplicity. Youth may sail anything, and the rest is a dull computation of available cash. Your young Corinthian rejoices in the yawing bow of the runaway catboat, and in the swaying over-extended main boom that thrashes into alternate waves. If the adventure end in that ignominious tangle technically called a goosewing, he has small reputation for caution or dignity to maintain. Not so the sober Corinthian who sees the land blink of old age blurring his horizon. In a sloop, young Corinthian affects the tip of his bowsprit and the lean of his gaff as resting places, and may do so with reasonable impunity. The racing scow of the Great Lakes will even afford him the stern joy of poising on the weather side of his own centreboard. These are ineligible spots for the skipper whose pace has been slackened by the years, and whose waist has outgrown the unimpressive concavity of mere youth. His problem in finding and handling his own boat is a sufficiently complicated and difficult one, his only advantage that he may be a little better able to pay for what he wants.

With abnormal cases of physical preservation, middle-aged men who habitually sail racing craft, I decline to deal. They need no advice and shall have no approval of mine. The middle-aged Corinthian I have in mind wants only to cruise. His guerdon is the fascination of right seamanship, the surprises of strange harbors, the scraps of odd human wisdom and experience that come to him who will cast anchor and be conversable. The other day, in the unlikeliest spot, Newport Harbor, the story of the last cruise of Capt. Slocum, of the world-circling sloop Spray, was told me by an ancient skipper who rowed alongside my little yawl. He had seen bottom up off the Connecticut River bars the nine-foot skiff in which Capt. Slocum sailed out from Mystic into his last nor'caster. Somewhere in the treacherous waters where Fisher's Island and Block Island Sound meet the old captain was overwhelmed. As my visitor talked, I looked at the nine-foot skiff which is my tender, thought of the nor'easter which I had ridden out uncomfortably the night before, and marvelled at the heaven-defying rashness of the greatest of aged

Corinthians. Compared with his last undertaking, the passage of Magellan Straits in the stanch and obedient Spray was mere child's play. A clever and resourceful mariner may well demand the scope of a world; a merely desperate skipper may be accommodated in his home waters. The Corinthian who courts his end need only wait for the right weather in New York Bay. Besides the natural interest in the dauntless Capt. Slocum, my visitor and I developed unexpected bonds. Years ago he had sailed a famous racing sloop. I could tell him that the son of his old captain had hauled her up to be an honorable landmark on one of the lovely Elizabeth islands, and just where she lay. It did not interest him greatly to hear that this son was distinguished as a connoisseur of art, but he was pleased to learn that he and his brothers were yachtsmen worthy of the stock whence they sprung.

Why this ancient mariner approached the particular middle-aged Corinthian who now writes was for no better reason than that we both sailed yawls. The law of birds of a feather applies nowhere with more automatic strictness than in harbors. You will see in flocks the cats, sloops, and schooners, and sometimes I have thought that an analytical mind might distinguish even finer subdivisions, as of craft with ambitious bowsprits, or with jib prudently rigged at the stem. At any rate the law of rig holds as an instinct. A catboat was my first love and best educator; yet I have just once consciously anchored alongside one. It was in a very small unknown harbor on which I chanced at night. The morrow showed the complete absence of other yawls, and perilously yet conveniently near my taffrail a monumental and well-stocked lobster crate, which I am satisfied was the real attraction that drew me to an otherwise unmeet roadstead.

What the boat of the middle-aged Corinthian should be is a matter of opinion; yet I am sure that the sensible choice lies merely between rigs with divided sails, such as schooners and yawls. The past ten years have seen the building of hundreds of small schooners and yawls; indeed, these are the only real novelties in our American waters. Many are sailed by their owners. Naturally, my own preference is for the boat I sail, the yawl—a rig which for centuries has proved its utility in the heaving shallows off Holland, and for generations has been the favorite rig amid the reefs of the West Coast of Scotland. Indeed, it is hard to imagine a more handy three-sail rig than one which provides only one sail of any size, while permitting the two small sails to be so rigged as under all circumstances to take care of themselves. I have even known hardy catboat skippers to admit, while surveying a welter to them passable but most uncomfortable, "You can do it well enough, in a yawl." And occasionally, casting aside the prudence that befits a middle-aged Corinthian, I have done it, just to prove them right. If any one doubts the handiness of what is still an exceptional rig, or that it has come to stay, let him watch the pleasure fleet when a thunderstorm roars up the wind. Down go the sails of cats and sloops. They wait, stripped and helpless, for the blast, or face it with ignobly chugging engine. Schooners follow suit, or go through a laborious process of reefing. Those that take that chance will generally be seen when the whirlwind has passed with gaff dangling and parted halliard. The yawl quickly lowers and ties up her mainsail, an affair of seconds, and in fighting trim gallantly faces the event. You will see her driving into the smother when the rest are aimlessly drifting. There are faster boats, but she works *ohne Hast ohne Rast*.

As for Corinthianism in general, the absence of the inevitable, inarticulate, and highly expensive Norseman, who is now about the only available sailing master, has the effect of throwing upon the Corinthian the most delightful variety of work. He is about the only surviving handy man. If there be anything more engrossing than sailing, it is sitting in your own unchaperoned cockpit under the sun and making splices. Taking up turnbuckles has its joys, and so has painting. Much wisdom is to be got by working on shore alongside those seasoned men who prepare ships to go down into the sea. Then the sport adjusts itself as few others to time, tide, and temperament. You may arrange a cruise gentle enough to please your wife's relatives, or you may sail out into winds fit to suit Viking blood. I know of a particularly timorous Corinthian, who, by biding his time, has nosed his ill-found craft into every port from Charleston to Machias. I know also the captain of a most picturesque and uncertain packet who has joyously left the fragments of his booms and masts from Monomoy to Block Island. He has sailed so long and successfully that his pleasure now is solely in emergency and disaster. These are the opposite poles. One is free to name his craft the Adventure or the Susan Jane, and to sail her accordingly. Between these high latitudes of radicalism and conservatism most middle-aged Corinthians will be content to steer.

To assert his kinship with the long line of seafaring men is the Corinthian's high privilege. By the easy expedient of neglecting his engine—in these days one will hardly escape some ill-smelling mechanism misnamed an auxiliary—the amateur captain may put himself essentially in the conditions of Ulysses or Erik the Red. It is the same sea, and boats have not greatly changed. Once, by a misunderstanding with the chart-seller, I had to find my way in the, to me, unknown stretch between Sakonnet and Cuttyhunk. It was done by keen observation of the waters, timely use of the lead, and a modicum of good luck. Under these conditions Smithtown Neck may be as ominous as Læstrygonia, while, having noted Scylla and Charybdis, I hold the currents that swirl around the Hen and Chickens rocks to be a satisfactory equivalent.

One noon, while rising and falling with slack sails in the great rollers that raced towards Narragansett Bay, I heard alongside a curious *pouff!!* A white fountain of thin spray rose near by, and then a slow rounded back ploughed through the wave, leaving its own wake of foam. I am thirty-one feet on deck. It was much longer. Had he playfully caught me head on, the good cedar planking of the Altair would have yielded like a filbert under the hammer. To react the tragedy of the Essex under the windows of the 400, this would be to succumb with dignity, such was the first reflection. Then the bass *pouffs!!* sounded all about. To starboard, port, and ahead the blue rollers were broken for a cable's length by fountain plumes and diving brown backs. Recalling that the blackfish, as this small whale is called, was after all a faint-hearted cetacean, for a moment I thought that by launching my largest boat-hook from the prow of the nine-foot tender, I might, with a minimum of risk, emulate the feats that had enthralled my boyhood in the incomparable pages of Herman Melville's "Moby Dick." I abstained from the proud gesture, considering that while I could ill spare the larger boat-hook, I had no kind of use for the small whale. As I left him unmolested, a sympathetic shipmate told with admirable mimicry the classic yarn of Captain Sims and his more enterprising mate and the whale that spouted and spumed and broached. For a moment we had lived over the thrill of old whaling days.

To the middle-aged Corinthian of any imagination such revivals of the standard incidents of seafaring through the centuries come not infrequently. They are the pledge of his oneness with all who have captained hollow ships since the ocean was—the assurance of a modest but indubitable apostolic succession. To-day a standing joke in old-fashioned boatyards is the apparently unshipshape plight of St. Paul when off the coast of Malta he "let out two anchors *from the stern* and waited for the dawn." That this, in a rowing galley, was all right enough merely enhances the bond of chaff and humor that is immemorial among sailing folk. Since I have experimented with a megaphone, I am satisfied that it was both terse and witty for Ulysses to describe himself as No Man to blinded Polyphemus, and sometimes, when my anchor chain has been clanking correctly enough at the bow, my anti-Calvinism has admitted a strong fellow-feeling for St. Paul. When the professionals quailed, he seems to have played a stalwart Corinthian part. May we latter-day Corinthians, if ever it fall to our lot to fight with wild beasts at Ephesus, hold ourselves as befits our lineage, and in fashion to do honor to our mighty mistress, the sea.

Frank Jewett Mather, Jr.

Poetry

RECENT VERSE.

Auguries. By Laurence Binyon. New York: John Lane Co. $1 net.

Aphrodite and Other Poems. By John Helstone. New York: The Macmillan Co. $1.25 net.

Challenge. By Louis Untermeyer. New York: The Century Co. $1 net.

Arrows in the Gale. By Arturo Giovannitti. Riverside: Hillacre Press. $1 net.

The Return of Odysseus. By Percy Stickney Grant. New York: Brentano's. $1.50 net.

The Ride Home. By Florence Wilkinson Evans. Boston: Houghton Mifflin Co. $1.25 net.

Brunelleschi. By John Galen Howard. San Francisco: John Howell.

Out of Bondage. By Fanny Hodges Newman. San Francisco: Paul Elder & Co. $2.50 net.

Poems. By Walter Conrad Arensberg. Boston: Houghton Mifflin Co. $1 net.

Sprays of Shamrock. By Clinton Scollard. Portland, Maine: The Mosher Press.

In the Shadow of Ætna. By Louis V. Ledoux. New York: G. P. Putnam's Sons.

Eve. By Katharine Howard. Boston: Sherman, French & Co. $1 net.

Selected Poems of John Greenleaf Whittier. New York: Oxford University Press.

A Little Book of American Verse. By Jessie B. Rittenhouse. Boston: Houghton Mifflin Co.

Anthology of Magazine Verse for 1913. By William Stanley Braithwaite. Published by the Author.

Poems. By Robert Underwood Johnson. Fourth Edition. Indianapolis: The Bobbs-Merrill Co. $1.50.

Robert Bridges. By T. Herbert Warren. New York: Oxford University Press.

Richard II. Edited by S. G. Gordon. New York: Oxford University Press.

The "Auguries" of Mr. Binyon, like auguries in other fields, arouses expectations which the results hardly verify. In these accomplished and modulated verses, we breathe the ether rather than the air of poetry. The verse is highly, minutely, pliantly expressive, but it lacks, in the accepted phrase, viscera. It wanders adrift with waiflike or spectral detachment, not achieving that rootage in the obvious which is indispensable to the success of the recondite. There is delicate Hawthornesque fancy in the first section of "The Mirror"; there is cosmic and cyclic imagination in the picture of the world-wide and age-long influence of the moon on the sum of human or planetary experience. Mr. Binyon deserves credit, moreover, for resisting the temptation, common in poets of his type, to seek in the coarsening of his matter an offset for the refinement of his treatment.

The combination of sexual passion and humanitarian ardor which emerged in Shelley, and reappeared in Shelley's devotee, Swinburne, has renewed its career in the writings of a follower and worshipper of both poets, John Helstone. His imitation, in an elegy on Swinburne, of Swinburne's well-known elegy on Baudelaire deserves admiration—like other forlorn hopes—for its courage. The author's imitativeness, however, is many-sided, and his chief debt to Swinburne is a facility in amplification which piles stanza upon stanza with a perseverance that sets one wondering how so much addition can mean so little increase. Mr. Helstone is not without strong phrases, good lines, and imaginative touches, particularly in landscapes of the bosky, dense, implicate type; but his rejection of clearness is absolute, and his slender evocative and rhetorical power is no compensation for his obscurity. His teaching is meagre and obvious, for all its haughty assumption of profundity and compass, and we cannot help wishing that some one more influential with young poets than the cold reviewer would suggest to Mr. Helstone that it is a waste of chivalry to undertake the championship of the injured animal passions. The animal passions can take care of themselves.

Mr. Louis Untermeyer's work divides itself into two parts. The first is a miscellany of types, narrative, descriptive, dialectical, allegorical, fanciful, erotic, producing a miscellany of impressions—impressions of study and negligence, of smoothness and harshness, of platitude and originality, of beauty and repulsion, of freak and poise. The second is a much smaller group of much abler poems, praiseworthy less for their value as poetry than as clear-cut dicta, which add to plain and pointed language the reinforcing crispness of verse. In the flux of moods which agitate Mr. Untermeyer, it is neither unnatural nor unfit that the one mood which abides with us should be that of steadfastness. His hand, largely unsure and tentative, has defined and affirmed itself in the single field of pointed thought and measured and incisive verse. We quote four stanzas of "Prayer":

God, though this life is but a wraith,
  Although we know not what we use,
Although we grope with little faith,
  Give me the heart to fight—and lose.

Ever insurgent let me be,
  Make me more daring than devout;
From sleek contentment keep me free,
  And fill me with a buoyant doubt.

Open my ears to music; let
  Me thrill with Spring's first flutes and drums—
But never let me dare forget
  The bitter ballads of the slums.

From compromise and things half-done,
  Keep me, with stern and stubborn pride:
And when, at last, the fight is won
  God, keep me still unsatisfied.

The impression left by "Arrows in the Gale" is that an earlier and more exclusive addiction to writing might have made Arturo Giovannitti a genuine man of letters. In spite of chronic superabundance, of much vague rhapsody in formless Whitmanesque verse, of an excess of density and hardness in the grenadier-like pace of the squadroned iambics, of plentiful infractions of good English and good taste, the writings of this syndicalist show real imagination, which, when joined with compression and restraint, rises into momentary power. The following beatitude expresses the spirit of the work: "Blessed are they that mourn their martyred dead, for they shall avenge them upon their murderers and be comforted." The literature profits by the massiveness of the truculence; it is an embedded, an assimilated, and organic hatred. The following lines illustrate the mixture of repulsiveness and power in the work (the italics are ours):

And now we, too, must sit here, Joe. Don't dust
These boards on which our wretched brothers fell,
They are clean, there's no reason for disgust,
For the fat millionaire's revolting stench
Is not here, nor the preacher's saintly smell,
And the Judge never sat upon this bench.

The subject of Percy Stickney Grant's poetic play, "The Return of Odysseus," offers clear dramatic opportunities. The success of Mr. Grant in evading or nullifying every one of these occasions has an inevitableness that resembles dexterity. His style shows a combination of firmness and bareness which is not uncongenial to the Greek temper, but the advantage is lost through the plethora of romanticized modern sentiment. With good will we might coax ourselves to believe that the vessel was antique, if the liquor that filled it were less indisputably modern. The author is best in lyrics, and one of these, a chorus in the first act, which adheres to Greek motives, has an urn-like symmetry and distinction. Taken all in all, however, Mr. Grant shows the trouble in store for the man who, essentially lyrical in temper and modern in feeling, attempts to write poetry under the double handicap of the dramatic form and the Hellenic setting.

"The Ride Home," by Florence Wilkinson Evans, is a volume of 383 pages, which looks like a collection of reprints. It falls into three groups: First, the poems in "The City" on practical or sordid subjects popularly classed as unpoetical; second, the travel poems; third, "The Marriage of Guineth," a one-act tragedy in blank verse, of Celtic theme, of which Mr. W. B. Yeats is evidently the prompter. The first group exhibits some pointed motives, but fails to show that overplus, that double charge, of imagination which is needed, in such themes, to offset the predisposition to a prosaic attitude, a predisposition which counts twice because it affects both author and reader. Of the travel verses, little else can be said than that they are the ingenious and brightly colored simulacra of poems, satisfactory only to those who are content to imagine that they feel. In the drama, the suspense dies of too much nursing.

The "Brunelleschi" of John Galen How-

ard is an artistic monologue of the Browningesque type (Brunelleschi loquitur) expanded to 1,837 lines, and adapted to three successive views or outlooks upon Florence, from the artist's chamber at dawn, from the hollow of the Duomo at noon, and from San Miniato at night. There are grave faults in the style, traceable mainly to the popular delusion that the only defence against that insidious foe, the commonplace, is impropriety or affectation, or, in other words, that the first step towards a mastery of English is the repudiation of its vocabulary. But the compensations are significant. There is a speed and sonority in the lines which makes them agreeable as they stand, and which, in purer English, would be really enjoyable. The main excellence, however, is a certain heat and vigor in the conception of Brunelleschi which makes him fully half-alive (in the "Dead City" of contemporary verse half-measures of vitality are welcome) and the presence of sparkles of animation even in the artist's lightly sketched compatriots. Mr. Howard has much to learn and to unlearn, but he has put beyond question his right to try again.

"Out of Bondage" contains much better poems than might fairly be presupposed from the luxurious letter-press and the attitudinizing preface. The best of them lack neither intellectual and emotional substance nor imaginative force; somewhat austere, even grim at times, the writer shows a particular fitness for thoughtful and massive themes which finds an apt second in a command of grave and weighty measures. In contrast with the indirections and sinuosities of our epoch, the reader is pleasantly conscious of a frank, face-to-face utterance which suggests that, while the verses have been tended, as all good verses are and must be, they have not been cockered. The following lyric, called "The Long Time," though too conventional in theme to be typical, illustrates the author's capacity fairly well:

Though years pass by and fortune does not come,
Let us not question why is joy so late;
While birds are singing we may well be dumb;
While roses blossom, Dearest, we can wait.

The fields of life are wide and full of grain;
Let us turn back from peering through the gate,
And help to load the common harvest wain;
If we are helping others, we can wait.

The earth is dreary and its paths are rough;
Crooked they are; fall to and make them straight
And point out pitfalls! There is time enough;
The while we serve we can forget we wait.

Then, when the noontide comes, and afternoon,
And we look up and see it growing late,
Behind the sunset hangs the little moon;
Till the night comes, Beloved, we can wait.

Mr. Walter Conrad Arensberg is an exasperating person—exasperating in a degree impossible to any person who is not at the same time half-captivating. His faults and virtues conspire to make him unforgettable. The list of Frenchmen whose poems he has translated—Ronsard, Du Bellay, De Musset, Baudelaire, Murger, each once; Laforgue, Mallarmé, de Nerval, each twice; Verlaine five times—is a half-description and a half-critique of his original lyrics. He is a pupil of the Symbolists, freely assimilative of their merits, and, as Shakespeare would say, duteous to their vices. The strain that he puts upon human intelligence is both complimentary and oppressive, and he is fond of tying up his construction in hard knots which repeat themselves in the foreheads of his readers. But the primary defect of these poems is the want, so to speak, of a signature, of a definite human being responsible for their genuineness. Here is a fine sensibility, here is a fine accomplishment, wandering about in melancholy quest of a man or soul who will give them shelter and employment. But not all these faults, with occasional affectation and cheapness superadded, disturb the reader's conviction that Mr. Arensberg is a man who cannot be put aside either with a buffet or a caress. For pure sound what can exceed the following quatrain?

What hath He made of thee,
More to be blest?
What of the braid of thee,
What of the breast?

He can rise by moments to sheer magnificence:

Nor trust the sad security of sleep,
Nor rest the ageless watching of their eyes.

We add a little poem, "Autumn Wind," not for exceptional merit, but because the first stanza illustrates his rich expressiveness, the second his frequent ooziness or insalubrity, and the two together his uncertainty:

The birds drift over the autumnal sky
Like frail and fallen leaves across a lawn,
And the unmitigating winds have drawn
Out of their chant a shivering shaken cry.

The winds have wrecked the gleaming sails of day
And they have made a sorrow of the air—
Wild winds, that are as streaming as the hair
Of girls that wait the drowned by the bay.

In the flying and filmy verse of the lyrics of Irish setting in Mr. Scollard's latest volume, there is a touch of love, a touch of landscape, a shimmer of pathos, a vestige of primitive religion, all softened and attenuated like the images of woods and rocks in the vague under-world of the lake or river. The effect is mildly agreeable, and the poetry, being essentially light, is the better for the fact that both its materials and its spell are obvious; the tenuous is intolerable when complex. Repetition is prettily employed in the two stanzas that follow:

What is that shimmering line of white
Gliding under the stark midnight—
Gliding—gliding—gliding—gliding—
Where the river gleams when the moon is bright?

There is never a sound save the night-bird's cry,
And the languid water lapsing by—
Lapsing—lapsing—lapsing—lapsing
Under the arch of a leaden sky.

In "The Shadow of Ætna," by Louis V. Ledoux, we meet with a prettiness which is distinguishable from the omnipresent prettiness only by a shy gentleness or meek suavity of tone. Two stanzas may be cited for lyric animation:

Heart of a bird! Heart of a bird!
O, the wild, white cranes are free;
But the heart of man is the song unheard
That the sea-winds sing to the sea.

What have you more that I have had
From the winds and the sun and the sea?
Is the heart of a bird like a man's heart sad
And crying ceaselessly?

In Katharine Howard's "Eve," the most primitive of legends, that of Adam and his wife, is applied to the illustration of the most ultra-modern of causes and doctrines, woman's suffrage and eugenics. The form is dimly rhythmical and vaguely dramatic, and the meanings peer at us from a mist—sometimes deepening to a murk—of allegory. The boldness of the conception and the sincerity that points to a personality behind the book entitle the work to a respectful mention in these columns.

The anthology continues to flourish, or at least to multiply. The "Selected Poems" of Whittier is a volume of convenient form and of discriminating taste in every point except the point of quantity. The object of selection is to reduce bulk and heighten quality, and mere arithmetic would seem to show that, in a collection of 189 poems, the accomplishment of neither object could be strikingly successful. Miss Rittenhouse's "Little Book of American Verse" is a competent selection of lyrics from contemporary or recent singers in America. The wise reader will feel that it is less to the purpose to be saddened by the absence, or the paucity, of memorable work in this collection than to rejoice in the convincing evidence it offers of the existence in America of a large class of thoughtful, delicate, and accomplished persons who enrich, if they do not glorify, a nation. Most American scholars and men of letters would probably derive more pleasure from Miss Rittenhouse's little volume than from all but one or two of the very best Elizabethan miscellanies and songbooks. The afflatus, it is true, is less marked, but it is a fair question whether thoughtfulness, interest, and accomplishment, with reduced inspiration, do not constitute better literature than inspiration which works monotonously in a not very extended field of not very elevated topics. One is scarcely bound to modify this estimate materially in passing from Miss Rittenhouse's "Little Book" to Mr. Braithwaite's "Anthology of Magazine Verse," which confines itself to the year 1913. The book contains forty-seven select poems, a longer list of titles of "distinctive" poems, and a brief, enthusiastic prefatory essay on the poetry of 1913 in general. Mr. Braithwaite emphasizes the merits of Nicholas Vachel Lindsay's latest volume and of Mahlon Leonard Fisher's sonnet, "November." Mr. Fisher's sonnet is entitled to about half of what the rapt critic says in

its behoof—which is another way of saying that its merits are striking.

Mr. Robert Underwood Johnson has given to the public a fourth edition of his collected poems, to which the delicately tinted ode on Saint-Gaudens and the enheartening "Vision of Gettysburg" have been added. Dr. Herbert Warren, president of Magdalen College, Oxford, has republished in pamphlet form a lecture on Robert Bridges, of which the outstanding traits are a fine literary gourmandisc and a winning mixture of respect and fondness. Mr. G. S. Gordon, of the University of Leeds, has prepared an edition of "Richard II," the purpose of which is "to gain readers for Shakespeare"; believing that the text should not be smothered in the wrappage, he compresses his introduction into six pages and his notes into eighteen.

Books and Men

ALICE IN WESTCHESTER.

He was a weary-looking little person, and might have posed before a newspaper cartoonist as that imaginary being, the Tired Business Man. He stepped slowly off the 5:34, and began a deliberate progress across the small park which makes that particular railway station different from all others in the world. There is a path bordered with pink and white altheas—three months ago it was similarly decorated with Cherokee roses. Through this he walked, with a bundle of newspapers under his arm, and came out on the grassplot near the banks of the Bronx River. There is a "rustic" bridge, a waterfall, a tiny, wooded island—I said it was an unusual railway station!

The moment he reached the bridge some one stepped out from behind an althea bush and said: "Please don't get into the picture!" He peered at her under his hat-brim, and then made a vague motion in the air in front of his eyes and peered again. She was in brilliant red from head to foot, there was no doubt of that. Her skirt seemed to be made of three or four bright red automobile tires, decreasing in circumference as they rose from her ankles to her waist. She wore a red shawl, and carried a long sceptre. On her head was a veritable crown, of the same brilliant hue.

If you have been steeped in business cares all day, if you have been gorging the war news for forty minutes on the train, you are ill-prepared to confront such a woman. Ordinarily, people do not dress in that way in quiet towns less than twenty miles from the city. So the man was confused. He made an inarticulate sound of inquiry. The woman repeated, briskly, "Please do not get into the picture!" But still the man hesitated, made queer noises in his throat, pinched himself, and made gestures with his right hand as if he were trying to drive away a swarm of gnats dancing in front of his face. The situation was altogether beyond him.

It was the complete failure of the practical life. Because he insisted on living in a world of fact, prided himself on remembering that this is the year 1914, that Woodrow Wilson is President of the United States, that business is going to the dogs on account of the war, and a number of other unimportant truths of that sort—it was because of just that attitude that he was absolutely helpless, absurd, pitiable. Any seven-year-old child would have been well poised by comparison. Any grown-up who had lived with a decent regard for foolishness, who had eschewed the awful career of fact, would have been at home in an instant. For such a one would have exclaimed: "Why, it's the Red Queen! Where is Alice, I wonder?"

Alice was near at hand. The White Knight was bidding her good-by, just down the little slope! Then he rode away (towards Farrell's drug-store!) tumbling off, first on one side and then on the other, in quite the proper fashion. As for Alice—"a very few steps brought her to the edge of the brook" (the Bronx River).

"The Eighth Square at last," she cried as she bounded across and threw herself down to rest. . . . "Oh, how glad I am to get here! And what is this on my head?" she exclaimed in a tone of dismay, as she put her hands up to something very heavy, that fitted tight all around her head.

"But how *can* it have got there without my knowing it?" she said, as she lifted it off, and set it on her lap to make out what it could possibly be.

It was a golden crown.

And all the time the stage-manager, or whatever he is called, stood behind a tree, on the little island near Alice, and the man with the moving-picture machine kept the handle of his apparatus in motion.

The puzzled man was still puzzled, and staring. Presently the White Rabbit, in all his majesty, walked out from behind a tree. Now, the White Rabbit is simply one of the most delectable personages in literature. By rights, he had no business here, for this was "Through the Looking Glass," and the Rabbit belongs, of course, in "Alice's Adventures in Wonderland." But who would find fault, when he came in full feather, or, rather, full fur—ears, tail, and whiskers, coat of loud checks, waistcoat, watch and chain, Gladstonian collar, and all? He walked over to help the Red Queen keep the business man from crossing the bridge until that film was taken. His help was not needed. The appearance of the Red Queen, and a glimpse of the White Knight as he rode away, falling off every few steps, had sufficiently perturbed the stranger. The approach of the Rabbit was the last straw, and the man retreated.

Then the Rabbit and the Red Queen came over to us. The Rabbit remarked that it was a hot day for furs, and the Red Queen said that it was a nuisance to have a costume you couldn't sit down in. (Look her up in the book, and you will understand the difficulties which Sir John Tenniel prepared for this actress). The 5:50 came into the station, and the stage manager declared that there would soon be too much of a crowd and that the light was getting bad, into the bargain. So he helped Alice off the Eighth Square, while the Rabbit hurried over to the baggage-room, to get into more matter-of-fact clothes.

It is hard to agree with the folk who see nothing but sensation and danger in the moving pictures. It is true that the March Hare told me that already, somewhere out West, they are enacting the battles in Belgium before the cinematograph. The Kaiser is there, moustache and all, and so is Gen. von Moltke and Gen. Joffre. These are painful things. But to step off the 5:34, in your own suburban town, and find the White Rabbit and the Red Queen awaiting you! Does that not add a new pleasure to life?

EDMUND LESTER PEARSON.

News for Bibliophiles

JAMES ADAIR'S "HISTORY OF THE AMERICAN INDIANS."

In the year 1775, two London booksellers, Edward and Charles Dilly, "in the Poultry," published a quarto volume, "The History of the American Indians," by James Adair, who had been—so reads the wordy title-page—"a Trader with the Indians, and Resident in their Country for Forty Years." The book is still in great demand and highly regarded, in spite of the author's peculiar ideas respecting the origin of the American Indians.

In his preface, Adair remarks that he had been engaged in the Indian trade since 1735; and, what is more interesting from a bibliographical point of view, that the greater part of the book was written while "among our old friendly Chikkasah," with whom he first traded in 1744. He laments that the work was written under many difficulties, being, as he was, separated from "the conversation of the learned," and from libraries. Furthermore, Adair was frequently interrupted by the exigencies of trade, and often compelled to conceal his manuscript from the jealous natives, who were suspicious of all papers. But the author does not intimate, neither is it generally known, that he endeavored to publish his book by subscription as early as 1769. In the *Georgia Gazette* (Savannah) of October 11, 1769, will be found an item about Adair, dated New York, February 27—possibly copied from a New York paper of that date—in which it is stated that "he intends going to Europe in the ensuing summer, where he proposes to print the Essays"—meaning his work on the American Indians. The same newspaper, issue of November 1, 1769, printed the following "Proposals":

Proposals for printing by Subscription, Essays on the Origin, History, Language, Religion, and religious Rites, Priests or Magi, Customs, Civil Policy, Methods of declaring and carrying on War, and of making Peace, Military Laws, Agriculture, Buildings, Exercises, Sports, Marriage and Funeral Ceremonies, Habits, Diet, Temper, Manners, &c of the Indians on the Continent of North America, particularly of the several Nations or Tribes of the Catawbas, Cherokees, Creeks, Chickesaws, and Choctaws, inhabiting the Western Parts of the Colonies of Virginia, North and

South-Carolina, and Georgia. Also some Account of the Countries, Description of uncommon Animals, &c, interspersed with useful Observations relating to the Advantages arising to Britain from her Trade with those Indians; of the best Methods of managing them, and of conciliating their Affections, and thereby extending the said Trade. Also several Interesting Anecdotes Collected in a Residence of the great Part of 33 Years among the Indians themselves.

By James Adair.

Conditions. The Work will be comprised in two Octavo Volumes, and be put to Press in London as soon as a sufficient Number of Subscriptions are obtained, and will be printed on a good Paper, with Letter entirely new.

The Price to Subscribers will be two Spanish Dollars, one of which to be paid at the Time of subscribing, and the other on the Delivery of the Books.

Subscriptions are taken in by the Printer of this Gazette.

It is not unlikely that the proposed book was advertised in other newspapers of the day. But, like Capt. Jonathan Carver, who later plagiarized portions of this work, Adair appears to have been compelled to go to London to find a publisher. And, like Carver, if he went "to Europe in the ensuing summer" (1769), he was forced to defer publication for a number of years after reaching the great metropolis. Meanwhile, I wonder if Adair and Carver met in England and talked over their experiences in the wilderness, and the difficulties encountered in getting a book published by subscription, particularly in America? If Adair went to England, this is not at all improbable. Charles Dilly, still carrying on his business "in the Poultry," was one of the publishers of the third, and best, edition of Carver's "Travels" (London, 1781).

JOHN THOMAS LEE.

Correspondence

A MARITIME PEACE LEAGUE.

TO THE EDITOR OF THE NATION:

SIR: The first idea towards creating a naval police force in order to maintain peace among the Powers, by the eventual menace of a blockade and ensuing famine, was put forward, I believe, by M. Van Vollenhoven, professor at the Leyden University. But his plan seemed quite impossible to realize, being founded on the principle that every Power should put *a part* of its naval forces in the hands of the executive committee at The Hague. A much simpler method can be devised, and, I am firmly convinced, would meet with no difficulty. Suppose that the United States, England, France, and Russia should agree—without precluding further adhesions—that every international difficulty, of whatever kind, between white men, should be submitted to the tribunal of The Hague; further, that any Power refusing at a given time to submit to this agreement, should be declared *outlaw* and all her shipping stopped, all her ports blockaded by the united squadrons of the Maritime Peace League. What country, in this rather overpeopled world, could resist such a pressure for more than a fortnight? Before shipping would be resumed, the guilty country would have to pay all the costs resulting from the action of the Maritime Peace League. Is that not very easy to understand, and will any one say that it is utopian?

THE MOST WICKED OF WARS.

TO THE EDITOR OF THE NATION:

SIR: I intended last week to ask you to thank some *Nation* writer for a phrase which has been ringing in my ears—"the most awful and most wicked of wars." Last night I read the *Nation's* article "The Real Crime against Germany," and now I must send my thanks this morning.

I suppose that every man who has spent as much as one semester in a German university must say "Amen and amen" as he reads the article. It is so horrible and so useless and wicked that the imagination refuses to work on it. To think of that beautiful land torn by the destruction of war; and to think of those earnest, lovable, naïve, high-minded young fellows who sat on the same benches and bent over the same seminar tables with me being slaughtered like sheep—and for nothing! The mere waste, not merely of money, and not merely of ordinary life, but of highly trained intelligence and scientific devotion, is appalling. I cannot even comfort myself with the idea so widely expressed, that it will be repaid by wiping out autocracy, and making future wars impossible. I fear that autocracy will not be wiped out; and, whatever the result of the war, it seems to me that another is inevitable. If the Entente win, Russia will have to be checked; if Germany wins, the Government will become utterly intolerable.

Is it too much to hope that this will at least end the infernal—I use the word advisedly—talk of "insurance against war"? Surely this land, so blessed by its geographical situation, will see the futility of such arguments, and will rally to the man who has held up such a lofty ideal before it. I suppose we have all thanked God many times that Roosevelt was not in the chair. I am fanciful enough to do so again now. I do not see how we can be involved, but I believe if it were possible he would do it.

A FORMER STUDENT IN GERMANY.

Athens, Ga., August 15.

"MADE IN GERMANY."

TO THE EDITOR OF THE NATION:

SIR: Apart from our citizens of German birth or German descent, the public opinion of the United States seems to be decidedly against Germany in the struggle ushered in by her own declaration of war against Russia. This attitude is dictated neither by any love of the Russian colossus nor by a dislike of the German people, who are highly respected and admired for their achievements in business, science, education, literature, and music. But as a nation we do protest against the doctrine of militarism as preached and practiced by his Majesty William II. We are well aware that the great burden of armaments is due primarily to the excessive military establishment of Germany, and we are reasonably sure that the present war is being fought because William II felt the moment opportune to attain certain long-cherished ambitions. For these and perhaps other reasons, American public opinion not only desires the defeat of the German armies, but believes that their Government has been overtaken by midsummer madness in throwing down the gauntlet to the Triple Entente and its subsidiaries. From our point of view, two considerations should have staved the Kaiser's hand. First, the mobilization of his huge army has dislocated the magnificent industrial system built up since 1870, and likely enough made difficult the harvesting of the crops, for which it has been necessary in recent years to import hundreds of thousands of Poles and Russians not now available. Secondly, by the challenge to England, Germany has placed her mercantile marine at the mercy of British cruisers, forfeited her overseas markets for perhaps a generation, endangered the fleet upon which she has lavished so many millions, and given England the chance to pick up the scattered German colonies in Africa and the Pacific, which, indeed, has already happened in the case of Togoland.

Without pretending to possess the imperial confidence, one may suggest certain reasons why the Kaiser has by his actions belied his much-vaunted love of peace. To begin with, the advance of social democracy in the Fatherland has aroused not only his animosity but his fears. Any student of German politics knows how the whole existing system has been called in question by the force which gathers strength at each new election. Personal government, militarism, protection, and an aggressive imperialism have been repudiated by a third of the German voters, who dislike the excessive burden of taxation and resent their political impotence. The fact that the property levy intended to finance the last increase of the army yielded only two-thirds of what was expected is significant; so also is the facility with which the Social Democrats mustered more than a thousand witnesses anxious to testify to the cruelties of army officers to their men. Why not dispose of these "grumblers" (the Kaiser's own word) by appealing to the military spirit of the nation, and by parading the war as one of defence, make it appear that the Empire was in jeopardy?

This old device of governments pestered by internal difficulties would be particularly suited to the German situation because the upper and middle classes have been educated into the belief that a mere rattle of the German sabre would send foreign monarchs and hostile Governments into fits of terror and abject obedience. Professors in the state-controlled universities, publicists of the *Flottenverein* and the *Alldeutscherbund*, an inspired press, and an exaggerated worship of the uniform have convinced a sober, intelligent, and industrious people that the world depends on the beck and nod of the Kaiser, and that they, his subjects, are the chosen people, to whom all things are possible. And in addition the conviction has grown—how justly cannot be discussed here—that the Fatherland has received harsh treatment at the hands of its rivals. That Russia seeks to block the *Drang nach Osten*, that France and England are constantly increasing their own vast empires, while Germany gets little or nothing, that the British fleet has been concentrated in the North Sea to carry out a surprise attack on Hamburg and the Kiel Canal, that France has been planning a war of revenge—these and a host of other grievances have been assiduously ventilated till, as was recently pointed out in the *Nation*, the temper of the German people has more than once been a danger to the peace of Europe. Dr. Paul Rohrbach's "Der Deutsche Gedanke in der Welt" may be recommended as a moderate statement of German ambitions;

but one will search in vain in his or other writings for any admission that German diplomacy may possibly have given offence to other nations, and thus defeated its own ends.

As a matter of fact, Germany's position is difficult enough. The country is fast becoming a replica of England. Food is imported in increasing quantity, and for their raw materials German manufacturers are more and more dependent upon the produce of other nations and their colonies. Thus the great steel plants of Westphalia receive much of their iron from the mines in eastern France, which in German eyes is the most important aspect of Franco-German relations, and silk, cotton, and wool all have to be imported, to suggest a few other items. Germans want a sure source of supply for these materials of their industrial life, and more markets for their manufactured articles. In other words, they desire colonies, and compared with the enormous possessions of England, France, and Russia, German Southeast and Southwest Africa, the Cameroons, Togoland, and a few islands in the Pacific are insignificant. Germans decline to admit the contention of Sir H. H. Johnston (in "Common Sense in Foreign Policy") that these lands have been but indifferently exploited; they point out that the population of Germany is greater than that of France or of the white-peopled dominions of the British Crown, and that the German emigrant who demands an agreeable climate cannot settle in a land ruled by the Kaiser's Government. Nor has it escaped Germany's attention that France and Russia have more or less excluded competitors from their preserves, that the British Empire may possibly form a customs union, and that German trade is no longer expanding at that rate which, a few years ago, gave such a shock to easy-going England and conservative France.

The fact that the desirable lands of the world already belong to other peoples may, according to Germany, be ignored in the face of her army and her growing navy; expansion or decay is the alternative which leaves the German nation but one choice. General von Bernhardi, in his "Germany and the Next War," put the case in a nutshell when he said that the great objective of German diplomacy must be to shuffle the cards so that France and England would declare war on Germany, who would thus be enabled, by right and might, to despoil the aggressors at the close of a victorious campaign. This doctrine is the more intelligible if we recognize that the vast sums expended on the army and navy have produced no returns of the kind desired. The very fact that her military strength prevented other nations from attacking Germany was all the more galling because, as long as peace was maintained, time was working not for Germany but for her rivals. The collapse of Turkey, the reorganization of Russia, the growing unity of the British Empire, and the increasing efficiency of the French army were slowly removing the political advantages hitherto enjoyed by Germany. Therefore the latter must strike for her altars and her fires before the odds became overwhelming.

In July, 1914, the general situation seemed unusually favorable for the success of German policy. France was still unsettled after the election of a new Chamber of Deputies and the excitement of the Caillaux trial; an official report had cast doubts upon the supposed perfection of her military machine. Russia, apart from serious strke complications, was not ready for war; so Dr. Rohrbach, in the July issue of the *Revue Politique Internationale*. Should England participate in the Continental war, the outlook would be different. But Germany had high hopes of procuring British neutrality. The long naval rivalry had been considerably appeased by Admiral von Tirpitz's acceptance of a ratio of 16 to 10 in the matter of Dreadnoughts, the negotiations about the Bagdad railway and other political disputes were practically concluded, and the animosity between the two peoples had to a large extent burnt itself out. Moreover, England was facing the probability of civil war in Ireland.

The resolution with which the British Government, in conformity with its treaty obligations and its interests, championed the neutrality of Belgium is believed to have caused intense surprise in Berlin. But the Germans have never understood the English party system, which is merely a device for affording an outlet for the combative spirits of Englishmen, and does not allow personal ambitions to override national interests. The Liberal opposition to the Boer War was dictated by peculiar circumstances quite different from the conditions of 1914, even if recent events had not shown that Great Britain would never tolerate an attack on France. It is quite clear that Germany was willing to forego a maritime attack on France as the price of British neutrality; while Sir Edward Grey's statement suggests that Britain was prepared to keep out of the struggle if the neutrality of Belgium were respected. The *Realpolitik*, so dear to German hearts, should have counselled moderation, but Prince Bülow has admitted in his "Imperial Germany" that the Germans do not understand the fine art of politics. A glance at the map of Africa will reveal how the Belgian Congo lies between the German possessions on the Atlantic and the Indian Oceans; by involving Belgium in the conflict and by taking for granted that she would make no resistance Germany would have an excuse for demanding some or all of the Belgian Congo, and perhaps annex Belgium herself, thereby procuring an outlet on the English Channel. National jaundice outran discretion, as is further illustrated by the assumption that Italy would fight with her allies.

In this connection, the decision of Portugal to support "her ancient ally," Britain, is instructive. The Germans have long desired to acquire Angola and Mozambique, and it is believed that a kind of an agreement for this was made with England in 1898. But the condition was imposed that the transfer should be with the free will of Portugal, and since then Great Britain has renewed the old treaty of alliance, by which she guarantees the integrity of the Portuguese possessions. Evidently Portugal is suspicious of German intentions.

But however fully the German case may be stated, and I have not entered into the diplomatic preliminaries of the war, the fact remains that Germany declared war. This in large measure justifies all that the French and English jingoes, so much condemned by rational people, have said in recent years. They have asserted that the Bismarckian spirit still guided German diplomacy, that the neutrality of Belgium was only a paper guarantee, that the German legions would be sent forth without warning, and that the rest of Europe would unite in self-defence against the War Lord. Well, the Germans have never denied most of the indictment, but they probably did not believe in the reality of a European coalition, apparently forgetting the fate of Louis XIV and Napoleon. Prince Bülow has told us that an attack on Russia would give France the chance "to wage her war of revenge under favorable circumstances"; that nothing should be allowed to make "an irremediable breach between [Germany] and England," and that "the moment the firm foundation constituted by Germany's position as a great European Power begins to totter, the whole fabric of [her] world-policy will collapse." Germany has rejected the advice of her fourth Chancellor, with what results time will reveal.

Bernadotte E. Schmitt.
Western Reserve University, Cleveland, O., August 20.

THE WAR.

To the Editor of The Nation:

Sir: In your reply to Professor Geiser's letter you again make much of "the fact that Germany refused to take part in the conference proposed by Sir Edward Grey." How could the German Emperor and his ministers, influenced by the motives which ordinarily guide and shape human action, well do otherwise than refuse at a time when the Czar was refusing to discontinue mobilization? Was Germany to forego the advantage of superior preparation for a conflict which seemed bound to come?

Permit me to call your attention to the following extracts from the correspondence lately published which passed between the Emperor and the Czar before the outbreak of hostilities. The Kaiser among other things wrote as follows:

"The peace of Europe can still be maintained by thee if Russia decides to cease her military measures which threaten Germany and Austria-Hungary." To this the Czar replied: "It is technically impossible to discontinue our military operations."

It seems to me that instead of the Kaiser rushing into war "in hot haste," as you charged in a former issue, you are yourself acting "in hot haste" and quite contrary to your usual calm and deliberate methods in making the charge. It is simply impossible at the present time to fix the responsibility for the war, and it may in my humble opinion prove a difficult task for the future *impartial* historian to do so.

Philip Stein.
Chicago, August 22.

To the Editor of The Nation:

Sir: When President Wilson called upon his fellow-countrymen, with single-heartedness for the common good, to keep themselves neutral in thought, word, and act, he called for what is as difficult as it is essential; indescribably difficult for the foreign-born American, essential to the continuance of American peace and America's ultimate ability to give the help she would to the now warring nations of Europe.

When, two days ago, after the President's appeal for neutrality on the part of all American citizens, "German Day," a day set apart for a hundred thousand Germans in the city of Chicago, to meet and show loyalty to their fatherland, was called off, and the large sums collected for the celebration were devoted to the general fund for aiding the wounded—

when these Chicago Germans did this thing they proved their understanding of the sacred character of citizenship, their real respect for the President of the United States, and that strong love of humanity for which, as a people, they have so long been famous.

ALFRED M. BROOKS.

Bloomington, Ind., August 21.

TO THE EDITOR OF THE NATION:

SIR: The breaking out of the all-European war has been the particularly favorable occasion for a chorus of anti-monarchical sentiment on this side of the Atlantic. On all sides we hear that the ambition and greed of three men is to be held responsible for this sacrifice and slaughter of millions, and that whatever the outcome of the war may be, one result at least which may be predleted with certainty is the destruction of the monarchical system.

Now let us keep our heads in this matter, though all Europe be mad! Whatever views one may entertain of the merits of republicanism or the demerits of monarchism, or of the personal qualities of William, Francis Joseph, and Nicholas, the one essential fact that must be admitted is the fact of the militarism of the mob. Can any one seriously imagine that the aged Austrian monarch would of his own free will choose war rather than peace to crown the closing years of his earthly life? And whatever we may think of William of Germany, he is but the admired leader of a host of warriors, eager to show their prowess against their rivals to the west and east. Would the Czar's life be worth a ruble if he should refuse to go to the defence of the Slavs of the south? Could the Government of republican France stay the hands of the people itching to revenge themselves for the loss of Alsace and Lorraine? Could a Ministry at Downing Street survive for a single day a refusal to support France and Belgium against the enemy?

No more tiresome political fallacy exists than that which universally condemns monarchism, and never has its absurdity been more evident than in the comments of the press on the causes of the present war. It is the animal passions of men that drive men to war, and presidents, kings, and emperors alike are powerless against them.

J. S. MOORE.

Cleveland, Ohio, August 15.

TO THE EDITOR OF THE NATION:

SIR: Your editorials in the *Nation* regarding the responsibilities in the war met with such complete approval of even German Chicagoans that I wish to let you know. I am here this summer to teach during the summer quarter, and see many professors at the Quadrangle Club. It is the general opinion that you hit the nail right on the head. The distinction between Germany as a nation and the Germany of militarism must be emphasized all the more since the Kaiser's party try so hard to make the world forget it.

There is only one thing before which the Kaiser will stop now: this is public opinion. He has shown it conclusively already. To create this public opinion in America, the *Nation* can help tremendously.

Permit me to express my warm approval of your campaign which distinguishes between the two Germanies. A. SCHINZ.

Chicago, August 21.

Literature

THE SIGNIFICANCE OF RELIGIOUS EXPERIENCE.

Religious Confessions and Confessants. By Anna Robeson Burr. Boston: Houghton Mifflin Co. $2.50 net.

This is a book of pivotal importance. Five years ago its author—a kinswoman of the late Henry C. Lea—published a remarkable study of "The Autobiography," in which she analyzed and classified several hundred specimens of autobiographic revelations. Now she goes deeper still—to the very bases, indeed, of individual convictions—and investigates the origin, character, and significance of religious experiences.

This she does through the testimony given by large groups of men, women, and children who have recorded those experiences. Borrowing from Bacon the word "confessant," instead of using the ambiguous form, "confessor," she studies the life-story of each person as carefully as the content of his confession. She is as patient and as dispassionate as a botanist, but she is thoroughly sympathetic, and ever conscious of the truth of her motto taken from John Webster:

> O this gloomy world!
> In what a shadow or deep pit of darkness
> Doth womanish and fearful mankind live!

After an introductory chapter, in which Mrs. Burr shows that the subject is most difficult, because it is religion, she discusses the general nature of confessions and apologias. Of auricular confession she has little to say, beyond noticing the fact that the priesthood early discovered its efficacy as a means for riveting their authority on the faithful. Her concern is to trace the steps by which confessants came to feel more and more strongly the impulse to make a written record of their experiences; and she is quick to discern how often the instinct of literary expression is interwoven with the religious.

Having sufficiently treated confessions as a *genre*, Mrs. Burr gives in a masterly summary of seventy pages a survey of introspection and the introspective type. Here, too, she follows the evolutionary process, beginning with the earlier human beings who never looked within because they were not conscious that there was anything there to interest them, and going on to animism and to the gradual budding of self-consciousness, until in recent times she reaches full-blown subjectivity and the Ego running riot. For each of these stages, after literary expression was reached, she cites typical examples. How she observes and how nicely she discriminates appears at every turn. One has only to read her brief dissection of "Shelley's hasty and tumultuous mind"; or of Dante as "an outward-looking, rather than an inward-looking, mind," or of Newman, whose "real springs of thought and action are studiously concealed, and thus his candor is seen to be as slight as his introspective power"; or of Oscar Wilde's "De Profundis," in order to test her critical insight.

The main body of her work contains a description or epitome of many score confessions: the "documents" on which any study of the manifestation of the religious instinct through confessions must rest. It is impossible here to touch upon the topics which Mrs. Burr examines. She devotes large space to the phenomenon of conversion; she discusses the previous and subsequent state of converts; she investigates the unpardonable sin, delusions concerning witchcraft, possession by devils, and all the other perversions or concomitants of this experience.

The importance of the results of her investigation is due to the truly scientific method which she employs. Until the last half-century it was usually taken for granted that the reputed saints and famous converts saw visions, performed miracles, and led abnormal lives through the direct interposition of God. They were extra-human, if not superhuman, unamenable to natural laws, and, therefore, above the scope of criticism. Even William James, in his stimulating study of "Varieties of Religious Experience," seemed inclined to emphasize the *exceptional* character of the examples under consideration; and this is not to be wondered at, because James in his Pragmatist period tended more and more to minimize or ignore the laws which bind mankind in one common system, and to exaggerate the differences which separate one individual from another and make each person a law unto himself.

But Mrs. Burr, instead of picking out a few startling examples, and deducing from them the agency of the supernatural, takes hundreds of cases, analyzes them minutely, and shows how they all fall into two or three classes, and how the difference between the highest and the lowest is one of degree and not of kind. This is fundamental. It brings the experiences of Paul, Augustin, and Teresa, of George Fox and John Bunyan, under the same reign of law as their humblest followers. Her examination of St. Paul's conversion, for instance, is not merely plausible, but sufficient, making as little use of the explanation by miracle of the theologians as of Renan's coincidence of thunderstorm and ophthalmia.

The usual process of conversion consists of three stages—depression, conversion, and reaction; and nothing can be predicated of the creed which the converts embrace; since, after passing through similar experiences, one may come out a Mormon, another a Methodist, and a third a Roman Catholic. Mrs. Burr presents testimony that proves in how large a number of cases religious confessants are either permanently defective in health or subject to periodical pathological lapses. Among the striking features which she notes is the frequent ineffectualness of even spectacular conversions. Not only does the mental capacity often deteriorate, but there is no enduring gain in either the moral or religious nature. Nor is backsliding rare.

Not less important than the conclusions

which Mrs. Burr arrives at through her analysis of the data of conversions is her interpretation of Mysticism. Her eighth chapter may well serve as the first onslaught in the battle which shall put to rout the hordes of neo-mystics, who have been for twenty years past undermining respect for law and reason. Their assertions may be summed up in the bastard syllogism: "Science has gone bankrupt; therefore, Mysticism must be the true solution." We may regard latter-day mysticism either as a symptom of mental lassitude or as a sign of religious enfeeblement—evidence in both cases of a lack of courage to look facts squarely in the face. When we find that Paris Syndicalists, who would destroy society, and the most conservative of orthodox religionists, who would plunge it back into mediævalism, appeal equally to M. Bergson's formulation of Mysticism for their warrant, we realize how far this blight has spread.

Here, again, Mrs. Burr pursues the scientific method, discovering, first, the personal equation of each mystic; next, examining the things which he is reported to have seen, done, or said; and, finally, drawing what conclusions the data support. She traces Christian Mysticism to a well-known passage in the ninth book of Augustin's "Confessions."

"Upon these great 'ifs' of Augustin," she says, "*if* the tumult of the flesh were hushed, and *if* we could hear God's voice—and *if* his word continued on and blotted out all else—and *if* all life might be like that one 'moment of understanding'—the imagination of the Middle Ages built a new heaven and a new hell" (p. 352).

She follows, historically, through its significant variations, the mystical process, always bearing in mind what was considered *normal* in any given age. She demonstrates that, contrary "to the general impression, fostered by so many of the theories now in vogue," "mysticism and mystical phenomena" do *not* "in themselves argue a high degree of religious or of moral development." In a word, mysticism is reversion to a lower type. Her scrupulous veracity, joined with a very delicate ability to distinguish differences, keeps her from confusing the ideally normal of one epoch with that of another.

In her study of introspection, confessions, and mysticism, Mrs. Burr has relied chiefly, and properly, on Christian evidence, drawing her documents from Early Christian, from Roman Catholic, from Protestant, and from Mormon sources; although occasionally she refers to an Old Testament example, and she uses with effect the confession of the Oriental, Al-Ghazzāli. For the concluding portion of her work, however, in which she investigates the religious instinct, she turns to anthropology to disclose the origins of modern phenomena. Her reading in this field is wide and judicious; she has absorbed not only Tyler, Frazer, and the other authorities, but monographists of special customs and practices.

With unflinching hand, she withdraws the curtain and lets us see the barbaric, or even bestial, ancestry and kinship of many beliefs and rites held sacred by modern worshippers. She shows how "fear is the main constituent of all survivals"; and she upholds with what seem to us formidable arguments the proposition that "*the theory of animistic revival fully accounts for all the more perplexing features of the religious experience.*" (The italics are the reviewer's.)

Equally impressive is her demonstration that religion is the product of *both* the emotional and the rational elements in human personality—a fact which disentangles many perplexities, including the anomaly so often observed that intensely emotional religion has little or no effect in promoting righteous conduct. How far psychological suggestion accounts for the states described by the ecstatics is made clear; and Mrs. Burr is assuredly sound when she concludes that "in most natures a religious conversion no more changes the original elements of good and evil in the subject than a wave changes the constituency of the water through which it moves" (p. 484).

Though Mrs. Burr avails herself of all the aid psychology can give her, she is very far from accepting the medical-materialist solution of religious phenomena, and she constantly distinguishes between proved facts and theory in the field of psychology. Among other matters deserving special mention is her treatment of personality itself as a "nebula." It is impossible to escape the conclusion that, with the advance of science, such phenomena as are described by most of the religious confessants will be regarded as psychopathic.

Mrs. Burr closes with a note of genuine, if sober, optimism.

"When men came to understand," she says, "that visions and voices, terrors and trances, belong to their 'ancient kindred,' their lower, not their higher selves, then men were plagued by them no longer; those symbols passed, and were rejected. For the work of the courageous rationalist—who to-day is the only idealist—is but begun. . . . Whatever the religious symbols of the future, at least they will not be founded on savage survivals. . . . No one who reads these records of suffering but feels his soul purged by pity and terror—pity to see his fellow-man clinging to these rejected symbols, terror to see him struggling with the slime of the pit, and knowing not with what he strives!"

No notice of this book can give an idea of the gentleness with which Mrs. Burr probes the most sensitive prejudices and convictions known to men: hers is the gentleness of the surgeon, which does not suggest irresolution. She states rather than argues. From her own study of confessions and of the cumulative data of anthropology and psychology, she has made a great synthesis. The implications of her study have the widest possible bearing, and they will sink, slowly, it may be, but with transforming permeation, into the religious heart of the age.

CURRENT FICTION.

The Vanished Messenger. By E. Phillips Oppenheim. Boston: Little, Brown & Co.

Mr. Oppenheim, in one or another of his novels, has probably imagined every possible combination of European nations leading up to the general war and the inevitable attack upon the sacred liberties of England except that which has actually come about. As a prophet, therefore, he seems to have enjoyed particularly bad luck; but as a romancer it is safe to assume that his occupation will not be gone, even though the threatened general war, on which so many of his plots hinge, has at last materialized. There is little subtlety in his method, and most of his work is of an ephemeral quality, but he tells a good exciting story in vigorous English, and at not too great length. His latest book is a capital tale of international intrigue, and as the hurricane pace at which we are carried from one adventure to another discourages any unseemly prying into the probabilities of the situation, we are content to accept Mr. Oppenheim's word for them. The messenger who vanishes is an American gentleman who is carrying word from a group of his country's financiers that they will not permit the contemplated war against England on which the other nations of Europe, including England's allies, are about to decide. The irony of the central situation, in view of what has happened, needs no comment. The villain of the piece who causes the disappearance of the messenger is a sweet-faced and white-haired, but black-hearted old gentleman, and Mr. Oppenheim makes him additionally picturesque by depriving him of both legs. The hero, a somewhat commonplace young Englishman, naturally rescues the messenger, whose inconveniences have been great, and thereby saves his country. Incidentally, he woos and wins the niece of the villain, who meets an appropriate fate.

Nothing Else Matters. By William Samuel Johnson. New York: Mitchell Kennerley.

You have asked me, you Five Dear Ones, to record against the forgetful years (still far ahead) certain Little Adventures, violent, vivid, yet whimsic-strange, that befell us in Paris (ah! the lost Bohème!), colouring the same, at my own proper peril, with certain Little Emotions that ached delicately in mute (but inter-gravitating) hearts.

These opening words of the author's Prelude give a taste of his style, which is consciously a style. We hardly need the frequent allusions to R. L. S. in the course of these pages to feel the Stevensonian influence, the influence, that is, of the theory that style is a dress to be invented rather than a medium to be found. Stevenson himself was real, but his fame suffers already from the artifice with which he deliberately overlaid his art. Quaintness, preciosity, pay a heavy price for their momentary successes, and, a Hewlett or a Farnol to the contrary, they are now little likely

to please, even for the moment. The world is in one of its plain, blunt phases and demands that its story-tellers, at least, shall speak straight on. Yet, if there is anything Mr. Johnson and his Bohemians seem determined not to be guilty of, it is a simple phrase, or a straightforward thought. It is true that the supposed story-teller, Hugh Lyddon, conforms to a robust popular model in being an ex-Yale athlete. But we believe there are few Yale athletes with his fondness for odd words and tortuous fancies. "A quaint and exquisite vocabulary suddenly swam into my being like a shoal of little fish, darting, playing, leaping through waves of limpid thought. . . . Words?—it was as if a casket of jewels emptied there had quickened into the petulant, sinuous motions of piscine life." So Hugh listens to the call of verbiage while his lady "Pruina" is by his side waiting to be made love to. But they are all alike, these "Little Ones" with their elaborate system of diminutives, and their common consciousness of Genius and Art. A thread of story involving several young pairs, a handful of adventures with Apaches and others, and the destruction of a will, may be traced by the patient reader. He may be grateful, at least, that his initial sense of being once again exposed to the business of the studio, the grisette, the bock, and other dilapidated properties of Parisian Bohemia is unjustified. We believe the Quartier is not even named in these carefully ingenuous pages.

A Lad of Kent. By Herbert Harrison. New York: The Macmillan Co.

The romancer has taken up his task with a light heart, and his tale has gusto if not consistency. The lad of Kent is a young Lord whose worldly mother has disowned him and become a Duchess, and whose wicked uncle has usurped his inheritance and title. All of this we do not make sure of till the end of the book; the villany of the uncle is particularly well concealed. He is caught at last red-handed, in the act of trying for the second time to compass his nephew's death. There is no reason why he should not have brought it off at the first try except that the hero was under the author's official protection. However, he deserves it, being a very likable lad. His chief failing, shared by his chum "Monty" and several other persons in the story, is a tendency to elaborate facetiousness. One element of romance is lacking—that of "heart interest" in the sense of calf-love; no white hand is extended to our brave young gentleman from bower or lattice. The heroine, if the reader must have one, is a delightfully impossible "Captain Meg," mistress of a free-trading craft which smuggles brandy across-Channel in face of the revenue officers and the King's navy. When she is not wearing sea-boots and risking her life, she knits and drinks tea and chats mildly with the youth of Folkestone. Indeed, there is a good deal of mild chat in the book. It is clear that the author has been moved quite as much to give the flavor of English life a century ago as to tell a tale with a thrilling plot. When he does get to the point of a thrill, he inclines to hurry matters. The supreme moment, technically speaking, is that at which the hero is about to be thrown overboard, one dark night, in the middle of the Channel: "I was lifted and swung inboard. I called wildly for help; I saw to the height of the lugger; it went out of sight and the lugger rolled to my outboard swing. My end was on me, and I had turned my face seawards to meet it, when through fog a bellying sail loomed above me; a shout rang out; a large boat ranged alongside; and armed men sprang down upon us to our rescue." All in a moment! Captain Meg and her crew have arrived, of course, and all is well thereafter for the young lord.

THE ILLUSIONS OF WAR.

Arms and Industry. By Norman Angell. New York: G. P. Putnam's Sons.

Even a prophet of Norman Angell's intensity would not look for such immediate verification as has followed the publication of the work before us. Six months ago the assertion that the real basis of international intercourse was economic would not have created a stir. To-day the whole of civilization has an excruciating realization of its profound truthfulness. Up to the date of Austria's ultimatum to Servia, Angell was regarded, if the world cared enough about him to regard him at all, as an unsentimental theorist; in ten days the demoralization of the world's finance and trade stamped him as a prophet.

"Arms and Industry" is a study of the foundations of international polity. The main contention is that the political ideas which at present shape the conduct and determine the attitude of one state to another in Europe, and give to international relationship its present character, are erroneous, despite their general acceptance as self-evident and axiomatic; that they are the outcome of certain abstract theories at variance with the facts. What are the tenets of the diplomatic orthodoxy here challenged? Briefly, that each unit in the society of nations is an independent entity of increasing needs and population in a world of limited space and opportunity, and that the survival of any given unit depends in the last resort upon the relative degree of physical force which it is able to exercise against competitors, whereby to impose its own or resist another's exploitation of the earth.

Nothing could be more dogmatic than Mr. Angell's assertion that, save only in a narrow judicial sense, which does not affect the vital functions of society, the nations which form the European community are not sovereign, or independent, or entities, or rival, or advantageously predatory; that the exercise or possession of the means of physical coercion does not determine the relative advantage of each; that physical coercion within their borders is not the ultimate sanction of social organization, of law and justice; that military power is irrelevant to the promotion of the aims, moral and material, postulated by diplomatic orthodoxy.

In the brute creation success of one individual may mean deprivation of another. Man has increased his means of subsistence and his chances of survival by conscious adjustment of the forces of Nature, by directing forces that would otherwise destroy him to his own ends. He turns Nature against herself. But he can only do this by reason of one fact—that he is able, by his intelligence, to create a union of forces by co-operating with his fellows. As soon as this union takes place, the coöperation of other members of his species becomes of more value to him than their disappearance or destruction. Indeed, the process of co-operation rapidly creates a condition in which, if one of two parties is to survive, both must survive; if one perishes, both perish. Thus a small but feebly coöperating population (like the Indian tribes of North America) had less of subsistence than a population many hundred times as great occupying the same space, and having only the same natural sources available, but having a much more highly developed capacity for coöperation.

The governing method of coöperation is the division of labor. That method necessarily implies interdependence. The mechanical forces created by a condition of interdependence progressively nullify the effectiveness of physical coercion. Now these two factors—the need for widespread coöperation and the decline in effectiveness of physical force as a means of obtaining services in a coöperative process of any complexity—have done two things: they have destroyed not merely the economic but the moral and intellectual unity and homogeneity of states, and they have rendered the exercise of force by one State against another, for economic, moral, or intellectual purposes, futile, because ineffective and irrelevant to the end in view. Co-operation between nations becomes essential to the very life of their peoples. But this coöperation does not take place as between states at all. A trading corporation, "Britain," does not buy cotton from another corporation, "America." A manufacturer in Manchester strikes a bargain with a merchant in Louisiana in order to keep a bargain with a dyer in Germany, and three or a much larger number of parties enter into a virtual, or perhaps actual, contract, and form a mutually dependent economic community (numbering, it may be, with the workpeople in the group of industries involved, some millions of individuals)—an economic entity, so far as one can exist which does not include all organized society. The special interests of such a community may become hostile to those of another community, but it will almost certainly not be a "national" one, but one of a like nature, say a shipping ring or a group of international bankers or Stock Exchange speculators. The frontiers of such a community do not coincide with the

areas in which operate the functions of the state. If Britain injures America and Germany, as a whole, she injures necessarily the economic entity which it was her object to protect.

The assumption that states are economically rival, and that economic advantage accrues to the possession of political power based on military force, postulates communities capable of political and geographical limitation that are self-contained, and postulates also the effective control of the social and economic activities of similar other communities by the military force of our own. The great nations of Europe have passed out of that stage of development in which such a conception bears even a distant relation to the facts. This condition carries with it the intangibility of wealth, so far as foreign state action is concerned, because any state destroying wealth in another must destroy wealth in its own, since the unit intersects the two areas. Six months ago this might, and very likely would, have been received by the generality as negligible theory; to-day there is hardly a member of any civilized community that is not acutely aware that it is the most vital of all truths.

The perpetual tendency to abandon the social arrangement and resort to physical coercion is, Mr. Angell thinks, easily susceptible of biological explanation. To realize at each turn and permutation of the division of labor that the social arrangement was, after all, the best, demanded not merely control of instinctive actions, but a relatively large ratiocinative effort, for which the biological history of early man had not fitted him. The physical act of compulsion only required a stone axe and a quickness of purely physical movement for which his biological history had afforded infinitely long training. The more mentally motived action, that of social conduct, demanding reflection as to its effect on others and the effect of that reaction upon our own position and a conscious control of physical acts, is of modern growth; it is but skin deep; its biological momentum is feeble. Yet on that feeble structure has been built all civilization. When we remember this—how frail are the ultimate foundations of our fortress, how much those spiritual elements which alone can give us human society are outnumbered by the prehuman elements—is it surprising that those presocial promptings of which civilization represents the conquest occasionally overwhelm man, break up the solidarity of his army, and push him back a stage or two nearer to the brute creation from which he came?

The militarists concede this. Indeed, they appeal to it as the first and last justification of their policy. "All your talk will not," they say, "get over human nature; passion is bound to get the upper hand." Both parties to this controversy are, therefore, agreed as to the fundamental fact that civilization is based upon moral and intellectual elements in constant danger of being overwhelmed by more deeply rooted anti-social elements. The plain facts of history, past and present, show that where those moral elements are absent the mere possession of arms only adds to the destructiveness of the resulting welter. The difference between the civilist and the militarist is that the former believes that the moral and intellectual faculties have the best chance of surviving if we can eliminate so far as possible the chances of physical collision; while the latter holds that as men are savage, bloodthirsty creatures who, when their blood is up, will fight for nothing, for a word or a sign, we should disparage the development of all counteracting intellectual and moral forces and take every precaution to see that their capacity for damage when in that blind excitement is as great as possible—all else is chimera and useless theorizing.

In controverting the militarist, Mr. Angell employs a merciless dialectic. He has an easy way of making his opponent ridiculous. For example, Major Stewart-Murray says that "peace depends upon the armed force of the nations"; to which our author replies, "To say that 'peace depends upon the armed force of the nations' is exactly equivalent to saying that if the nations had no armies how murderously they would go to war with one another!" That, of course, is not what Stewart-Murray means; but what he does mean is just as absurd. What he wants us to understand is that peace depends upon the armed forces not being used; but if neither party resorted to armed force, the peace would not—could not—be broken.

We have Admiral Mahan's word for it that it is vain to expect nations to act consistently from any motive other than that of interest, and that the predatory instinct that he should take who has the power survives. That is the assumption of orthodox statecraft, with which is associated necessarily the further assumption that spoliation of rivals is to the interest of nations. The civilist, however, contends that an examination of the facts, of the results yielded by this general method in the case of the nations, as compared with the results yielded by a certain other method, shows this assumption to be false, mistaken, not that it is immoral — that is another story — but false when judged in the light of those motives of interest which we are told by the defenders of the system are its foundation. Sanctified common-sense, to say nothing of scientific criticism, fully sustains this view. By division of labor you have created a condition of dependence upon others, and that dependence upon others necessarily implies a limitation of the force which you can use against these others. Even in slavery, if the master is dependent upon the labor of the slaves, the force he can use against them is limited—he cannot kill them. As the division of labor increases in complexity, a progressive stultification of force takes place. The events of the last few weeks have given these words, which were uttered merely as a characterization of science, the ring of astonishing prophecy.

A HIGHLAND FEUD.

Macdonald of the Isles. By A. M. W. Stirling. New York: The John Lane Co. $4 net.

In the romantic story of the Lords of the Isles, the chronicler of Coke of Norfolk has found a congenial theme. The Hebrides have always been a haunt of romance, and of romance interwoven with the fortunes of the great Clan Donald. Here the clan spirit has prevailed in its extreme form, and, turned against itself by a division of allegiance, has given rise to a feud of unexampled bitterness, which has survived almost to our own time. In tracing the origins of the clan, the author goes back confessedly to legend and a region of dispute which there is no attempt to explore rigorously. The intention is merely to make "a plain, unvarnished tale" out of the generally accepted version of those dim and ancient events. But such a tale, in whatever sense plain and unvarnished, cannot be reduced to terms of matter-of-fact. "To eliminate the element of fantasy from such records would be not merely to reduce poetry to prose, but to rob them of their most faithful characteristics, the haunting echo of the dead centuries, the heritage of a strong people who, intrenched in their sea-girt isles, still preserve, in its pristine freshness, something of the simplicity, as well as the mystery, of their age-old past."

The Macdonalds of Sleat trace their blood to an Irish King of the second century. From his descendants emerge a MacFergus, of the ninth century, who was known as Ruler of the Isles, and, in the twelfth, one Somerled, a prodigious champion, Lord of the Isles and terror of all Scotland. From his sons sprang the great lines of Argyle, Macdonald, and Bute. To the Macdonalds fell the lordship of the Isles. The clan's bravery at Bannockburn was rewarded by the privilege, unchallenged for centuries, of taking the place of honor above all other clans, at the right of the battle-line. Our author believes it was because they were denied this right at Colloden, and therefore refused to fight, that the day was lost for Prince Charlie. Long before Colloden the Clan Donald had been divided against itself. The feud had origin, indeed, in the time of the Bruce. A Macdonald, by marrying his cousin, brought together almost all the lands which had belonged to Somerled, and which by the Scottish method of division had been gradually parcelled out. They had had three sons, when the enterprising Angus divorced his wife to marry a great-granddaughter of the Bruce. By this woman he had several sons, the eldest of whom, Donald, became Lord of the Isles. He was so recognized by his elder half-brothers at the time, but their descendants later laid claim to the lordship. They argued from the law of feudal succession, while the descendants of Donald, with greater reason, as it seems, argued from Celtic usage, which made little or nothing of primogeniture. In short, the real question is, "not who was the feudal heir

of John of Isla, whether the eldest son of his first or of his second marriage, but to whom on his death was the Lordship of the Isles and the supreme chiefship of the Clan Donald actually transmitted in the order of Celtic succession."

The Bruce had bequeathed urgent counsel that to no one man should be permitted the entire lordship of the Hebridean Isles. It appears that Robert II did what he could to foment trouble among the members of the Clan: and it was not many years before the feud was on. How stubbornly the spirit of it has persisted is shown by a document of recent date quoted entire in this book, a document of well-nigh incredibly quaint import. It is entitled, "Letters of Certification and Agreement by and between the Chief and Captain of Clan Ranald, McDonell of Glengarry, and Macdonald of Sleat." Addressed to "the whole kin and name of Clan Donald," it solemnly agrees: that there has been long disagreement among the different branches of Clan Donald as to the supreme chiefship; that those branches have been really separate for nearly four centuries; that, while none of the chiefs of the different branches abandons his claim to the supreme chiefship of the whole race of Clan Donald, they will cease from active assertion of claims; that if more than one of them is present on any occasion, precedence shall be determined by lot; and that Macdonald of Sleat is hereafter, as a matter of compliment, to be permitted the use of the words "Of the Isles" after his name. Peace in the Hebrides, at least!

Notes

Longmans, Green & Company announce that in succession to the Fairy Book series, edited by the late Andrew Lang, they have arranged with Henry Newbolt to write for them "The Blue Book of the Sea."

Two new Juvenile series are announced by the John C. Winston Company for publication on September 1: The Alamo series, by Edward S. Ellis, and The National Pastime series, by Hugh S. Fullerton.

The Century Company will publish on September 15 "Songs for the New Age," by James Oppenheim, and "The Charmed Life of Miss Austin," by Samuel Merwin.

The following volumes are included in the autumn list of G. P. Putnam's Sons: "Frémont and '49," by Frederick S. Dellenbaugh; "The Dread of Possibility," by Emile Faguet, translated by Emily James Putnam; "Between the Old World and the New," by Guglielmo Ferrero; "The Life and Times of Cleopatra, Queen of Egypt," by Arthur E. P. Weigall. The same company announces the following publications of the Cambridge University Press: "The Philosophy of Biology," by James Johnstone; "The Press and Poetry of Modern Persia," by Edward G. Browne; "The British Isles," by Frederick Mort; "The English Borough in the Twelfth Century," by Adolphus Ballard; "Bannockburn," by John E. Morris; "The Revolt and Fall of Capua" (Selections from Livy), edited by T. C. Weatherhead; "Précis-Writing," by W. Murison; "A Handbook of English," by D. B. Nicholson; "The Production and Utilization of Pine Timber in Great Britain," by E. Russell Burden and A. P. Long.

In "At the Sign of the Van," by Michael Monahan (Kennerley; $2 net), the author reprints a number of essays from his magazine, the *Papyrus*, and adds "other escapades in life and letters." The writer, it seems, deserted New York city and moved—about nine miles—to Mt. Vernon, in the same State. This removal is the subject of both verse and prose. Manhattan is disrespectfully addressed as a

> . . . City of fuss and fake,
> Where men the dollar their idol make.

There is more to the same effect, with frequent references to "the Lesbians of the pave" and all the other excrescences of the "modern Babylon." Comfortably situated in Mt. Vernon (reached easily by the New York, New Haven & Hartford or the Harlem Division of the New York Central), Mr. Monahan considers many things and records his thoughts in about sixty essays of carefully planned explosiveness.

Mr. A. R. Hope Moncrieff, the author of "A Book about Authors" (Macmillan; $3 net), declares that his worst enemy could not accuse him of having led an idle life. "What with story-books, school-books, historical and topographical books, and miscellaneous writings, under half a dozen different names, [my writings] cannot come far short of two hundred volumes, perhaps above that number, at all prices from pennies to pounds. For more than fifty years I have been an author of all work, what the contemptuous call a hack. . . . From first to last I must have shed as much ink with my own hand as there was blood in Duncan's body, or in Falstaff's." In his present work Mr. Moncrieff (one of whose favorite pen-names is "Ascott R. Hope") has written a fat and entertaining volume. The Anatomy of Authors, An Apology for Authors, The Trade of Author—these are some of his chapters. Others are devoted to publishers, editors, critics, and readers. As it is evident, from what has been quoted, that he does not take himself too seriously, it is not unkind to say that the book, though often amusing, is somehow unimportant. Frequently, in its compilation of facts about the habits of authors and similar subjects, it sounds like an amplified paragraph from *Tit-Bits*. Every one is familiar with those staccato sentences which tell us that: Pope could only write at night; Balzac preferred the early morning; Racine, when composing, wore a velvet coat; Whitman put on overalls, etc., etc. Mr. Moncrieff's book differs from this in degree, but not greatly in kind.

Those who enjoy reading Cervantes in the original have long felt the lack of a complete set of that author's works at once critical, well printed, and moderate in price. This want is now to be supplied through the generosity of Mrs. Phœbe Apperson Hearst. The edition has been entrusted to the joint editorship of Professors Schevill, of Berkeley, Cal., and Bonilla, of Madrid. The first two volumes, which have just appeared (Rodríguez, Madrid), are devoted to the pastoral romance "La Galatea." The text, based on the original edition of 1585, is by far the most critical ever offered of this little-read novel. The notes are adequate, but not burdensome. A brief introduction gives much information regarding the vogue of the pastoral genre in Spain, and "The Galatea" in particular. The beautiful typography and extremely moderate cost of this edition should give it the popularity it deserves. The only complete set of Cervantes's works in the Spanish has hitherto been the luxurious, but costly and uncritical, edition edited by Rosell, and published by Rivadeneyra a half century ago. This set, limited to 310 copies, has long been difficult to obtain. The present edition is within the reach of every purse.

The latest addition to the swelling tide of Nietzsche literature in English is a translation of four essays by Georg Brandes under the collective title of "Friedrich Nietzsche" (Macmillan; 75 cents net). Two of these essays possess considerable importance. The first, dated 1889, beginning with the words, "Friedrich Nietzsche appears to me the most interesting writer in German literature at the present time," constitutes a sort of landmark in European recognition of the German philosopher. It was the first study of any length in the whole of Europe to be devoted to him. The expression "aristocratic radicalism," which Brandes there used, called forth from Nietzsche the remark that it was the most apposite thing that had been said about him. The substance of this essay still seems remarkably fresh. The more recent study of Nietzsche has brought out some new things about his theory of knowledge, but it has been able to add very little to Brandes's lucid exposition of his ethical system or of its bearing on life and on the problems of the present age. The second essay gives in full the interesting correspondence between the two men from its inception in the autumn of 1887 to Nietzsche's mental collapse in January, 1889. The publication of the present volume in English appears fully justified on account of the peculiar interest which attaches to these two essays. There are also comparatively unimportant addenda written in 1900, the year of Nietzsche's death, and in 1909, on the occasion of the publication of the autobiographical "Ecce Homo." The translation by A. G. Chater is satisfactorily done.

An admirable guide-book to a delightful section is the Ven. W. H. Hutton's "Highways and Byways in Shakespeare's Country" (Macmillan; $2.00). True to its designation, the section is rather restricted, hardly covering more than what Shakespeare as a boy might conceivably have wandered into. Aside from a short chapter on the vicinity of Maxstoke Castle, the limits are from Four Shires Stone to Coventry and from Pershore to Daventry. There is for this area an unindexed map, on which the routes described in the text are indicated in red. In keeping with the leisurely atmosphere of the region traversed, not all these rambles are laid out with an eye to economizing the traveller's time and energy. The only other maps are small ones of Stratford-on-Avon and the Evesham battlefield, and in the whole book there are only two or three plots or plans. The volume is provided with an inadequate Index to names of places and persons. Regrettable are some negligent errors: "The government of the town [Warwick] . . . continued to be as ordered by the charter of William and Mary

till James II annulled the charter" (p. 84). Obviously Philip and Mary's charter was in mind. Of Shakespeare, the author remarks: "He probably returned to Stratford in 1596, the year when his father had a grant of arms" (p. 164). It is true that a draft granting the request for a coat-of-arms was drawn up in 1596—in fact, two drafts—but it was not executed. The exemplification of the shield was not furnished till 1599 in response to a renewed application. Of the Birthplace, he says: "You enter into the eastern part of the house" (p. 194). In other places the room is correctly designated as the western of the two houses known as the Birthplace. Most of these errors might have been eliminated by more heedful proofreading.

Such blemishes are the more unexpected from the competence in archæological, historical, literary, and architectural features displayed in every chapter. The Ven. W. H. Hutton, in his forty years' acquaintance with the heart of England, has gained a singularly intimate knowledge of the subject. His statements on disputed points are on the side of caution. He cannot agree with Freeman that "at Warwick the mound of the Lady of the Mercians still remains; for the castle of the Conqueror we seek in vain." He accepts the proof that the mound is Norman work, not Ethelfleda's. He warns us that "Amy Robsart . . . probably never saw Kenilworth in her life." He is properly unable to assert that Anne Hathaway's Cottage was actually inhabited by Anne's family at all. He pours gentle ridicule on the deer-stealing episode at Charlecote, and frankly gives the facts about the Birthplace, so that the reader can draw but one conclusion. His years of reading have enabled him to do more than state facts with reserve. He has culled many a quaint passage from Dugdale and other antiquarians; he has reset many a classic or local legend; he has even copied out humorous records from contemporary documents. These are woven into the texture of a style full of glints of humor. But the distinction of this guide-book is not due so much to the richness of fact which it conveys as to the deep personal interest that informs nearly every part of the description. He tells of what he has seen and enjoyed with his own eyes. Mr. Edmund H. New, a native of Evesham, accompanies the author with a delicate pencil to give an artist's impression of more than a hundred features of Shakespeare's country. For the leisurely traveller it would be difficult to prepare a more attractive or informing companion.

"The Story of Dorothy Jordan," by Clare Jerrold (Brentano's; $4 net), is the account of a popular actress whose real name was Dorothy Bland. She was born in London in 1761, and died at St. Cloud in 1816, virtually an exile from England because of the debts which misplaced confidence and business folly had created for her in England. Though she began life in poverty, she was so liberally endowed by nature that she later could earn seven hundred dollars an evening on the stage. Illegitimate herself, she gave birth to fourteen illegitimate children. For twenty years also she was the recognized mistress of the Duke of Clarence, later William IV, and ten of her children are accredited to him as Fitzclarences. Students of the drama will find some facts of interest in her life, but on the whole, the story is a sad one and unedifying. Mrs. Jerrold has told it with far greater detail and with much more accuracy than it is related by Dorothy's earlier biographers, who were more interested in currying favor with royalty than in telling the truth about a woman who, though sinning, was much sinned against. But Mrs. Jerrold would have done better if she had blue-pencilled her repetitious expressions of praise for her heroine, and of indignation against those who ungratefully enjoyed the charms and the hard-earned revenues of Mrs. Siddons's rival.

Seldom does a book succeed in enveloping a reader so deeply in an atmosphere of reality as does Thomas Mott Osborne's narrative of his experiences during his week of voluntary confinement in the Auburn prison. He calls his story "Within Prison Walls" (Appleton; $1.50 net), and he takes his reader with him as he enters the grim enclosure. Part of this effect may be due to the severely simple form of the narrative, which, with an exception or two, consists of his diary, written in his cell mornings and evenings, and couched in the present tense; but whatever the cause, the result is just that which Mr. Osborne must have hoped it might be. His "great adventure" turned out to be greater than he had anticipated, and the volume in which he has recorded it is at once a thrilling tale and a plea for radical prison reform, all the stronger for not forcing the reform note. The impressive element in the episode is the promptness and the completeness with which "Thomas Brown, No. 33,333X," won the prisoners to belief in his sincerity in living their life for a week. He did the things from which, as they had realized in advance, a man of his type would most shrink, and, without encouraging a spirit of insubordination, made them feel that he was one of them. Not all the pages of his story are sombre. The sunlight falls through the bars now and then, and occasionally there is an incident at which one must smile. But for the most part one breathes as in a narrow room.

The climax of the week, in one direction, came with a premeditated breach of the rules and sentence to the "jail." This portion of his adventure Mr. Osborne calls "A Night in Hell," and the chapter-heading does not belie the story that it introduces. Nothing in the entire book is more illuminating as to the official attitude that is bred by certain situations than Mr. Osborne's argument with the Principal Keeper for the release from the awful "jail" of a youth who is positively ill and who, having accidentally overturned his cup of water, may not have any more until the end of the twenty-four hours, for which three gills, and three gills only, are provided. The Principal Keeper is somewhat impressed by Mr. Osborne's impassioned plea, but "You see, this is Sunday; and you know we never let 'em out of jail on Sunday." Whether the recently released "Thomas Brown" would have succeeded in moving the P. K. from this apparently impregnable position by ordinary reasoning is doubtful, but something that he says in an outburst of indignation finally touches the logical spring in the P. K.'s mentality: "Why, that's true. I think you're right. We put 'em in on Sunday; why shouldn't we take 'em out?" There is no space here for more than reference to the sequel of this remarkable series of experiences, but there was a sequel in the way of finding a better method of spending Sundays and holidays than that of being locked in cells all day, and in devising means of developing the prisoners' better possibilities instead of choking them. The book makes no plea for sentimentality, but it is a powerful appeal for such a union of common-sense and sympathy in the treatment of offenders as we have not yet generally exercised.

The story of Princeton is told by Prof. Varnum Lansing Collins in the second volume of the American College and University series (Oxford University Press; $1.50 net). Although the book runs to four hundred pages, there are few that even a non-Princetonian will care to skip. The tale is told with a wealth of particulars that saves the narrative from any effect as of mere annals. From the origin of the project to the present day we are made to see the institution in its various activities, formal and informal. For the most part, the plan of the book is chronological, thus differing, and to advantage, from the first volume of this series, the one on Columbia. This plan is interrupted at the beginning of the Civil War period for a timely survey of A Century of College Life, and there are concluding chapters on the History of the Curriculum and Entrance Requirements, Buildings and Equipment, and the College Seasons. This last chapter, corresponding to the one entitled An Academic Year in the volume on Columbia, is evidently to be a feature of the series, upon which, and no less upon the way in which it has been handled in these first volumes, editor and publishers are to be congratulated. The chapter pictures the round of campus activities in order from the beginning of the summer vacation until commencement, and does much more than any other kind of record could do to impart the atmosphere of the college. There is rather more of detail regarding the history of the curriculum at Princeton than most readers will care for, but it is easy to skip when one tires of it, and in a volume of this sort a liberal policy of inclusiveness is wise.

The monograph by Agnes Arber on "Herbals" (Cambridge University Press; $3.25 net) will interest others besides professed students of botany. The herbals, which may be defined as lists and descriptions of plants and herbs, together with their properties and virtues, represent something more than a mere chapter in the history of the scientific dark ages from Aristotle to the seventeenth century, when botany was the humble handmaid of medicine. Their illustrations of plant forms, which are reproduced in profusion in the present volume, open an interesting by-path in the history of engraving on wood; and the student of literature will meet with friends of his acquaintance in the mandrake and the goose tree. Of the latter Gerard, in his "Herball" (1597), presents a picture with the birds falling into the sea, and though he admits he has not seen it, he modestly confesses to having beheld with his own eyes the generation of geese from barnacles adhering to driftwood. Literature, from the Anglo-Saxon "Riddles" to Drayton's "Poly-olbion," was loath to give up so entertaining a fiction, but among the best of the herbalists, especially the Continental scholars who shared in the quickened botanical interests of the sixteenth century, there is a vigorous skepticism concerning such marvels. For all that, William Turner, who handled Latin with Queen Elizabeth and was one

of the most independent of the herbalists, though he vigorously discredits the mandrake, accepts the barnacle goose. Not many of the hundred or more printed herbals in half a dozen languages here considered are likely to be found even in large libraries. Mrs. Arber not only tells their story fully and engagingly; her concluding chapters on the evolution of plant description, classification, and botanical illustration and on the doctrine of signatures are broadly grounded and ably presented.

Madame Jeanne Antelme's investigations in the Isle de France throw some light on an instance of negro slavery under French rule as well as on the truth of the story of Paul and Virginia. Without deciding the interminable dispute, she gives reasons why the story may be taken as true. As to slavery, traditions show that it was kindly in practice, although the legal code was extreme in its punishments. Death might be inflicted for horse- or cattle-stealing, as indeed was still the case in England among whites:

> When the stealer of sheep and the slayer of men
> Were strung up together again and again.

Chicken-thieving was satisfied by a whipping or, with old offenders, by branding a fleur-de-lys on the shoulder. The inhabitants of the island refused to allow a landing to the agents of the Directory who came to publish the emancipation of the slaves.

Science

Samuel Butler's "Evolution Old and New," which is now reissued by Dutton, was published in 1879. The intention was to attack the Darwinian theory of Natural Selection, and to show that a better theory of mutation and evolution existed before Darwin—in germ in Buffon and Erasmus Darwin, fully developed by Lamarck. This position is supported by numerous quotations from Charles Darwin's predecessors. What Butler objected to in Darwinian evolution was its calling itself a theory. It was, he held, merely an assertion of two rather opaque facts—nature's tireless production of variations, and the survival of organisms in which the lucky variation happens to produce itself. He reprehended more severely still Darwin's tendency to write as if Natural Selection (Survival of the Fittest) were the cause of Variation, a procedure rather worse than circular. These attacks Butler conducted with much wit and dialectical ingenuity, but in a spirit not quite worthy of him. Though his language was pretty carefully measured, his attitude towards Darwin was plainly ungenerous and a bit contemptuous. It was this that made the reviewers, among them Grant Allen and Romanes, whose abuse Butler carefully preserved in his second edition, treat him as a vulgar upstart. Darwin himself, though the critique hit at the heart of his system, quickly dropped the controversy. His position had become pontifical, and he could afford to let his cardinals do his dirty work, but we feel that he was rather influenced by a sense that his antagonist, whom he knew personally, was in a hopelessly intractable attitude. In fact, the tone of the attack is wrong. It was easy to show that Charles Darwin had neither sufficiently read nor appreciated the books of his grandfather Erasmus, but such derelictions are common in literary families. That Darwin had not done justice to Lamarck's evolutionism was patent, but insular scholarship generally has been more mindful of its own researches than of the theories of Continental predecessors. Again, it was easy to make Darwin seem disingenuous when he was merely cautious or caught in the inevitable ambiguities of written speech. Thus the anti-Darwinian polemic seems to us of slight value to-day. In fact, there is no work of Butler's that we could more readily spare from a new edition.

On the constructive side, its plea for the teleological evolution of Erasmus Darwin and Lamarck, the book is still interesting, though most of its arguments are also contained in Butler's "Life and Habit," and "Unconscious Memory." Against the postulate of blind variation, Butler, following Lamarck, held that these variations are very largely the creation of the organism itself to meet its own needs. We have an immemorial course of intelligent experimentation. Moreover, each individual, being organically part of all its ancestors, unconsciously remembers much of their experience. The instincts, thus interpreted, are merely lapsed and funded intelligence. In Butler's view the evolutionary hypothesis was already fairly complete with Erasmus Darwin and Lamarck, and what he occasionally scornfully termed Neo-Darwinism was philosophically and scientifically a retrogression. Though teleological views still find rather little favor among biologists, the most candid will admit that the question is entirely an open one. Evidently the teleological vitalism of Butler is more satisfactory to both the philosophical and the common-sense mind than is any form of mechanism. It is possible that biology may yet swing back Butler's way. If so, he will add to his multiform repute a certain position as a pioneer in scientific theory. Doubtless the orthodox scientist will be aghast at his wit and his constant appeal to common-sense. But, in the long run, after all, science must square itself with the general interests of the human mind and even accept the hazards of a common-sense tribunal.

M. Pierre Villey, who has published a book entitled "Le Monde des Aveugles" (Paris: Flammarion), has all his senses but that of sight, and hence has aroused less interest in himself than persons, like Helen Keller, suffering under heavier handicaps. His book, however, is especially valuable because he is a trained observer, if we may use that word of him, and a man of genuine scientific spirit. What he has to tell us of the world as it presents itself to those who cannot see is a real contribution to our knowledge of the subject. M. Villey begs us in the beginning to put aside the absurd notion that four senses are somehow better than five. All the wonderful tales of the superiority that blindness confers upon its victims, such as ability to distinguish colors independently of texture, to ascertain the cards that their opponents hold by the mere feel as they shuffle them, to tell from the way a horse trots that he, too, is blind—all this mass of legend only renders the path of the blind person more difficult by making his world more misunderstood. Even though he be a genius, he is, and remains, a sense short. On the other hand, M. Villey urges us, with equal fervor, not to argue from mutilated senses to a mutilated personality. The whole mind is there, waiting only for the opening of avenues between it and the world outside. What becomes, then, of the common notion that touch and hearing make haste to supply the deficiency of sight? M. Villey's answer is that any special refinement of these senses is due solely to narrowing of attention. Upon this point he offers scientific evidence. Actual measurement of Laura Bridgman's tactile sensibility showed it to be two or three times the normal; that of Helen Keller, on the contrary, which was examined, he thinks, in a more coldly scientific spirit, showed no notable superiority. In his opinion, blindness induces neither a general stupor nor a general exaltation of the remaining senses. This does not mean that blind persons, like those with sight, may not sometimes have a special acuteness in one sense or other which is instinctively utilized to its full advantage. In some instances, as with Helen Keller, everybody with whom the blind person is acquainted has a special odor as recognizable as the perfume of a flower. There is a certain Frenchman, for example, who is deaf, as well as blind, but who knows that the postman has arrived by the smell of his letter-bag on the floor next below him. The keenness with which such persons will detect changes in temperature or movements of air is familiar. Our blind and deaf Frenchman recognizes his friends by the vibrations produced by the impact of their feet on the ground.

So perfectly does the sense of touch respond to the need that we may speak of "tactile vision." In M. Villey's words: "The word *sight* alone seems adequate to those apparitions which surge through the mind, free from any admixture of purely muscular sensations." At the same time, the limitation that rests upon this substitute for seeing is indicated by his distrust of Helen Keller's assertion that she grasps the meaning of sculpture through the medium of touch. Just here, too, lies a practical danger for the blind person in search of a living. The very readiness with which his other senses endeavor to fill the gap caused by sightlessness makes people less sharply aware of how great that handicap still remains. Every blind person, in the common opinion, is a potential musical genius. How different from this view is M. Villey's summary of his investigations into the way in which the blind get along as bread-winners! Often, he finds, there is a "conspiracy of benevolence" without which the supposedly successful blind mechanic could not exist. Sometimes there is marked talent for particular work, which is not the lot of the ordinary person, blind or seeing. More striking still, he found virtually no case in which a blind mechanic, famous for his skill, could work fast enough to earn his living. The prospect is more hopeful in less skilled employment, in which special training may offset the advantage of those with sight. But the problem, in great part, is unsolved. It is not enough, as T. M. Kettle points out in the *British Review*, to spend benevolently. We must spend intelligently. In this respect, it is not too much to say that our own country is making a worthy record. Men and women of the stamp of Miss Winifred Holt are showing that the spirit of Howard and Shaftesbury, of Elizabeth Fry and Octavia Hill, is flourishing in undiminished brightness in our own day. But we shall not be doing enough until we have enlarged the world of the blind far beyond its present narrow boundaries.

Drama and Music

A TWIN AND NO TWIN.

Beaumont, the Dramatist: A Portrait, with some account of his circle, Elizabethan and Jacobean, and of his association with John Fletcher. By Charles Mills Gayley. New York: The Century Co. $2 net.

A good deal has been done in recent decades, especially from the point of view of versification and diction, to distinguish the respective shares of Beaumont and Fletcher in the plays which former generations were contented to accept as the productions (to employ Professor Gayley's phrase) of "an indivisible pair of Siamese twins, constructing with all four hands at once." In the present work, however, we have the most complete and searching investigation of this subject that has been made—with full utilization, of course, of the results of previous scholars. The solution of this problem is the indispensable preliminary to a study of Beaumont, and accordingly, after first determining the plays in which this dramatist had a hand, Professor Gayley tries to establish in each case, as far as is possible, the scenes or parts of scenes that come from Beaumont's pen. From this definite basis he proceeds to an analyis of the dramatic genius of his author. Following is a list of the plays which, according to Professor Gayley, are wholly or partly by Beaumont: "The Woman-Hater" (wholly his, except that a few scenes were revised by Fletcher), "The Knight of the Burning Pestle" (wholly his), "Cupid's Revenge," "The Scornful Lady," "The Maid's Tragedy," "A King and No King," "Philaster," and "The Coxcomb." This does not include the "Masque of the Inner Temple," which is by Beaumont alone. It will be observed that Professor Gayley's list is shorter than that of G. C. Macaulay by five plays, viz., "Four Plays in One" (in which, perhaps, there is a mere trace of our dramatist), "The Captain," "Thierry and Theodoret," "Wit at Several Weapons," and "The Knight of Malta."

In the separation of the work of the collaborators, the style and dramatic methods of Fletcher have to be deemed as well as those of Beaumont. The book is, consequently, almost as important for the study of the former as of the latter, although the later period of Fletcher's activity, of course, does not come within the scope of the inquiry. With the exception of Swinburne, the critics have been inclined to regard Fletcher as the more significant genius of the two. Profcssor Gayley's fine analysis of Beaumont's genius, however, based upon a rigorous separation of the respective shares of the two poets in their joint-dramas, will go far, we believe, towards redressing the balance in the latter's favor. He brings out with particular clearness the greater purity and elevation of Beaumont, and shifts to Fletcher's shoulders the main responsibility for the moral obtuseness and cynicism that constitute a reproach to so much of their joint work. This moral superiority appears especially in the girl-figures that Beaumont contributed to these plays—the Bellarios, Violas, and others, whose loves are crossed by circumstances or thwarted by differences of rank. "In the delineation of lust he is frankly Elizabethan rather than insidiously Jacobean." Moreover, as Professor Gayley says justly, in the main, "he is melodramatic at times in sudden shifts of crisis; but he is uniformly sensitive to innocence, beauty, and pathos—contemptuous of cowardice, braggadocio, and insincerity—appreciative of fidelity, friendship, noble affection, womanly devotion, self-sacrifice, and mercy, of romantic enterprise and of the virile defiance of calumny, evil soliciting, and tyranny." The writer's discussion of the moral aspects of Beaumont's genius takes in part the form of an answer to the criticisms of Mr. Paul E. More in this journal (November 14, 1912; April 24, May 1, 1913). He is successful in showing that Fletcher is in largest measure responsible for those features of the plays which are the especial object of Mr. More's strictures, and, furthermore, that the decadence of the Elizabethan drama had already begun in Heywood, Chapman, Marston, and Middleton before the famous partners appeared. On the other hand, even after reading Professor Gayley's pages of rebuttal, the "Maid's Tragedy" (which is, of course, Beaumont's alone, with the exception of a few scenes) still seems to us, in Mr. More's phrase, an "incomprehensible tangle of the passions," and leaves us with the impression that Beaumont, though exempt from the grosser defects of his fellow-dramatist, was infected with the moral contagion of the age more deeply than our author will allow. Indeed, he would hardly have associated himself in a constant partnership with Fletcher, if this had not been the case, for their joint-plays were, of course, produced with his approval, even where the workmanship was largely Fletcher's.

On the side of technique in these joint-plays, it is interesting to note that in addition to their clear and comprehensive expositions Professor Gayley attributes to Beaumont "the sensational reversals of fortune, as well as the cumulative suspenses and reliefs of the closing scenes" in the tragedies and tragi-comedies, and "the shifting of interest from the strictly tragic and universal to the more individual—pathetic, romantic, and comic—emotions" in the tragi-comedies. Furthermore, he makes it plain that "The Knight of the Burning Pestle" owes nothing to "Don Quixote." On the other hand, some of the most valuable pages in this volume are devoted to the refutation of the view which has been championed by Prof. A. H. Thorndike, that "Philaster" determined the character of Shakespeare's production in his last period. Professor Gayley, rightly in our judgment, argues that the distinctive features of "Cymbeline" and the rest are a natural development from Shakespeare's earlier plays. "There is closer resemblance between 'Cymbeline' and half a dozen of Shakespeare's earlier comedies than between 'Cymbeline' and 'Philaster,' and it might more readily be shown that the author of 'Philaster' was indebted to those half-dozen plays than Shakespeare to 'Philaster.'"

We have been dealing so far only with Part II of this book. Part I is concerned with Beaumont's life, his acquaintances, and his career as poet and dramatist. There are no new facts here brought to light, but by a minute study of the poet's family and its connections and of the local and other conditions under which he grew up and practiced his art, Professor Gayley has been able to make him a living figure as he has never been before. In fine, apart from its learning, this work displays literary abilities of no mean order. It escapes altogether the reproach of the "whitey-brown" style which, according to Mr. Oliver Elton, is characteristic of American academic productions. The author is not only thoroughly informed at every point in regard to his subject, but he has imagination, and his criticism is marked by the warmth and color of a fine humanity. He has added substantially to our knowledge of a body of work which, next to that of Shakespeare, constitutes the most important contribution to the English drama in the period of its greatest glory, and if any one should persist hereafter in confounding these memorable dramatists, it will be due to neglect of this admirable "portrait."

"ON TRIAL."

The end of detective plays, it appears, is not yet. One might have fancied that the popular relish for this type had been exhausted by the busy parade of revolvers, secret service men, district attorneys, and all the mechanical appurtenances of detectiveness which was offered by last season's bills. But in "On Trial," which is running at the Candler Theatre, the author, Mr. Elmer L. Reizenstein, has produced a novelty. The story itself is nothing new. The defendant has murdered a man who in some way has wrecked his home. So much is clear at the outset of the trial, which is represented on the stage with much attention to realistic details. But the matter is complicated by a theft of ten thousand dollars perpetrated at the house of the victim almost simultaneously with the murder. Hence the problem to determine the defendant's motive. If it was burglary, the jury will grant him no mercy; they will show pity if it was to revenge himself for brutal wrongs done to his wife.

The novelty of the representation consists in the manner in which the story is unfolded to the audience. When the trial has reached a certain stage, the lights go out, the scene is suddenly shifted, and we see the dead man come to life and behold the murder reëacted. Later, by a similar transformation, we are carried back thirteen years to a time when the defendant's wife, then a young thing of seventeen years, is ruined by the villainous victim. And so on. There is a continual seesawing back and forth between courtroom and the events preliminary to the murder.

At least, the author cannot be charged with

having left his audience uninformed; indeed, in this respect he has probably shown the greatest scrupulousness on record. What though the reader of this review is shocked by the manipulation of the time-element in the play! The audience was evidently not displeased with this, as who should be whose dramatic conceptions have been formed by cinema sketches wherein, as every one knows, the present easily melts into past dreams and past experiences! In this respect "On Trial" is significant. It may indicate a growing influence of the cinema upon other drama, and a very unwholesome influence. The chief hope is that by so wholesale a throwing over of the usual dramatic standards there may in time result a *reductio ad absurdum*, together with a return to the limitations of true art. F.

Writing from Paris a few days before the outbreak of the war, C. Phillips Vierke says, in *Musical America*, that "the music going on in Paris just now consists of 'La Marseillaise,' the 'Sambre-et-Meuse March,' 'Le Chant du Départ,' and 'En Avant les Petits Gars!' In a word, nobody is interested in anything but the war, and the ultra-patriotic people in the crowd have been combating the agitations of the anti-militarists—who are stronger than is generally supposed—by the singing at street riots of the above-mentioned tunes."

An amazing suggestion regarding the unfortunate Paris Opéra has been made by the editor of *Le Monde Musical*. "The Opéra can live," he says, "and live very well, without any kind of subvention. All that is necessary is that it should be equipped like the Monte Carlo Opéra, and all the operatic theatres of resorts, such as Enghien, Vichy, Dieppe, Aix-les-Bains, etc., with a gambling casino. And why not? Moral objections? Why should not what is moral on a race course and in authorized private clubs be regarded as moral at the Opéra? Gambling is much less immoral—in any case, much less dangerous—than alcoholism, from which the state realizes a huge income."

Berliners will not be afflicted with as many concerts next season as they were during the musical year which closed just before the outbreak of the war, when 1,262 had been given. Vienna came next, with 603 concerts, followed by Munich, with 418; Hamburg, with 351; Dresden, with 309; Leipzig, with 295; Frankfurt, with 212; Breslau, with 183; Prague, with 160; Stuttgart, with 122. In Hamburg no fewer than 57 of 68 song recitals were given by women. Evidently, other forces besides war are at work in gradually eliminating men from musical fields—excepting, for a time at any rate, teaching, orchestral playing, and composition. The growing scarcity of men may make it necessary once more, as in the days of Bellini, to have female Romeos.

Frederick Niecks, best known outside of Great Britain as the biographer of Chopin, has resigned the professorship of music at the University of Edinburgh to which he was appointed in 1891. He is sixty-five years old. The Reid chair of music which he occupied so long is an unusually complete professorship. There are separate endowments for the professor's salary, the [illegible] his assistants, and his class expenses. There is also a fund for an annual series of high-class concerts.

Art

A "SACRAMENTAL AGENCY."

The Ministry of Art. By Ralph Adams Cram. Boston: Houghton Mifflin Co. $1.50 net.

In this book are gathered together seven addresses delivered upon various occasions by the author, who is widely known as a talented and successful architect, but who from this time forward must be looked upon also as a talented and successful lecturer. He has a remarkable command of exuberant language, and an enthusiasm of exposition that compels the eager attention of his hearers, even when he attacks without mercy their cherished ideals. Yale asks him to speak on The Place of the Fine Arts in Public Education, and listens to a fierce attack upon the principles she proudly claims to embody; yet she is so fascinated by him that she does not hesitate to cry for more, and he generously again speaks to her students of The Artist and the World, repeating his violent denunciations of what Yale stands for. The Congress of the Protestant Episcopal Church calls for an address, and in his Ministry of Art he heaps obloquy upon all that Protestantism involves. The American Institute of Architects, which is dominated by those in sympathy with the traditions of the Ecole des Beaux Arts, listens with joy to his denunciations of everything that pertains to the Renaissance; and then proceeds to elect him president of its Boston Chapter, and to make him the mouthpiece for its Committee on Education. Even the conservative Royal Institute of British Architects calls for him, eager to be stimulated by his words, after having listened to what he himself describes as the "penetrating and comprehensive paper" from Mr. Edward Warren, of London.

Had Mr. Cram been well advised he would have left the matter there. One may accept without cavil, from a rapid and interesting speaker, words that seem extravagant and unconvincing to one who reads with deliberation; and the friends of our author who have urged him to publish these addresses cannot but regret that he was induced to succumb to their solicitations. For when we read the book with care we find it a congeries of mystical rhapsodies, of violent attacks upon all with which he is not in sympathy, and of exaggerated praise of all that fires his own highly inflammable imagination.

The unsophisticated reader might indeed be led to believe that there had been little true art anterior to the Middle Ages, and none then but the Gothic of France. He certainly would be entertained, if not convinced, by the violent attack upon the "strange madness we call the Renaissance" (p. 67 f.); but the worst of it is that he might, by chance, be convinced. For our author speaks with such an air of historical authority that one might easily fail to note that he is picking his examples to support his contentions, apparently quite unconscious that he is indulging in the most vicious of special pleading. His statements that our present situations are without counterparts in the past (pp. 24 to 27, 81), and his firm conviction (p. 48) that there is a "great rhythm of human life that is the underlying force of history . . . which seems to divide itself into epochs of about five centuries," will certainly amuse the real student of history.

With equal confidence our author speaks of matters philosophical; although it is clear that his studies in this field have been limited, and largely influenced by his interest in the Middle Ages, and in modern days by men whom he has heard in Boston, "James, Eucken, Bergson—the last the greatest figure, perhaps, since St. Thomas Aquinas" (p. 52). Nevertheless he does not hesitate to give us bits of supposed philosophical insight: speaking (p. 76) of "the basic principle of the Renaissance, 'there is no mystery' "; and closing his essay on Art the Revealer with these high-sounding words: "'Man is the measure of all things,' said Protagoras, and with equal truth we can say, art is the measure of man." That he is not competent to speak authoritatively in the realm of theoretical æsthetics is clear; yet, after quoting a definition from one of the less significant students of this difficult subject, he dares to characterize it as "surely the most grotesque example of serene incapacity anywhere recorded in that congeries of incapacities, the literature of æsthetics" (p. 109).

But we must not allow the reader of this review to suppose that Mr. Cram's book is without its interesting presentations of truth; even his criticism, although exaggerated and often ill-founded, must be salutary in awakening from their "dogmatic slumber" those whom he attacks. Nor must we forget the spirit that urges him on. For our author evidently feels himself a prophet of a great movement. He believes that the supporters of the Gothic restoration are missionaries (p. 62); and, somewhat after the manner of Tolstoy, that art, as he conceives it, is a "sacramental agency" (*e. g.*, pp. xi, 97). So, after all, we must not allow ourselves to take too seriously the self-confidence of partial knowledge he displays; for the true prophet is allowed to use any tool that may come to hand. The question only remains, Is he a true prophet?

In "Small Country Houses, Their Repair and Enlargement" (Scribner; $5 net), the author, Lawrence Weaver, gives so large a portion of the text to descriptions of mere alterations, and of the trials and tribulations of the remodelling architect, that the book might be tedious and uninteresting but for the frequent reference to historical associations. In any event, the attractive illustrations, particularly of interiors, are delightful and well repay the perusal of one who "reads between the lines," *i. e.*, skips the text and reads the pictures, as so many of the author's profession say they do. His high commendation of the British Society for the Protection of Ancient Buildings for its well-directed activity is interesting and suggestive to us on this side of the water; and he gives some sound advice, as, for instance (p. 32), "It is rarely worth while to play with an old building, and face all the restrictions of planning

which that involves, unless the additions to be made are relatively small."

In "Architecture and the Allied Arts: Greek, Roman, Byzantine, Romanesque, and Gothic" (Indianapolis: Bobbs-Merrill; $3.50), a handsomely printed and weighty volume, Prof. Alfred M. Brooks, of the University of Indiana, has written a book which proves on examination to be an elementary history of mediæval architecture, with a few very brief excursions upon the allied arts, which mean, in this case, chiefly sculpture. There is in the text nothing that might not have been prepared as lectures to freshmen or sophomores in college; one looks in vain for originality or novelty in either the views of the author or his presentation of them; he nowhere ventures aside from the well-beaten paths of criticism of the old and standard writers, and there is little suggestion of individual judgment, or of any personal acquaintance with or impressions from the great buildings he describes. Mention of the allied arts might well have been omitted from the cover and title page, as the references to them are singularly meagre. The splendid mosaics of early Christian and Byzantine art, the marble inlays of mediæval Italy, the Gothic choir stalls and tabernacle-work, the development of stained glass and mural painting—all these subjects are either wholly ignored or receive only passing allusion. The illustrations are generally excellent, but scattered in a confusing way, with neither textual nor numerical sequence. Fig. 62 is followed by Fig. 50, and that by Fig. 66, and so on through the book. A plan of the octostyle pseudo-dipteral temple of Selinus is given in Fig. 9 (following Fig. 35!) as a plan of the Parthenon.

Finance

"FOREIGN RAW MATERIALS."

When war broke out in Europe, four weeks ago, the first feeling that prevailed in all our markets was one of intense satisfaction at the advantage possessed by the United States over all the world. Sudden consternation over the war embargo on the shipping industry made up the next chapter in the mood of our own community. When the breaking of that deadlock was beginning to come in sight, one home trade after another was all at once heard from, with the surprisingly general testimony to the fact that some one essential raw material of its manufacture, produced in Continental Europe and now cut off by war, would presently be unobtainable, thereby bringing the home manufacture itself to a standstill.

The extraordinary thing about this simultaneous discovery by many separate trades was that the menace of forced suspension of production came at the very moment when the war seemed to have opened up new and profitable outlets for American finished goods. At first, it was only the steel trade and the textile industry; the one had been buying ferro-manganese from Germany, the other had relied almost entirely on the German chemists for the dyes which gave the requisite colors to its fabrics. But the startled outcry from these two trades was only the beginning. The electrical industry was presently heard from, with the word that the platinum supply from the Ural Mountains was cut off, and that certain carbons and metal filaments, made by German manufacturers and essential for the arc-light, could not be obtained after existing supplies on hand in the United States were used up.

The drug and chemical trades were as quick in coming into view; an astonishing number of indispensable materials for these industries appeared to have their single source of production in Germany. Emphasizing the situation, one large retail firm in New York received notice from a German wholesale drug distributer doubling the price on 1,000 articles supplied by it. Drug dealers here trebled their price of such products as citric acid, tartaric acid, carbolic acid, gum camphor, and dandelion root, and warned consumers of an impending failure of supplies. In quick succession, the same word came from manufacturers of glass, soap, matches, artificial fertilizer, gunpowder. In all these industries, potash is an essential raw material. Natural potash is a German monopoly, and with war begun, the supply was necessarily absolutely blockaded.

Misgiving spread after this to the manufacturers of photographic materials, because of the prospective embargo on German-made oxalic acid. Then the glove, shoe, and hat trades had their turn; nobody outside these trades had suspected to what extent they depended on Continental Europe for their particular kinds of material. Even certain kinds of felt roofing were drawn into the dilemma, for the curious reason that the rags from which it has been made are imported from Belgium. As a highly interesting climax, London raised the alarm over the Transvaal gold mines—the last of all places to be suspected in this case. These, like our own Rocky Mountain gold mines, extract the precious metal by the cyanide process, and cyanide of potassium, again a by-product of German potash, was about to be cut off.

What is to be said of this new and extraordinary turn in the situation? Are these trades, each with a fair chance of expanding its business into neutral markets relinquished by the fighting European states, to sit down despondently and give up production? The chemists and working experts smiled quietly at the suggestion, and presently it began to be pointed out that of all these various raw materials entering into the trades enumerated above, there is not one that is an absolute monopoly with Europe. Dyestuffs and acids can be extracted from American coal-tar as well as from the coal-tar of Europe; what is required is the effort and the enterprise. Manganese ores are in sufficient supply in this country, in India, and South America to keep the steel trade going—already the per-ton price of this commodity has fallen from $150 to $100 a ton, after rising in a week from $38 to $150. Potash is manufactured in this country, though it costs more than the natural product, cyanide may be extracted from it here, and, as for hats, shoes, gloves, and rags, substitution of domestic for European material is easy if not convenient. Platinum may be a problem; yet we are not cut off from the Ural Mountains, and the Siberian Railway is not this year being used for mobilizing armies. Carbons we are perfectly able to make at home.

Why, then, all of this stir and commotion over the "embargo on raw material"? There are two main explanations. One is, that in the first alarm, the purely temporary obstruction of all shipping communications, due to the presence of German cruisers on the ocean and to the deadlock in foreign exchange, was confused with the much more serious obstruction of access to Central Europe. The other is, that American manufacturers had grown lazy, and allowed their chemists to be distanced by the patient experts to whom the German Government—which now is so recklessly diverting its energies from construction to destruction—had for years given every possible encouragement.

Perhaps the justifiable conclusion will be, that the extraordinary commercial incidents of the war will teach our business community more lessons than one. If men learn, as a result of this year's experience, how to provide their own shipping facilities, they may also learn how to utilize their own home products and the ingenuity of their own home experts, to provide the small materials of manufacture whose production they have been surrendering to Europe.

NOW READY

A Handbook of Warring Europe

The New York Evening Post's

WAR GAZETTEER

It contains all the fundamental information about the war, and is invaluable for one who is trying to understand the movements of the various armies and navies.

It gives the size, organization, and *personnel* of these, and has a table giving full details of all warships and airships owned by the various governments. It describes the fortifications on the borders between the fighting countries. It sketches the lives of the principal rulers involved, and states the reasons for the war and the international law on the subject. It treats every aspect of the war in special articles.

There are 36 pages, with maps, a colored cover, and many other features.

On sale at railway newsstands, subway and elevated railway newsstands, and by newsdealers generally throughout the United States. If your dealer is not able to supply you, send 15 cents in stamps to

BUSINESS ENGLISH AND CORRESPONDENCE

By **Roy Davis**, Mechanic Arts High School, Boston, Mass., and **Clarence H. Lingham.**

This book has been prepared to meet a definite and widespread demand lately expressed by teachers in commercial classes in high schools. It provides within moderate compass a well-rounded exposition of the fundamentals of English, business correspondence, and their mutual relations, the subject matter having been chosen only after careful inquiry among both English teachers and business men.

The first five chapters provide an eminently sensible and practical treatment of grammar, spelling, punctuation, and composition. The remaining chapters illustrate the application of the principles thus developed to the different forms of business composition. The treatment of the business letter, Chapters VI-XII, is unusually full, interesting, and helpful, and shows a knowledge of actual needs and conditions. The exercises, most of which have been carefully tried out in the classroom, are abundant and teachable, and the book is always within the average pupil's experience and comprehension.

LONGMANS' RECENT PUBLICATIONS

A History of Diplomacy in the International Development of Europe

By DAVID JAYNE HILL, LL.D., former Ambassador to Germany. In 6 Volumes. 8vo. **Vol. III. The Diplomacy of the Age of Absolutism.** With 5 Colored Maps, 7 Tables of Rulers, and Index. Pp. xxvi+706. $6.00 net. (Weight, 52 oz.)

"This is undoubtedly the most important work on diplomacy yet undertaken by an American author, and it is not unlikely to be accorded primacy as a general history of diplomacy."—*Republican*, Springfield, Mass.

ALREADY PUBLISHED:

Vol. I.—The Struggle for Universal Empire. With 5 Colored Maps, Chronological Tables, etc., etc., and Index. Pp. xxiii+481. $5.00 net (Weight, 64 oz.).

Vol. II.—The Establishment of Territorial Sovereignty. With 4 Colored Maps, Tables, etc., and Index. Pp. xxv+663. $5.00 net (Weight, 64 oz.).

Municipal Life and Government in Germany

By WILLIAM HARBUTT DAWSON, Author of "The Evolution of Modern Germany," "Germany and the Germans," etc. With Appendices. 8vo. Pp. xvi+507. $3.75 net (Weight, 34 oz.).

This book is an expression of municipal government in practice, and is based on first-hand study and observation. Beginning with chapters setting forth the organization of German town governments, and the wide and almost limitless administrative powers enjoyed by them, the author reviews the most important departments of local administration, land policies, town planning, housing policies, public health and sanitation, poor relief, education and culture, including the schools and the theatre, social welfare endeavors, trading enterprises, finance, local taxation, etc.

Uncrowned

A Story of Queen Elizabeth and the Early Life of Francis "Bacon," as told in his Secret Writings and in Other Contemporary Records of Her Reign. By C. Y. C. DAWBARN, M.A., with Drawings by J. Y. DAWBARN, M.A., LL.M. Crown 4to. Gilt Top. Pp. xii+192. $1.50 net (Postage, 13 cents).

CONTENTS:—Part I. The Historical Setting. Part II. My Story: as Told in Cypher.

APPENDICES:—A. The Machinery of the Cypher. B. Marriages in the Fleet. C. In Courtly Phrase. D. The Use of Torture under the Tudors and Stuarts. E. Some Miscellaneous Additions.

The Economic Organization of England

An Outline History. Lectures Delivered at Hamburg. By WILLIAM JAMES ASHLEY, Ph.D. Professor of Commerce in the University of Birmingham; Late Professor of Economic History in Harvard University; Sometime Fellow of Lincoln College, Oxford. Crown 8vo. $0.90 net (Weight, 18 oz.).

The purpose of these lectures is to give a rapid sketch of the whole course of English economic development, regarded especially from the point of view of organization.

The Struggle for Scutari

(Turk, Slav, and Albanian). By M. EDITH DURHAM, author of "High Albania," etc. With 23 Illustrations from Photographs and Sketches by the Author. 8vo. $4.00 net (Weight, 32 oz.).

The author considers various phases of the Balkan War. An account is given of the whole campaign on the Montenegrin side up to the time when the Representatives of the Powers took possession of Scutari.

Germany and the Next War

By GENERAL FRIEDRICH von BERNHARDI. Translated by Allen H. Powles. Cheaper Edition. Crown 8vo. $1.00 net. Immediately.

This is the most candid expression that has been given in recent years to the doctrine that Germany must, regardless of the rights and interests of other peoples, fight her way to predominance. The book caused a sensation in Germany, where it passed through many editions in a very short time; it throws much light on the German military attitude and plans for the present war.

What Can I Know?

An Inquiry Into Truth, its Nature, The Means of its Attainment, and its Relations to the Practical Life. By GEORGE TRUMBULL LADD., LL.D., Emeritus Professor of Moral Philosophy and Metaphysics, Yale University. Crown 8vo. $1.50 net (Weight, 20 oz.).

CONTENTS:—The Meaning of the Question. What is it to Know? On Thinking One's Way Through a Subject. On Being Sure of What we Know. Degrees and Limits of Knowledge. What May the Knower Take for Granted? On the Worth and Way of Self-Knowledge. Agnostics and People of Common Sense. Knowledge and Reality. What is the Uso of Knowing? The Value of the Men who Know. Can a Man Know God?

Education and the New Utilitarianism and Other Educational Addresses

By ALEXANDER DARROCH, M.A., Professor of Education in the University of Edinburgh. Crown 8vo. $1.20 net (Weight, 14 oz.).

Sons of the Sea Kings

By ALICE and W. H. MILLIGAN. With 10 Illustrations. Crown 8vo. $2.00 net (Weight, 42 oz.).

The scene of this story is laid in Iceland, Orkney, and Norway in the tenth century, with Ireland more or less in the background. The sea kings from whom the book takes its title, Olaf the White, first Norse King of Dublin; and Muirchearteach of the Leather Cloaks of Aileach, ancestors of the hero and his companions in arms.

The Diary of Adam Tas (1705-1706)

Edited by LEO FOUCHÉ, Ph. et Litt. D. (Ghent). With an Enquiry into the Complaints of the Colonists against the Governor Willem Adriaan Van Der Stel. English Translation by A. C. Paterson, M.A. (Edin. and Oxon.). With 2 Maps. 8vo. Pp. xlviii+367. $3.75 net (Weight, 28 oz.).

The MS. of his diary has only lately been discovered in South Africa. Its importance lies in the fact of its being the diary of the leader of the opposition to Governor W. A. Van Der Stel, about whose administration there has been so much controversy. The diary not only sheds light on this controversy, but has a further value from the picture it gives of the country life of South Africa at the opening of the 18th century.

ANNOUNCEMENT.

The second and final volume of "George III and Charles Fox," from the pen of the Right Honourable Sir George Trevelyan, is in preparation and will appear shortly. It brings to a close the series of six volumes of which the first four are entitled "The American Revolution." The forthcoming volume contains a narrative of the events in England, and on the Continent of Europe, which had a bearing upon the struggle in America; and it tells the story of General Nathanael Greene and the War in the Carolinas, of Doctor Franklin and John Adams in Paris, and the Campaign of Yorktown.

"By far the most desirable edition yet published."—*[The Dial.*

THOMAS Y. CROWELL CO., NEW YORK

Just Published
BUSINESS ENGLISH AND CORRESPONDENCE

By **Roy Davis**, Mechanic Arts High School, Boston, Mass., and **Clarence H. Lingham.**

This book has been prepared to meet a definite and widespread demand lately expressed by teachers in commercial classes in high schools. It provides within moderate compass a well-rounded exposition of the fundamentals of English, business correspondence, and their mutual relations, the subject matter having been chosen only after careful inquiry among both English teachers and business men.

The first five chapters provide an eminently sensible and practical treatment of grammar, spelling, punctuation, and composition. The remaining chapters illustrate the application of the principles thus developed to the different forms of business composition. The treatment of the business letter, Chapters VI-XII, is unusually full, interesting, and helpful, and shows a knowledge of actual needs and conditions. The exercises, most of which have been carefully tried out in the classroom, are abundant and teachable, and the book is always within the average pupil's experience and comprehension.

NEW YORK, THURSDAY, SEPTEMBER 3, 1914.

Summary of the News

We comment elsewhere on the naval and military developments in the European war. Politically the most important development is the threatened intervention of Turkey. Ottoman intentions have been under suspicion ever since the German cruisers Goeben and Breslau were afforded the proteetion of the Dardanelles and were immediately purchased by Turkey. The persistent wooing of Turkey by the Kaiser during the past deeade has also been remembered. Dispatches reeeived on Sunday and Monday pointed to the probability of Turkish intervention and reported the movement of a number of German officers and men to Constantinople. On Tuesday a telegram from Berlin by way of Rome announeed the mobilization of a Turkish army of 200,000 men, all Mohammedans, and stated that seventy-two superior German officers, forming the German military eommission at Constantinople, had been incorporated in the Turkish army.

Up to the time of writing, no declaration of war has been made, but it seems eertain that one is expected in England. The hope of the Kaiser in allying himself with Turkey is frankly that it may eause disaffeetion of the Mohammedan subjeets of England. Whether this will be the result or not, it is extremely probable that Turkey's partieipation in the war on the German side will have the effeet of restoring the original Balkan League and ranging those states on the side of the Entente. It seems also to be probable that Italy's attitude of neutrality may be modified, as she has everything to lose and nothing to gain by the suceess of Turkey, Austria, and Germany in the war. Greece, beyond any doubt, will enter the eonflict on the side of the Allies, should Turkey ally herself with Germany.

It is understood that, although no formal protest has been lodged at Washington, Great Britain has joined with Franee in presenting views regarding the proposal to purchase German liners in eonneetion with the plan to build up an Ameriean mereantile marine. The view taken by Franee is that the purehase of German liners now tied up in the ports of this country would be tantamount to giving finaneial assistance to Germany, while England's position is that there is no preeedent in international law for the purchase of a large number of ships belonging to a belligerent nation during war.

It is not unlikely that a full settlement of the difficulties coneerning wireless messages in eode sent from this country to any of the belligerents in Europe will soon be reaehed. Dispatches from Washington, published on Monday, stated that both England and Germany have aeeepted the proposal of the United States that the wireless stations at Tuekerton, N. J., and Sayville, L. I., be permitted to send eode messages to belligerent countries, subject to eensorship by Ameriean naval officers.

The Administration bill to create a Federal bureau of marine insuranee against war risk was passed by the House on August 29, by a vote of 230 to 58.

For fear lest additional restrietions on shipping during the present erisis should handieap the efforts that are being made to encourage the building up of a merchant marine, the Seaman's bill, revising regulations of service on Ameriean ships, has been sidetraeked in the Senate.

Senator Reed's amendment to the Clayton Anti-Trust bill, to prohibit absolutely one interstate eorporation owning stock in another interstate corporation engaged in the same line of business, was defeated in the Senate on Monday. The bill as it stands only prohibits such ownership "where the effeet of such aequisition is to eliminate or substantally lessen competition."

A Demoeratie eonferenee will be held to determine a definite programme for Congress in meeting the emergeney eaused by the war. The seope of the revenue measure to offset the deerease in eustoms reeeipts will be deeided, and it is understood that some phases of the situation in the Far East, growing out of Japan's partieipation in the war, may be diseussed.

Viseount Chinda, Japanese Ambassador, on Thursday of last week issued an explieit denial of reports that had obtained eurrency as a result of the declaration of war by Austria, that Japan eontemplated sending a squadron to the Adriatie. There was no indueement, the Ambassador said, for Japan to embroil herself in the European war in Europe itself.

Rumor continues to be busy in Mexieo, and, as heretofore, is oeeupied prineipally with the differenees between Villa and Carranza. There were even reports on Monday from Vera Cruz, of old a suspieious souree, that several ex-Federal generals were ready to throw in their lot with Villa in raising a new revolution against Carranza. Sueh reports, however, need not be taken very seriously. Villa's attitude apparently is simply that Carranza is Provisional President, and aeeording to the Constitution is not eligible for eleetion as President. Meanwhile, Gen. Villa and Gen. Obregon have been devoting their efforts towards obtaining a settlement among the loeal faetions in Sonora and their adherenee to the eentral Government. An agreement has also been reaehed between Zapata and Provisional President Carranza, the eessation of guerrilla warfare in southern Mexieo being thus seeured.

More serious, perhaps, than the possibility of disputes arising between Villa and Carranza is the attitude of the latter towards the eontinued occupation of Vera Cruz by forees of the United States. The Administration, however, is understood to view the situation without anxiety, and on Monday a denial was issued of reports that Gen. Funston had asked for more troops. On the same day it was announced that Carranza had ordered the port of Vera Cruz closed, but State Department officials do not attach undue importanee to the order. Two weeks ago traffie was diseontinued between Vera Cruz and Mexieo City, the explanation being given that the interruption was due to the transportation of troops south of Mexieo City. Traffie was restored on Gen. Funston's informing the Provisional President that if the suspension was to be permanent he proposed to seize all the rolling stoek in Vera Cruz and hold it until traffie was resumed.

Relief work for Amerieans stranded in Europe has reaehed its eoncluding stages. The gold taken to Europe on the Tennessee has been distributed, and reports from Ameriean diplomatic offieials in European eapitals and large towns indieate that most Amerieans have already left, or are about to leave.

Santo Domingo, whose troubles have been somewhat obseured by other events, appears to be on the way to a peaceful settlement of its affairs. President Bordas, it was announeed last week, has undertaken to resign, and leaders of all elements have agreed to disarm their followers and to release politieal prisoners. Bordas will be sueeeeded by Ramon Baez as Provisional President, who will eonduct eleetions.

The Freneh Cabinet, admittedly one of medioerities and intended only as a stop-gap Government, resigned on August 26, M. Viviani, the Premier, informing M. Poinearé that he and his eolleagues had eome to the eonclusion that in the present crisis the Ministry should have a wider seope, and eomprise all the best men in all the Republican groups. The President requested M. Viviani to assume the task of organizing the new Cabinet, whieh was eompleted within an hour of the aeceptanee of the resignations. In the Cabinet, as at present eonstituted, M. Deleassé is Minister of Foreign Affairs, and M. Millerand, Minister of War. It also includes MM. Briand, Ribot, and Doumergue, all ex-Premiers, and two Soeialist Deputies, M. Sembat and M. Guesde.

An interesting forecast of what may be expeeted to happen in the final settlement after the war, should the Allies prove vietorious, has been seen during the past week in sundry skirmishes that have taken place on the outskirts of empires. Early last week it was offieially announced in London that German Togoland had surrendered unconditionally to the British West African forees, and on Sunday a dispateh was received by the British Colonial Secretary from the Governor of New Zealand stating that Apia, in German Samoa, had surrendered on the previous day to an expeditionary force sent by the Government of New Zealand. On the other hand, news was reeeived by way of Paris on Friday of last week that an attaek on the Belgian Congo had been made by German troops.

The deaths of the week inelude: Gen. Powell Clayton, August 25; Baron Merthyr, Brig.-Gen. Philip H. Briggs, August 27; Charles Truman Hotehkiss, August 28; Bishop Robert MeIntyre, William De H. Washington, August 30.

The Week

How thin is the veneer of our civilization now appears with every newspaper issue containing dispatches from the front. They are full of charges and counter-charges of atrocities. Thus, besides the familiar accusations that the Germans are killing priests, women, and children, we are asked to believe that Belgians have dragged German women naked through the streets by the hair of their heads; that a Belgian boy killed in cold blood the commander of the Germans in Louvain; that the Austrians killed twenty young girls in a single house, besides executing sixty Servian prisoners in one place and mutilating dead bodies elsewhere. From Germany come stories of Russian atrocities in East Prussia, and shortly we shall have, without doubt, word from Austria of the horrible Servian barbarities and the excesses of the Cossacks in Galicia. But the Germans, it is urged, are carrying on an inhuman war. Undoubtedly; but so are all the others. There is no such thing as humane war. No war ever was that did not drag down women and children, in Europe usually by the thousands. Never was there a war in which an enemy was not accused of atrocities. All this is, of course, quite apart from such acts as the razing of Louvain, upon which we comment elsewhere.

The news that both France and Great Britain have protested against American purchase and use of German ships is another reason why the Administration should go slowly with its programme of a Government-owned merchant marine. Moreover, it is announced that the President will so modify the present laws under the recent authorization of Congress that no less than 200 ships will at once be transferred to the American flag. If this large number should become neutral, or anything like it, a long step would have been taken towards meeting the existing crisis. Meanwhile, the regularity of the ocean traffic to France and England is rapidly being restored. After all, what the President must take into consideration is that merely supplying ships will not create the traffic; that we cannot even do a large business with South America until the machinery of exchange is restored. And then there is the consideration that if the Government embarks in the business of ocean transportation every advocate of Government ownership of railways will have placed in his hands powerful arguments for what seems to us a most dangerous policy.

Whatever the objective importance may be of the loss inflicted upon the German navy off Heligoland last Friday, the moral effect at home of the British fleet's successful achievement must, in this hour of deepest trial, be of inestimable value to England. News from the Franco-Belgian border has been little more than that of a continuous series of disappointments and setbacks. The character of that news, too, has had its effect greatly intensified by the extreme scantiness of the information given out. It has been urged very strongly in the English press that such failure to keep the public in touch with events at the front must exercise a highly discouraging influence on the voluntary enlistments upon which the British War Office depends for its campaign. The victory of Rear-Admiral Sir David Beatty is now on every Briton's tongue, and, little or big, is worth many a battalion of fighting men.

On a battle line where four million men may soon be engaged, England's contribution of 100,000 men could hardly affect the general course of events. But England's expeditionary force was a pledge of honor, a notification to the world that she would see the fight out to the last. The British Government might have contented itself with war on the sea. But in the minds of Frenchmen it would have raised the fear that England was indifferent to what happened on the Continent. To-day the legend of perfidious Albion is dead. By taking up the gage of battle on land, England has bound herself to meet the enemy on his chosen ground. Her task has been made immensely more difficult. England on the sea alone could have waged that prolonged war which Germany cannot afford to face, could have waited with the utmost patience for the advance of the Russian armies. But she has chosen to assume the heavy handicap of a land campaign against the Kaiser's armies to be carried on even on the desperate supposition that the French resistance utterly collapses. The Entente with France has been observed with magnificent loyalty.

Sir Edward Grey has a convincing reply to the charge made in an official German publication that Great Britain might have averted the present conflict if she had exerted her influence to keep France neutral. The British Foreign Minister points out the misapprehension into which the German Ambassador at London had fallen. In case of a war between Austria and Russia, Sir Edward had expressed the hope that it would be possible to keep France neutral. And from the published English correspondence we know that Great Britain had pledged herself to exercise the very strongest pressure at Paris, in case the war was so localized. But the German Ambassador's proposal was that France should remain neutral if Germany, as well as Austria, went to war with Russia. This the English Foreign Secretary had rejected. The German Foreign Office must have been aware that the proposition was impossible. The Russian alliance has been the keystone of French policy for twenty years. For France to abandon her ally would be to condemn herself to isolation and to submit once for all to German leadership. It would have been France's abdication as a great Power. That the statesmen at Berlin seriously expected such a surrender by France is incredible.

Despite Bourassa in Quebec and Hertzog in South Africa, no one doubted the zealous patriotism of the Anglo-Saxon Dominions in the present crisis; the spirit of India may have surprised a few who exaggerated the unmistakable elements both of "loyal unrest" and "disloyal unrest." But the reported passage of Imperial Service contingents across Canada is that of a branch which had its origin in native loyalty during the Russian scare of 1885. Recruited from thirty native states, the full force numbers 25,000 men, under regular inspection and drill by British officers. English papers also report "the offer by every important chief of his entire military and financial resources," and "great meetings in the large centres to raise funds"; there is no doubt that India is a very real asset. Yet the employment of Indian native troops may be regarded as another evidence of the seriousness with which the home government regards the conflict. They were kept out of the South African war for special reasons, and it is not impossible that their presence in Europe may raise questions of international usage. But not without cause would the English give their enemies in India a chance to whisper to the ignorant masses an exaggerated account of the dependence of the Empire upon Sepoy prowess. The assistance of Indian troops, it should be pointed out, may be indirect as well as direct, for their transportation to Egypt, Cyprus, and Malta would release British regiments. In 1878 Disraeli actually brought a small force to the latter island.

A French Ministry of all talents and all factions has been organized in this hour of great emergency. The emphasis must be laid rather on the union of talents than of factions. That the country is united in face of the enemy was made manifest in the Chamber of Deputies from the moment when war became a certainty. The inclusion in the new Cabinet of so extreme a representative of Socialist opposition as Jules Guesde is, to be sure, a reaffirmation of national unity. The make-up of the new Cabinet indicates that France has called into her councils her best-tried and her most energetic public men; men of the type of Ribot, Briand, and Millerand. The last takes over the war portfolio, which he has held before and with conspicuous ability. He replaces Messimy, whose removal must be taken as a judgment of inefficiency and in line with the reported disgrace of a commanding general in the field for unsoldierly behavior in face of the enemy. Three members of the Cabinet have been themselves at the head of the Government. Out of the circle of new French Ministers will a second Gambetta arise if the need for one should confront France? The men who dominate great crises have a way of appearing out of comparative obscurity. Yet in France to-day men's minds must turn to the hope that the man will appear who will atone for the nation's numerical inferiority to her enemy. It is a hope which we see reflected in the new regulations issued at the Paris War Office, suspending promotion by seniority. Somewhere in the lower ranks of the army command may be hidden a youth with the spark of genius. The country is now seeing to it that his way shall not be blocked.

News from Mexico City continues to be of a cheering nature. The reopening of the National Bank of Mexico, and of other important banks, is both a fresh sign of returning tranquillity and security and a powerful direct influence in the toning up both of business and of public sentiment. In these days of gloom and apprehension, with the skies black over all Europe, and hopes of anything like a speedy termination of the great war completely abandoned, it is peculiarly grateful to dwell on the bettered conditions in the troubled land upon our own borders. Were we not so preoccupied with the giant struggle across the Atlantic, our thoughts would be centred in these days upon the wonderfully propitious outcome of President Wilson's firm and patient policy towards Mexico, the success of which was so long scouted as an impossibility by so large a part of the American public and regarded as highly doubtful by many of Mr. Wilson's most hearty supporters and admirers. It is quite in keeping with the quiet immovability of the President in his pursuance of the "watchful waiting" policy, that not a word has been heard from him in the way of comment on its triumphant vindication. Mr. Wilson appears to have a fixed habit of letting things of this kind speak for themselves.

The Federal investigation has not thus far brought out anything sensational in the matter of the high prices of provisions. It is very probable that the institution of investigations of this kind has had a salutary effect in preventing various schemes of extortion; but, however this may be, it does not seem likely that they will result in the unearthing of any large or formidable conspiracies actually operative in the raising of food prices. The existence of great corporations or combinations practically controlling the chief sources of supply doubtless does add something to the burdens of the consumer, and it will be of great public interest to learn the nature and extent of such evils, as they may be exhibited in the ultimate findings of Federal and local investigators. But the impression gained from such fragmentary evidences as appear in the press in the course of the hearings is that the enhancement of prices is in the main such as would naturally come from the conditions of supply and demand if no such combinations or corporations existed. In this connection it is especially interesting to note in the present extraordinary situation—as it was in the less abnormal, but still unusual, situation that existed before the war began—that men in a position to know state without hesitation that, high as are the prices of articles which have been put on the free list by the present tariff, these prices would have been still higher had the tariff tax not been removed. Thus Mr. Benjamin, representing the San Salina Company, importers of Argentine beef, nearly all of whose imports go to independent dealers, "said that it was true that the importations from Argentina have not reduced the prices of meat, but he said they had kept the prices down." To keep the price down, as compared with what it would be if the imports were kept out, is all that can be expected of the breaking down of tariff bars, and there is no reason to doubt that this result has been effected.

It is little more than a month ago that the trouble in Santo Domingo became so serious that a considerable body of marines was dispatched to Guantánamo. Now it is reassuring to learn that, thanks in part to peace commissioners sent by President Wilson, active interference is unnecessary. Dispatches state that *pourparlers* are in progress between President Bordas and his Southern supporters and the northern adherents of Gen. Velasquez, and that both factions realize the great havoc entailed by the war. One reason for its subsidence is the pressure of economic need, the crops having been laid waste. Another is the European conflict, the reiterated protests of Germany, France, and England having heretofore maintained hopes on each side for American intervention. As in Mexico, a provisional Presidency is expected to pave the way to a general election, and the fact that there are representative Dominicans in each party assures a responsible abiding of the issue. If the President's work succeeds, it will afford an interesting comparison with the Rooseveltian stroke which a decade ago made us collector of Dominican customs. It is to be hoped that Santo Domingo may become a standing illustration of the wisdom of the policy of letting each republic settle its own affairs, or at least merely helping it to help itself.

The President's veto of a bill to reverse the action of an army examining board, while not of tremendous importance in itself, is significant as showing the attitude of the White House towards Congressional interference in matters of discipline. The case was that of a former captain in the medical corps who had been honorably discharged, but desired to be reinstated and to be allowed to take an examination for promotion to the rank of major. The traditional course in such cases, as in those in which students have been dismissed from West Point, is to appeal from the military authorities who have jurisdiction over such matters to the politicians. Army examining boards and superintendents of military academies are apt to be influenced by a sense of the value of impartial enforcement of rules and regulations, from which many members of Congress are free. But the President, following the example of some of his predecessors, stands with the disciplinarians. Here again one sees the hand of the schoolmaster. Incidentally, the way in which he has disciplined Congress is indicated by the reference in the newspapers to this veto as his first.

While those who have thought last winter's movement in Congress for national prohibition by Constitutional amendment a spasmodic one, locally engineered, may have heen in part right, the events of the past week should warn them against over-confidence. Both the Republican and Democratic State Conventions in Kansas endorsed it, and instructed their Congressional candidates to pledge themselves in support of it, while in Missouri the same step was taken by the Progressives, and the Democratic Convention was kept non-committal only by the vigorous efforts of Senator Stone. Even in Ohio, it is now perfectly evident, the topic is sure to have serious discussion. Party exigencies may account for some of the State endorsements given or looked upon as probable, and the general confusion of the merits of national, State, and local prohibition may disappear with a closer facing of the question. But, while the matter may not yet be politically alarming, or seem likely to be, it is one that should concern those interested in a sound public opinion on the subject.

The latest roll-call of the House showed how great was the justification of revoking all leaves of absence, and cutting off the salaries of those who fail to return; and every one interested in the dispatch of national business must hope that the measure will be effective. Twenty-seven of the 43 New York members were absent; 8 of Massachusetts, that State having been conspicuous for its absentees; and the entire delegation of Maine. In the case of Pacific Coast members irritation at their desertion has heen expressed at home, and one Oregon Congressman — Representative Lafferty — faces a strong opposition on that single account. If such a sentiment could be widely cultivated, it would be the most effective means of combating the evil. In the present close union hetween party systems and representative government, something may he said even for the abstract right of Congressmen to return to the primary firing line. The Republicans are inclined to blame Southern members for the resolution, and their sudden zeal may be impugned by the fact that their primaries are now over. But the difficulty in procuring a quorum was growing intolerable; no one doubted that many absentees had not a shred of excuse; and the time had come to exert a power which had grown lax only because the honor of members was trusted.

In a time of such world-wide tragedy, we should all he grateful to any one who gives us cause for a hearty laugh. Hence the thanks of the public should go to the Republican minority of the House Committee on Insular Affairs, who, without batting an eyelid, solemnly assure us that it is necessary to sidetrack the whole question of Philippine independence because of the war in Europe! The reason for this is plain to see: if we should now grant to the Filipinos the mild advances towards autonomy provided for in the bill—advances by no means satisfactory to the Filipinos or their delegate, Mr. Quezon—the Japanese would at once he encouraged to seize the islands, now that they are hesieging Kiao-chau. If such utter nonsense could be taken seriously, it would but be proof of how unsettled men's minds have become by reason of the unprecedented state of affairs abroad. As a matter of fact, it only shows how hard-pressed the Republicans are for some sort of argument with which to combat this perfectly reasonable proposal to grant a wider measure of self-government to the Philippines, in accordance with Republican pledges that "some day" the islands shall be set free entirely. If the war had not come, this humorous Republican minority would have found some other reason. If not a Japanese bogey, a German one; if not a German one, some other solemn nonsense. People who like to govern others without their consent can always produce reason for their tyranny.

The "unofficial" Democratic State Convention at Saratoga merely said ditto to the Republicans, in the matter of procedure. That is to say, it adopted a platform, listened to speeches, nominated delegates-at-large for the Constitutional Convention, but expressed not even a preference as to candidates for Governor and United States Senator. Judge Herrick had vowed that he should demand some expression of opinion, at least on the Governorship, from the gathering, but found the sentimennt against such a course so overwhelming that he desisted. All hands, even the bosses and sub-bosses present, were for sacredly respecting the right of the voters to make their own nominations in the direct primary at the end of this month. The Democratic leaders talked as gravely as the Colonel himself now does about confiding in the wisdom of the people. But they, as well as he, we fancy, will be doing something to aid the people to come to a wise decision—meaning a decision agreeable to them—before September 28 arrives.

Publication in Philadelphia of the catalogue of the library of Lieut.-Col. John Nicholson, recorder-in-chief of the Loyal Legion of the United States, has roused civic pride in a unique collection of 15,000 volumes. "There is a feeling," according to the *Dial*, "that it should not, like the famous Lambert collection, be suffered to pass eventually under the auctioneer's hammer, but should be acquired by the city and preserved in a suitable manner." Such preservation must be hoped for by every one interested in Civil War literature. Nearly every important work is extended by the insertion of autograph letters, rare plates, maps, and illustrative material. Notes and communications by Grant, Sherman, Sheridan, Meade, Thomas, McClellan, Pope, and McDowell, and by the Confederate commanders, are endless; while there are such original MSS. as of one of the Comte de Paris's volumes and Buell's notes on Shiloh. Various documents enlarge Sheridan's memoirs, in a presentation copy, to four volumes, and Sherman's to eight. The library is justly called priceless to students of the war, and it should be an event to more than the general public of Philadelphia to find that it exists. A collection thus made by a private individual and a military order is a public service.

Mr. R. Norris Williams's victory over Maurice McLoughlin in straight sets on Tuesday was one of the greatest surprises in a year full of athletic sensations. For two years Mr. McLoughlin's supremacy has been easily maintained, and with him that of the California school of tennis players. Each year the Western invasion of the East has brought forth one or more stars until we have almost come to believe that anybody from the Pacific Coast was a new conqueror of the courts. But Mr. Williams has shown consistently fine form throughout the season, even though defeated by Brookes and Wilding. His headwork on Tuesday was unsurpassed; even his critics admit that he is the best stroke player in America, now that Mr. Larned's career is practically ended. He readily found McLoughlin's weak spot—his low backhand—and passed him there with his winning stroke, as with many others. McLoughlin's wonderful serve retained its power to the end, but in this case did not avail him sufficiently to overcome the deadly placing of his young opponent. Indeed, Mr. Williams is one of the youngest men ever to hold the championship; he is still an undergraduate at Harvard, as was Robert D. Wrenn when he earned the title.

THE DESTRUCTION OF LOUVAIN.

Last Friday, there was received at the German Embassy at Washington a wireless dispatch from Berlin containing the following statement:

> Civilians of the Belgian town of Louvain made a perfidious attack on German troops while fighting. Louvain was punished by the destruction of the city.

The news of this act of awful devastation has aroused throughout the world a feeling of indignation and abhorrence such as has been caused by no other event of the war. Whether the facts fully justify the meaning that was attached to the statement is at this moment doubtful; several reports, from impartial or even hostile sources, indicate the possibility that one, or perhaps both, of the two most precious architectural monuments of the beautiful mediæval city—the Hôtel de Ville and the Cathedral—were spared by the German conquerors. If this shall prove to be true, it will mitigate in no small measure the wrathful judgment which the whole civilized world has been passing on the act, though the deed will still remain a deep stain on the German name.

On the day after the news of Louvain's destruction came, the New York *Evening Post* spoke of it as "on its face an appalling act of vandalism and ferocious cruelty," and expressed the earnest hope that the German Government might find it possible "to throw off, either by explanation of the deed or by punishment for those who committed it, the fearful burden of guilt which otherwise will attach to that Government and to the German nation." It is now nearly a week since the event, and nothing of the kind has been forthcoming. So far from disavowing the act, or punishing its perpetrators, all that is said by representatives of, or spokesmen for, the German Government, is in justification of the deed as a necessity of war. Not a word has been heard that modifies the original statement on the subject in the Berlin dispatch to the German Embassy. The world is therefore compelled to believe that the beautiful little mediæval town, the site of some of the most wonderful monuments of architecture and art that have been preserved through the centuries, and the seat of one of the most venerable of the historic universities of Europe, was deliberately given over to destruction as a punishment for the acts of individuals who had violated the laws of war. How terrible and instant was the punishment of those individuals themselves, we say nothing about; however far the Germans may have gone in that direction, they were but carrying out—with perhaps more, perhaps less, ruthlessness than is common—the dire prescriptions imposed by the necessities of war. But the burning of the city, the destruction of the homes, and the treasures, private and public, of all the people as a punishment for the acts of some of them—this is not an act of lawful war, unless lawful war includes terrorism, pure and simple—terrorism unrestrained by any consideration—as one of its legitimate resources.

The burning of Louvain, as a punitive measure expressly ordered by the military authorities, stands out in an entirely different category from the sporadic acts of cruelty and savagery which occur in all wars and are committed by the soldiers of all nations. In this matter of Louvain, one excuse put forward on behalf of the German commander is that Belgians had been guilty of such inhuman atrocities that nothing less than the wiping out of such a city would suffice to teach them the lesson they needed. But all this melancholy business of pitting tale against tale is utterly futile as well as mischievous. Neither Belgians nor Germans are fiends that love to kill women and children; and the unquestioned cruelties of war are quite enough to engage our minds without raking up here and there some abnormal horror which if true is not typical, which it is ten to one is not true, and which at best can only serve to inflame murderous thoughts of revenge. If we dwell as we do on the crime of Louvain, it is because its significance lies in the revelation not of any horrible savagery of nature, but of the character of that militarism which dominates the councils of the Kaiser and of the German imperialist bureaucracy.

To say that in those circles imperialist militarism has become a religion is to put the case too mildly; no religion of the Western world in our time has laid upon its followers a hold like that. Of the German militarist cult, the very essence is the absolute supremacy of its claims over all other human considerations whatsoever. It is this which accounts for the unhesitating and unqualified support given by the Kaiser's Government to the Austrian ultimatum to Servia; that this could mean nothing less than the monstrous war into which the world has been plunged was as clear as noonday, but the appalling responsibility did not stay the Kaiser's hand, nor swerve him from his position by a hair's breadth. And the rest is all of a piece. He who wills the end wills the means, is an old maxim; but rarely has it been applied with the machine-like consistency exemplified by the German military autocracy. Louvain is only Zabern writ large; the finger-print of the militarist, with his ruthless motto of Thorough, is on the one as plainly as on the other. It is the profound realization of this fact which, above all other things, accounts for the almost utter absence of sympathy with Germany in this conflict; and it can but be with deep sorrow that the humane and liberal elements in the German nation view the aggravation of this state of things by such an act as that at Louvain. We can only pray for a hastening of the day when all that is best in the German people will reassert itself as of old, and when the long reign of an arrogant and ruthless military caste will be looked back to by the countrymen of Schiller and Goethe as a nightmare that never can return.

WAR AND RELIGION.

Several correspondents have written to ask that the *Nation* protest against what they deem the offensively "pious" tone of the German Emperor in announcing victories. But this is only the traditional German way; and it is not for us to say that it is insincere. The Germans, both in war and peace, make much more free with "Gott" than our conventions allow us to do with "God." In 1870 King William, in his telegrams to Queen Augusta, was eminently devout. Some of the phrases which he used grated on American ears and led to various parodies in the press, one of the best known of them ending:

> Ten thousand Frenchmen sent below,
> Praise God from whom all blessings flow!

It is idle to quarrel with national customs or with Hohenzollern habits, even if their effect does sometimes seem almost sacrilegious to the simple-minded who, with Hosea Biglow, "kind o' thought Christ went agin war an' pillage." How easy it is to fall into a repellent excess of piety about war is shown by Mr. George Sylvester Viereck. He has a poem in *The Fatherland* in which he does not hesitate to speak of "the shining mail of him [the Kaiser] who leads God's hosts," and to assure his readers:

> The Red Czar's blight shall never fall
> Upon the earth, nor freedom pale,
> While the white blade of Parzival
> Still guards the Teuton's Holy Grail.

On this we make no comment.

From of old satirists have found a theme, and poets and prophets a text, in the powerlessness of religion to prevent the barbarism of war. It is a melancholy subject.

Nominally Christian nations must often pray and take the name of God upon their lips at the time when they are trampling upon Christian principles in waging war. Either side is ready with its *Te Deum* in the moment of triumph, which means slaughter and misery. Both sides, on their own admission, cannot have the Lord with them, yet both insist that they have. It is a spectacle of mortal inconsistency and weakness at which, one might well believe in the bold Hebrew imagery, "He that sitteth in the heavens shall laugh." On this whole mystery, or, as some would say, mockery of the co-existence of war and religion, of men created in the image of God killing one another in the name of God, no one has written with a greater wrestling of spirit, yet withal in the most long-suffering charity, than Abraham Lincoln. It is well to cite again to-day the often-cited words of his immortal Second Inaugural:

> Both read the same Bible, and pray to the same God; and each invokes His aid against the other. It may seem strange that any men should dare to ask a just God's assistance in wringing their bread from the sweat of other men's faces; but let us judge not, that we be not judged. The prayers of both could not be answered.

We cannot all be as great-souled as Lincoln, but we can at least strive after something of his philosophic and considerate attitude on this question of war and religion. One point can be made with confidence. Churches and Christians have no direct power to prevent a war. Some grieving people appear to think that the Pope or the bishops or the authorities of the great Christian denominations should have somehow laid an interdict upon the monarchs and diplomats and Parliaments, and forbidden them to go to war. But, saying nothing of practical difficulties, this is to overlook one teaching of the Church, which is obedience to the powers that be. The duty of allegiance, and of submission to the constituted civil authorities, may be terribly abused by unscrupulous rulers, but it is a duty, and a religious duty, nevertheless. Religion is, after all, within the state. If the state were destroyed, the first thing that religion would have to do, when it emerged from the caves where it had taken refuge, would be to reconstitute it, and make some sort of civil society possible again, so that the practices of religion could be restored. All this must be borne in mind, and should operate as a stay of condemnation upon soldiers who go about the devil's work, as we cannot help thinking it, calling upon God for help. They may be conscious only of doing their civic and patriotic duty. The real place for reprobation to strike is higher than the armies—upon the rulers who needlessly and therefore wickedly launch the armies upon their work of destruction and inhumanity.

Thus it is that it seems to us hasty to pronounce this awful and desolating war the collapse of Christianity. Clergymen have, in their first feeling of profound dejection and discouragement, so spoken of it. With their general position that such a war appears to make Christian civilization look farcical, few can fail to sympathize; but we must discriminate. Christianity has not utterly broken down. Religion has not ceased to be a powerful motive in the hearts of men. But a horrible situation has brought millions of men and women into a state of confusion and perplexity, as regards their relation to their country and their God; and out of this has arisen the seeming willingness to drag Providence into the carnage, which has shocked many a tender conscience. It is for religious men to bide God's good time, assured that, in the end, we shall see that the judgments of the Lord are true and righteous altogether.

TRUSTS AND PUBLIC WELFARE.

The impending passage of the Clayton Anti-Trust bill gives a timely interest to the concluding instalment of the discussion of "The Trust Problem," by E. Dana Durand, late Director of the Census, which appears in the August issue of the *Quarterly Journal of Economics*. Whatever the Clayton bill may be in detail, it is in essential purpose a reaffirmation of the Sherman Anti-Trust act. Whether it was wise or unwise thus to supplement the broad provisions of that act, whether expedient or inexpedient to inject this new element into our political and economic situation at the present time, are questions on which there is much room for controversy; but it may be said with a very near approach to entire accuracy that, whether well conceived or not, the idea behind the bill is precisely the same as that behind the act of 1890—namely, the idea that monopoly must be prevented or suppressed, as against the idea that it should be permitted, either with or without Government regulation. There was a long series of years during which this idea appeared to be sadly discredited. Within the past five or six years, however, there has been a most remarkable change in the temper of general opinion on the whole subject, and it is the voice of the critic of monopoly, not of its champion, which is dominant in public discussion.

Mr. Durand's position is perfectly clear-cut. It is adverse not only to unregulated combination, of a monopolistic tendency, as "dangerous to the public welfare," but also to regulation of such combinations in a manner analogous to the regulation of railways by the Interstate Commission. This he regards as bound up with such stupendous difficulties and open to such cardinal objections as suffice for its unqualified rejection. On the other hand, he holds that the prevention and suppression of monopolistic combinations—in other words, the actual policy of our country—is both feasible and desirable. And the assertion that it is desirable he supports chiefly by arguments designed to show that the claims that have been set up for the advantages of combination are untenable. It would, of course, be absurd to deny the advantages of large-scale production, and even in many instances the advantages of combination or consolidation; but the idea that defenders of competition *do* make these denials is a pure figment of the imagination. What they assert is not that large-scale production, or combination or consolidation, is incapable of affecting economies, but that there are two essential points which the apostles of monopoly habitually ignore. In the first place, there is a limit to the extent to which the process of economizing through enlargement and combination can be carried; after a certain point in the process has been reached, the gain ceases. And, secondly, the question of magnitude, pure and simple, is one thing and the question of monopolistic control is another.

Both these aspects of the question Mr. Durand discusses with great force and clearness. "No one would think of denying," he says, "that large-scale operation has advantages over small-scale operation. It does not follow that an industrial combination controlling the major part of a business will, by reason of size alone, be more efficient than a less extensive combination or even than a single plant." The economies claimed for the Trusts could, in Mr. Durand's judgment, in many if not in most industries, be effected in approximately equal measure without permitting combinations "sufficiently comprehensive to possess any approach to monopoly power." As regards unnecessary duplication of plant, under a régime of competition, Mr. Durand shows that this plea has been worked for far more than it is worth. The case of parallel competing railways—and likewise, of course, of other

"natural monopolies"—is wholly different in this regard from anything that ordinarily obtains in manufactures or trade:

> In the case of the ordinary manufacturing industries it seldom happens that a single plant, however large, can supply the entire demand of the territory to which it has natural access. The construction of a second plant usually does not mean needless duplication of investment. The aggregate capacity of all plants is not likely to exceed materially the demand in times of prosperity. The desire of each competitor to be ready to get as large a share of the trade as possible may lead to some excess in plant capacity, but not to a great excess. Moreover, in manufacturing industries, even if there be some excess of plant capacity, operating expenses are not likely to be materially augmented. The plant working at less than full capacity can lessen its force more or less proportionately. Operating expenses vary fairly closely with output.

And, all along the line, Mr. Durand feels justified in the conclusion that the various alleged advantages of monopolistic combination—that is, advantages from the standpoint of the community, not of the promoters—fall too short of such importance to afford any reason for permitting it.

Moreover, a monopolistic régime presents, as an offset to any advantages in the way of economy of production which it may actually possess, the disadvantage of the absence of that constant stimulus to efficiency and progress which the spur of competition supplies. Under this head, Mr. Durand makes one remark which seems specially worth quoting, as to the actual efficiency and progress which have been exhibited by the great Trusts. "The Trusts," he says, "have thus far been on the defensive, both against potential competition and against public criticism. . . . Should the policy of permitting monopolistic combinations be adopted, there would be danger that the absence of competitive pressure would more than counterbalance any possible advantages from the elimination of competition." And it is not out of place to point out that a remark analogous to this is eminently applicable to quite another phase of the question of our anti-Trust legislation. In the past three or four years, the Sherman law has operated with a vigor and effectiveness theretofore unknown; but it is a great mistake to suppose, as is so generally done, that its existence on the statute books during the first twenty years after its passage was of little or no effect. On the contrary, there is every reason to believe that, had it not been for the law, the march of monopoly would have been so much more rapid and so much more comprehensive that the restoration of competitive conditions would have required nothing less than an economic revolution.

SHIPPING GAINS VIA PANAMA.

Few Americans have been so war-engrossed as not to notice that last week freight first began to pass in large quantities through the Panama Canal. Calculation of the commercial advantages of the Canal, especially to shipping from New York, is now a subject of practical curiosity. Avoiding complexities and looking at only the salient facts Mr. Lincoln Hutchinson has recently made such a study in the *American Economic Review*, based on the "tramp-ship" trade alone. The cost of carrying cargoes from New York and Liverpool to twenty representative Pacific ports is computed according to fuel and other operating expenses, distance, and toll charges. The author thus arrives at a very broad, but fairly trustworthy, estimate of the shift caused by the Canal in international commercial advantages.

The advantages which Mr. Hutchinson shows that New York shipping should reap over Liverpool's are surprising in degree and in the extent to which they apply to the Pacific littoral. On the east they range from 42 per cent. in the case of Seattle to 81 per cent. in the case of Guayaquil. On the west the city's former disadvantage of 18 per cent. to Yokohama will be converted into an advantage of 11.5 per cent.; to Melbourne, a disadvantage of 6.5 per cent. to an advantage of 6 per cent.; to Sydney, the present slight disadvantage into an advantage of 13 per cent.; and to Wellington, 27 per cent. Freights to Hongkong, Manila, Singapore, and Batavia will still be cheaper from Liverpool, for it will be useless for New York ships to give up the Suez route to these ports. A curious fact is that it remains a toss-up whether our Philippine exports should choose the eastern or western route. To translate these percentile advantages into dollars and cents per ton is illuminating as to the direct advantages of the Canal to American manufactures. Thus it formerly cost us $5.82 to send a ton of freight to Callao—only 60 cents less than it cost Liverpool. Henceforth it should cost just $2.40, or $1.63 less than Liverpool. To Melbourne we have been paying freights of $7.27, or 44 cents more than carriage has cost Liverpool; hereafter it will be $6.45, or 38 cents less. The net result of the opening of the Canal is that, whereas we were once only slightly better situated than Liverpool for trade with the West Coast of South America, now our advantage is decisive; that whereas we have been somewhat handicapped in commerce with Japan, the Philippines, and Australasia, we should henceforth be on better than even terms; while with China and Malaysia the chances of our trade are greatly brightened.

The tables on which these conclusions are based contain valuable implications as to the extent to which world-trade will forsake the Suez, Magellan, and Cape routes for the Panama. The Magellan almost passes from commercial history; by Europe and North America, if not by Rio Janeiro and Buenos Ayres, it may be forgotten. To China, the Philippines, Malaysia, and Java, Liverpool will continue to use the Suez, and to Australia the Cape route; but to New Zealand she will find it cheaper to employ the Panama Canal. The same may be said of German lines. New York vessels will find it advantageous to go to Hongkong (though not to Shanghai, the greatest of Chinese ports), to Singapore, and to Batavia via Suez, but to no others. All West Coast trade will, of course, flow through the Panama Canal. It is true that certain of the factors which Mr. Hutchinson leaves out of account, such as way-freight, passengers, and the frequency of coaling-places, with the price of coal, may unite in several instances to counterbalance the apparent advantages of the Panama route, especially as against the Suez passage. But there is no reason to fear anything but the crowding of the Panama locks, especially if shippers and manufacturers of the eastern United States seize their unusual opportunity. As a competitor for the trade of all Pacific Ocean countries except the East Indies, we find ourselves placed at a great advantage at the very moment when German commerce is utterly eliminated, and England alone remains a serious rival.

IDEALISTS HARD BESET.

A few short weeks ago, an article such as that of Dr. Henry S. Pritchett, president of the Carnegie Foundation, on "The Critics of the College," must naturally have seemed to the editor of the *Atlantic* most timely for his early autumn number, appearing when the thoughts of so many would be turned to the subject by the approaching renewal of college activities; to-day, such questions as that of the functions of the college president, of the proper place of athletics as against scholarship, of the growth or decline of snobbery and class distinctions, and the rest of the familiar series, important enough in themselves, can hold the interest of a mere handful of persons, alongside

the awful unfolding of the great European struggle.

But Dr. Pritchett's article closes with a reflection which is quite detached from all the special questions, and which is not altogether without relation to issues that the world-wracking contest may well suggest to a thoughtful mind. While admitting the many weaknesses and defects of our colleges, Dr. Pritchett says that there is one thing about the college, take it all in all, which always brings to him comfort and confidence:

> The fact still remains that it is the best agency society has yet devised for the training of leaders; and I apprehend that this remains true largely for the reason that, notwithstanding all these weaknesses, the youth during his college life is under the sway of ideals which make him for all the rest of his life—in part, at least—an idealist. These ideals are not always the highest. In too many cases the boy gets them from the training coach rather than from the teacher, from an obscure instructor rather than from an experienced professor, from the college treasurer rather than from the college president; but nevertheless they express devotion, service, unselfishness, patriotism. It is because the college is still a place in which ideals grow that the college remains the most fruitful training place for the world's leaders.

"Still a place in which ideals grow"—that is the feeling which thousands have cherished about the American or the English college; and have justified it in their minds with or without reference to any connection between the influences bred in the college atmosphere and the training of leaders for the nation. In the mind of a Kipling, the dominant thought about Eton or Rugby, about Cambridge or Oxford, was as of the nursery of an imperial breed—rulers and educators of dark-skinned millions in India and Africa. To the chivalric soul of a Colonel Newcome, it was making brave men gracious and generous and gentle through the reverent study of arts and letters that constituted the crown of the English colleges' work. Either way, the peculiar gift they gave was to be found, not so much in any specific achievement either of knowledge or of power as in an intangible something which made a man some way better than—at least some way different from—what he would have been without it.

To all such notions of the worth of a liberal education, the cult of efficiency—specific, concrete, hard-and-fast efficiency—has been profoundly hostile. The forces which that cult has arrayed against the upholders of the "gentleman and scholar" idea have been steadily gathering in volume and pressure, lo, these many years; and now comes to these forces, as it would seem, a reinforcement so tremendous as to throw all former elements into the shade. Industrial efficiency, scientific efficiency, financial efficiency—what is all that to the efficiency upon which a nation must rely for its very survival? What but the grim determination to carry efficiency to its uttermost limit accounts for the German preparedness—for the ability of the Kaiser to hurl his hosts without hesitation against a world in arms?

But the war will not last forever; and to forecast what the temper of the world will be when it is over would be the rashest of undertakings. The most one may do is to put the question, not to answer it: Will the mighty conflict end in making Europe, or the world, more than ever an armed camp, or will it end in a realization of the insane and wicked folly of tolerating such a state of things? But, whichever shall prove to be the truth, it will remain essential to cleave to that conception of a liberal education which finds its most precious function in the stimulation of ideal interests and the cherishing of ideal aims. For, if the world shall recoil from the horror and destruction of the awful conflict and turn itself towards the better aspirations of peace, surely there will be room in the new order for the pursuit of the graces of culture, and not only of its utilitarian fruits; and if, on the other hand—which Heaven forbid—the energies of the nations shall be bent more than ever upon the fostering of those elements of strength that can best serve the purposes of mutual slaughter and devastation, then surely there will be bitter need of whatever refuge can be supplied for at least a remnant of men and women of intellect and training, whose interests and tastes and aspirations and endeavors lie elsewhere. And, unless we are to give up altogether our faith in the power of ideas to prevail ultimately over brute force, out of that very remnant of unpractical idealists will come, in the end, the rescue of mankind.

IS AMERICAN HUMOR DECLINING?

Prof. Stephen Leacock's explanation in the *Nineteenth Century* of the decline of American humor is that of a funmaker facing a situation that is no joke. Our humor is one of the few products on which the label "American" is supposed to be as good as "sterling." Much of our literature may be thin, but the humorous element has been thought, with the short story, to stand out of the ruck. For its recent weakening, if it has occurred, Mr. Leacock accounts by the disappearance of supporting factors in national life; it is no accident, according to him, but inevitable; and until American life undergoes a second change there can be no recovery. Our humor, he reasons, has depended upon primitive incongruities, which the rough detachment of the pioneer period enabled us to see objectively—the incongruity of a Westerner against a cultured civilization in "Innocents Abroad," of the society girl and the desperado in Bret Harte. There were also the related qualities of wilful simplicity and of exaggeration. This "original impulse which created American humor has largely spent its force," and we can look forward to little "except the factory-made fun of the Sunday journalist."

The best reason for clinging to hope, despite this prophecy, is in the doubtfulness of Mr. Leacock's classification. For all its suggestiveness, it has an appearance of artificiality. Incongruity and exaggeration may explain Nasby, Nye, Artemus Ward, and much of Mark Twain; but the humor of Irving and Lowell, Bunner, Holmes, and Eugene Field, which Mr. Leacock glosses over, is founded on less analyzable elements. Among secondary writers it reaches a broader basis still—a basis extending in theme from William Allen White's stories of rural Kansas to a Chicago versifier's sonnets of an office-boy. Any attempt to condemn our humorous future by a classification of its subject-matter not only overlooks the obvious truth that humor is mainly in the seeing eye, but involves itself in contradictions.

An illustration is the conflict of Mr. Leacock's argument, as based on the disappearance of social chaos and contrast, with one which certain dramatic critics have founded on the very opposite assumption. We can have no comedy of wit or depth, according to Clayton Hamilton's introduction to a recent English play, until social lines have crystallized. The humor of a Sheridan or Goldsmith is impossible here because "high comedy requires for its inspiration a social tradition that has been handed down for centuries. . . . To all intents and purposes, the United States is still a country without an upper class, and the chaos of our social system precludes the possibility of social satire in our native drama." This clash might be explained on the ground that one critic has in mind general literary humor, the other high dramatic comedy; but the writer's more dogmatic statements are so contradictory as to point to the underlying

fallacy. In a country that is such a "vast of various things" as America there can be but one conclusive reason why the fruits of humorous observation are not committed to literature.

Owen Wister's "Lady Baltimore," dramatically presented, would come near shaking the theory that we have no codes of manners fixed enough for satire; as would unconventional treatment of the Southern aristocracy of blood, the New England aristocracy of culture, and certain would-be aristocracies of wealth, or the codes of our professional classes. Professor Leacock would be rash to assert that humorists of the tenements like O'Higgins, of the school like Josephine Dodge Daskam, of the negro child like Miss Pratt, or the ranchman like Lewis, failed because of subject-matter. "Why cannot we fly?" asked Mr. Chadband. "No wings!" observed the knowing Mr. Snagsby. We are more certain of the fallacy because of its antiquity. The allied complaint that character-comedy is at an end because types of men are worn smooth, the surface of life become a plane, is as old as Hazlitt. Literature and life, according to him, were dissipating character "by giving men the same artificial education and the same common stock of ideas; so that we see all objects from the same point of view and through the same reflected medium; . . . all men become alike." Part of this particular error was the idea that humor lies in manners rather than the individual; for, as Augustine Birrell once remarked, it is "not in his hat nor in his hose, even though the latter be cross-gartered, but in the deep heart of him, his high-flying vanities, his low-lying oddities." The rest it required only a genius like Dickens, with a better eye for humors than Johnson's, to disprove.

The low state of American humor may well have no more radical causes than the low state of the novel, or of poetry. Mr. Leacock justly points out as contributory "the prevailing neglect of letters, the prevailing attempt to reduce education to a mechanical, provable process." We might add to this some of the tendencies of the American magazines, and in especial their mad unanimity in exploiting the same field, once it proves popular under a single hand. The national temper, however, remains not unfavorable to humor. So far as Americans have always had the balance, the sanity, the detachment, to see the amusing side of life, even in adverse times, their character has not altered.

Chronicle of the War

Since we wrote last week, the gradual retirement of the Allies in face of the determined German advance has continued. It is impossible to give any but approximate dates for the various stages of the fighting, since the majority of the news received is at least two days old. Mézières, we now know, was occupied by the Germans on August 24, after a severe battle along the line Mézières-Verdun, and on August 27 news was received of the capture of Longwy by the army under the Crown Prince. All along the line the Allies have retired, but in a singularly clear and frank summary of the situation issued by the French War Office on Monday we read of an offensive movement undertaken by the Allies on their right, of alternate successes and checks in the centre, and of another retirement on the left.

The present situation, then, may be summed up thus: The German forces are gradually approaching nearer to Paris, but their advance is stubbornly contested, and the Allies occupy strong positions on the line Amiens-La Fère-Verdun-Nancy-Epinal. Paris has been prepared for a siege, and if the force of the German attack has not already spent itself (and there seems no reason to suppose that it has) the investment of the capital within the next few weeks appears not improbable. Nevertheless, the German plans have so far failed to accomplish the one thing which could give decisive victory, that is, an enveloping movement which would involve the surrender of an army. So long as the Allies can retreat fighting, keeping their communications intact and the morale of their armies good, their situation, though serious, does not call for alarm, while, on the other hand, the further the German forces advance into France the longer will be the line of communications that they must guard. In the meanwhile, the Russian advance in East Prussia has assumed serious proportions, and on Saturday we learned of the withdrawal of at least one army corps from the western frontier for the defence of Prussia. It seems probable, too, that the end has been reached of the apparently exhaustless supply of men upon whom Germany can draw, since we read of boys of sixteen being called to the colors. England, on the other hand, can count confidently on raising another half-million men. All reservists in France were called to the colors on Monday. Russia, according to dispatches published on Monday, has been able to dismiss for the time being half a million reserves who had been mobilized.

With the more definite reports of previous battles on the western frontier of France which have come to hand during the past week, we are in a position to reconstruct the broad outlines of the fighting that has taken place since the great German drive through Belgium began. It becomes increasingly apparent that the French have been from the first outnumbered and, what is worse, outgeneralled. We know now that the forces against which the Belgians made their gallant resistance were only the advance guard of the great army which was massing behind this screen. We know also that the French venture into Alsace-Lorraine was an exceedingly costly mistake. To assert roundly that it was dictated by sentimental reasons would perhaps be doing an injustice to the intelligence of the French General Staff, but it is probable that sentimental reasons had not a little to do with it. Had it succeeded, it would have been hailed as a masterly stroke of strategy; but it failed, and it is perhaps not unfair to connect with its failure the recent change of Ministry and the appointment of M. Millerand to the War Office. Whether there was a good initial chance of accomplishing the flanking movement which was intended, is a question that cannot yet be decided; but whatever chances there were seem to have been frustrated by the misconduct of one army corps. At all events, when the main German attack developed on the west, on the line Lille-Namur-Neufchâteau, the French defence there was found to be weak, while fully half of their forces were engaged in the excursion into Alsace-Lorraine.

In the light of this knowledge, the German plan of campaign is obvious. The main weight of the German attack has been directed against the left wing of the Allies, where the British forces have offered a stubborn resistance, retreating gradually from the Mons-Charleroi line to Valenciennes-Maubeuge, to Cambrai-Le Cateau, and to Amiens-St. Quentin. German efforts, therefore, have persistently been directed towards outflanking the Allies on their left and getting between them and Paris. Could this object have been carried out, even success in the Alsace-Lorraine adventure would have been of small value. The anxiety of the German General Staff for the success of this turning movement is evidenced by the pertinacity with which they have put forth reports that it had been successful. As we write, while the Allies' left is hard pressed, the way to Havre is still open, and appears in no immediate danger of being cut off.

It may be said in effect that the news of the eastern frontier from different sources has been absolutely contradictory. At the beginning of the war there were complaints of the silence of Berlin. Recently, by means of the wireless station at Sayville, L. I., Berlin has been as communicative as London, Paris, or St. Petersburg, and certainly not more trustworthy. We heard on Saturday of a great German victory south of Allenstein, in East Prussia, against five Russian army corps, and this news was repeated with amplifications on Tuesday. Without further confirmation, it is difficult to accept the report at its face value, since in the whole of East Prussia there were at the time probably not more than five German army corps, certainly not more than seven, and of these, three, according to previous Russian accounts, which in this case correspond with the probabilities f the situation, were around Königsberg, some eighty miles to the north, and another had been reported in retreat on Osterode, some forty-five miles to the southwest. Similarly conflicting reports have been received of the fighting in Galicia and in Poland.

The main point of the Russian strategy is, of course, simple. It is a dash to Berlin in the quickest possible time, in order to deflect German troops from the western frontier and relieve the pressure on the Allies. For the sake of convenience, it is best to consider the Russian army threatening Prussia as a whole, but operating in four divisions. The north-

ermmost of these divisions entered Prussia by way of Gumbinnen, the capture of which place we recorded last week, has taken Insterburg, the occupation of which has been confirmed, and is around Königsberg. There have been reports that this last fortress has been occupied, but these may safely be discredited. The Russian plan will doubtless be to leave Königsberg invested. The capture of Tilsit, to the northeast of Königsberg, has also been confirmed. The second division of this army entered Prussia at Lyck, some fifty miles south of Gumbinnen, and the third at Neidenburg, on the southern boundary of Prussia. This last division is that which has been engaged in the neighborhod of Allenstein, defeated, according to German accounts, victorious and in occupation of Allenstein, according to St. Petersburg dispatches. The second division may either have joined this army or it may have struck north towards Königsberg. Finally, we may assume that a fourth division, in reality the main army, is attempting the short route to Berlin by way of Posen, which is only 160 miles from the capital. This route has the additional advantage of not being intersected by the River Vistula, which, at a few miles beyond Thorn (where also there have been reports of fighting), turns aside into Poland. This army, however, is still presumably detained in Poland by the Austrian army of invasion, which, operating from its base at Krakau, has Lublin for its objective. There has apparently been severe fighting around Lublin, and both sides have reported victories. It may be assumed, therefore, that no decisive battle has yet been fought.

We see, then, that the Austrian invasion of Poland is in the nature of a flanking movement to arrest the progress of the Russian forces invading Prussia. The Austrian army itself, however, would appear to be in danger from another Russian army which has invaded Galicia, is striking at Lemberg, and threatens to cut the Austrian army in Poland from its base at Krakau. There were unconfirmed reports of an Austrian defeat in Galicia on Tuesday, and a dispatch from St. Petersburg to the London *Times* of the same date mentions the seizure of the railway centre forty miles south of Lemberg as involving the rupture of railway communications with the Austrian fortresses on the Dniester and the Bukovina. On the eastern frontier, as on the western, the same principle applies, that, to secure a decisive victory, it is not sufficient to drive an army back, but the army, or a great part of it, must be surrounded and captured. To isolate the Austrian armies in Galicia and Poland, and so open the way through Krakau to Vienna and through Posen to Berlin, is doubtless the aim of the Russian offensive.

The long silence of the British fleet in the North Sea was broken on August 28 by the news of a naval engagement off the Bight of Heligoland. Two German destroyers and two cruisers were sunk, while a third was reported to be in flames and in a sinking condition. The British losses were relatively small and none of the vessels engaged were damaged past repair. Earlier in the week news was received of the sinking off the west coast of Africa of the Kaiser Wilhelm der Grosse by the British cruiser Highflyer. Confirmation has also been received of the destruction by Russian ships of the light German cruiser Magdeburg in the Gulf of Finland.

Foreign Correspondence

"THE MAN FORSWORN"—A VANISHED ARMY—ADMIRAL "JACK" FISHER—THE AUSTRIAN AMBASSADOR.

By SIR HENRY LUCY (TOBY, M.P.).

WESTMINSTER, August 19.

On the night before the roar of cannon signalled the opening of the biggest battle that ever burdened the earth with dead and wounded, I was standing on the lawn of a country house fronting the English Channel. It was a beautiful summer night. The moon looking down on the quiet sea made a broad pathway of light leading to the coast of France. The stars sparkled in a sky almost blue, although it was close on the stroke of midnight. The only sound to break the silence was the ripple of the sea on the shingly beach. Looking out from this scene of idyllic peace across the shining waterway, it was hard to think that within less than a hundred miles two million men were facing each other, the whole business of their day or night being to kill each other, business accelerated by the latest resources of civilization in the way of cannon and rifle, whose stupendous aggregate cost has for years been a tax upon the wage of bread-winners in high or low estate.

At a moderate estimate it is certain that in quiet homes in various lands two million women and children are thinking fondly of some one in this horde of humanity, fearing news that may come on the day after the battle. These men mustered on the fertile lands of Belgium have no quarrel with each other. They have simply been torn from their homes, withdrawn from their peaceful vocations, and ranged in parallel lines with orders to do their best to kill each other. And this carnage on the battlefield with the breaking of hearts in countless homes, not to speak of the paralysis of the commerce of the world and the consequent privations to be endured for an indefinite period, is the deliberate work of a single individual, by chance born to a family which holds the heritage of a throne. Truly, since such a state of things can be, it must be admitted with fresh conviction that "God moves in a mysterious way." Journeying through Kashmir, I heard a striking variant on Cowper's familliar lines. Talking with a native of a tribe that in one of its frequent wars had recently met with dire disaster, he said: "Khud (God) is all-knowing; but His ways are dark."

> Who draws to-day the unrighteous sword?
> Behold him staud, the Man Forsworn,
> The warrior of the faithless word,
> The pledge disowned, the covenant torn,
> Who prates of honour, truth, and trust,
> Ere he profanes them in the dust.
>
> . . . . . .
>
> But he that took our proffered hand,
> Thinking to take our birthright too,
> He, in this hospitable land,
> Bore him as only dastards do.
> Here, where the Earth still nurtures men,
> His hand shall soil not ours again.

Since, fifty years ago next November, at a crisis in your great war, Sherman, after raiding Atlanta, vanished from human ken at the head of 60,000 men marching southward to the sea, there has been no incident in warfare so striking as the disappearance of the Expeditionary Force promised by this country for the assistance of Belgium and France resisting Germany's new march on Paris. Immediately on war being declared, the Force was authorized and public announcement made that it would be under the command of Sir John French. Thereafter, the newspapers, teeming with details and movements connected with the war, absolutely ignored its movements, even its existence. This conspiracy of silence is a remarkable, as far as I know, an unparalleled, proof of the patriotism of the British press. There probably is not a newspaper office in the kingdom wherein the editor did not know where the Expeditionary Force was (where, indeed, it has been encamped for nearly a fortnight), and how it got there. Military policy required that its movements should be hidden by an impenetrable cloud, and Lord Kitchener has been loyally supported by the press of all classes. As soon as the great fight by the banks of the Meuse actually opened, the secret, of which I for one in ten thousand had full knowledge, was disclosed. The episode testifies afresh to the splendid administration of the War Office of to-day, contrasted with the muddle that accompanied the opening of the Boer War.

Since his resignation of the office of First Sea Lord of the Admiralty, Lord Fisher has, during the last four years, had no directly official connection with Whitehall. But he has not abrogated supervision of the navy, whose prëminence in time of emergency is largely due to him. As a member of the Committee of Imperial Defence he has been in constant attendance on its meetings, his strong personality having marked influence upon its conclusions. He is just now in London, where he has been in residence since the shadow of war closed over Europe.

Mr. Winston Churchill is very properly credited with the conception and carrying out of the plan by which declaration of war by Germany found the British fleet in commanding position in the North Sea. While "the Man Forsworn" was still protesting his love of peace and his determination to insure it at any price, it would have been contrary to diplomatic usage for England to prepare for war by mobilizing her fleet. What was done was the simplest, most innocent-looking thing possible. The King expressed a sudden, imperative desire to review the fleet at Spithead. In order to do honor to the occasion it was, of course, necessary that the ships should be placed in full state of readiness for service. In short, the fleet was mobilized, and as soon as his Majesty had inspected its long lines it, by way of diversion, steamed out to the North Sea, accidentally, as it were, taking up a position that enabled it to hem in the German fleet. Doubtless the First Lord of the Admiralty contributed his counsel and authority to the perfecting and carrying out of the plan. I fancy I see in its inception traces of the genius of the wily naval strategist affectionately known as "Jack" Fisher.

The Austrian Minister at this court, who, after brief interval, has followed the German Ambassador in his compulsory exile from London, was the best known and the most popular of foreign diplomats. He made his acquaintance with London and its multiform society in 1889, when he joined the ambassadorial staff as an attaché. Ten years ago he became Minister Plenipotentiary. He enjoyed in special degree the personal favor of King Edward, with whom he was related by distant family ties. A dinner party in London, or a week-end gathering in the country at which his Majesty was a guest, was rarely completed without the presence of Count

Mensdorff. Royal favor was in equally marked degree bestowed when King George succeeded his father on the throne. Separation from the many friends he had made in England must have been accompanied by a pang more poignant, since necessity for leave-taking arose from the fact that his country was at war with them.

NEUTRAL ITALY—THE DISORGANIZATION OF BUSINESS—A POLICY OF WATCHFUL WAITING.

ROME, August 13.

Perhaps by the time this article reaches America its title will no longer be applicable to the state of Italy. With nearly all the rest of Europe ablaze, we, too, may from one moment to another find ourselves involved in the mighty struggle, but for the present we are outside it, anxiously watching the terrible play of world forces as spectators, though anything but disinterested ones.

If we are not participating directly in the war—as yet—it by no means follows that it does not affect us. Independently of the vast political aspects of the situation, its fearful possibilities, and the changes which its outcome will probably bring about in the map of Europe and certainly in international values, the fact that five great nations and several smaller ones are at war has brought about most peculiar economic conditions, even in neutral countries like Italy. The trade of the world in normal times is based primarily on international exchanges, for practically no country to-day is self-supporting, the entire economic system of each state being closely bound up with that of every other. The war has suddenly changed all this, and has temporarily put an end to foreign trade. Every belligerent state has begun by closing its doors and prohibiting the export of all articles of first necessity—foodstuffs, raw materials, and everything which may be of use for military purposes; at the same time, by suspending the train service, except for the transport of troops and war stores, it has stopped imports from abroad and almost all trade within the country. War risks and the requisitioning of many steamers as auxiliary cruisers or transports has reduced seaborne trade to the most trifling proportions. Neutral states have had in self-defence to follow suit to a great extent. Europe is thus brought back several centuries to a state of almost purely national economy, each country trying to live exclusively on its own resources.

Italy has had to prohibit the export of a number of articles, and although our ships can sail without fear of capture, they are far from sufficient for our own maritime trade, and certain necessary raw materials are beginning to be scarce. The supply of coal is sufficient for the time being, and arrangements have been made to import fresh supplies, but prudence is indispensable, and the railway administration has begun by reducing the train service. This necessity has produced less inconvenience than might have been expected, because few people are travelling; no one thinks of going abroad, and no foreigners arrive, save a few from Switzerland and a number of Americans from various countries who are trying to sail for the States. In Italy itself most people prefer to remain near their own homes, and even the ubiquitous drummer is less conspicuous now that almost all business is suspended. We are also to a large extent cut off from the foreign mails, for with the suspension of international trains, letters and newspapers no longer arrive from any of the belligerent states.

Another consequence of the war is the hurried return of tens of thousands of Italian emigrants who were peacefully working in France, Switzerland, and Germany when the outbreak of hostilities and the consequent shutting down of many industries made it necessary for them to leave. Those who were employed in the mines and iron and steel works of French and German Lorraine had to quit so hurriedly that they had not even time to draw their last week's wages. The calling to the colors of a number of reservists will to some extent relieve the pressure caused by this sudden influx of laborers, and both the Government and private employers are doing what they can to provide them with work; but the situation is serious, as the interruption of foreign trade and the consequent scarcity of many raw materials is hampering all industries, and a number of mills have had to shut down or at least reduce their hours of work.

Foodstuffs, fortunately, are abundant. The wheat crop has just been gathered in, and although inferior to that of last year, it has proved equal to the average; the supply is therefore expected to last for about ten months without any need for foreign imports, and next month there will be the Indian corn crop, which is expected to be fairly good. Other articles of diet which Italy usually exports should be more abundant than in normal times, owing to the impossibility of sending them abroad. Nevertheless, some of the wholesale and retail dealers have tried to raise the prices of all commodities, even of those which are wholly produced at home. This has caused much indignation, and might lead to serious results, but the municipalities are waging war against such attempts, and are enforcing the official price lists, which are issued from day to day; this policy seems to be successful, as the rise in prices has been kept within moderate limits. An attempt was made by the dealers in petrol to treble the price of that product by spreading the rumor that the Government had seized practically all the available supply for military purposes. For a day or two the number of motors in the streets diminished considerably, but the story proved wholly without foundation, and the price of petrol dropped again to its former level.

The most alarming incident was the run on the banks in Rome and other cities which occurred during the first days after the outbreak of the war. Large numbers of depositors were seized with a sudden panic lest their savings should be endangered, and hurried at once to withdraw them. The scenes outside the chief banks defy description, and for two days the cashiers were kept busy ceaselessly paying out deposits. But the Government stepped in and authorized the banks to refuse to pay more than 5 per cent. on each deposit except for those below 50 lire, a minimum which the banks themselves raised voluntarily to 200, until August 20. The run thus ceased, but when the ordinance was first published many depositors refused to believe it, and some bank managers were insulted and threatened because they would not pay out more than the prescribed amount. There was absolutely no reason for this panic, as the Italian banks are exceptionally sound and almost overcautious in their operations, especially since the money tightness which has been felt during the last two years; but there is no accounting for these sudden popular outbursts, and the Italian public is less accustomed to dealing with banks than that of other countries. But although the measure taken by the Government has been generally approved, many manufacturers and other employers of labor who habitually deposit their funds in the banks find it difficult to pay their employees; arrangements will probably be made to enable them to withdraw what is necessary for this purpose.

Those who have money invested abroad find themselves in a peculiarly unpleasant position, as the local banks will not cash foreign checks save on those banks which have current accounts with Italian institutions; so that many wealthy foreigners, including a member of the Vanderbilt family, have found themselves temporarily without resources. With the reëstablishment of the mail service, which is expected within a week or so (when the mobilization in the belligerent countries will be complete), conditions will improve in this connection, but in the meanwhile there are loud complaints. Considerable annoyance has been caused to the public by the difficulty of changing paper money. A number of people have got it into their heads that silver and small notes are less likely to depreciate than large notes; consequently, there is dearth of the former, and large shops often refuse to change the latter. The result is much bad language between shopmen and indignant customers, and the intervention of the police and the imposition of fines on those who refuse to accept legal tender The Government is having more silver and five- and ten-lire notes issued, and will probably also issue one- and two-lire notes, and then temporarily withdraw silver from circulation. At Milan the municipality has issued local notes which can be cashed at the municipal offices.

Otherwise the life of the country goes on outwardly more or less as usual. One's chief occupation is reading the newspapers, which are issued with increasing frequency, although filled with news which for the most part is confused, uncertain, and often fantastic. Although the press, with some exceptions, maintains a strictly neutral attitude, the sympathies of the public are on the whole in favor of the Entente, especially since the German invasion of Belgium, which has converted many former *triplicisti*. Every one approves the action of the Government in deciding to remain neutral, but it is also realized that at any moment neutrality may become impossible. Three extra *classi, i. e.*, the yearly contingents of men who serve in the army, have been called back to the colors (those born in 1889, 1890, and 1891), and further calls are expected. The whole country realizes that as long as the terrible struggle lasts it must keep ready for anything that may happen. Internal dissensions, so bitter a few weeks ago, have disappeared, and even the Socialists and syndicalists, following the example of their foreign comrades, are becoming patriots. Day by day we ask ourselves what is going to happen, for we all feel the strain of the incubus weighing on us like a Dantesque *cappa di piombo*. In the meanwhile we are anxiously waiting and watching.

L. V.

THE CAILLAUX TRIAL—POLITICAL AND PERSONAL ASPECTS—A CONTRAST WITH THE DREYFUS AFFAIR.

PARIS, July 31.

In a letter which attempts to make certain notations on the French temper, it is hardly necessary to discuss the points at issue in the Caillaux trial itself. They were settled before a jury, and even those who may agree with its conclusions know, alas, only too well, that twelve men picked at random even in a unanimous verdict—and here the verdict need not be unanimous—may be very far from representing the national feeling. It is doubtful, however, if there ever was a trial in which the intellectual ability of all the disputants (and every witness seemed to be trying to make out a case) was of so uniformly high a level. Two ex-Premiers of France, parliamentary leaders, editors of the leading French dailies, Paul Bourget, Henri Bernstein, the present and the former wife of a Minister of Finance, and two of the ablest French lawyers, Me. Labori and Me. Chenu, conducted the trial. I say that they all conducted the trial, for, from an American point of view, every one seemed to do very much as he pleased.

An American lawyer, confused by the difference in procedure, and dazzled by the brilliancy of the pleading, could not have helped saying to himself: "It is magnificent, but it is not law." That difference in procedure has, none the less, its advantages. In a French trial like the present there is, of course, none of the objecting and striking from the record, none of the badgering or cross-examination of your plain, blunt man hy a professional, none of the tiresome summing-up, rebuttal, and sur-rebuttal. There is merely the reading of the act of accusation, the statement of the accused, the uninterrupted testimony of witnesses, the confrontation of these by other witnesses, the pleas of the lawyers for the *partie civile,* the presentation of the case by the *proeureur général,* and the plea of the lawyer for the defence, in this case, as in the Dreyfus affair, Me. Lahori.

Such a trial, with its greater directness of attack, inevitably takes over the processes and the character of a great tragedy, in which the lawyers are much more nearly stage managers than *dramatis personæ.* In this case, for those of us who did not have to consider the political bearings of much of its testimony, it was an intensely interesting Grand Guignol drama between two women of whom one loved and the other hated, Mme. Caillaux and Mme. Gueydan, one the present, the other the divorced wife of a Minister of state. In trying to point out the difference between national temperaments, perhaps nothing could serve as a hetter illustration than the thunderous applause which greeted Mme. Gucydan, the former wife of M. Caillaux, when, at what was undouhtedly a long calculated moment, and with a carefully premeditated gesture, she forced upon Me. Labori, who was too prudent not to he on his guard, the famous letters which provided the pivot of the affair and the climax of the drama. It had already become evident that justice was not the uppermost consideration in the mind of this unhappy woman testifying against her rival. It had also becomc evident from her own testimony that of this notorious *dossier* of eight letters, at least five had nothing to do with the trial and that the woman who was offering them had abstracted them—the man in the street would use a stronger term—from a locked secretary. The *coup* was strikingly theatrical; it was hardly dramatic, but non-partisan journals spoke of the incident as a "vraie scène Cornélienne." If it was a scene such as might be found in the great Corneille, it would have to he sought in "Rodogune," and not in "Cinna" or the "Cid." It was easier to understand Mme. Gueydan's motives than to approve them. With her imperturbable self-mastery, and an unerring *souei de l'effet,* it seemed to some that she was merely supplying with consummate skill a further proof of Byron's lines:

> There never yet was human power
> Which could evade, if unforgiven,
> The patient search and vigil long
> Of him who treasures up a wrong.

I doubt, however, whether the incident would have received in America the same reception, either by an audience or by the general press, which it received on the day of its occurrence; for it must be added that already not a few of the former enthusiasts have found it necessary to make very serious reserves about this *beau geste,* which to many will seem to have been made with the wrong hand.

It would be idle to pretend that, in its political significance, the trial which has just closed with the acquittal of Mme. Caillaux is in any way to be ranked with the famous "affaire." A comparison of the two cases, however, cannot fail to indicate the direction in which the Third Republic has been tending. The most striking and, possibly, most significant differences will lie in the conduct of the trials themselves. The hand that ruled during the Dreyfus affair, especially in its earlier phases, was only too evidently an iron hand, a locked, mailed fist. The hand which guided here was lax and open. The ease with which important state affairs, supposedly secret, were discussed is a case in point. But the most striking comparison would perhaps be the treatment accorded to two prominent French men of letters, who took it upon themselves to deal with the issues involved in the debates. By a curious coincidence, at the time of the Dreyfus *affaire,* it was Zola, the head of the naturalistic school, while now it was Henri Bernstein, the leader of the movement for *la littérature brutale.* It will be remembered how swiftly Zola was condemned and that for his article in *L'Aurore* he spent an exile in England. Zola's charges were, to be sure, grave; but his language in that case was noble and dignified, if not measured, and his aim was justice. The statements of Bernstein were made in the course of his deposition. He was ostensibly there as a witness of character for the victim, Calmette. I am not sure that his aim was not self-exploitation and I am certain that his manner was impertinent. It is true that when he said, "Caillaux (a former Premier of France) is a man who climbs upon the coffin of his wife's victim in order to speak to you from a greater eminence," he was told that this was "literature" and was asked to proceed. But after other remarks, most evidently involving the honor of members of the existing Government and officers of the court themselves, he was not seriously rebuked, and was allowed to leave the court unmolested. To those who remember a previous trial, it will be interesting to note how far a man may go to-day in a French court without being forced to withdraw his remarks or being held for contempt. Bernstein was testifying to the story of Mme. Gucydan's misfortunes as she had given it to him. He had made several insinuations and passed some ugly slurs upon the conduct of French magistrates—which had aroused considerable laughter—and had used the words "hesitation and partiality." The *proeureur général* here interrupted:

"These are singular appreciations, altogether unexpected on the part of M. Bernstein, and which are out of place here."

M. Bernstein—"Far from me the thought that magistrates make the slightest difference between a Minister or an ex-Minister and the humblest citizen. [Laughter.] On that point I have a very pronounced opinion. I am sure that in a hall of justice, to use the language which I have been hearing for the last few days, a Minister or an ex-Minister is treated as I would be myself, and if I had conceived the slightest doubt in this connection, the present debate would have enlightened me."

To this, *M. le proeureur général* made the astounding reply: "That is entirely exact. You are not mistaken," and Bernstein was allowed to proceed.

It will be recalled that M. Caillaux had read into the record a copy of the will of Calmette, and also that Gaston Calmette, when assassinated, had in his portfolio a copy in his own hand, the famous *doeument vert,* purporting to be a transcript of an important state paper. After the tragedy it was delivered into the hands of M. Poincaré, President of the Republic, by Calmette"s brother, who received the thanks of the head of the Government. The document was discussed at the trial, and on the demand that it be produced two of the present Ministers of the Republic, consulted in the matter, sent an official communication to the court to declare that the document was spurious, and pretended to be a copy of a document which had never existed.

Bernstein, recalled to testify under somewhat exasperating circumstances, to be sure, had this to say:

> We have watched this happen; we have seen the Bureau of Registration, the *fisc,* commit the boundless felony of delivering up a will. There are possibly among you, gentlemen of the jury, men who have made a will. Well, don't allow yourself to be assassinated by a Minister, or the next day that will will be read at the hearing. That is what I had to say. [Uproar.]
>
> Then we saw two Ministers declare, in order to shield a former comrade, that the documents which M. Poincaré had received and which he thanked Dr. Calmette for bringing to him, were false, had no importance. Then one of two things is true: either M. Poincaré is weak-minded, or the Miinsters have lied.

The rôle of the President of the Court was indeed a difficult one. He was called upon to preside at a trial in which, for good reasons, the wife of a Minister was accused of assassinating a political enemy, and in which, for reasons far less evident, a Minister was forced to defend himself against the charges of venality and treason. That there should have been insinuations and reflections passed upon the character of the President, in a case where feelings were so tense, is only natural. That he should have been so seemingly helpless in the face of criticism was hardly to be expected. But when we compare the treatment meted out to Zola after his famous letter, "J'Accuse," with the complete immunity enjoyed by a contemporary dramatist whose criticism of both the President and the Republic and of his Ministers had certainly gone beyond the bounds, we must realize that something has been happening in France.

CHRISTIAN GAUSS.

Poetry

A FRENCH POET OF TRUE LOVE.

PARIS, August 1.

André Rivoire, middle-aged, spare, dark, with the mien of a patient college professor and the eyes of one accustomed to kindly speech, has tried to explain to me his idea in translating into French verse Shakespeare's "Romeo and Juliet." Like Richepin, another poet, with "Macbeth," he would give the true Shakespeare; but—"I wish to versify the feelings of Romeo and Juliet in the language of lovers of to-day."

A new book of André Rivoire's verses, "Le Plaisir des Jours," shows what he is able to do. It is made up of sixty-eight short poems, with no other order than the natural "pleasure of the days" where true love, happier than in Verona, runs smoothly through the years. Two volumes of such love songs have already won for him the official recognition of the French Academy; but he is best known popularly by his plays, which are also in verse. They are romantic, sometimes pathetic, and always amusing in their transplantation of modern feeling into ancient characters; and their verses are jolly as well as *jolis*. "Le Bon Roi Dagobert" was also crowned by the French Academy after a successful career at the Comédie Française.

In these selections from the last poems of André Rivoire, I try simply to follow the sequence of thought and the division in lines and the rhythm, as far as may be; but the delicious rhyming of the thoughts must be left to masters of the poetic art in English speech. He begins with the looking and the waiting for "the Beloved":

Learn to choose her slowly—
One of soul quick-closing—
For thy desire's companion,
To make her thy beloved:
. . . . . .
Near her to live, nought knowing
Save that life's less sombre;
And your happiness some evening
You'll find old in the shadow.

All through his singing the French poet is haunted by this dream of their happiness growing old with the lovers themselves. It was the heart's desire of a forgotten English poet that life and love should thus go on—

The same, the same, and every day the same.

It is also the soul's education from the "Presentiment" of the waiting years:

When thou shalt come, my one and only love,
We each perhaps a long turn shall have made
And followed many a disappointing way . . .

Then comes the predestined "Meeting":

I know nought of her, only
That, bending o'er her naked hand
While her name to me they told,
—Suddenly—I knew her.

And, since I have touched her hand,
My heart is beating quicker:
And so I feel henceforth I must
Love her—or quite leave her.

The "Departure" of the wedding trip, which is a French conventionality also, is transfigured:

Far, far away to-night I bear thee—
We go forth in the night—
Thy eyes are clear, my soul is strong:
Past evil takes its flight.

We are alone—the train leaps on—
The rain beats cold on the window:
And we—we smile in the silence—
Black night shall be blue sky to-morrow.

The new life—two lives in one—grows through varying verse, calm and refined and unemphatic, to "Wisdom":

Springtime may flower—far away—
White orchards on the hillside:
I only need, upon my desk,
One branch inclining toward me.

The morning blue may bathe the air—
And all the azure's in me:
Enough that one bit of light sky
Should cut across my window.

And one full-throated bird that sings
From the chestnut tree, green-leaving,
Is enough to give me ecstasy—
Fragrance and azure and joy.

'Tis then thine eyes I think of,
And, to myself a-smiling,
I find the whole spring in my heart
And all love—since I love thee.

With the shadows, luminous still but lengthening, the poet's mind looks forward, unafraid, to "When we are Old":

We shall be seated
At the threshold of the door;
And the wind shall bring no murmurs
Of words undefined:

And the far blue spaces
Shall dazzle our eyes—
For we shall be old,
And the long day passes.

Still he looks for the Beloved "From my Window":

I've pushed my table near
To the window:
With dew the garden's shining,
Fresh is the wind.

I look through the branches
Where drops of water glisten—
Where thou comest with thy hands
Full of white roses.

All his life's philosophy centres in "The True Face":

Happy is he who hath known thee, Face of Love,
Face where you'd say the soul comes, turn by turn,
Into the depth of changing eyes, to flower or fade.

All is foreseen, and autumn has come; and this dainty, limpid versifying of true love ends with a "Wish" for whoso may read:

Here are only happy verses—
And I wish that they who read them
Would come and bend above them,
Only with smiles upon their faces.
. . . . . .
May I be for them the friend
Their heart demands, without their knowing,
To pass the love of happiness
Out from these verses into their souls.

S. D.

Books and Men

DEEP-DYED MYSTERY.

Not many months ago a man was reading an essay, before a men's club, on the international position of Germany. In the course of it he referred casually to the German spy system as "the most elaborate and efficient ever maintained by any nation."

"Where do you get your authority for that?" asked one of his listeners.

"From the novels of E. Phillips Oppenheim," he replied, with complete gravity.

Doubtless he felt justified during the first days of the war. Had he been able to read "The Secrets of the German War Office," by "Dr. Armgaard Karl Graves" (McBride, Nast & Co.), he would not have had to turn to a (professed) novelist for his authority.

The preface of "The Secrets of the German War Office" is dated August 7, 1914. The publishers say that its complete manuscript has been in their hands since June 1. The book, they say, is a striking commentary on the author's sources of information.

The author, according to his own statement, is a man of mystery. "There are three persons alive who know who I am. One of the three is the greatest ruler in the world." Accepting his other statements at their face value, it becomes apparent that he has been enjoying a career that makes that of Monte Cristo seem a life of tea-parties and church "sociables" by comparison, that puts Rudolf Rassendyll in the shade and retires Sherlock Holmes into mild obscurity. He has been a secret agent of Germany. He passed an apprenticeship like that of Kim with Durgan Sahib; he inspected and found the weaknesses of Port Arthur before the outbreak of the Japanese war; he faced a "firing-squad" in a gloomy fortress in Belgrade (for no apparent reason), and was reprieved at the last moment, like the man in "Under Two Flags," Bulbo in "The Rose and the Ring," and countless heroes of romance. He engaged in serpentine intrigues at Monte Carlo; he has been involved, like the true Oppenheim hero, in flirtations with lovely Russian ladies and Turkish damsels (merely in the interest of his employers), and he was present at a secret conference in the Black Forest between famous English and German statesmen, whose names he gives!

You are dismissing the book as fiction. Wait a bit. Long years ago, fifteen maybe, as Patience sang—but it would be nearer the truth to say twenty-five—they used to take us to see what was called the "Panorama"—or was it "Cyclorama"?—of Gettysburg. A vast painting of the battle, housed somewhere in a great building—only one thing about it returns clearly to me. It was a cunning combination of pictured canvas and real objects. Near you, as you looked at it, were genuine wheat stacks, real rocks, and shrubs, and grass. There were real trees

and cannon, and then, somewhere, the real objects ended and the painted canvas began. Where was the boundary? That was the puzzle and the charm—it was so hard to determine.

Dr. "Graves's" book has its real trees and cannon. For instance, if you care to look it up in the London *Times*, for one place, you will certainly find the record of his trial and conviction for espionage at Edinburgh in the summer of 1912, substantially as he relates it. Perhaps it is all real. But if so, he has undoubtedly painted the lily of truth until it looks astonishingly like fiction. It is the penalty, perhaps, of an age that demands even sober facts dished up with a spicy sauce. Not that the facts in this book are sober! In the future, novelists may find a method of presenting the famous problem of 2 plus 2 equals 4 in such a way that nobody will believe it for an instant.

"The Secrets of the German War Office" is an amazingly interesting book. You are inclined to smile at some of the author's gay-dog adventures; you will frequently have terrible difficulty in swallowing. You do not see exactly what he discovered of value on several of his missions. His wisdom sounds like that which comes after the event. ("Indiscreet Letters from Pekin," by "B. L. Putnam Weale," was a similar book—a mixture of fiction and fact.) The chapter called The Grand Duke's Letter is a well of Oppenheim undefiled. The Secret Treaty of the Black Forest sounds preposterous—especially in view of the events of the past few weeks. And the interview with the Kaiser—"that lonely figure seated at his desk, the greenish light playing over him . . . in an underground chamber of the Foreign Office"—well, it is magnificent, but it cannot fail to remind you of Professor Moriarty and *his* underground chamber, with *his* green light, in the second act of "Sherlock Holmes." But the book is interesting, for all that.

As for the accuracy of its predictions, here are some of them: "All the war-scare talk between Germany and England has been and is only a means to an end. The end is to throw dust in the eyes of the rest of the world. Germany and England will never willingly war. . . . Holland is not averse to coming into the German federation. Belgium is averse, but could be snuffed out as easily as a candle."

Some luckier ones, in the chapter called Arming for Peace or War, are these: "The map of Europe is certain to undergo some very decided changes within the next decade, very possibly in less time. . . . Two things must happen in the near future. Germany must expand peacefully in Europe, to the northeast and west, or there will be war. . . . It may be to-morrow; it certainly will not be more than a decade hence. The death of the Emperor Francis Joseph will precipitate it at once—and he is old and feeble. . . . Wilhelm holds the thunderbolt that will shake the world."

At least one chapter—that about the Kaiser and his green light—has appeared in a Sunday magazine. Some of the others have been in *Collier's Weekly*—that called The German War Machine within a few weeks. Now that they are together, they can be judged better, and guessed at. There are some impressive illustrations.

EDMUND LESTER PEARSON.

News for Bibliophiles

CHARLESTON THEATRES, 1735-1766.

Unusual interest has been shown of late years in the history of the early American theatre, recognized both as a social and a literary institution of importance. Rival claims to priority in the erection of a theatre have been set up by partisans of Williamsburg, New York, and Philadelphia, in particular, with intimations in other quarters that the first theatrical performance in what is now the United States actually took place in Boston or in Charleston. Patient sifting of the evidence, however, points to Williamsburg, Virginia, as possessor of the first regular playhouse, which seems to have been established in the second decade of the eighteenth century; but unfortunately we have the names of less than a half-dozen plays acted in Williamsburg before 1750. In New York as early as 1732 theatrical performances were regularly given by a company of actors from London (cf. Brown, T. A., "A History of the New York Stage from the First Performance in 1732 to 1901"); another company was playing there from October to December, 1734, and there is evidence of still other "seasons." Philadelphia and Boston, on the other hand, saw their first performances about 1749, and even then the plays met with rigorous opposition from the Quaker and Puritan authorities.

The third regular theatre to be established in the colonies, I believe, was in Charleston. There the players contended against no legal obstacles, and their financial rewards were apparently ample. Moreover, contemporary records preserve for us many details of three dramatic seasons before 1749, and of others in the years 1754-5, 1763-4, and 1766. Yet not only Seilhamer's "History of the American Theatre," but almost every encyclopædia which attempts to tell the story of the drama in colonial America, states positively that the first Charleston theatre was erected in 1773. In view of this fact, it may be well to summarize briefly what is recorded of dramatic performances in Charleston before 1773. Although facilities for making a chronological summary are at hand in the wonderfully complete newspaper files of the Charleston Library Society, so far as I know such an account is not in existence.

The prologue spoken at the first Charleston performance was reprinted in this column several months ago (April 23, 1914), but I have never seen reference made to the advertisement of that performance. This appears in the *South Carolina Gazette* of January 18, 1734-5. One of the earliest theatrical notices in any American newspaper, it is a model of modest statement:

> On Friday the 24th Inst. in the Court-room will be attempted a TRAGEDY, called *The Orphan, or the unhappy Mariage.* Tickets will be deliver'd out on *Tuesday* next at Mr. *Shepherd's* at 40s each.

Apparently the "attempt" was successful, for the next *Gazette* informs us that the same tragedy "will be acted the second time" on Tuesday, January 28. Again, the following week the *Gazette* advertises for Tuesday, February 4, "The Orphan" and "a new Pantomimie Entertainment in Grotesque Characters, called, the *Adventures of Harlequin and Scaramouch,* with the Burgo-master trick'd." This makes three renditions of Otway's tragedy, and if we may trust the heading to the second prologue, printed in the *Gazette* for February 8, there was a fourth performance of that play on February 7. But I suspect that this is very probably a misprint for February 4.

The *Gazette* of February 15 advertises for Tuesday, February 18, "the Opera of *Flora,* or *Hob in the Well,* with the Dance of the two Pierrots," and the Harlequin pantomime. Then, a little over a month later, is a notice of "The Spanish Friar," to be given Tuesday, March 25, "and on Thursday the 27th the same Play for the Benefit of MONIMIA." To receive a "benefit" this actress must have been a professional, but beyond the fact of her playing the title rôle in "The Orphan," we know only that she was in Charleston next season to play the heroine's part in "The Recruiting Officer" at the opening of the new theatre. This we learn from Dr. Dale's prologue written for this latter performance and published in the *Gentleman's Magazine* of London, wherein it is stated that "*she had acted* Monimia *with great applause.*" Probably her acting caused the repeated performances of Otway's play.

In the court-room, which then occupied the second floor of a building on the waterfront, all these plays took place. A movement to obtain a permanent theatre for Charleston seems to have been inaugurated at the end of the season. For the *Gazettes* of May 3, May 10, and May 17, 1735, state that "all Gentlemen that are dispos'd to encourage the exhibiting of Plays next Winter" may see the subscription list at Mr. Shepheard's. The second sentence is more interesting: "And any persons that are desirous of having a share in the Performance thereof, upon Application to Mr. Shepheard, shall receive a satisfactory Answer." Evidently, then, the whole company was not to be professional.

The permanent theatre, which was situated on Dock Street, or Queen Street, as it soon came to be called, near St. Philip's Church, just behind the later site of the Planter's Hotel, was formally opened Thursday, February 12, 1735-6, with "The Recruiting Officer," and the special prologue already mentioned. "The Orphan" is again advertised for February 23; "The Recruiting Officer" and "several Entertainments as will be express'd in the great Bills," for March 2; "George Barnwell" for March 9; the same play "with a Farce called *the Devil to Pay,*" for March 16, and "The Orphan" with the same farce for March 23; all these were in the Queen Street theatre.

In the *Gazette* of May 29, 1736, appears a poem, "On the Sale of the Theatre," containing certain cryptic personal allusions. In some quarters the lines have been taken to mean the end of the building's use for stage purposes, but that this interpretation is false quickly appears on a perusal of the *Gazette's* advertising columns for the following winter. Notices begin on November 6, when we are informed that Addison's "Cato," with "a Prologue by Mr. Pope," will be given on Thurs-

day, November 11. This suggestive statement follows: "N. B. If any Persons are possessed of last Year's Tickets, they are desired to send them in to be chang'd for new ones." Again "Cato" is advertised, for November 18; "The Recruiting Officer," with "Flora, or Hob in the Well," for December 1; and "Cato with Entertainments of Dancing" for December 17. Then occurs a long interval without notices of the kind until the *Gazette* of May 21, 1737. There we are told that "at the request of the antient and honorable Society of Free and Accepted Masons, at the Theatre in Queen street, on Thursday next the 26th Instant, will be performed a Comedy called the *Recruiting Officer* with a Prologue, Epilogue, and Song suitable to the Occasion, to which will be added a new Dance, called *Harlequin* and the *Clown*, and the song of *Mad Tom* in proper Habilliments, by a Person that never yet appear'd upon the Stage." To this last performance the *Gazette* of May 28 devotes a paragraph in its news columns. The Masons are said to have "made a very decent and solemn appearance; there was a fuller House on this Occasion than ever had been known in this Place before." We read too that Apprentices' and Masters' songs "were sung upon the Stage, which were joined in *Chorus* by the Masons in the Pit."

So far as I can ascertain, the Queen Street theatre was never again used as a playhouse. *Gazettes* show frequent balls and concerts given there during the winters following, but no plays. One notice in the *Gazette* of November 1, 1742, announces that "on the 9th of December next, at the (formerly) THEATRE in Charles-Town will be A BALL." Evidently the actors were no longer welcomed.

The second theatre in Charleston was opened in the autumn of 1754. A news item in the *Gazette* for Friday, October 10, of that year reads:

> Last Monday Evening the *new* Theatre in this Town was opened, when the Company of *Comedians* perform'd the Tragedy called, *the Fair Penitent* much to the satisfaction of the Audience.

Thereafter regularly each week until well into November, the *Gazette* runs advertisements that begin: "At the NEW THEATRE On THURSDAY *Evening* next, *Will be Presented* (By a Company of *Comedians* from *London*) A Comedy [or Tragedy] called," etc. The form of this advertisement, I think, leaves no doubt as to the identity of the "Comedians." It is the same stereotyped wording that was used by Hallam's company in Williamsburg, New York, and Philadelphia. That company opened a short season in Philadelphia April 15, 1754, with "The Fair Penitent," and on June 27, 1754, according to Seilhamer (*Op. cit.*, I., 71-72), "took its farewell of that city and the continent." Its farewell to the continent must have been *au revoir*.

The répertoire for that season includes: October 6, "The Fair Penitent"; October 16, "A Bold Stroke for a Wife" and "The Mock Doctor"; October 23, "The Orphan"; November 6, "Cato"; November 13, "The Recruiting Officer" and "The King and the Miller"; November 25, "George Barnwell"; December 27, "The Distressed Mother."

The acting of "George Barnwell" passed unnoted by the *Gazette*, but was seen by Mrs. Ann Manigault, whose unpublished diary has been mentioned in a previous article in this column (February 27, 1913). The Grand Lodge of Masons in South Carolina, formed that very day, attended "The Distressed Mother" in a body. The *Gazette* tells how the Masons first went to church to hear "an excellent sermon" by their Brother Baron, then "to their Bother Gordon's Tavern, where they dined and spent the Afternoon to the number of upwards an Hundred," and finally to the theatre. One month later, on January 27, 1755, Mrs. Manigault again saw a play, but did not record its name.

Of the coming in 1763 to Charleston of Hallam's company, then under the leadership of David Douglass, and the name of the American Company, I have already made mention in the article referred to above. Fresh examination of newspaper files and of Mrs. Manigault's diary adds considerably to the list of plays previously given. This list now includes: December 14, "The Suspicious Husband" and "Lethe"; December 16, "The Gamester" and "Wives Metamorphosed"; December 19, "The Provoked Husband" and "Damon and Phillida"; December 22, "The Mourning Bride"; January 13, "Douglas"; February 3, "George Barnwell"; February 13, "The Conscious Lovers"; February 24, "Jane Shore"; February 27, "Love for Love"; March 19, "The Jealous Wife"; March 26, "The Orphan of China" and "The Anatomist" (benefit of Mrs. Morris); March 29, "Theodosius"; April 9, "The Mourning Bride"; April 12, "Romeo and Juliet"; April 25, "A Wonder! A Woman Keeps a Secret," and a farce (benefit of Mrs. Crane and Mr. Barry); and May 10, "King Lear." All these plays and doubtless numerous others unnamed (for the company was to act each Monday, Wednesday, and Friday), were given in a new theatre, seventy-five feet by thirty-five in dimension, situated on Queen Street, "near where that of Messrs. Holliday and comp. formerly stood."

The American Company returned two years later. At that time the *Gazette* had suspended publication on account of the provisions of the Stamp Act, but another periodical, the *South Carolina Gazette and Country Journal*, arose, joyfully proclaiming that no stamped paper was to be had. From the files of this paper, with the help again of Mrs. Manigault's diary, it is possible to make out this list of performances: January 17, "The Distressed Mother"; January 31, "Douglas"; February 10, "Love in a Village"; February 27, "The Constant Couple" and "The Mock Doctor" (benefit of Mrs. Osborne); March 6, "The Gamester" and "The Oracle" (benefit of Mrs. Douglass); March 13, "The Provoked Husband" and "The Lying Valet" (benefit of Mr. Emmet); March 20, "The Way to Keep Him" and "The Brave Irishman" (benefit of Mr. Verling); April 3, "The School for Lovers," "The Oracle," and "An Ode set to Musick, called *Gratitude and Love* written by a Gentleman in this Province" (benefit of Miss Hallam); April 16, "Cato" and "Miss in Her Teens" (benefit of the poor). Of these, "The Oracle," "The Way to Keep Him," and "The School for Lovers" had never before been acted in America. After the last performance Douglass remained in Charleston about a month, delivering several times a lecture on "Heads," corresponding perhaps to the modern "phrenology." This venture likewise seems to have brought considerable monetary profit to the actor.

Of the brilliant Charleston season of 1773-4, a full account is given by Seilhamer. The success which it enjoyed was based on that of previous seasons.

ROBERT ADGER LAW.

Correspondence

"THE NATION" ON THE WAR.

TO THE EDITOR OF THE NATION:

SIR: I have read your journal thirty years without missing a number, so that the fine treats of reason you afford your readers are not new things to me. But I must register my satisfaction and gratification on account of this week's discussion of the tremendous events which are happening. Your journal is, in my estimation, a missioner of right reason.

OSCAR WOODWARD ZEIGLER.

St. Mark's Rectory, Baltimore, August 27.

JUSTICE TO GERMANY.

TO THE EDITOR OF THE NATION:

SIR: Doubtless, many readers of the *Nation* will vigorously dissent from your editorial, "England and War," of August 13, in which you assert that Germany is responsible for this war; for it seems too plain for argument that England, and not Germany, is the proximate cause of the present war, as she has been many times in the past.

Your further contention that Germany has violated the Neutrality act has no merit, because England forced Germany into the breach by obstructing German attack on the northern coast of France. Germany was perfectly fair in the matter with Belgium, for she notified her of the intention, and promised her compensation for all damage done.

It seems to the writer that it is only fair that the *Nation* print an unbiassed and unprejudiced article upon the cause of the present war, showing the exact stand taken by each contending country.

J. A. BAER.

Milwaukee, Wis., August 17.

PEACE AND WAR.

TO THE EDITOR OF THE NATION:

SIR: The present deplorable state of affairs in Europe surely has not come as a surprise even to the most ardent and optimistic advocate of peace. Since the exhaustion following the last great struggle the nations of Europe, particularly Germany and France, have taken advantage of the quiet of a generation to store huge sums in their war-chests and to expend the gains of Peace on preparations for war. The vicious cycle, which ever is being repeated, is quaintly and admirably described by the old French poet, Jean de Mehune (quoted in English by Puttenham [1589] as an example of the figure *Clymax*):

> Peace makes plentie, plentie makes pride,
> Pride breeds quarrell, and quarrell brings warre;
> Warre brings spoile, and spoile povertie,
> Povertie patience, and patience peace:
> So peace brings warre, and warre brings peace.

LA RUE VAN HOOK.

New London, N. H., August 28.

THE WAR.

TO THE EDITOR OF THE NATION:

SIR: I have observed your articles on the responsibility for the present European war, including those in your issue of the 13th inst. As I gather from one of these, you have received some protests on the article which appeared on the 6th. I write to express my commendation of this article.

In your issue just to hand you make abundantly clear what I think nearly every one feels, namely, that whatever condemnation is expressed of the action of Germany applies entirely to the Emperor and his immediate advisers. We have good reason in this country to appreciate the German element in our citizenship, and it is undoubtedly the fact that if it had been necessary to obtain popular support in Germany for the war, this would not have been forthcoming.

It would be idle to blind ourselves to the existence of an ambition and jealousy, in at least two of the countries involved, which has brought about the present situation, and this makes it all the more discouraging to attempt anything in the nature of mediation. Without an entire change in the governing control of these nations, no permanent peace can be expected, and this change, it would appear, can only be achieved by a positive defeat of the policy and the corresponding discrediting of the parties responsible for it. On the other hand, if that policy were to prove victorious, the result would be still worse for civilization.

Again let me express my appreciation of the completeness and breadth of your weekly survey. E. Shorrock.

Seattle, Wash., August 17.

To the Editor of The Nation:

Sir: Your statement that you have received protests against your fixing of the responsibility for the European war leads me to write and thank you for doing that very thing. I can't help believing that public opinion can have some influence upon the right side in such matters, and public opinion needs often to be instructed. The wrong side in such an awful war as the present one ought to be pilloried, and the *Nation*, while doing that, is distinctly fair to the German people, who are so unfortunate as to be under the domination of a set of people who seem to worship brute force rather than right.

A. M. Wilcox.

Frankfort, Mich., August 20.

CENSORSHIP AND FALSE NEWS.

To the Editor of The Nation:

Sir: Some years ago, when engaged in the composition of a military study, I was perplexed and discouraged at the apparent impossibility of getting trustworthy numerical and narrative information, and at last concluded that except for official statistics, prepared usually before the incidents to which they relate and without intentional bearing upon them, military estimates may rarely be accepted, while most other statements are to be regarded askance. Since then I have had to feel the same scepticism in regard to similar matters to which I have given less detailed study, of the kind which have been dealt with by Sir James Ramsay so forcefully, and often with so much success.

The present war in Europe affords admirable illustration of how difficult it is for the ordinary witness to furnish trustworthy information, and how many reasons exist for giving false news.

In the first place, the stress and excitement are terrible, and more than men's minds can bear, so that they will believe and report anything. This is partly true even of England, least disturbed of the belligerents as yet. But in Germany and in Belgium, where they are in the thick of it, rumor runs as she did in the days of Virgil.

As to military engagements, it need not be said, the operations are now so immense, and the movements, to the witness, so fragmentary and confused, that even the best-trained correspondents neither understand nor know the truth. All the field of Waterloo is easily visible from one point, but the battle now beginning is on a line, Belfort-Brussels, over two hundred miles long, and is occupied by more than two millions of men.

To collect the various fragments of information which would be absolutely necessary for the truth about any great movement is temporarily impossible, for censorship was never so strict and efficient. It was not easy for correspondents to learn much in the Russo-Japanese war, and increasingly difficult in the Balkans in 1912; but the suppression of news is now so organized that little gets out but what the authorities are willing to give. As for England, the day on which war was declared, her fleet disappeared, and scarcely a word has there been about it since. The newspapers have understood the necessity of this and make it a point of honor. During an entire fortnight they preserved inviolate the secret of the expeditionary force. And so also for the Continent. At present scarcely anything is mentioned about Austria or Russia, while of the military movements in Germany, France, and Belgium there is not a great deal. Where newspapers are so well equipped that they do learn something, they consider themselves bound to publish nothing about their own countrymen or their allies; and, indeed, if they did do this, they would fall under much displeasure. Thus the *Times* of August 12 publishes an admirable map, "The Kaiser's Plan of Campaign," showing the disposition of the German troops, probably based on a great deal of accurate information; but nothing whatever is shown of the French plans.

It is, then, obvious that little can yet be obtained, and that what is furnished is apt to be inaccurate. A few days ago, when the French advanced into Alsace, there were immediately circulated brief though vivid accounts of the battle of Altkirk: "45,000 Dead and Wounded" read innumerable newspaper broadsides. Of these it was asserted that the French had lost 15,000; but shortly after a more credible report said that their losses had been slight, and an official account which followed put them at 100. One is reminded of the comment made by Napier on the estimates of losses at Fuentes de Onoro; and it may be surmised what effect such redaction would have had upon the numbers reported at Arbela or the carnage which an obscure account assigns to Châlons.

Very great error also, though more temporary, arises not from censorship or exaggeration, but from deliberate falsification with official sanction. Reports from Germany indicate that a great deal of this is being done there. Apparently stories have been current that Paris was burned, that France was disorganized, that a commune was established, and that Japan had attacked Russia, while it is asserted that England's attitude was misrepresented shamefully and in skilful fashion; nor am I persuaded that English accounts are entirely guiltless of misrepresenting the acts of Austrians and Germans.

GERMANY'S HOLY WAR.

To the Editor of The Nation:

Sir: Germany's bid for America's sympathy on the ground that she is conducting a holy war to protect herself and the rest of Europe from falling under Muscovite domination will not appeal to the intelligent, clear-minded American.

It would be a calamity indeed for the whole world if Europe were to be ruled by the Slav, but it would likewise be a calamity should the Teuton become her master. The imminent danger to-day is not the rule of the Romanoffs, but that of the Hohenzollerns.

The present war is not, as the German Chancellor would have it thought, a "life-and-death struggle between Germany and the Muscovite races of Russia," but obviously a life-and-death struggle between democracy and German militarism. This is why the sympathy of the majority of the American people must necessarily be with Germany's opponents. The present coalition is not directed against the German people and German civilization—no more than the coalition that put an end to the power of Napoleon the First was directed against the French people and French civilization; it is directed against the rule of might represented by German militarism.

It is obvious that Germany's supreme desire in the present struggle is not the warding off of Slavic rule—that is only incidental—but the bringing of Europe under her own rule. Hence the present alignment of Powers against her. Her eagerness to crush France is not stimulated by her desire to save the latter country from Muscovite domination, but rather by her wish to increase her own power at the expense of her neighbors. Her evident intention to annex Belgium, should she be victorious, is not directed against the Slavs, but aims solely at her own aggrandizement.

The world also realizes that Germany has played the part of a bully among European nations—a part which is never popular—and not without danger, for the hour of reckoning generally comes, and when it does come, the bully is likely to find himself without friends. The invasion of Belgium was a brutal manifestation of Germany's belief that might makes right. And when thus breaking her pledge guaranteeing the neutrality of Belgium, she asked the English nation to take her word that after the war she would restore the independence of that country. The perjurer in the act of perjuring asking to be trusted! It is little wonder that the statement was received with laughter by the English Parliament.

It remains to be seen how far the German nation will be willing to go with the sacrifice of her children in order, not to save the fatherland, but the Hohenzollern dynasty. There is nothing fantastic in the thought that before the end of the war the German monarchy may tumble down.

A German victory in the present struggle would mean primarily a tremendous setback to democratic principles and the triumph of militarism; it would imply the crushing of France and of French civilization and the weakening of the power of England, if not the reduction of that country to the rank of a second-rate nation. The victory of the Allies, on the contrary, would probably be a death-blow to militarism and all the evils it implies, and might mark the dawn of the era of peace and good will among nations

for which the world has so long waited, and towards which bleeding humanity is stretching imploring arms. ALBERT SAUVEUR.

Bailey Island, Me., August 22.

IRISH AND GERMANS.

TO THE EDITOR OF THE NATION:

SIR: When one reads accounts of occasional fraternizings between the Irish and the Germans in this country and notes the malicious satisfaction exhibited by the latter at the prospect of inducing the former to make trouble for the English Government in the present crisis, one is reminded for the thousandth time that consistency is not a characteristic of man. If there is one fact that has been prominent above all others in the acts of the British Parliament, it is the determination to redress the past wrongs of Ireland in so far as it can be done. The Irish members seem to be satisfied that the party in power is acting in good faith. Is there any evidence that the German Parliament ever intends to deal in the same spirit with the Alsatians and the Poles? That the dissatisfaction of these people is far greater than that of the Irish, nobody doubts who has had the opportunity to obtain first-hand information. Why should it be a cause of satisfaction to anybody if the Irish give the English Government trouble and a matter for condemnation if the inhabitants of the provinces annexed by Germany against their will manifest an undying spirit of hostility? The number of Alsatians, of Lorrainers, and of Prussian Poles who are friendly to Germany is so small as to be an almost negligible quantity; conversely, there are many Irishmen who are passionately attached to England. Besides, many years have passed since there was an English military force in Ireland to overawe the people. The Irish have been permitted to say and to print almost anything against the Government they pleased, but neither liberty of speech nor of the press is tolerated in the trans-Rhenan provinces.

We are here dealing with a case in which the jury is asked to give full faith and credit to the testimony for the plaintiff, but to regard with suspicion or to reject altogether the evidence for the defendant. All the justifications for the German invasion of Belgium are pitifully weak. If Germany did not want war, why was she the only Power that was completely ready? The patent fact is that the German commander-in-chief thought it would be easier to invade France through the neutral territory than directly, but to avow the truth would not have looked well in the eyes of the world. Therefore, other pretexts had to be discovered or invented. What would it profit a man to be a reasonable being if it did not enable him to find a reason for doing what he wants to do or for believing what he wants to believe? It is strange that so many Germans talk and write as if the strenuous Prussian military régime of the twentieth century were the legitimate successor of the Germany of Goethe and Schiller, of Kant and Hegel. Germany never counted for so little politically and for so much intellectually as at the close of the eighteenth century. Goethe and Lessing confessed to a total lack of patriotism because, like Dr. Johnson, they recognized that it is a sentiment usually devoid of sense.

CHAS. W. SUPER.

Athens, O., August 24.

AN HISTORICAL PROPHECY.

TO THE EDITOR OF THE NATION:

SIR: Most great historical writers have refrained from prophecy, and the few who have ventured to forecast the future have generally been belied by the issue of events. But the subjoined paragraph from the "Roman Journals" of Ferdinand Gregorovius, written in 1858, would seem to be endowed with an unapprehended inspiration.

Their [the Russians'] aspirations extend to Constantinople, Prague, and Lemberg; in short, to the restoration of the Eastern Empire through Pan-Slavism. Russia, however, is a half-Mongolian entity, devoid of genius and energy. Her hatred of Germany is due to the consciousness of her intellectual dependence on Teutonism, perhaps, also, to the instinctive presentiment of a conflict with Germany in the future, should Germany become a united nation.

Liliputian Language

NATIONAL CHARACTERISTICS REFLECTED IN THE SPEECH OF HOLLAND—THE USE OF DIMINUTIVES MISINTERPRETED BY FOREIGNERS.

THE HAGUE, July 31.

The eminent Danish philologist, Prof. O. Jespersen, has praised the English language for its businesslike, virile qualities. Among other characteristic traits of its manliness, he noted the lack of diminutives. English, in this respect, forms a strong contrast to Dutch. "In Dutch," according to Professor Jespersen,* "every child is a 'kindje,' and every girl a 'meisje'; every tree may be called a 'boompje,' every cup of coffee or tea a 'kopje,' every rabbit a 'konyntje,' every foot a 'voetje,' every key a 'sleuteltje,' etc., etc." The learned author must have got his information from that English lady resident at The Hague, whom the present writer once heard boast that she was never worried by the genders in Dutch, for she simply turned all nouns into diminutives, which, as in all Germanic languages, are without an exception neuter words. The lady was too much satisfied with her clever contrivance to notice the modest smiles of her Dutch friends at her string of Liliputian speech, and the Danish professor, if he were to try the experiment, would not be saved by his academic dignity from the same gentle form of criticism.

To hear the Dutch converse among themselves would easily lead a casual observer into this misconception. But from a philologist a more accurate statement might have been expected than this sweeping and incorrect assertion that the continual recurrence of these endings happens "without any apparent necessity." Every Dutch mother could tell him on what trying occasions her little "kindje" no longer deserves that fondling name and is called simply "stoute kind" (naughty child). Every Dutch girl, it is true, is a "meisje," and for a very good reason; without its ending the word would mean maid-servant, or else would be a term of abuse. Every little tree may be called a "boompje," and a big tree cannot be called otherwise than a "boom." In Holland the professor would be offered a "kopje" of tea, and would actually have to be satisfied with a Liliputian cup, of less than a quarter the size of a good English breakfast cup. Tom Thumb trips on "voetjes" in the Dutch version of the fairy tale, but his parents, not to mention the giant and his wife, walk on "voet," as every Anglo-Saxon parent does. And the key that by its bloodstain betrayed poor Mrs. Bluebeard to her cruel husband has never been a "sleuteltje" since the first days when little Dutchmen trembled at the story. The sandhills near The Hague swarm with "konijntjes," but big, fat "konijnen" are just as numerous. I dare say that a Dutchman knows quite well when there is a necessity for the use of a diminutive, and that he has sufficient self-control to abstain from employing them when this necessity is not apparent.

A Dutch novelist once told me an anecdote about a plain-spoken servant-girl of his, fresh from the country, who one day said to her master: "I cannot understand why you are always writing, but a silly fool you are." In like manner Professor Jespersen remarks: "I cannot understand why these Dutch people are always using diminutives," but they "are innocent, childish, genial beings with no great business capacities or seriousness in life."

Mirabile dictu! No business capacities in the Dutch? By what miraculous way, then, did they, in the early seventeenth century, become the greatest traders of the world? What other capacity, if business was not their line, made them the rulers over colonies forty times larger than their own little fatherland? And if no seriousness in life is found in them, by what tenacious flippancy did they hold out during that cruel war of eighty years against Spain, of which Motley has told the stirring tale? The perusal of that history will convince Professor Jespersen that, in this case, his theory has led him to a wrong conclusion. The Dutchman's fondness for diminutives is more proverbial than real. True it is, that the language has an unlimited capacity for forming them. But their employment depends on definite conditions such as the size of the thing or person in question, or the mood of the speaker himself. Who does not admire in Dutch paintings the artist's loving attention for details, for the minutest trifles of daily life? That nice distinction of detail is a characteristic of the race and accounts for the Dutchman's accuracy in drawing attention, in his speech, to the difference between the little and the big, between the "boompje" and the "boom." Far from its being a trait of a childish mind—children, as a rule, are very little observant—this close scrutiny of the world they live in is the very capacity which makes them particularly fit for business. The Dutchman knows the difference between a penny and

*"Growth and Structure of the English Language."

a pound, between the proverbial "little he gives" and the "much he asks."

I do not mean to imply that to this habit of observing details the diminutive in Dutch owes its development, just as little as the absence of diminutives in English need prove that the Anglo-Saxon has no eye for gradations of size. The productiveness of a suffix depends on various, mostly inscrutable, conditions, and it is quite possible that the unproductiveness of the English diminutive suffix is due to other causes than the virility of the English mind. I only want to press this point that, the diminutive suffix having proved productive in Dutch, it need not be wondered at that the Dutchman makes use of it where his nice distinction of detail invites expression. And he has this undeniable advantage over the Anglo-Saxon speaker, that with the diminutive suffix he can give utterance to various moods such as scorn, irony, love, cosiness, familiarity, to all of which the Anglo-Saxon must apply a variety of synonyms, or a choice of accompanying adjectives expressive of the particular mood. In this respect Dutch speech is a puzzle and a wonderment to every foreigner. The feelings of snugness and contentment find vent in the formation of diminutives from words that to any other than a Dutchman would seem incapable of diminution. "Lekker weertje" ("nice little weather") may be heard repeatedly on a warm summer's day. People declare themselves glad to see the "zonnetje" ("the little sun") again after that "onweertje" ("little thunderstorm") of last night. Some poets of the seventeenth century have stretched the possibilities of diminutive speech to the utmost. Vondel wrote an exquisite song in which the "tje" endings clatter down like raindrops on a window pane.

I know one English poet who would have relished the charm of this artistic word-play. Robert Herrick equals his Dutch contemporaries in his passion for diminutives. He coins forms like "quarrelet," "pipkinet," "shepherdling." And what would the following "Ternary of Littles" have sounded like, if the English language had yielded a little of its virility to some feminine pliancy?

A little saint best fits a little shrine;
A little prop best fits a little vine;
As my small cruse best fits my little wine.

A little seed best fits a little soil;
A little trade best fits a little toil,
As my small jar best fits my little oil.

A little bin best fits a little bread,
A little garland fits a little head,
As my small stuff best fits my little shed.

A little hearth best fits a little fire,
A little chapel fits a little choir;
As my small bell best fits my little spire.

A little stream best fits a little boat,
A little lead best fits a little float,
As my small pipe best fits my little note.

A little meat best fits a little belly,
As sweetly, lady, give me leave to tell ye,
This little pipkin fits this little jelly.
—Herrick.

A. J. Barnouw.

Literature

THE FAITHS OF THE WORLD.

History of Religions. By George Foote Moore. New York: Charles Scribner's Sons. Vol. I. $2.50 net.

The need for a comprehensive work in English on the general history of religions written from the standpoint of an historical student has long been felt. We have had for some time an excellent German manual in two volumes edited by Professor Chantepie de la Saussaye, of the University of Leiden, in which the subdivisions have been parcelled out among a number of specialists, but in English, until the appearance of Professor Moore's works, we have had, apart from the translation of M. Reinach's brilliant exposition, which, however, is too subjective, merely some very general and quite insufficient surveys. In the person of Professor Moore we have a scholar of the first rank, who has made the chair of the history of religions which he holds at Harvard University among the most notable in this country. He has fitted himself for his task by numerous contributions in the field of the Old Testament, in Arabic, and in other branches of Semitic studies. Everything that issues from his pen bears the stamp of comprehensive scholarship in combination with a strictly scientific method and a remarkable critical acumen. With his election to the newly established chair at Harvard, he further enlarged the scope of his studies by including in his range such fields as India, Persia, and Greece.

Naturally, the entire scope of the history of religions is too large to be covered by any single scholar, and even Professor Moore must depend upon second-hand sources for many of the subdivisions. This is inevitable, but a scholar who is accustomed to getting his material directly from the sources for certain sections of a large subject acquires the ability to use second-hand sources for other subdivisions in a manner that insures accuracy and trustworthiness in his treatment. There is an obvious advantage in having the entire field of the history of religions thus treated by one individual, even though certain portions of it are necessarily not so well done as others. The unity of the work is a compensation for this defect.

The present volume embraces China, Japan, Egypt, Babylonia, Assyria, India, Persia, Greece, and Rome. A second volume expected shortly will embrace Judaism, Christianity, and Mohammedanism. It is to be regretted that our author intentionally excludes the so-called "primitive" religions. We cannot agree with Professor Moore that an investigation of these religions is not necessary for the purpose of his work. In the treatment of the advanced religions of antiquity we are constantly brought face to face with survivals of primitive views; and when we come to the consideration of religious rites it is impossible to understand them without constant reference to the attitude of man in early phases of culture towards his environment. Professor Moore would have added largely to the value of his work if he had given in a series of introductory chapters the general aspects presented by such subjects as magic, animism, totemism, taboos, and divination.

Our author himself recognizes that a general treatment of the subject can amount to little more than an introduction, and that for the details the student must be referred to works of a more specialized character. In view of this, the question of what should be included and what excluded in a general treatment is the most serious problem which a scholar is obliged to face. Opinions will naturally differ, and it is difficult, for obvious reasons, to maintain what may be called an equilibrium in the treatment of the many subdivisions in which the history of religions falls. We notice in the case of the history of religion in Egypt, for example, that Professor Moore is more liberal in furnishing extracts from the texts than in the case of Babylonia and India, whereas in the case of Zoroastrianism these extracts are even more limited. Necessary limitations of space formed, no doubt, the controlling factor in his mind. But we are inclined to believe that he would have done better if he had illustrated the subject in the case of all religions that have produced a noteworthy religious literature by abundant extracts, chosen naturally with care and discretion. A few of the hymns of the Rig-veda, given in full or in large parts, would have been exceedingly helpful in furnishing a general view of the conceptions of divine government, and so in the case of Babylonian religion the two long extracts on pages 224-26 might have been abbreviated to make room for some of the very fine prayers and hymns to Marduk which have been preserved for us. A certain inequality in the treatment of the Pantheon of the various religions covered in the first volume is also to be noted. Thus, while in the religions of India all the important figures of the Pantheon are briefly treated, in the case of Babylonia and Assyria we miss the same systematic treatment of the characteristic traits of the Gods, many of whom are brought to our notice in a somewhat incidental manner.

Such strictures do not, however, affect the substantial value of the work on which it is evident Professor Moore has spent years of incessant labor. The reader obtains in the case of each of the religions treated an admirable survey of its salient traits, and the author shows himself particularly skilful in tracing the connection between the unfolding of religious thought and the general course of culture. The religious history of a people is always closely entwined with political events and social development. This fact is never lost sight of by our author. He is particularly happy in applying this method to the treatment of the religions of Egypt and India. Nor does he neglect the important relationship of religion to ethics and, though he is necessarily brief in his summaries, he gives us throughout his

volume valuable glimpses of the way in which religious beliefs and rites found an expression in public and private morality.

CURRENT FICTION.

The King of Alsander. By James Elroy Flecker. New York: G. P. Putnam's Sons.

"Here is a tale all romance—a tale such as only a Poet can write for you, O appreciative and generous Public." These are the opening words of Mr. Flecker's preface, and they are also blazoned conspicuously on the front and on the inside of the book's paper cover. Nevertheless those members of the capitalized Public who are able to overcome a natural distaste for this hubristic appeal to their support will find "The King of Alsander" a reasonably entertaining story. There is a mystical chapter at the beginning and another at the end, which we do not pretend to understand and can only accept with resignation, in the light of the author's preface, as an ebullition of poetic temperament. These are the caviare and the ice-cream. The meat of the story is contained in those chapters which tell how a refined young English grocer, tiring of distributing pounds of tea to an unappreciative world and yearning for the higher things of life, journeys to Alsander and becomes the enlightened King of that ancient and somewhat retrogressive country. There are plots and counter-plots; a mad king and an unscrupulous regent; a romantic mediæval castle, and a very pretty hand-to-hand fight, which is so much more interesting than these modern, long-distance affairs. Finally there are two charming ladies, one of whom, we regret to record, the hero treats in an exceedingly shabby fashion. Mr. Flecker's book inevitably invites comparison with Mr. Anthony Hope's exciting tales of Balkan pretenders, and the pseudo-mysticism in which he envelops his main idea does not save it from suffering by the comparison.

Canadian Nights. By Albert Hickman. New York: The Century Co.

The seven short stories of this volume are marked by a studious attempt to find uniqueness of theme; to follow the laconic, omniscient, parenthetical style of Kipling's earlier tales; and to suggest the attitude towards life of a young London observer struck by the vigor, the extravagance, and the social self-confidence of the more leisurely Canadian classes. In pursuit of the first object, the narrative centres on Montreal. In the focus are the clubs, the rich hotels, the adventurous capitalists, fur dealers, and merchants who make money easily; at the periphery are the woods, rivers, snows, and hardships that furnish a natural and striking contrast. If Mr. Hickman's plots were less invertebrate, the freshness of the scenes and the vigor of his style might sometimes strike out a short story of rare quality. But the best of the lot is the mere tale of how an imperious young lady commandeers a suitor to carry her home, and how he wins her by taking a river trail with his motor that leaves her exhausted with terror. From this the framework degenerates to two stories whose heroes are rich and drunken giants, afflicted with such amusing manias as for threading derby hats on their arms and throwing hotel furniture out through the windows. One of Mr. Hickman's best endowments, it must be confessed, is his ability to make physical encounters really humorous—humorous in an Elizabethan way.

The Twenty-fourth of June. By Grace S. Richmond. New York: Doubleday, Page & Co.

The ethical purpose in this latest book by "the author who portrays the home" is as transparent as the love-story—both being plainer than a pikestaff by the end of the third chapter. When the unstable and purposeless hero has met the girl who embodies every domestic ideal, and by her is suddenly awakened to the fact that life has a number of goals, after all, the narrative waits an inevitable end. An obvious suspense is contrived by Mrs. Richmond, who has the heroine send him packing until June 24, with instructions that if he cannot lay a real achievement at her feet he need not come at all. The world he conquers is that of the dry-goods trade, in which his grandfather can assure him unique advantages; nor are the obstacles he encounters serious. The natural criticism which the austere-minded will level against Mrs. Richmond is that, with all her emphasis upon "wholesomeness," a sweet sentimentality weakens the needed effect of vigor; and this holds true of style as well as general construction.

Mrs. Vanderstein's Jewels. By Mrs. Charles Bryce. New York: John Lane Co.

Mrs. Vanderstein was the still comely widow of a Jewish money-lender, and had the habit of wearing a king's ransom in jewels. It therefore befell her to be lured into a strange house and murdered. The manner of her taking-off was, we regret to say, rather tame and commonplace, since she was merely chloroformed like a cat. In disposing of the body, however, the murderers really achieved the sort of novelty called for in this order of fiction. They hit upon a new place for an inconvenient corpse, namely, a large, a very large flower-box on a balcony. The pot of basil, with its dolorous skull, is quite outdone. How Gimblet, the detective, discovers the house, the crime, the box, the body, and the murderers, is the substance of the story. Gimblet, with his languor, his connoisseurship, and his inductive method—or is it deductive?—bears a somewhat striking resemblance to Dr. Watson's Sherlock. He carries a microscope, and a set of pill-boxes in which he solemnly deposits bits of dust, hairs, and the like. Nothing escapes him, not even the murderer. This is all as it should be, for the purpose. Detective stories are commonly reducible to formula, and the Sherlock recipe is better than most. But in Conan Doyle's own hands it has proved better adapted to short stories than to a mystery novel. Much of the great Holmes's glamour is due to the celerity of his method. This Gimblet is a dawdling gentleman and a garrulous, more, as it seems, by the author's fault than his own. If anything is fatal to a tale of mystery, it is dawdling and prolixity. The material in this book might have been condensed into a fairly effective short story.

A VICTIM OF ROVING.

A Wanderer's Trail. Being a Faithful Record of Travel in Many Lands. By A. Loton Ridger. Illustrated from photographs. New York: Henry Holt & Co. $3 net.

When you turn an apparent tramp from your door in these days, you cannot feel absolutely sure that it is not some college graduate gathering material for a work on sociology whom you are declining to aid. A few years ago, when a freight conductor between Kalama and Tacoma found four men stowed away in the refrigerating box of an empty fruit car, he cursed them all alike as "hoboes," though one of them happened to be a prospective fellow of the Royal Geographical Society, accumulating data for the volume of travel now before us. This can hardly be admitted as a strictly commendable method. It calls the attention much more to the traveller himself than to what he sees, and the traveller who goes in this way is not likely to have a very strong personal claim upon the interest of the reading world.

Mr. Ridger, however, travelled with an open eye and has written a readable book. Starting from England on a tramp freighter, in 1907, at a cost of only three shillings per day for mess money, he made his way to San Francisco, and gradually worked northwards until he reached the Klondyke, laboring at odd jobs only long enough to tire of them, to get sufficient money to reach some other desired point, or to convince his employer that he was too unskilled to earn his wages. By December of the same year he had drifted back to San Francisco, but times were hard there, and before the end of the month he had arranged to work his passage to Japan, by way of Puget Sound and Vladivostock, on a tramp freighter flying the German flag and carrying a Chinese crew. After getting safely through a very hazardous voyage on an unseaworthy vessel, rated A1 at Lloyds' through some legerdemain which he could not explain, the wheel of fortune placed him for a short time in the responsible position of foreign reviser on the *Seoul Press*, the official organ of the Japanese residency in Korea. His criticism of Japanese methods in Korea is intelligent and severe. We quote a few sentences:

> To put it bluntly, the Japanese régime in 1908 stood for wholesale pilfering of Korean soil, ostensibly for military purposes; for the gradual absorption of the industries of the

country, and for the vigorous suppression of the insurgents. . . . Over fourteen thousands of Koreans have been shot down since the protectorate was proclaimed, and not fourteen hundred Japanese have fallen in this butcher's work. . . . Never once has a prolonged appeal been made to the good in the Korean character. Bayonets and bullets have been preferred and have brought in their train only the undying hatred of a race once friendly to the Japanese.

Late in August, 1908, he left Korea, and after passing through Manchuria, sailed down the Chinese coast to Hongkong. Here he arranged for passage on a tramp steamer to Boston, paying his way by service as purser, plus twenty pounds in money.

In January, 1909, he reached England again, his *wanderlust* apparently dead. But the dead soon came to life. April found him on his way to the Transvaal, and a few months later an empty purse forced him to the severe test of underground work as a miner. In the spring of 1910, with one companion and native servants, he set out on a long "trek" northward for the purpose of recruiting native laborers in Ovamboland. This proved wholly futile, so far as procuring laborers was concerned, but it gave material for some very interesting chapters descriptive of the vicissitudes of mismanaged trekking over the wild wastes of South Africa. Incidentally it brought him into contact with many natives who had fled into British territory from the German colony of Damaraland, and he contrasts German harshness towards the African with British mildness, greatly to the advantage of the latter. While peace reigns in Bechuanaland, with a British police force of less than 200, three-fourths of whom are natives, Damaraland is overrun with German troopers and in a constant state of agitation. "Thousands of the natives have been shot down, and such a steady exodus of Hereros has been going on during the last few years that the country is becoming almost denuded of its labor."

We cannot follow Mr. Ridger from South Africa to Zanzibar, Bombay, Ceylon, Burma, Calcutta, and from there, via Singapore and Hongkong, to Japan again, where he found Korean affairs in no more comfortable situation than he had left them, three years before. And Japanese life itself seemed to him to be growing sadder and harder. "The deadly material aspect of twentieth-century Japan struck me most forcibly. Poverty and crime stalked the streets. Ironclads and similar tokens of 'civilization' were drawing heavily on the savings of the overtaxed inhabitants. Speculation, embezzlement, and corruption appeared to be the order of the day."

In Tokio, and later in Hongkong, his book was finished and the manuscript sent home, to be followed almost immediately by the author himself, by third-class on a German mail steamer to Singapore, and from there by a Japanese timber tramp to Antwerp. They had been six hard years, and Mr. Ridger frankly confesses that the burning of the candle at both ends had had its natural effect. If his story leads other young men to follow his example, the motive will at least be something other than bodily ease or material reward.

THE STORY OF A COLLEGE.

A History of Dartmouth College, 1815-1909. By John King Lord. Concord, N. H.: The Rumford Press. $3 net.

Dartmouth is fortunate in possessing so adequate an account of its development as is contained in this volume. It is a continuation of the history of the College and town of Hanover which was published more than twenty years ago by Judge Frederick Chase; it is also based in part on material collected by Judge Chase. In addition, Professor Lord himself has had unusual opportunities for obtaining the fullest information; he has taught at Dartmouth for forty years, and he is the grandson of Nathan Lord, who was president of the College for a generation before the Civil War. After surveying in chronological order the presidential administrations, from John Wheelock to the beginning of that of Dr. Nichols, he wisely adds a number of interesting short chapters on topics like the College Library, Societies, Commencements, Laws, Term-Bills, Bell, and the Connecticut River, Railroads, and Mails. There are good portraits and other illustrations.

To many persons outside the immediate circle of Dartmouth's own alumni and supporters, Professor Lord's volume will be interesting in several respects. It is not generally known, for instance, that the germ from which the Dartmouth College case grew is to be found, more than a quarter of a century before Webster argued the case before Chief Justice Marshall, in a religious dispute in regard to the pastorate and use of the venerable church which still stands to-day at the corner of the campus. This dispute was embittered by the self-will and self-importance of President John Wheelock, a very different kind of man from his father, the founder and first president of the College. The son seemed to regard the College as a family affair, to be managed as he alone saw fit; he wanted, in the words of an unsympathetic trustee, "to be the *omnis homo* of the College." So he increased his enemies and supporters until the dispute spread through the State, and finally the Wheelock party in the Legislature attempted to alter the charter of the old College and establish in its place "Dartmouth University."

A quarter of a century later high feeling arose over quite another matter. President Nathan Lord had become convinced that slavery was an institution of divine origin designed by God, like war and pestilence, as a penalty for sin. He did not hesitate to express his pro-slavery views vigorously in print, and in so doing brought down a storm of Northern indignation not only upon his own head, but upon the college over which he presided. The trustees, who were responsible for the welfare of the College, met; President Lord offered his resignation, and it was accepted. Fortunately, no bitter controversy resulted. Three years later, when the news of the fall of Richmond reached Hanover and the students paraded the streets calling for speeches, the ex-president responded in words of sympathy with the losing side. The students listened quietly, but at the close one of the leaders called for three cheers for the Union cause. They were given with a will, when another sprang forward and called for cheers for a man who had the courage of his convictions. They were given with equal vigor, showing a spirit honorable alike to the students and to their ex-president.

An excellent, though brief, closing chapter chronicles the main features of the notable growth of the College under President Tucker's administration. He at once began to take the alumni into his confidence, going to their annual and special gatherings, and telling them of what had been done and of what he planned to do. Partly as a result of this policy and of his remarkable insight into human nature and educational questions, the number of undergraduates increased during his presidency from 315 in 1893 to 1,107 in 1909, and the number of the teaching faculty from twenty-seven to eighty-four.

PSYCHOLOGICAL ASSIMILATION IN FRANCE.

French Civilization in the Nineteenth Century. By Albert Léon Guérard. New York: The Century Co. $3 net.

A course of lectures delivered at Stanford University in 1913 finds in this book the larger audience and the permanent form which its general interest warrants. Questions generally debated by Frenchmen with heat and special pleading are here discussed coolly and with philosophic candor; and the pedagogic origin of the book has led to a system of clear division, of synopsis, and of bibliography that goes far to simplify a subject of essential complexity.

One simplification made at the outset avoids the many mares'-nests built about the word *race*, of which a popular recent example is Chamberlain's "Foundations of the Nineteenth Century." It is not Chamberlain's Teutonism, but his loose science, to which M. Guérard objects. He will have nothing to do with language or blood or the cephalic index as criteria of a Frenchman. "The bond of unity provided by tradition" is what constitutes a people; "he whose soul is French needs no other credentials." The vagueness of this standard M. Guérard candidly points out, but in this connection to be vague is to be exact. The population of France is a racial medley, and her marked success in the psychological assimilation of her alien children is the best answer to the ever-recurring cry of the decreasing birth-rate. M. Faguet, himself an alarmist, admits that the sons of Germans, of Italians, and of Jews make excellent Frenchmen. The author of an excited ar-

ticle in a recent number of *La Revue*, calling upon his fellow Frenchmen to help him repopulate France, is named Lowenthal!

It is, then, the French tradition of which M. Guérard traces the history and present manifestations. He finds it persisting through apparent dislocations. The Revolution itself was not so revolutionary as the ordinary textbook supposes. It preserved the French concept of absolute sovereignty, while transferring its seat from throne to people. "The Constituent Assembly was simply crowning, in a few weeks, the patient work of the Capetian line." The Civil Code of Napoleon, an instrument of eclectic and moderate character, embodying Roman law, common law, royal decrees, and the jurisprudence of the courts of the old régime, as well as the intentions of the Revolution, has continued with but few changes to govern France through all the political vicissitudes of the nineteenth century.

Starting from this principle of a strong tenacity of tradition among the French, and using a method of careful historical analysis, M. Guérard discusses the social, political, educational, and religious questions raised in France during the last century, and in a final chapter he brings the discussion up to date.

Notes

Henry Holt & Company announce the forthcoming publication of "The Scarlet Wagon," by Claude M. Girardeau, and "Behavior," by John B. Watson. The same company will publish this month five new volumes in the Home University Library: "The Exploration of the Alps," by Arnold Lunn; "The Renaissance," by Edith Sichel; "Between the Old Testament and the New," by R. H. Charles; "Elizabethan Literature," by J. M. Robertson; "Chemistry," by Raphael Mendola.

"The Honorable Percival," by Mrs. Alice Hegan Rice, will be published by the Century Company in October.

The Devin-Adair Company announces the forthcoming publication of: "Beauty and Nick," by Philip Gibbs; "Yourself and the Neighbours," by Seumas McManus; "Your Pay Envelope," by John R. Meader.

"Le Livre en Italie à travers les Siècles," by Leo S. Olschki (Florence: Imprimerie Juntine: $3), is an illustrated catalogue of a collection shown at the Leipzig International Exposition of the arts of book-making and printing. This collection is designed to show the part played by Italy in the development of printing and book-illustration from the fifteenth to the nineteenth century. Examples of all the early Italian printers, and many of the early binders, are given. Over eighty plates, in color, half-tone, and wood cut, embellish the volume.

To aid the Italian immigrant, and to help American librarians in serving their Italian readers, is the purpose of a pamphlet called "Immigrant and Library: Italian Helps," by John Foster Carr (Immigrant Education Society; 35 cents). Following the articles on The Library and the Immigrant, and The Librarian and the Italian, are annotated lists of books for Italian readers. It is not only a useful but a necessary book for any library in a community which has Italian residents.

"Thirty Years' Anglo-French Reminiscences (1876-1906)," by Sir Thomas Barclay (Houghton Mifflin; $3.50), is one of the books of which the interest is tantalizing in the sense that it keeps on promising more than it really gives. Perhaps the original sin of journalism—superficiality—is the explanation of it, for Sir Thomas Barclay first went to Paris as correspondent of the London *Times*. He knows his France well, and was on friendly terms with many leading Frenchmen; yet somehow neither they nor their country quite *live* in his pages. He glances at them, always amiably and intelligently, but with an air of haste and of not seeing very deep, and then passes on. Renan, Boulanger, Blowitz, Gambetta, and the rest—they are but flitting figures here. The volume has, however, one central theme which gives it unity: one should add, timeliness, for it is the theme of the Anglo-French *entente*. As regards the growth of this, Sir Thomas was something more than a looker-on in Vienna. As *Times* correspondent, and later as President of the British Chamber of Commerce in Paris, he had much to do with shaping schemes to bring about a better understanding between the two countries. The final diplomatic steps he details with first-hand knowledge; though his book was completed before he could know that the *entente*, which he thought of as a great instrument of peace, would prove to be part of the material of a terrible European conflagration. Sir Thomas Barclay has included the United States in his travels and observations, though he refrains in this volume from writing about his visits to our country. When he comes to do so, or when he brings out a new edition of these reminiscences, he will be glad to be warned against the slip of speaking of "Mr. Nelson Page, the new United States Minister to *China*" (p. 240).

While written with the English reader primarily in mind, Lord Monkswell's "The Railways of Great Britain" (Dutton; $2 net) has much that will attract students of transportation everywhere, particularly those who are actually engaged in the operation of railways. Although the book from its chapter headings appears only to take up in order the railways of the different sections of Great Britain, and to treat them from the standpoint of traffic and operation, it contains much of generalization on the fundamental economic problems involved. A few illustrations selected more or less at random will suffice to show its character. The policy of division of territory, which has been carried so far by English railways, is held to be more conducive to public advantage than competition, in spite of its undoubted benefits, would be. Government ownership and operation, a very present topic of discussion in England, is looked upon with disfavor, and it is insisted that Continental conditions are not sufficiently analogous to make experience with them of much value. The author recognizes that under Government ownership some reduction in general officers' salaries would probably result, and offers the interesting suggestion that high salaries are paid to induce in subordinates a feeling of self-respect, that they are not a reward for ability, as "the railway service does not offer any particular facilities for a specially good brain to make itself felt." The apparently excessive figure of capitalization per mile, so often contrasted unfavorably with that of our American roads, is explained by the large amount of additional main-track mileage, the generous provision of rolling stock, stations, and signals, and the elimination of curves, grades, and grade crossings. "There is hardly any doubt," says the author, "that they give their customers more for their money than do those of any other country." Methods of accounting, which are usually supposed to have had much to do with the increase in capital securities in England, are not referred to. American readers who have been taught to think that many of our worst accidents have been due to excessive speed of trains, will be startled by the author's apparent obsession by questions of speed. His severest criticisms of English railway operation are reserved for this subject. He refers to the "disastrous effect" of the slowing down of passenger schedules, says that since 1896 the London-Scotland service has "never risen above mediocrity," and apparently feels himself disgraced that British express speeds were for a time "completely put into the shade by those of the best French trains." In concluding this discussion he says: "In course of time, perhaps, some one in authority will realize that it is advantageous for all concerned to get people over the ground as rapidly as possible, and not as at present, at speeds which the railway companies affectionately regard as 'quite fast enough.'"

"The Railways of the World," by Ernest Protheroe (Dutton; $2.50 net), is a trifle top-heavy with British information. Of its 734 closely printed pages, Great Britain occupies 528, Europe receives 61, and the United States 28. It consists purely of description, and that of the most detailed sort. One is curious as to whether the author will succeed in his purpose, expressed in the preface, of stimulating the interest of boys in the subject. Possibly he has in mind only the illustrations, which are profuse, and many of them excellent.

In "Where No Fear Was" (Putnam; $1.50 net), Mr. A. C. Benson furnishes another of his sensitive if not robust commentaries on human life. We have now nearly a score of these little books of familiar discourse. This one, like its predecessors, reflects the mind and temper of a don who is also a man of feeling. Its theme is of precisely the sort to appeal to his eager and almost tremulous sensibility. What he is concerned with is, of course, not physical fear, but the different fears of mind and spirit; timidity, moral cowardice, worry; the fears of youth and age; fear of life and fear of death. Such fear, says Mr. Benson, is not a discipline, like other forms of suffering: "I can never trace the smallest good in having given way to it. It has been from my earliest days the Shadow; and I think it is the shadow in the lives of many men and women. I want in this book to track it, if I can, to its lair, to see what it is, where its awful power lies, and what, if anything, one can do to resist it." The worst fear of all, he finds, springs from the "ghastly doubt" as to whether we are bound for any goal at all, whether there is any meaning in things. But there are many lesser or more primitive fears: the night fears of childhood

which spring from inheritance; the distressing shyness of youth, which is a fear of the unknown; the anxiety of the adult who has his bread-winning fight to make; and so on. Mr. Benson shows how each of these fears, if indulged, becomes a debilitating or even paralyzing force, and how it may be faced and kept in check, at least, by labor, faith, and common sense. This is a book to be placed beside such earlier volumes as "The Altar Fire" and "The Gate of Death."

"Juvenile Courts and Probation," by Bernard Flexner and Roger N. Baldwin (Century; $1.25 net), is for judges, probation officers, and interested laymen rather than the general reader. At the same time, since it is the first comprehensive presentation of the problems and methods of the juvenile court, it has value as a reference volume. Beginning with a discussion of the legal principles underlying the juvenile court, the authors take up in order the organization and procedure of the court, probation, reports, and statistics, and the blank forms employed in the work of the officials connected with this institution. Pictures and plans add to the interest of the text, which is marked by common-sense and a recognition of the supreme importance of the human factor in the activity of one of the most promising developments of our judicial system.

May a volume on peace venture out into the open in these mobilizing times? One does so, regardless of the risk, as the bearer of ex-President Taft's four addresses before the New York Peace Society. The little book is entitled "The United States and Peace" (Scribner; $1 net), and takes up the Monroe Doctrine, the protection of aliens, arbitration treaties "that mean something," and the history of attempts at federation for the sake of the judicial settlement of international disputes. It is interesting to note that Mr. Taft's apprehensions of the effect of the joining of the "A B C Powers" with us in action regarding another American republic have proved needless. While all of the addresses in this volume are marked by both knowledge and poise, their author is at his best when he is setting forth the desirability of arbitration treaties that shall really bind their signatories to a peaceful settlement of disputes.

In "Men and Women of the Italian Reformation" (Scribner; $3 net) the indefatigable Mr. Christopher Hare has produced another volume of considerable interest. The general reader scarcely knows that there was an incipient Reformation in Italy, and he will therefore be surprised to learn of Calvin's budding disciples in Ferrara and of Valdés and his circle in Naples. Sadoleto and Ochino, Cardinal Pole and Vergerio, Paleario and Carnesecchi are among the chief men described by Mr. Hare, while Renée, of France, Olympia Morata, Vittoria Colonna, and Giulia Gonzaga are the famous ladies to whom he devotes special attention. In most cases, it will be seen, these Italian reformers aimed merely at a purifying of the Roman Church, and not at a schism or secession to Protestantism. But there were actual martyrs among them—none more valiant than the venerable Paleario—and it was worth while thus to introduce them to American readers. Mr. Hare lays no claim to historical depth; but he is an excellent compiler. Seven portraits illustrate the volume, in which we have noticed various misprints.

In a recent volume entitled "The Historical Christ" (Chicago: The Open Court Publishing Co.), Dr. F. C. Conybeare investigates the views of J. M. Robertson, A. Drews, and W. B. Smith, who, for various reasons, agree in asserting that the man Jesus never lived. Mr. Robertson, who appears to be prejudiced against Christianity, tries to prove his negative by the aid mainly of the once favored, but now discarded, hypothesis of comparative mythology, the solar myth. Dr. Drews, after stating candidly that "the belief in the historical reality of Jesus is the chief obstacle to religious progress," seeks evidence of all sorts to prove that Jesus never lived, leaning heavily on Robertson in matters mythological and philological. Professor Smith seems to have been led to the same conclusion because of difficulties in connection with Paulinism. Discarding, of course, the miraculous, and rejecting as illogical the ecclesiastical doctrine of the God-manhood of Jesus, and yet unable to account for Christianity on the assumption that Jesus was a man, he jumps to the logical conclusion that Jesus was a god or God. This hypothesis, once formed, controls the treatment of the sources. The God Jesus never came into the world, never lived on earth, never said, for example, "Unto you hath been given the mystery of the kingdom of God" or "What I tell you in the darkness, speak ye on the housetops." For the Gospels contain not an historical narrative of the things said and done by Jesus, but symbolical annals of the God Jesus. In order to account for these annals, it would be necessary to assume, even if there were not evidence to prove, the existence of a pre-Christian secret Jewish cult of the God Jesus.

Dr. Conybeare investigates these views. Personally, he dislikes the bishops and other clergy, abhors miracles, and despises Nicene theology; but he is a competent philologist, and that means that he has the historical faculty. Pleading for fair play, he asks only that the writings of early Christianity be treated precisely like other documents; that the argument from silence be cautiously employed, for fear of innocently assuming that "the whole of the ancient literature, Christian and profane, of the epoch lies before us, instead of a scanty débris of it," and that before rejecting passages as interpolations care be taken lest one be fitting facts to theory, not theory to facts. Such is the spirit of the book as expressed in preface and epilogue. In the body of the work, however, where the detailed investigation is carried on, there is page after page of the most relentless criticism. A single passage may be quoted to illustrate the controversial style of the Oxford free-lance:

> Sensible that their hypothesis conflicts with all we know about the Jews of these three centuries [*i. e.*, B. C. 200—A. D. 100], these three authors insist on the esoterism and secrecy of the cryptic society which in Jerusalem harboured the cult. This commonest of literary tricks enables them to evade any awkward questions, and whenever they are challenged to produce some evidence of the existence of such a cult they can answer that, being secret and esoteric, it could leave little or no evidence of itself, and that we must take their *ipse dixit* and renounce all hope of direct and documentary evidence. They ask of us a greater credulity than any Pope of Rome ever demanded.

The few travellers in Paris who visit the "Arènes de Lutèce," just back of the Jardin des Plantes, are surprised to find an almost perfect example of the arena and lower amphitheatre of Roman gladiatorial games. Only one-half of the ellipse is visible, and the rows of stone benches have been restored, following scrupulously the descending lines of steps. The remainder is still covered by the débris of the ages and by buildings which, till lately, were used as stables for Paris omnibus horses. The coming of automobiles has given lovers of Old Paris the opportunity to secure the complete excavation of ruins which served Gallo-Roman amusement when Julian, named Emperor here and Apostate afterwards, held command in his beloved Lutetia. The City of Paris offers 63,620 francs for the work—only a little over $12,700—but the covering débris can be removed easily. The convent of English nuns which existed here till the Revolution was entirely demolished at that time; it dated from the days of Penal Laws in England. The later stables were only temporary constructions. The half already restored is enlivened by other games, played by children of this populous quarter.

"The Summer Paradise in History," by Warwick Stevens Carpenter, is an interesting example of modern railway advertising. The book is issued by the Passenger Department of the Delaware & Hudson Co., as a successor to Phelps's "Literary and Historic Note Book," published by the same company in 1907, and now out of print. Following a brief physiographical and historical sketch of the "Gate of the Country," the book takes up the various places of historical interest along the railway line, including Lake George and Lake Champlain, and gives careful accounts of each. The alphabetical arrangement of topics makes the volume easy to consult, while the absence of time-tables, hotel lists, and all the other customary paraphernalia of advertising literature shows commendable restraint. The presswork is attractive, and the volume is not too large for the pocket.

Under the engaging title "The Age of Erasmus" (Oxford University Press; 6s. net), Mr. P. S. Allen, favorably known for his very careful edition of the Letters of Erasmus now in progress, presents a group of eleven lectures delivered at the Universities of Oxford and London. The plan of these lectures is fairly uniform throughout. In each case it is evident that the author has selected some person or some work of the period as the basis of his discourse, and upon this has strung a series of comments and anecdotes more or less connected with the subject which stands at the head of the lecture. When he has filled the necessary number of pages he stops; but there seems to be no good reason why he might not have gone on indefinitely. The individual lectures have generally a beginning, but no ending, and the same may be said of the book as a whole. It is a collection of scraps often interesting, but often also commonplace. Mr. Allen has a fondness for moralizing and generalizing which leads him into occasional stretches of downright dulness. His anecdotes are often trivial without enlightenment on the main subject in hand. The chapter on Force and Fraud is introduced by an eloquent comparison of the Middle Ages with the sixteenth century,

in which the former are represented as a time of "bestial cruelty and reckless ignorance," while the latter is described as an age when men escaped from the "thraldom of terror . . . into light, air, freedom, activity, etc." Then follow illustrations of the brutality of the sixteenth century calculated to chill the blood of the most indifferent. The sequence is not clear. In brief, we feel that Mr. Allen's undoubted knowledge in the field of sixteenth-century culture has been misapplied in this effort to popularize it. What we should greatly like to see would be a serious attempt on his part to present the same subject in good literary form and on a scale commensurate with its interest and importance. When he does this we trust that he will not allow his proofreaders to display such stolid indifference to German orthography as to pass "Lubeck," "Osnabruck," "Munster," and "Maine" (for the river Main).

NOTES FROM ABROAD.

In England, as presumably in the other countries involved, the war has killed the publishing business. Even atlases, war books, and histories have only a small circulation compared with the amount of general reading that has been dropped. The study of the great Revolutionary and Napoleonic wars has been commended to English readers as suitable to the occasion, but a correspondent of the *Daily Chronicle* pronounces this the worst possible prescription. "I happened accidentally to be reading about them," he says, "when this war came upon us and spoilt that reading promptly. The sympathies are all wrong; you have the wrong allies, wrong enemy, wrong everything."

As for the literary men whose occupation has been broken in upon by the war, the more facile of them are finding immediate opportunities in journalism. Only a few months ago H. G. Wells issued a book which poured scorn upon the inefficiency of his compatriots. Their army, their navy, their civil service—the administration of it all was hopelessly incompetent. Unchecked by the practical refutation of his criticisms, Mr. Wells has now applied himself with equal confidence to the task of redrawing the map of Europe as it will have to be after the war. As two or three newspaper articles have sufficed for the exposition of his scheme, one wonders what problems will engage his attention next.

The war has revolutionized the programmes of Sir Henry Wood's promenade concerts in the Queen's Hall, London, this autumn. Each concert is to open with the National Anthem and close with the Marseillaise. The usual practice of making every Monday a Wagner night has been discontinued, and compositions of Russian, French, and English origin have been substituted. It is announced that, in consideration of "the patriotic feelings of the enormous audience," all works by living German, Austrian, or Hungarian composers are to be banned during the present season.

Two leading Flemish prose writers, Frank Lateur, better known by his nom de plume Stijn Streuvels, and Herman Teirlinck, have been active during the first fortnight of the German invasion as war correspondents for Dutch and Flemish papers. But for reasons of secrecy, which every one will appreciate, strict orders from the military headquarters in Brussels have now practically excluded the war correspondent from the field of action. This was a serious disappointment, especially to Stijn Streuvels, who had already planned a great novel on the war. But he was not to be thwarted. He has simply enlisted and gone to the front as a volunteer, if we may trust reports concerning him that have reached the Dutch papers. Stijn Streuvels is a nephew of that great lyrical poet, Guido Gezelle, Flanders's most musical singer of nature. The novelist, Herman Teirlinck, is also said to have joined the army, now that his work as a war correspondent has practically come to an end, and Maurice Maeterlinck may have taken a similar step by the time this note reaches the *Nation*. The *Nieuwe Rotterdamsche Courant* was allowed to publish a letter which he wrote to his friend, Mr. Gerard Harry, a Brussels journalist:

> My dear friend: I wonder whether this note will ever reach you. I should like to have gone to Belgium to offer my services to the War Office. In spite of my fifty-two years I could make myself useful as a civic guard. But the sudden mobilization of the French army has surprised me and prevented me from travelling. I am not yet sure when I shall see my way to depart. If I cannot get away, I shall have my name put on the lists of the Belgian volunteer corps, as fight one must at all costs against the enemy of the human race, the terror of the world. Do you think they will take me? In the meantime I am helping here in bringing the harvest home. Only women and children are left in this place. The heroic march of France to the front is the most splendid sight ever seen. Yours, etc.

Science

WHAT IS SCIENCE?

Problems of Science. By Federigo Enriques. Translated by Katharine Royce. With an Introductory Note by Josiah Royce. Chicago: The Open Court Publishing Co. $2.50.

In his Introductory Note Professor Royce assigns the work before us to the field of "scientific methodology." "Methodology," however, though conventionally correct, is hardly enough to remind us that the subject involves the deepest issues of logic and metaphysics. There is no question of profounder significance for philosophy to-day than the question, What is science? Remembering that professional science and the scientific movement are distinctively modern, one might suppose that science is simply the latest, and by no means the last, term in a continuous evolution of human thought and culture. But the average man of science would tell us that science stands for the first direct contact, which is also, as far as it goes, a final contact, with an independent and non-human reality in the form of "facts." Yet at the same time science makes use of theories and hypotheses, and the process of constructing an hypothesis bears a suspicious resemblance to what in the field of literature we call "a work of the imagination." What, then, is the relation of hypothesis and fact? Do the facts of science shape the hypotheses, or do the hypotheses shape the facts? Or may both be true—and how?

Discussion of the question has brought out in recent years (since Mill's "Logic" and Jevons and Clifford) a fairly sizable literature of "methodology," to which the chief contributors have been men of science, like Mach, Karl Pearson, Ostwald, and the late Henri Poincaré. The philosophical critic is apt to feel that these contributions from science show an imperfect grasp of the question at issue, in particular a failure to realize how profoundly, and how long ago, the question was stated for philosophy by Kant in his "Critique of Pure Reason," which is really from first to last a critique of science. On the other hand, the student of philosophy who attempts a criticism of science is hampered by a lack of intimate and first-hand knowledge, especially in the difficult fields of mathematics and mechanics.

The work before us is perhaps the most considerable contribution to the discussion since Mill. It shows some of the critical limitations of the scientific view, chiefly in the assumption that nature, or "experience," passes out to us a set of ready-made facts—as if the genesis and logical status of a "fact" were not the whole matter at issue. Besides this traditional empiricism there is also a strain of unconscious pragmatism, shown in the tendency to treat scientific theories merely as instruments of discovery, which is interesting, as Royce remarks, because the first Italian edition of the book (1906) antedates most of the recent discussion of that subject. On the other hand, the interdependence of knowledge and will, which lies at the base of pragmatism, is flatly rejected. Thus the total outcome of the theory is rather uncertain. Nor does the treatment properly cover the whole of science. Most of the book is occupied with mathematics and mechanics. Biology and the social sciences (so called) receive less than twenty pages at the end, where the mechanical theory is reconciled with a (pseudo) teleology and with a (pseudo) free will, while at the same time it is shown that in these fields the mechanical postulates have no "scientific value"—that is, they lead to no discoveries. Apart from the difficulties inherent in the subject, the author's style, his disconnected paragraphs (reminding one somewhat of a syllabus), his abrupt transitions, his too confident assumption of detailed knowledge on the part of his reader, not to speak of a certain trace of the mathematician's lingo, to be expected doubtless from a descriptive geometer, all combine to make the work difficult reading. Mrs. Royce appears to have performed her rather severe task with patient accuracy—for no art of translation could impart fluency. There are a few typographical errors, increasing towards the end, and at least one passage that is unintelligible (p. 385), but there is no evidence anywhere of seeking refuge in obscurity.

Yet the reader who persists will be rewarded with the gradual attainment of a synthesis of conceptions which is impressive both for comprehensiveness and for fineness

of elaboration, a synthesis not less impressive because at many points defective. Perhaps, indeed, the author is not committed to completeness. What he seeks to demonstrate is an ascending development of scientific conceptions from the elementary postulates of geometry, through mechanics, dynamics, physics, and chemistry, pointing, at least, in the direction of the sciences of life—a development which is at the same time a process of addition. Looking at the series of conceptions from the lower end, we might say that all science is but the logical elaboration of the postulates of mathematics, and in particular of geometry, yet not of "pure" mathematics. For, strictly speaking, there is no pure mathematics. The postulates of mathematics are simply the most elementary summations of sense-experience, made unconsciously in the pre-critical stages of thought, and thus invested with the appearance of self-evidence. Mathematics is thus the beginning of science and the oldest of sciences, just as the sciences of life are the newest. As we pass from science to science—for example, from geometry to Newtonian mechanics—new postulates are added, which are similarly derived from experience. This process of addition is called "association." But at the same time, in a process of "abstraction," the new and the old postulates become organically related in a more comprehensive conception. And—what is remarkable—it seems that the new postulates, or assumptions, do not merely modify and correct the old, but furnish a kind of welcome extension and clarification of a meaning which now appears to have been foreshadowed in the older postulates themselves, yet not discoverable except through new experience. Thus the modern geometry has shown, and must have shown to Euclid, that the Euclidean geometry is not, as we had supposed, once for all complete and independent of correction by experience; and the postulates developed in the modern theories of electricity and thermo-dynamics, and in the theory of relativity, call for corrections in the Newtonian mechanics which Newton himself must now concede to be necessary, or at least permissible.

Yet perhaps the synthesis is not quite so sweetly harmonious as just painted. For from the very beginning, in the formation of our conception of space, we are confronted by a dualism between the material supplied by the sense of sight and the material drawn from sensations of touch and movement. Our conception of space is a synthesis of these apparently disparate sensations, and the postulates of geometry, which define the characters of space, are derived partly from one sense, partly from the other, as Enriques undertakes to show in distributive detail. This duality persists through all the later developments of science and forms the dividing line for a whole group of contrasts, the type of which is the contrast between the mechanics of Descartes and of Newton, the mechanics of pure space and the mechanics of "force." It will be remembered that Descartes attempted to resolve force into change of place; and according to Enriques, it is the Cartesian, or visual, motive which usually underlies an insistence upon a "mechanical" explanation. Again, the Cartesian prefers to explain by models, while the Newtonian is satisfied with equations; the Cartesian tendency represents "association," the Newtonian "abstraction"; and the Cartesian stands for the internal development, or organization, of science, the Newtonian for its external development, or extension. The final meaning of the distinction is left far from clear, but in general we may say that the Cartesian is the lover of clear ideas, while the Newtonian is eager for discovery. Or, we might add, the Cartesian is an intellectualist, or rationalist, the Newtonian a pragmatist.

It is to be regretted that this suggestive analysis of scientific conceptions into their sensuous sources is not carried further. The comparative significance of the senses is an unwritten chapter both in psychology and in logic. Enriques is doubtless justified in suggesting that "intellectualism" is connected with a partiality for vision. A comparison of our intellectual with our æsthetic vocabulary points to this; and it is probably the purely passive quality of visual images, when dissociated from muscular feelings, that furnishes the motive for pragmatic objections. Cartesianism, again, is only the most deliberate expression of the oft-noted French "lucidity." But it still remains to ask whether vision, as the most developed of human senses, has not a superior cognitive authority. On the other hand, present science is content with a synthesis of vision with touch and movement, which, as Enriques notes, does not exhaust our knowledge of the object. The vibrations of a cord we treat as the exclusive reality, the sound as an extraneous addition. For a science which purports only to give a true account of experience such considerations should be highly instructive, but what would be the consequence of a larger synthesis Enriques does not pause to ask. Evidently nothing less than a complete renovation of the principles of science.

Thus it appears that the ancient conflict between reason and experience, the Aristotelian conflict between form and matter, the Kantian conflict between *a priori* conceptions and *a posteriori* perceptions of fact, are all resolved into the difficulty of uniting our visual experience with the experience obtained from the other senses. By this resolution Enriques conceives the problem to be solved. As for Kant's problem, how theories evolved by us could be afterwards verified by facts—how, in short, we are able to make true predictions—this he attributes to the darkness preceding the era of evolution, when all distinctions were hard and fast. In point of fact, no calculations are verified exactly, but they are verified ever more approximately and comprehensively. "And thus the positive theory of knowledge reconciles strife by a more lofty view of scientific progress."

"A more lofty view," we venture to suggest, which dismisses the problem. One is tempted here to repeat James's witticism about the servant in "Midshipman Easy" who excused her illegitimate child on the ground that he was "such a very little one." Enriques seems to think that, while an exact anticipation of facts by theories would be a ground for wonder, an approximate anticipation is perfectly simple, whereas the fact of prevision, if it be more than hit or miss, is as much of a miracle in one case as in the other. Nor less of a miracle when touch experience is foretold on the basis of vision. Indeed, one of the results of Enriques's analysis is to make us wonder how this synthesis happens to be accomplished, and how far each of the parties to the synthesis is really satisfied.

Following the tradition of empiricism, Enriques assumes complacently that prevision is fully accounted for by similar experience in the past. But Hume (whom his extensive learning seems to have omitted) could have told him that no amount of previous experience, regarded simply as an accumulation of facts, would furnish the slightest *ground* for any prediction whatever; and Kant, startled and convinced by Hume, could then explain the success of scientific prevision only on the ground that the whole system of scientific theories is a reflection of the human mind, and therefore (as a pragmatist would say) in some fashion subject to our control. And this human element, as even Kant began to show, is involved, not merely in the prediction, but in the perception of the basic fact. Even so hard and commonplace a fact as a chair or a table is not merely given, but formed. The possibility that science is the reflection of a human point of view and one of the expressions of human culture, Enriques will not even pause to consider. And yet it is the seemingly unavoidable presence of the human element that sets the problem for science. Except as we have a voice in determining the conditions of verification and the constitution of a fact, how can we venture to predict? But if we have the sole voice how will a system of scientific facts differ from a work of the imagination?

Coming from the study of a Psychotherapeutic Institute, and from the pen of the author of a number of serious works on psychopathological and psychological subjects, Boris Sidis's "The Psychology of Laughter" (Appelton; $2 net) leads the reader to look for something of a contribution to the subject treated. He will, however, find himself disappointed; for the writer makes no advance beyond the well-known positions of Darwin, Spencer, and Bain; and, apart from some cogent criticism of Bergson's discussion of laughter (p. 149 ff), deals with no new conceptions. The book, in fact, proves to be little more than a source-book of jokes, witticisms, and examples of humor and of the ludicrous, not always judiciously selected, but arranged to illustrate the positions gained by the author, mainly from the writers above referred to.

Drama

GEORGE FARQUHAR.

A Discourse on Comedy, The Recruiting Officer, and The Beaux Stratagem. By George Farquhar. Edited by Louis A. Strauss. Boston: D. C. Heath & Co. 60 cents.

This volume is scholarly, convenient, and compact; it appeals to that growing class of readers who like texts as they were originally worded and spelled, but not—except for mere pride of ownership—as they were originally bound and printed. The editorship of Mr. Strauss, who works in the "Dramatic Section" of this series under the general supervision of Prof. George P. Baker, is thorough, vigorous, and usually competent. The introduction reveals a thoughtful and fertile mind, and its English possesses a certain eloquence in spite of, or in virtue of, its academic rotundity.

Mr. Strauss could hardly evade, and has no wish to evade, the vexed question of the morality of the Restoration comedy. In the endeavor to steer a middle course between Lamb and Macaulay, he is embarrassed by his simultaneous acceptance of three warring opinions—that good art must be morally sound, that Restoration comedy is good art, and that Restoration comedy is morally unsound. The resourcefulness of Mr. Strauss is equal to this perplexing trilemma. The morality of Restoration comedy, he thinks, is both sound and unsound—unsound because it reflects faithfully the manners of a depraved age; sound because, in the very faithfulness of that reflection, it is morally enlightening to those who watch institutions and ideals from the far perspective of history.

In one sense—whether it is Mr. Strauss's precise sense or not we hesitate to affirm—the proposition that this famous comedy was noxious in its own time and place, and has since become harmless or helpful—is entirely defensible. The union of charm and evil which makes vice maleficent may be dissolved in the course of time by the mere passing of the charm. So the courtesan who was demoralizing at fifteen may become at fifty-five an edifying example without the slightest improvement in her essential morality. The Restoration comedy is such a courtesan.

Mr. Strauss's discussion of the period, which is too complex to epitomize, is interesting and suggestive throughout. His acumen sometimes ravels out into subtlety, and elsewhere, as in his curt dictum that "comedy of manners is necessarily immoral," his generalizing is precipitate. In the able review of Farquhar himself, he shows a fondness for discrimination that is somewhat obstructed by a fondness for Farquhar. We should say that Mr. Strauss is quite sound in his high praise of the wit and springiness of Farquhar's dialogue, that he is too respectful to his characterization and too indulgent to his scatterbrained plots. As to morals, Mr. Strauss strikes us as uneven; Rochester or Buckingham would have been content with his leniency to the fast and flashy "Recruiting Officer," while he condemns the bedroom scene in "The Beaux Stratagem" with an emphasis strong enough for Bunyan or Collier.

Of the Farquhar reprints, only the briefest mention is permissible or necessary. The "Discourse upon Comedy," which Mr. Strauss appraises very justly, is worse written than the plays, but is, like them, clever and careless in composition, with good sense enough to float its nonsense, and showing in the tone a not unattractive mixture of bumptiousness and humility, of *bon enfant* and *enfant terrible*. "The Recruiting Officer," admired by Mr. Strauss, seems to us, after homage is duly rendered to its robust and sparkling English, little better than a tray or counter for the exposure of lewd anecdotes and silly tricks. "The Beaux Stratagem," equally good in dialogue, is better plotted and better charactered, but is, after all, a loose and light affair, a whisky-and-soda with more soda than whisky. Mr. Strauss finds in these two plays an improvement on Farquhar's earlier styles, and an anticipation of the eclecticism of later comedy.

The agitator, Emma Goldman, composedly glances at some plays through red spectacles in "The Social Significance of the Modern Drama" (Boston: Richard G. Badger; $1 net). In little over three hundred pages she summarizes thirty-two plays of nineteen separate authors in six different countries. The comfort of wearing red spectacles to survey the drama from Ireland to Russia is that one sees exactly what one looks for. One can find the revolutionary spirit not only in "King Hunger" of Andréev and "Justice" of Galsworthy, but even in Hauptmann's "The Sunken Bell" and Rostand's "Chanticleer." The author, innocent of anywhere attempting an analysis of the social philosophy of the different dramatists, states the alleged meaning of each play in a few cursory remarks. Her time is thus left free to rehearse the plots in the facile manner of a lecturer to uncritical audiences. Of "Pillars of Society" she declares: "*Consul Bernick* . . . sells his love for *Lona Hessel* in return for the large dowry of her step-sister *Betty*, whom he does not love. To forget his treachery he enters into a clandestine relationship with an actress of the town." Now a pause would have brought to mind, besides minor matters, that first soul-searching conversation between Lona and Bernick, where the "clandestine relationship" is seen to have been a mere youthful escapade begun before Betty had returned home, even before Bernick had learned of her inheritance, and, what is more important, that Bernick was too cool in his calculations to seek forgetfulness in any such manner. A little reflection, too, would have sufficed to avoid such pell-mell passages in the style as: "Patching up or reforming one sore spot merely drives the social poison deeper into the system." To the uninformed the tales interpreting events, characters, and purposes in this headlong manner may be very interesting, but how are they going to induce even the uninformed to wear the red spectacles of the revolutionist?

Music

AMERICAN OPERA IN PARIS.

PARIS, July 30.

Natural curiosity has been excited by the Wagnerian representations given in Paris last spring by an American opera company. The German text was sung, whereas the Paris Opéra was giving at the same time "Parsifal" in French, according to its rule as a National Academy of Music. What was the real musical success of the American company? A judicial and not unsympathetic appreciation has been published by M. Gabriel Fauré, director of the French National Conservatory of Music, whose graduates have so long furnished the majority of French composers and singers and musicians of name:

The success of these representations organized by the Boston Opera Company was considerable. Yet all was not perfect, and the value of the interpretation varied, not only from "Tristan" to the "Meistersinger" and "Parsifal," but also among the different elements of each work. Sometimes it was the orchestral direction; sometimes the orchestra itself showed hasty and incomplete preparation; the chorus, which was oftenest so excellent that it made us regret we have not its like in Paris, sometimes lacked cohesion, decision, and exactness; and, while the decoration, costumes, and scene-setting of "Tristan" and the "Meistersinger" showed true art in exactness, color, and movement, that of "Parsifal" put our taste to a rude test. On the other hand, interpreters of incontestable talent, but different origin, seeming to have been brought together by chance, did not suffice to give such representations the necessary character of unity.

This inevitable lack of unity, with the reproach that a somewhat mechanical exactness is not accompanied by a corresponding expression of feeling in voice and acting, may be taken as summing up the European criticism of American execution of operatic music. On the latter point, M. Fauré does not touch; but he goes on to some very instructive considerations on equally inevitable national differences in the execution of all music, particularly that of Wagner:

Between the German and the French interpretation of the Wagnerian drama, an ethnical question rises from the start, and singularly aggravates the difficulty—I would almost say the impossibility—of translating exactly into French that which has been thought and written in German, if you take account of the connection which is closer here than ever before between thought and words and music. . . . To judge this, we have first to acknowledge—and it is not altogether easy—that in this drama the music only participates; . . . that Wagner is first of all a dramatic poet, and undertakes music only as he judges it necessary to the complete expression of his thought; . . . that the artist who has brought music to such a height and so widened its domain became a musician only by way of "consequence." And we must also remember that Wagner wished to create a "German" art.

This German art Wagner built up by

dramas and the subjects and ideas which he treated in them, and by the developments which he gave them, much more than by his music, which, born as it is of the poem, and, in the poem, of the thought and words, still speaks a universal language. But it is precisely this association, this servitude of the music to the poetic text—not to speak of the special difficulties and obscurities found sometimes in the text—which defy all rigorously exact translation. Otherwise, to avoid destroying the sense of a musical phrase or the value of accent, which is always important, we must be resigned to contortions in our beautiful clear language. . . . Moreover, we cannot forget that German artists have this natural advantage, that the fabulous or historic heroes whom Wagner sets moving in his dramas have peopled their imagination from childhood. When they have to express the feelings with which Wagner animated such heroes, they express what they understand with a German soul and heart. . . .

It has often been said—particularly, in the days of Wagnerian fanaticism—that too developed vocal qualities injured the interpretation of Wagner's personages—and that even an approximate declamation in connection with the melodic line was preferable. Luckily, this opinion has been changed. To declaim such rôles is well; to declaim them and sing them at the same time, to sing with fine voices and exactness and expression, is far better. And these conditions we are sure to find at home, at least, as well as in Germany. S. D.

Edgar Stillman Kelley was to have conducted, at the recent MacDowell Festival in Peterboro, the movement from his "New England Symphony," in which he uses as motives diverse American bird songs. He was not able, however, to do so, the war having detained him in Germany. As Mr. Kelley had the manuscript of his symphony with him, it was necessary to omit the "Birds" movement from the Peterboro programme.

New Orleans will have a season of opera in French, beginning on November 12. It will comprise forty subscription performances. Among the operas to be sung are "Manon," "Carmen," "Thaïs," "Faust," "Herodiade," "Sigurd," and "Louise"—seven French operas, three of which are by Massenet; Wagner's "Lohengrin," and nine Italian operas: "Aïda," "Rigoletto," "Lucia," "Cavalleria," "Pagliacci," "Trovatore," "Butterfly," "Tosca," and "La Bohême."

St. Paul and Minneapolis, the "Twin Cities of the West," are so close together—their centres being only ten miles apart—that it has always seemed needlessly extravagant for each of them to have its own orchestra. It is now announced that the St. Paul Orchestra has been disbanded, as the annual deficit (about $50,000) exceeds by $10,000 the largest guarantee fund it has been found possible to raise. It may be assumed that the excellent Minneapolis Orchestra will now supply the music lovers of the neighboring town with an annual series of concerts.

Germany alone, of all leading countries, was not represented officially at the recent meeting in Paris of the International Musical Society; but there were delegates from Bavaria and Baden. The proceedings and concerts were mostly concerned with French music of the last three centuries.

One of the most prominent of English suffragettes, Dr. Ethel Smyth, has private reasons for deploring the hostilities between England and Germany. Her opera, "The Wreckers," had been accepted for production at the Munich Royal Theatre next February. It was performed at Leipzig several years ago. Dr. Smyth is also engaged on a new comic opera which was to have been produced at furt in March. It is not yet orchestrated.

Art

GOTHIC ARCHITECTURE IN SPAIN.

Some Account of Gothic Architecture in Spain. By George Edmund Street. Edited by Georgiana Goddard King. New York: E. P. Dutton & Co. In two volumes. Illustrated. $2 net.

George Edmund Street was one of the last, and one of the most scholarly, among the leaders of the Victorian Gothic movement in England. He died thirty-three years ago, and the first edition of his "Gothic Architecture in Spain" had appeared some thirty years earlier. It took its place at once as a standard work on the subject; and nothing has since appeared to challenge its long-established title to popular favor. This fact is the more remarkable when we consider the changes that English taste has undergone and the enormous volume of architectural literature that has been published since 1860. Miss King has done well to edit a reprinting of Mr. Street's work, and the publishers to produce it in two attractive volumes at a popular price.

The work is reprinted with the original woodcuts and plates, which have suffered somewhat from process-reduction and the wear of long service on the old blocks. The editor's work is confined to notes at the end of each chapter, in which she records the changes that time has brought about since Mr. Street wrote, having herself faithfully visited nearly every building he has described. For the tourist it would have been an advantage if the corrections had been brought into nearer relation to the corrected text; but the notes are for the most part excellent, revealing a particular interest in the paintings of the French and Spanish Primitives in the various churches.

It is hardly necessary to review in any detail the general substance of so old and well-known a book. Mr. Street's critical taste was generally excellent, and it is remarkable to how slight a degree the broader views of our day challenge the estimates he has recorded. It is well he confined himself to the Gothic architecture of Spain, for he shared the current "Gothic" dislike of his time for Renaissance art in general, and could see no charm in the picturesque products of the Plateresque style which architects to-day find so interesting and instructive.

We have received from Rudolph Lepke's Kunstauctions-Haus, Berlin, the handsome illustrated sale catalogue of the Baron Oppenheim Collection. For years this collection, which was generously accessible at Cologne, has been famous. The sale of the Italian potteries only enhanced the coherence of the display. We have in the second volume of this fully illustrated folio catalogue an extraordinary series of fine examples of old Rhenish stoneware, Siegen, Frechen, and Raeren. These massive and highly decorative pieces are still often called from the region where many were found *Grès flamand.* The Oppenheim examples, some hundred in all, are famous for size and quality. Many have been reproduced by Molinier, Solon, and other authorities. Besides the stoneware, the section of industrial art includes painted glass—especially a fine Rhenish series of the fourteenth century—some Renaissance statues and wood carvings, a few miniatures, and porcelain figurines. The first volume is devoted to the paintings, of which there are forty-four, nearly all of the Northern schools. The finest, possibly, is a delightful interior by De Hooch signed and dated 1658, but a Terborch presses it close, and so does a family group by Gonzales Coques, while admirable sketches by Hals (two), Rubens, and Rembrandt are noteworthy items. Tenier, Keyser, De Heem, Verspronck, Ambrosius Benson, Matsys are well represented. There is a splendid Hobbema, and a Kessel which is quite the equal of a Ruysdael, who, however, is also represented by a routine example. Of high historic interest is the signed Legend of St. Eligius by Petrus Christus. With the single exception of Velasquez, the attributions seem trustworthy. Everything considered, it is a fine lot of little Dutch masters. The auction is set for the 27th of October and following days.

Finance

THE GERMAN VICTORIES AND THE MARKETS.

The series of notable victories over the French by the invading German armies, the fall of the Namur forts, the advance of the Germans from Belgium into France, their capture of several French towns, and their concerted movement towards Paris, have had a somewhat curious effect on financial sentiment in this neutral market. When similar Prussian victories were won, in July and August, 1870, neutral markets responded with a show of cheerfulness. When the French were beaten at Gravelotte and Marshal Bazaine surrounded, prices rose on the London Stock Exchange and the English bank rate was reduced. The surrender of the French Emperor and his army at Sedan, on September 2, sent British consols up, and, in the words of a contemporary reviewer, "influenced favorably the market for foreign securities," caused a 6-cents-per-bushel break in wheat, and in the Lancashire cotton trade brought about "a large business at advancing prices."

Neither Stock Exchange nor cotton market was open, to reflect the feeling of finance and trade as to the past week's German victories. But the one great speculative market which was doing business—that for wheat—rose wildly, and the motive was clearly expectation of a long and destructive war, which would sustain the high existing

prices. In all New York financial circles, meantime, a feeling of discouragement prevailed because of the nearly unanimous inference that the German successes meant a longer conflict than had originally been expected. The presumption seemed on every hand to be that a desperate resistance, and perhaps a military stalemate, considerably prolonged, would be the outcome.

It will be perceived that the inference drawn from the German advance—this week, at any rate—was exactly opposite to the inference which the markets drew in 1870. Each sweeping Prussian victory, on that occasion, was instantly interpreted as bringing nearer than had been expected the inevitable end, as shortening the war, and therefore as giving ground for reviving financial confidence.

To explain the totally different point of view in 1914, one must turn to the contrasts between now and 1870 in the European political situation; to the far greater number of governments engaged; to the fact that three or four important land campaigns are now in progress—not all to the disadvantage of the Allies—as against only one in 1870, and to the presumably much greater staying powers of Germany's antagonists, this year, with England holding the seas and the German and Austrian ports blockaded. It is doubtless possible that the further progress of events may modify or alter this present point of view. Nevertheless, the feeling prevalent, last week and this, makes necessary some sober consideration of what a really protracted war would mean to finance and industry.

That it would mean continued derangement of international finance, goes without saying. This would be true, not only because of the consequent longer embargo on international exchange and the longer extension of the European moratoriums, but because of the prodigious drain on Europe's capital. The war, including mobilization, has lasted nearly five weeks. If the expert estimates of cost are anywhere near correct, a total expenditure of nearly one billion dollars must have been involved already; for the figures on average daily cost, with five great nations in the field, have ranged between $25,000,000 and $50,000,000. In any case—even if the war were to end next week—investment capital would command a higher price as a result of it, and continuance of fighting, through a long series of months, would greatly aggravate that part of the situation.

It would also, presumably, keep up relatively high prices for a market such as wheat—especially if next year's European planting were to be interfered with. Precisely what it would mean to this country's other industries, is less certain. A short but very violent conflict of this sort has usually meant that business of neutral states was seriously dislocated, without having a chance for readjustment to new conditions. If, as in the Franco-Prussian War, hostilities begun in midsummer were virtually to end in September or October, there would certainly be little opportunity either for establishment of new American shipping interests, or for entry in a comprehensive way into other neutral markets, hitherto supplied by Continental Europe, or for the founding of manufactories to replace all the raw materials for which we have been depending on the belligerent states.

Indication of a long war would undoubtedly, to a large extent, alter that aspect of the situation. It would also (as was our case in the Napoleonic conflict) lead our merchants, traders, and manufacturers to adapt their whole machinery of business to the altered relations of producer and consumer. Such positive advantages as the United States enjoys from its neutrality, its commercial and industrial vigor, and its enormous production of materials which the European world must have, it would to that extent enjoy on an even larger scale with the war continued.

But this, necessarily, is only one side of the matter. The machinery of trade, finance, and commerce is so wholly different an affair from that of the prolonged European fighting in the Napoleonic period, that deduction from our trade expansion in that period is not safe to draw offhand. Nothing is more perplexing, in any conjectural glance ahead at the possible situation in a protracted war, than the question, how our own financial affairs would be affected, if the United States were to be cut off for an undefined period from access to European reserves of capital. Financial results of the European war to date have abundantly fulfilled the prediction made by experienced financiers, whenever a "general war" was talked about in the quarter-century past—that modern civilization would be trying a wholly new experiment and establishing wholly new precedents.

Settle War Arguments with This Book

When your French neighbor, your English father-in-law, your American office partner, your German shopkeeper starts an argument about the war—

Give him the facts—

In up-to-the-minute form, complete, and from authentic sources, in

The War Gazetteer

Just Issued by

The New York Evening Post

The War Gazetteer is a compilation of all information bearing on the war—just the book for which every one is waiting. It is not a rehash of newspaper articles, but a thoroughly new, fresh and careful accumulation of data. Doesn't give expert opinions, editorial ideas, biased prophecies—only facts, facts, FACTS.

TABLE OF CONTENTS:

1 Chronology.
2 Table of comparative wealth, resources, financial condition, and war expenditures.
3 The armies of the nations.
4 The navies of the nations.
5 The air fleets of the nations.
6 Wireless telegraphy in the war.
7 Defences of coasts and frontiers.
8 The European Alliances—and how they were formed.
9 Colonial possessions of warring nations.
10 Estimated general cost of the war.
11 Biographical sketches of the kings, counsellors, and leaders.
12 Table of distances in war zone.
13 Text of Anglo-Japanese treaty.
14 Text of President Wilson's Proclamation of Neutrality.
15 Rights of neutrals at sea.
16 Information for American shippers.
17 Chronology of Franco-Prussian War.
18 Large folding map.
19 Six smaller maps.

Size, 9 inches by 12 inches, 32 pages and cover. On sale at newsstands, subway and elevated stations. Also sent by mail—use the coupon.

IMPORTANT NEW AND FORTHCOMING MACMILLAN EDUCATIONAL WORKS

A HISTORY OF ENGLAND AND GREATER BRITAIN

By ARTHUR LYON CROSS, Ph.D., Professor of European History in the University of Michigan

The best comprehensive one-volume work ever published on the British Empire of to-day. Included in the volume are the facts necessary to give a coherent view of the larger factors influencing national development from the earliest periods to the present time.

Cloth. 8vo. Maps. 1165 pages. $2.50 net

READINGS IN POLITICAL PHILOSOPHY

By FRANCIS W. COKER, Professor of Political Science in the Ohio State University

A useful handbook not only for college courses in political philosophy, but as a convenient compilation for general reading in that field. It presents in handy form significant parts of the most noteworthy philosophical discussions of political questions, from Plato's time to the nineteenth century, many selections from works which are not ordinarily available in English.

In press

INTRODUCTION TO THE SCIENCE OF ETHICS

By THEODORE DE LAGUNA, Professor of Philosophy in Bryn Mawr College

A new elementary treatment and fresh presentation of the principles of ethics, written throughout from the sources. This work should be highly welcome, for hitherto there has been no treatment of the subject in English that has been at once simple, accurate, and full enough to be interesting.

In press

INTERNATIONAL TRADE AND FOREIGN EXCHANGE

By HENRY GUNNISON BROWN, Ph.D., Instructor in Economics in Yale University

A distinct contribution to the available material on this increasingly important subject, which in form—covering two related fields—will be found better suited to the needs of American readers and students than any other book now on the market.

In press

FOOD PRODUCTS

By HENRY C. SHERMAN, Professor of Food Chemistry in Columbia University

A comprehensive descriptive text on the general subject of foods which in completeness, with tables and appendices, is useful not only for class work, but for general household reference.

In press

COLLEGE LIFE—ITS CONDITIONS AND PROBLEMS

By MAURICE GARLAND FULTON, Professor of English in Davidson College

An important volume of selections chiefly from the writings of college presidents and other educators dealing with questions and problems of the student's personal relation to the various aspects of college life—the intellectual, the social, the athletic, and the scholastic. A work which will be of especial value for use in English composition courses. *In press*

STATE AND COUNTY EDUCATIONAL REORGANIZATION

By ELLWOOD P. CUBBERLEY, Professor of Education, Leland Stanford University

"The revised constitution and school code of the hypothetical State of Osceola," a forcible plea for educational reform and reorganization.

Cloth. 8vo. 257 pages. $1.25 net

PROBLEMS OF CHILD WELFARE

By GEORGE B. MANGOLD, Ph.D., Director of the School of Social Economy, Washington University

A work of special appeal to all men and women interested in the various aspects of practical sociology, and in the constructive philanthropy which deals directly with the child, and the improvement and social betterment of conditions relating to child welfare.

Cloth. 8vo. 522 pages. $2.00 net

NEW AND FORTHCOMING PUBLICATIONS

College Texts

AN INTRODUCTION TO GENERAL PSYCHOLOGY

By Professor R. M. OGDEN, University of Tennessee (Soon to be published).

A general elementary text for beginners written from a modern point of view, based upon recent investigations of the thought processes. It is a departure, the necessity for which has for some time been realized, from the conceptions and methods of the physiological and other schools.

A HISTORY OF COMMERCE

By CLIVE DAY, Professor of Economic History, Yale University. 682 pp. $2.00.

The new 1914 edition treats fully of recent commercial development. The salient and significant movements of commerce throughout the world are recorded in a new chapter which has been added. Latest available statistics have been included and the bibliography enlarged.

AN INTRODUCTION TO ENGLISH MEDIEVAL LITERATURE

By CHARLES SEARS BALDWIN, Professor of Rhetoric, Columbia University. 267 pp. $1.25.

Sketches the development of English literature in the Middle Ages, with emphasis not on biography and history, but on the inner spirit and on the technical advance. A student's guide, that is scholarly, of easy reading, and yet scientifically sound. Abundant bibliographical apparatus.

ENGLISH PROSE

A series of related essays for the discussion and practice of the Art of Writing.

Selected and edited by FREDERICK WILLIAM ROE, University of Wisconsin, and GEORGE ROY ELLIOTT, Bowdoin College. 487 pages. $1.50.

The selections in this volume present a body of ideas that includes practically all the great departments of human thought and interest. The series aims to arouse thought and provoke oral discussion in the classroom, as well as furnish suitable models of style.

Secondary School Texts

PRACTICE WORK IN ENGLISH

By MARIETTA KNIGHT, South High School, Worcester, Mass. (Nearly ready.)

A book of exercises in English offering a minimum of explanation and a maximum of practice, in the supposition that the teacher will prefer to do the teaching. All of the exercises in "sentence structure," and most of those in "forms of discourse," were furnished by pupils. The grammatical nomenclature adopted by the National Education Association has been followed.

FIRST YEAR ENGLISH

By MAUDE M. FRANK, A.M. (Soon to be published.)

This book is the outgrowth of the author's successful experience in teaching English to pupils in high schools. It is practical, fresh, and interesting.

LONGMANS' MODERN FRENCH COURSE. Part 1 and Part 2

Containing Reading Lessons, Grammar, Passages for Repetition, Exercises, and Vocabularies. By T. H. BERTENSHAW, B.A., Assistant Master in the City of London School. Pupils' Edition, both parts, $0.50 each. Teachers' Edition, both parts, $0.65 each.

A FIRST COURSE IN ALGEBRA

By FREDERICK C. KENT, Associate Professor of Mathematics, University of Oklahoma. 262 pp. $1.00.

The equation is made the central idea and a principle is employed as soon as it is mastered in the solution of equations. Interest in the subject is stimulated by numerous practical problems of everyday life.

Pedagogical Texts

THE MENTAL AND PHYSICAL LIFE OF SCHOOL CHILDREN

By PETER SANDIFORD, Ph.D., University of Toronto, 356 pp. $1.35 net.

The German, American, and latterly the English practical psychologists have been opening new fields of knowledge, and Dr. Sandiford has explored these largely. His book is the ripe fruitage of long and painstaking research and gives a most comprehensive account of child nature.

INTRODUCTION TO EXPERIMENTAL EDUCATION

By ROBERT R. RUSK, M.A. (Glasg.), B.A. (Cantab), Ph.D. (Jena). 312 pp. $1.40 net.

Makes accessible in convenient form the main results of investigations in the new subject of Experimental Education. Since publication it has been adopted in many of the leading universities of the country.

EDUCATION AND PSYCHOLOGY

By MICHAEL WEST, I.E.S. 348 pp. $1.50 net.

An unusually interesting and effective treatment of psychology in its relation to education. It is thoroughly up-to-date, in the sense that the principles both of psychology and of education which are presented are in accord with the latest and best work in these fields. The book gives one the impression that it was written out in the open, as it were, in contact with real human life and actual education, instead of being written in the library remote from real life.

THE MEDICAL INSPECTION OF GIRLS IN SECONDARY SCHOOLS

By CATHERINE CHISHOLM, B.A., M.D., Medical Inspector to the Manchester High School for Girls. 220 pp. $1.10 net.

This book is of interest to all who are interested in the education of girls. The author's remarks will appeal to parents as well as teachers.

HOUGHTON MIFFLIN COMPANY

BOSTON NEW YORK CHICAGO

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 10, 1914.

Summary of the News

The week's fighting in Europe has resulted, in the west, in the further advance of the German armies so that their right wing has been almost within range of the outer defences of Paris, and in the east in considerable progress of the Russian offensive. The French Government moved from Paris to Bordeaux on Thursday of last week. The Government was accompanied by most of the members of the *Corps Diplomatique*. Mr. Herrick, however, the Ambassador of the United States, elected to remain in the capital, his opinion being that he could be of more service there to American citizens. Gen. Galileni, the military commander in Paris, has stated that the city is in a state to withstand a siege. Elsewhere we comment in greater detail on the military situation.

A protocol was signed in London on September 5 by the representatives of Great Britain, France, and Russia, mutually pledging those countries not to conclude peace separately during the present war. The three Governments also agree that "when the terms of peace come to be discussed, no one of the Allies will demand conditions of peace without the previous agreement of each of the other Allies." The protocol was signed, on behalf of England, by Sir Edward Grey; of France, by M. Paul Cambon, and of Russia, by Count Benckendorff.

The position of Turkey remains for the present undefined, and the impression is not without justification that the Ottoman Empire, as was her habit in the old unhappy, far-off days of Abdul Hamid, is waiting to grasp the skirts of happy chance. There have been rumors that the Goeben and Breslau, the German cruisers that were bought by Turkey after taking refuge in the Dardanelles, still retain their German crews, and there have been further reports of German officers passing through Sofia on their way to Constantinople. It is possible, however, that momentary pause has been given to Ottoman ambitions by the attitude of Rumania, which, according to Washington dispatches published on Monday, has officially announced that if she abandons her position of neutrality it will be to follow the course taken by Italy. In the meanwhile, with a view to guarding against attempts to inflame sedition, it is stated that German and Austrian consular officers have been ordered by the British authorities to leave Egypt.

Italy has so far succeeded in guarding her neutrality, and we publish elsewhere some illuminating correspondence on this subject written in the early stages of the war and showing that a policy of neutrality, so far from being the expedient of a harassed Government, was the united will of the people. The general tone of recent dispatches, however, would seem to indicate a growth of public sentiment in favor of the Powers of the Entente, and a significant dispatch was published on Sunday stating that a petition signed by members of the Republican and Socialist parties in the Chamber of Deputies had been presented to the Premier, demanding that Parliament be convoked in order that it might give to the Government "instructions in regard to the grave effects of the international conflict." The memorandum prepared by the signatories of this letter for presentation to the Chamber is extremely anti-Austrian and anti-German in tone.

The Government Merchant Marine bill was ordered favorably reported last week by the House Merchant Marine Committee. We comment elsewhere upon this bill.

As a result of the investigations of the Federal grand jury into the artificial raising of the prices of foodstuffs, thirty-two indictments were returned last week in Washington under the Sherman law.

Representative Thomas W. Hardwick was nominated last week by the State Democratic Convention at Macon, Ga., to fill the unexpired term of the late United States Senator, A. O. Bacon.

President Wilson on Monday addressed letters to the miners and operators concerned in the Colorado mine strike virtually demanding that the long strike be ended. Up to the present no solution has been reached by the two mediators who went to Colorado months ago and have listened to proposals and counter proposals.

The President, on Friday of last week, addressed Congress, in joint session, urging legislation to raise $100,000,000 a year additional revenue through internal taxes to meet a deficit in the Treasury threatened by the European war. He urged the inexpediency of the Government borrowing money to meet the emergency, and recommended immediate legislation on the subject.

An agreement on the disputed points in the Federal Trade Commission bill was reached on Thursday of last week. It has been decided that appeals from decrees of the Commission against corporations shall go direct to the United States Court of Appeals instead of to the district courts, and findings of the Commission shall be regarded as conclusive of fact instead of prima facie. From the decision of the Court of Appeals there shall be no appeal, unless the Supreme Court, upon application, shall grant one.

In the Wisconsin primaries held last week Senator Robert M. La Follette and his followers suffered a surprising defeat—the first since 1900. The nominations were as follows: Republican—For United States Senator, Gov. Francis F. McGovern, Roosevelt candidate for temporary chairman of the Republican National Convention of 1912; for Governor, Emanuel L. Philipp, conservative Republican. Democratic—For United States Senator, P. O. Husting, pledged to the Wilson Administration; for Governor, Judge J. C. Karel, conservative Democrat.

It was announced by the Boston *Post* on Friday of last week that arrangements had virtually been concluded for the purchase by the Government of Mount Washington, including all of the great central peak and its flanks and spurs, together with six other peaks of the Presidential range of the White Mountains and 84,355 acres of land. The purchase price, according to the *Post*, is $737,670.

Premier Asquith on September 4 delivered an impressive speech at the Guildhall of London, in which he reviewed the causes of the war, and called upon the country to furnish recruits for the army. Up to the day on which he spoke, he announced that between 250,000 and 300,000 men had already responded to the call. The Premier was supported by the leader of the Opposition, Mr. Bonar Law, and by the ex-leader of the Unionist party, Mr. A. J. Balfour.

Cardinal Giacomo Della Chiesa, Archbishop of Bologna, was, on September 3, elected Supreme Pontiff by the Conclave of Cardinals which had assembled at Rome on August 31 for the purpose of choosing a successor to Pius X. The new Pope, who has elected to be known as Benedict XV, was crowned in the Sistine Chapel on Sunday. It has been stated that his attitude towards the war, which is said to be one of absolute neutrality towards all the Powers engaged, had something to do with the election of Cardinal Della Chiesa, who only became a member of the Sacred College at the last consistory held by Pope Pius in May of this year. As not infrequently happens, the ultimate choice of the Conclave fell upon one whose name had not even been mentioned among the *papabili*.

That ill-starred monarch, Prince William of Wied—whose name has recently earned distinction by suggesting to the British army a sobriquet for one more important in the destinies of Europe than himself—has at length found the throne of Albania too unstable for further occupancy, at any rate for the present. He departed from his kingdom on September 3 for the neutral shores of Venice, leaving behind him a proclamation in which he expressed his undying affection for the chivalric Albanian people and his intention of returning to rule them at a more auspicious moment.

By the death last week of the Moroccan Raisuli, the world loses the most picturesque and the astutest bandit of modern times. For years Raisuli had been the cause of chronic trouble in Morocco and a particular thorn in the side of the Sultan, Mulcy Abdul Aziz, but the pinnacle of his career was reached when he kidnapped Ian Perdicaris, an American citizen, and his son-in-law, a British citizen, and, after setting several great Powers by the ears and fetching an American fleet to Tangier, managed to obtain a large ransom and the governorship of the districts around Tangier as the conditions of their release.

The deaths of the week include: John Henry, Baron de Villiers, Chief Justice of the South African Supreme Court, September 2; Leonard E. Opdycke, September 3; Dr. William J. Milne, September 4; Sir Stephen Wilson Furness, Georgine von Januschowsky-Neuendorff, September 6; Joseph Millbank, Col. Alexander Warner, September 7.

The Week

What President Wilson put before Congress last Friday in such admirable form, Congress and the country are thoroughly prepared to act upon in the spirit of Mr. Wilson's recommendation. As for the need of action to procure an emergency revenue for the Government, it is well that everybody should remember that this is not owing to any general upsetting either of business or of the fiscal routine of the Treasury; it is owing, as the President states, to the cutting off of the customs revenue caused by the cessation of imports from the countries engaged in a world war of unprecedented magnitude. And as for the nature of the action that should be taken, there will be substantially unanimous concurrence in the President's view that this must not take the shape either of borrowing money or of withdrawing Government deposits, at a time when either of these operations would be sure to have the effect of aggravating, instead of alleviating, the strain upon the business interests of the country; and accordingly that it becomes the duty of Congress to levy emergency taxes to make good the falling off in Government revenue caused by the war in Europe.

"The only suggestion I take the liberty to make" as to the nature of the taxation, says the President, "is that such sources of revenue be chosen as will begin to yield at once, and yield with a certain and steady flow." This condition will be completely fulfilled if Congress simply follows the precedent of the war taxation of 1898; of which the stamp taxes and an increase in the tobacco and liquor taxes were the leading features, though something was also accomplished by the imposing of an inheritance tax. These taxes have, in addition to the merit of producing an immediate and a steady flow of revenue, the considerable recommendation that they produce no disturbance of business, are hardly felt as a grievance by anybody, and can be abolished with an equal absence of disturbance or dispute whenever the occasion for their collection shall have passed away. Under the operation of these taxes, the internal revenue receipts for the fiscal year ending June 30, 1899, exceeded those for the preceding year by $103,000,000, and exceeded the average of the preceding five years by $122,000,000. Owing to the growth of population, the like taxes now could be counted on to yield an even larger accession to the revenue, and accordingly much more than the $100,000,000 needed; so that it seems manifestly the part of wisdom for Congress to provide for the present need by reviving such part of the war taxes of 1898 as may be necessary—selecting those features that present the least objection and are the least burdensome to anybody—and to eschew all ventures upon other and more disputable expedients.

Vice-President Marshall, in his statement concerning the Presidential possibilities for 1916, not only expresses with accuracy the existing condition of public sentiment, but puts in brief and excellent form one of the chief reasons for that sentiment. "In my judgment," says the Vice-President, "partisanship will be sunk by the American people in their desire to preserve the blessings of peace." Of course, this must not be taken literally. Even if the Presidential campaign were impending now, instead of being two years off, the American people would divide, in the main, on party lines; but there can be no question that a vast number of those citizens upon whom party ties sit lightly will find in the President's magnificent record as a strong and wise conservator of peace the consideration that will control their political choice. How momentous at the time, how profoundly influential in the nation's future, the difference can be between a policy of firmness and patience like that identified with the name of Woodrow Wilson and that other policy which so many men in his place might have pursued is borne in upon the minds of millions, as never before, by the awful spectacle of the European conflagration. But it is within the Democratic party itself that Mr. Wilson's conquest of opinion has been most complete. In face of the fact that he has grappled with a long series of questions involving the most conflicting interests and prejudices, and has in almost every one of them asserted his own views, and insisted on his own purposes, with extraordinary tenacity, he has behind him to-day a party almost unreservedly attached to his policy and loyal to his leadership. Nobody to-day questions the Vice-President's assertion that Mr. Wilson will have, in 1916, "the enthusiastic, unqualified, and united support of his party."

Kipling's picture of England and France wheeling girth to girth must now include Russia; the agreement signed by the Allied nations Saturday to make war together and peace together has already had an impressive moral effect. Such a break-up of coalitions as occurred more than once in the Napoleonic wars is rendered impossible, and many a German must echo the chagrin expressed in the New York German-American Chamber of Commerce's extraordinary assertion that the treaty proves the perfidy of England, selfishly seeking to restrain France from making a favorable peace in a moment of discouragement. But the unity of the Allies was in reality to be taken for granted. The enthusiastic resistance of the French to the last man, the boundless determination of Russia, the declarations of England that she would beat Germany to her knees if it took the entire weight in men and money of her empire, have been accepted at their full value. If it is necessary to fight a long war, the Allies will persist to the end, in confidence that sheer mass gives them an immense advantage. The greater significance of the treaty is its potential effect upon the disposition of affairs at the end of the struggle. Whatever the outcome, it must make for fairness and an enlightened settlement. The penalties, if paid by the Allies, will be distributed, and not rest with crushing weight on one alone; if by their opponents, England and France may be trusted to put restraining hands upon the arm of Russia.

To the Archbishop of Canterbury's declaration that "the position of an actual combatant in our army is incompatible with the position of one who has sought and received holy orders" two convictions doubtless contributed. One was that of the necessity, which all must recognize, for maintaining the spiritual character of the churchly calling. The other lay in the consciousness that, from country vicar to bishop, all would find in their regular offices at such a time as much as they could undertake. The available positions as army and navy chaplains have long since been filled. The Archbishop's letter invites comparison with the recent message issued by the English Society of Friends, whom the war found in an even greater dilemma. Reiterating their belief that the method of force was no solution of any question, the Quakers were still unflinching in their support of the national cause; they recognized the Government's efforts for peace, and that the moment was "not one for criticism, but devoted service." They went on to declare it "of vital importance that the war should not be carried on in any vindictive spirit," and that England must remember "that we are not going into it to crush and humiliate any nation." Their

opinions upon the charitable reconstruction of European affairs were also laid down. In time of war, to prepare for peace is obviously the Church's first duty.

The announcement that the 100,000 British who have just enlisted will not be ready for service on the Continent for six months may surprise the public, but it is just what was to be expected. No Government could take these men from counting-room and plough-share, put guns into their hands, and place them on the firing-line against the best trained troops the world has ever seen. The British regiments, moreover, are not capable of expansion like the French and German, and officers are not ready to hand for the new organizations. To rush raw battalions to the Continent would be merely to court disaster. That Lord Kitchener fully realizes this is perfectly apparent from what has been passed by the censor. Meanwhile, however, reinforcements are steadily being sent over to France, where they can join Sir John French. Trained troops from Malta, Gibraltar, perhaps even Cairo, must be on the way, as well as the native Indian troops from China, now supposed to be crossing Canada. But if the war is to continue for any length of time, these will be merely a drop in the bucket; British reliance must be on the volunteers who are rushing to the recruiting offices with unabated enthusiasm.

The Sacred College has sustained its record of making an unexpected choice by naming as the new Pope Cardinal Della Chiesa, Archbishop of Bologna, who has announced that he will be known as Benedict XV. This choice is especially surprising, because the new Pontiff has been a cardinal only since May 30, being one of the last group to be created by Pius X. The last Pope to bear the name of Benedict reigned from 1740 to 1758, and is remembered especially as the author of two bulls prohibiting the practice, extensively adopted by the Jesuits in India and China, of accommodating Christian language and usage to heathen superstitions and ceremonies. Prophecies of the policy of Benedict XV are idle, but in so far as can be judged from the sentiments he has expressed in subordinate positions, he will represent a tendency towards the course of Leo XIII rather than that of the Pope whom he succeeds. He comes to the Papal throne at a stirring time, at just such a time as in former ages would have given him a great opportunity. If he can seize the occasion to restore some of the vanished prestige of the Papacy; if, without impairing his spiritual influence, he can contrive to exert pressure upon the distracted politics of Europe and assist in bringing order out of the present chaos, his name will shine among those of the occupants of his lofty chair.

Carranza's reply to the latest proposal from Zapata, while a rejection of that chieftain's demands, leaves the way open for an agreement that will give the latter the substance of what he wishes. The First Chief can hardly do other than insist upon recognition of his authority as a preliminary to discussion of reforms, but in the same note in which he makes this point he reminds Zapata that he has already signified his willingness that the particular agrarian programme which Zapata holds to shall be adopted wherever needed. He urges Zapata to send delegates to the convention called for October 1 "precisely for the purpose of discussing the programme of reforms which the country needs." If this is in any way a disingenuous invitation, let Zapata make the most of that fact; but unless he can furnish evidence calculated to throw suspicion upon Carranza's fairness in arranging for this convention, he will confirm the worst opinions entertained of him if he refuses to accept the opportunity of presenting his views at what, on its face, is a new and promising development in Mexican affairs. The convention will constitute the first important test of the ability of Mexico, under the leadership of the Constitutionalists, to work out her own salvation.

Last week the Senate passed the Clayton Anti-Trust bill; very greatly improved, indeed, over its original form, but still containing features which at a different time would have been the object of far more earnest opposition. The ambiguous, as well as dangerous, labor clause went through with the rest. A few months ago, it was being vigorously denounced as an unworthy piece of legislation, whatever be the true meaning of its vague language. It is either a "gold brick" to labor leaders of the Gompers type or an odious piece of class legislation; and, whether it be the one or the other, it is slipped through by the unfair device of being represented to the organized-labor men as giving them all they want and to opponents of class legislation as adding nothing to what organized labor already has. The time is very likely to come when this cowardly dodge will return to plague some of the men responsible for its adoption.

President Wilson has placed before the opposing sides in the Colorado mine trouble a proposal designed to end a condition of things which is recognized throughout the country to be disgraceful and intolerable. In the letter which he has addressed to the presidents of the leading mining companies and to the officers of the United Mine Workers of America, the President sets forth the nature of the situation in language wholly free from offence to either side, and yet making quite clear the urgent need of bringing it to a speedy close. The tentative proposal which accompanies the President's letter was drawn up by the Federal Conciliation Commissioners. It is manifestly inspired by the purpose of presenting a scheme to which each side can subscribe with the feeling that its interests and contentions received all the consideration possible if a basis of conciliation was to be found at all. Both sides are asked to pledge themselves to a three years' truce, based upon conditions now laid down. The guardianship of those conditions is to be placed in the hands of three Commissioners to be appointed by the President, one a representative of the workers, one of the owners, and the third representing neither party; and the decisions of this Commission shall be final. Of the conditions themselves, the salient features are: "enforcement of the mining and labor laws of the State"; restoration to work of "all striking miners who have not been found guilty of violation of the law"; prohibition of intimidation of either union or non-union laborers; no mine guards on the one hand, and no interference with the working of the mines by picketing, parading, etc., on the other; no suspension of work pending the investigation of any matter in dispute. Any grievance alleged by workmen is to be submitted, first, by the individual workmen to the proper officer of the company; if this does not bring about an adjustment, a standing local grievance committee of the workmen is to take it up with the company; finally, if this fails, the dispute is to be submitted to the Commission of Three for definitive settlement.

Intensive utilization of our natural resources has not been one of our characteristics, but our progress in that direction in some fields is shown in a timely Government Bulletin on our mineral reserves, which bears the journalistic sub-title, "How to Make America Industrially Independent." Zinc is one of the minerals most seriously threatened by the war, as the great smelting centres of Continental Europe are in regions

of active fighting. Fortunately, our own smelting capacity has been increasing faster than consumption, as is indicated by the growing size of the stock on hand. The extent to which we have made ourselves independent of foreign cement is shown by the fact that twenty years ago our domestic product was less than one-fifth of our consumption, while last year our imports of cement were less than one-tenth of our consumption, and our exports were between thirty and forty times our imports. Much has been said of the cutting off of the world's supply of potash, since no commercial source of potash salts is known outside of Germany. The Government, through the Geological Survey and the Department of Agriculture, has been endeavoring to locate deposits of these salts in this country. It has investigated places from New York to California, and from Michigan to Louisiana. How important the finding of native sources of these materials would be is indicated by the magnitude of our imports of them, which have been averaging a million tons a year, with a value of $15,000,000.

New Hampshire's first direct Senatorial primary leaves Senator Gallinger, a Republican whose record of wrongheadedness has just been capped by his anti-Japanese outbreaks, facing in Congressman Stevens one of the most determined and able of opponents. The Progressive nominee, B. F. Greer, is negligible. Senator Gallinger made his race alone; there were three Democratic candidates for the nomination, and the Republicans are already making capital of the fact that Stevens is a "minority candidate." But there is every reason to believe that the party is united behind him, and that he will attract independent voters. In the State he is regarded as a chief factor in the throwing off of the railway yoke by the Legislature some years ago. In Congress his record on the floor and as an efficient member of the Committee on Interstate and Foreign Commerce is as creditable as Senator Gallinger's in the upper chamber has been objectionable. No small part of the alterations of the Trust bills for the better are due to his suggested amendments. In a State almost invetcrately Republican in prejudice, and one in which the press shows very few Democratic organs, Mr. Stevens's campaign must rest essentially on his personal record and merits; and the prospect is that the contest will be of unusual interest.

By what strange fate do Uncle Joe Cannon and Senator Tillman display a familiarity with the Bible that is apparently denied their less tempestuous colleagues? Whatever the reason, the result is an occasional picturesqueness of language that Mr. Bryan's more solemn use of the same source seldom manifests. In 1910 Tillman wired Blease, the nominee for Governor of South Carolina, in these words: "Congratulations; let the heathen rage." Then came the break between the two men, and in 1912, after the conclusion of a campaign in which Tillman apologized for ever having helped raise Blease to the Governorship, the latter retorted the Senator's language of two years before in this dispatch: "Let the heathen rage. They still rage." Now, with Blease defeated for the Senatorial nomination, it is Tillman's turn again, and so the latest of the series of telegrams conveys the Senator's compliments in this way: "The heathen still rages, but the people rejoice. See Deuteronomy 3 : 2-15. Good-bye." The passage relates the story of the capture of Og, King of Bashan: "and we smote him until none was left to him remaining." Evidently we have here some of the Old Testament spirit as well as its phraseology.

The experiment of the Bellevue Hospital, of New York, with the "twilight sleep" method of childbirth has received a publicity representing it as an innovation, a trial of something new. It signifies, on the contrary, a resumption of interest, caused by recent improvements and recent magazine articles on the work of Drs. Koenig and Gauss, of Freiburg, Germany, in a method known since 1902. The preponderance of American opinion has hitherto regarded with distrust the use of scopolamine, mainly on the score of safety. The *Outlook*, for example, lists Dr. Vaughan, president of the American Medical Association; Dr. Green, of Harvard, and Dr. Williams, of Johns Hopkins, as hostile; and states that Dr. De Lee, of Northwestern, studied the method at Freiburg disapprovingly, and found that "the famous maternities of Berlin, Vienna, Munich, and Heidelberg had discarded the plan." There come, however, counterbalancing expressions of enthusiasm from European and American hospitals, one of the latter being the Jewish Maternity Hospital in New York, with 120 cases. If the perfected method accomplishes the blessing it claims, it cannot too rapidly be diffused over the country. But hasty newspapers should realize the mischief and cruelty possible through the breeding of false hopes and the stimulation of rash action concerning a matter which is as yet only experimental.

A review of Butte conditions in the last issue of the Socialist *New Review* admits that the cause of the persistent rioting is, along with internal labor-organization disputes, a growth of radical ideas "ranging from comparatively orderly parliamentary Socialism to the most extreme anarchism." The outbreak of three months ago was directed against the property and officials of the Western Federation; the new assaults have been mainly against the private property of the Amalgamated Copper Company. That anarchistic ideas and a labor-union quarrel should repeatedly endanger orderly industrial development is a condition justifying not merely martial law, but the sternest repressive measures. To take this view it is not necessary to assume that all the wrong is on one side. The mine owners' conduct may have been provocative at some points, and they and State and city politicians may have tampered with the workers' union. The point is that the menace to property and life comes from men who quarrel with those who would attempt an orderly correction of affairs, and from men who are imbued with syndicalist ideas and worse. The State National Guard should be able to cope with the situation, and State effort should be made to ferret out agitators who will otherwise wait only a new opportunity.

The forfeiture by two Canadian Senators of their seats for non-attendance parallels our difficulties with a Congressional quorum; and were the Dominion not engrossed with war, it would give new strength to a latent public indignation with the upper body. One other Senator saved his seat only by joining the recent emergency session, and four have one more chance. The Chamber contains a proportion of serious members, but the majority attend just sufficiently to hold their places, and there is always a group utterly indifferent to public affairs. Each member being allowed $2,500 for the session, with a deduction of only $15 daily for absences, a record of neglect during short sessions is an even more palpable cheat upon the public purse than our own Congressmen's habit of claiming $21 per day for services unperformed. The obvious and natural remedy for the whole unsatisfactory state in the Canadian Senate is its transformation into an elective body. The Senators, as nominated for life by the Governor-General, are almost invariably political appointees. But to such a change, or to abolition of the Senate, the great obstacle is the Canadians' perplexity as to how their Constitution can be amended.

FORTY-FOUR YEARS AGO.

It is, above all, the moral and political side—the human side—of what happened at and after Sedan that forces itself upon the mind of him who in this present month travels back in memory to the days of that other September. What was the feeling then of those who, in other lands, had wished success to the German arms? What fruits for the German nation and for all mankind did they look forward to as the result of a victory unmatched for splendor and completeness in the annals of war? The new German Empire was about to be born; and it was clear that Germany was thenceforth to take the place of France as the leading Power of the Continent. The pinchbeck imperialism of the third Napoleon, and that higher, but yet pernicious, tradition embodied in the French devotion to martial glory, were alike prostrate in the dust; what was to take their place? What example was German civilization going to set, what better ideals and purposes was she going to make dominant in Europe?

Let us turn to the *Nation* of September 15, 1870. In all the world, there was no more stanch, as there was no abler, champion of the German cause than Mr. Godkin. To his mind, that cause was not only just in itself, but was the cause with which were bound up the highest hopes of civilization. The proclamation of the Republic, after the *débâcle* of the Empire at Sedan, did not change his attitude a jot; he had nothing but scorn for the "sentimentalists" who permitted it to affect their judgment. In the number of the *Nation* to which we have referred, issued two weeks after Sedan, the leading article is entitled "The Terms of Peace." There is no sparing of France as the under dog; it is unflinchingly urged that "in the interest of justice and morality there should be no tenderness" in exacting from France "the cost of the war to the uttermost farthing"; but on the great question, the crucial question as to the future, this is what Mr. Godkin says:

> The Germans owe it to the better civilization they profess, and we believe truly, to defend and spread; and to the public opinion of all other countries, which has up to the present sympathized with and applauded them, to show moderation in the hour of their triumph. We do not ask them to spare France on the ridiculous plea that the Republic is not responsible for the dying sins of the Empire, or that, the Empire being gone, there is nothing to be feared any more from French ambition or aggressiveness or restlessness—a plea which the whole course of French history belies; but in the interest of future peace, and in the interest of that orderly and intellectual progress of which the world now expects Germany to set the example. All absorption of territory, whose inhabitants are not German in feeling as well as in origin, will not only lay Prussia open to the charge of rapacity in carrying on the war, but furnish France with a far more respectable motive in preparing for a renewal of the struggle at no distant day than the bitterness which mere defeat is sure to leave behind.

It is melancholy, it is awful, to contrast the thought of the world about Germany to-day with that expressed in this representative utterance of forty-four years ago. Instead of "that orderly and intellectual progress" of which the world then expected "Germany to set the example"—an example she was so admirably fitted to set, an example which, in so many respects, she actually has set—all her intellectual and moral greatness has been thrown into the background by the relentless spread of an all-overshadowing militarism. The imposition of the German yoke upon the people of Alsace and Lorraine, accompanied as it has been with that sanctifying of "la revanche" to the French mind which Mr. Godkin forecast, was but the first manifestation of the spirit of military domination; from that time to this, it has been the dominant element in the thoughts of the ruling class of Germany. What has come of it for the world, the unspeakable horrors of to-day bear witness; and for Germany herself, what is the prospect? If she wins, a world-domination to be maintained more than ever by the divine right of the bayonet and the dynamite bomb; if she loses, that terrible downfall which the unflinching logic of von Bernhardi recognized as the unescapable penalty of failure.

What a situation is this for the people who, in their struggle in the last century, commanded so generally the sympathy of the world as truly representing "the better civilization they profess to defend and spread." To-day, millions who have never thought of Russia except with loathing and dread are actually turning to her to save the world from a nearer danger. To-day when one says Germany, one means the mailed fist of the Kaiser and the crunching heel of his military satraps. All the glories of Germany in science, in letters, in music, in the advancement of human happiness through medicine and sanitation and civic improvement, are forgotten in the absorbing resentment for what the Kaiser has brought on the world, the absorbing dread of what he threatens to bring on it. How different would have been the state of Europe if the thoughts of the wise and humane had prevailed instead of the demands and the limitless ambitions of the militarist and the imperialist! And how infinitely more secure would Germany herself have been, not only in her national greatness, and not only in the happiness and prosperity of millions, but also in the assurance of permanent existence as a leading nation of the world—an existence that will tremble in the balance for many a bloody month, whatever the fortunes of war may be at this moment in the fields of Picardy or on the banks of the Vistula.

PROTECTIONISM AND WAR.

Among the principles making for peace which Dr. Charles W. Eliot, reviewing in a letter to the New York *Times* the broad questions connected with the great war, enumerates as represented by the American people is that of "the open door—which means nothing more than that all nations should be allowed to compete on equal terms for the trade of any foreign people, whether backward or advanced in civilization." But there is a broader principle—a principle capable of far profounder influence on international feeling—which, if it had made the headway in general acceptance that its advocates at one time had reason to hope for, would have insensibly impressed upon the instinctive thoughts and habitual impulses of the nations a character immeasurably different from that which has actually obtained. We refer to the principle of free trade. The movement which made so signal a beginning in England under the leadership of Cobden and Bright, and which, for a number of years, seemed to give promise of gradually spreading over the whole Western world, came to a standstill in the early seventies; and the memory of that movement as it was in its palmy days has faded out. Accordingly, there are now few in this country, or perhaps even in England, who are aware that it was imbued with something more than the spirit of commercial and industrial gain—that it was animated also by the high and far-reaching purpose of fostering in the nations a spirit of friendship and mutual helpfulness.

For evidence of this, one need hardly go farther than the cover of the Cobden Club publications, on which was imprinted the motto "Free Trade, Peace, Good Will among Nations." In the article on Cobden in the "Encyclopædia Britannica," we find it stated that "Cobden's efforts in furtherance of free trade were always subordinated to what he deemed the highest of moral purposes—the promotion of peace on earth and good will among men." Turning to John Morley's

BIRMINGHAM PUBLIC LIB.

biography of the free-trade leader, it is interesting to note how early in his career this identification of the cause of free trade with that of peace presented itself to Cobden's mind. "It has struck me," he wrote to Mr. Ashworth in 1842, "that it would be well to try to engraft our Free Trade agitation upon the Peace movement. They are one and the same cause. It has often been to me a matter of the greatest surprise that the Friends have not taken up the question of Free Trade as the means—and I believe the only human means—of effecting universal and permanent peace. The efforts of the Peace Societies, however laudable, can never be successful so long as the nations maintain their present system of isolation."

That this may be an extreme view we do not deny; and in so far as it rested upon the connection between protectionism and the desire for colonial expansion, it may justly be urged that Cobden did not take into account other grounds besides the desire for exclusive trade privileges which account for national strivings and ambitions in that direction. But on the other hand, we do not believe that even Cobden or Bright overestimated—we doubt whether they even estimated highly enough—the power of the free-trade idea on the one hand, and of the protectionist idea on the other, so to mould the thought of nations as to make all the difference between the spirit of peace and good will and the spirit of jealousy and enmity. Habitually to think that what is one nation's gain is another nation's loss; that to give free scope to the sale of your neighbor's products is to choke off the opportunity of your own people; that the operations of commerce, instead of being transactions in which both parties are gainers, are in the nature of a constant struggle of the one side or the other for "supremacy"—this is the insidious, but none the less powerful, daily teaching of protectionism. If instead of the reaction towards this mediæval notion of international relations which the last three decades of the nineteenth century witnessed, the world had, during the past four decades, become more and more habituated to the thought of trade between nations as an opportunity for mutual gain, the freer the more beneficent; if the idea of the "open door" had come to be regarded not merely as a political expedient, a means of avoiding quarrels in distant fields of exploitation, but as a principle based on common-sense and the common interest—who shall say how much would have been taken away of what has gone to the fomenting of international jealousy and bitterness?

Those who talk so glibly about economic causes being at the bottom of all the developments of history would do well to give their attention to the part which, even in the economic field, is played not by the economic causes themselves, but by the ideas which men entertain in regard to those causes. If the South had known that slavery was not essential to her economic prosperity, there would have been no Civil War; and it is not an overbold supposition that, if the nations of the world had been emancipated from the delusions of protectionism, the passions and prejudices which have had their part in bringing on the unspeakable horrors of the world war of to-day might never have attained the intensity that made such a calamity possible.

GOVERNMENT PURCHASE OF FOREIGN SHIPS.

Whatever may be said regarding the dangers, political and economic, of engaging the Federal Government in the purchase and operation of ships in the trans-oceanic trade—and there is much to say on that consideration—there are certain other aspects of the matter which must be investigated with the utmost care before any such experiment is undertaken. We submit that Congress has no right to authorize such procedure by the Government until it has satisfied itself and the country on three points. One is, whether this new supply of ships is peremptorily needed. The second is, whether the ships available for purchase would be suited for the very purposes of trade which are contemplated. The third is, whether our Government would or would not create a delicate and dangerous situation, if it should buy and operate—even as majority shareholder in an operating corporation—ships which are at present owned by belligerent interests.

None of these questions has yet been properly canvassed, so that the public at large may understand exactly what is now proposed. As against the argument that we have not ships enough available for our foreign trade, it is answered, in quarters at least entitled to respect, that with trade to Continental Europe largely suspended, and with great unsettlement in plans for neutral commerce, even our present ships are unable to get full cargoes. As against the argument that we ought to use the idle German Lloyd and Hamburg Line vessels, it is objected in similar quarters that these ships are built primarily for a passenger traffic which does not now exist, and which cannot be created; that they would have to be reconstructed to make them a profitable commercial undertaking in the transportation of freight, and that, by their size and length, they are adapted only to the European trade. The further and very grave political reasons against this purchase of the German ships, and especially against their operation by our Government, is familiar to every one. At least the possibility of a most dangerous diplomatic situation would be involved in such an undertaking.

The first duty of Congress, then (if it feels bound to consider the project further), is to summon to a public hearing the best authorities—shippers, merchants, and authorities on international law—who can place at the disposal of Congress their expert opinion on these several considerations. If this is not done, and if Congress and the public do not hear both sides, from the best authority obtainable, then we shall be taking a leap in the dark, engaging in an experiment which may involve the gravest consequences.

To President Wilson we feel that these considerations of prudence and foresight ought to appeal with peculiar force. Whether viewed from the standpoint of domestic policy or from that of international relations, it is clear that the graver and more far-reaching elements in the problem have an importance so vital that only the most unimpeachable demonstration of immediate need and the most convincing showing of immediate efficacy should be allowed to weigh against them. Neither of these things has thus far been forthcoming; not even, so far as we are aware, anything distantly approaching them. The President's desire that something be done at this time to promote American commerce is shared by the country generally; and his interest in the promotion of this legislation is understood by everybody as a manifestation of the earnestness of that desire. But it would be a thousand pities if he should make himself responsible for the enactment of a piece of hasty legislation that, after the hurry of the moment is over, would be found to have done grave injury to great principles to which his devotion is unquestioned, and to which he has done signal service—the principle of holding the country's interest in peace and international good will superior to its interest in special commercial and financial opportunities, and the principle of upholding, so far as possible, independent and individual enterprise as against Government paternalism.

THE DEMOCRATS AND CONGRESS.

President Wilson's determination to make no speeches in the coming Congressional campaign, as stated in his letter to Representative Doremus, will meet with general approval. It is in keeping, too, with his entiro conduct since he entered the White House. This has exhibited a degree of undeviating devotion to the duties of the office, a sense of responsibility for seeing that no harm shall come to the Republic through want of the most watchful attention on the part of its executive head, which has seldom been equalled. Something more, too, than the fear that the public business might suffer through any diversion of his time or energy to the demands of a political campaign is to be seen underlying the President's words. Impressed as he is with the critical importance to our own welfare, and not impossibly to the welfare of the nations now engaged in a titanic war-grapple, which attaches to the observance of precisely the right conduct in this extraordinary situation, Mr. Wilson doubtless feels that any unnecessary thrusting forward of his party attachments is to be avoided. In all that relates to the large questions of national policy having no partisan character, he wishes to exercise upon the whole people all the influence belonging to the head of the nation, not the head of a party; and the making of campaign speeches is not calculated to promote this end.

The President justly says that the Democrats are in a position to go to the country with an appeal "in which there need be no pretence or boast of any kind, but a plain statement of things actually accomplished." The record, he says, "shows us at peace with all the world"; and, dismissing with these eight words that phase of the situation, he goes on to speak of the legislative achievements of the prolonged sessions of Congress since the Government passed into Democratic control. But though so briefly dismissed by Mr. Wilson, and though it may not be desirable that it should form the theme of much campaign oratory, the fact that we are at peace with all the world is sure to weigh mightily with thousands of voters. They will be inclined, other things being equal, to make their vote for members of Congress a vote of approval for the Administration which, in the face of all possible discouragement, by skill and patience and firmness averted a war that seemed all but absolutely upon us; and averted it not only without loss of national prestige, but with a great gain for the position of the country in its relations with the South American republics. The unspeakable calamity that has befallen Europe, the horrors that every day brings before the eyes of us all as we read the newspapers, cannot fail to impress upon multitudes of honest and right-minded men a realizing sense of the debt our country owes to President Wilson's moral and intellectual strength in dealing with the Mexican crisis; and the influence of this sentiment can hardly fail to be felt in the fortunes of the party of which he is the unanimously acknowledged leader.

The campaign, however, must, of course, primarily rest upon the record of Congress. And it may safely be said that the Democrats will in this regard be in a position very different from that which has so often in recent years confronted either party in Congressional campaigns. On the two great subjects upon which public attention has been chiefly centred, they will not be in the position of a party on the defensive. In 1890, after the enactment of the McKinley tariff, the Republicans found themselves face to face with a wave of public resentment; and the pitifully apologetic character of their campaign of 1910, after the passing of the Payne-Aldrich tariff, is still fresh in everybody's mind. Between these came the Dingley tariff, it is true, which brought about no such state of the public mind; but that was immediately after the Democratic free-silver *débâcle* of 1896, from which the party was many years in recovering anything like its normal condition, and which gave the Republicans free swing to do as they pleased during a long period. Leaving this out as abnormal, it may be said that every tariff law, except the present one, enacted in the past quarter-century—including the Wilson-Gorman act of 1894—was followed by a tremendous reaction against the party responsible for it; but in the present instance, though there has of course been a certain amount of discontent and complaint, no such change in the country's temper is at all discernible.

The Banking and Currency bill was second only—if second at all—to the Tariff bill in the attention centred upon it by the country; and here the contrast with previous experiences is even more marked. Here the Democrats have, on the face of things, the credit of having dealt, in a manner that commands almost universal approval, with a problem which has for decades been regarded as in the highest degree urgent, and with which, nevertheless, Congress after Congress had found itself impotent to grapple. A just analysis would assign to those previous unsuccessful efforts a large share in bringing about the final result; in particular, it would recognize that the efforts of Senator Aldrich, the labors of his Monetary Commission, and the exertions of many men instrumental in the long campaign of education, were essential to the success finally achieved this year. But the fact remains that the actual attainment of that result—the enactment of a vital monetary and banking reform, and one free from a score of bad features which threatened to be incorporated in it—was the work of a Democratic Administration and a Democratic Congress. The old cry that the Republican party is the only one fit to govern the country—the great stock-in-trade of the G. O. P. spellbinders—will not be heard this year, or, if heard, will provoke only a smile. Whatever may prove to be the outcome of the elections, the Democratic spokesmen can go into the campaign with heads erect. They can, without boasting, point with solid satisfaction to the record of President Wilson and of a Democratic Congress which, though far from perfect—as witness its failure to keep its pledges of economy, and its encroachments upon the merit system in the civil service—has measured up to a very high standard of legislative duty.

THE RIGHT NOTE IN THE PHILIPPINES.

I believe that the Government here was out of sympathy with the people and that he [Governor-General Harrison] has brought it into sympathy with them. I believe that the Government here was upside down, and he has turned it right side up.

In these words Commissioner Winfred T. Denison, in a recent address in the Philippines, defined his position and upheld the policy of the President as carried on by Mr. Harrison. Addressed to the American colony in Manila, which was, and probably still is, bitterly opposed to Mr. Denison, it aroused the utmost bitterness in the mushroom American press of tbe capital. So opposed were the editors that, if we are correctly informed, it appeared at length only in the native press. Such treasonable sentiments could not find a place in American columns, and from that time forth the vials of wrath were emptied upon Mr. Denison's offending head.

It is not difficult, on reading his speech, to find out wherein lies Mr. Denison's wrongdoing. He has taken the extraordinary position that he and his associates are really in the Philippines to administer the islands for the Filipinos' benefit, and not for the Americans'. Such treason to the existing order

naturally made the welkin ring. It has been the habit to say glibly that the Filipinos' land is theirs, and then to add, "but I have never really believed in this policy of turning over the islands to them." We remember that to one official who, after some time in the islands, still believed in the rights of the Filipinos, a compatriot said: "Everybody that comes out here thinks for a while that these people ought to be treated like human beings, but they soon get over that." Well, Mr. Denison's beliefs in democracy and human brotherhood seem to have survived some months in the archipelago, for we find him asking these searching questions: "Are we to commit the absurdity of trying to teach democracy by exhibiting an autocracy? Are we to stand before the world as crusaders of a democracy backed with bayonets? Are we to stand before the world for the proposition that we are for democracy for ourselves, but not for the other fellow?"

Well, even these high-flown, Declaration of Independence sentiments might have been forgiven in this young gentleman if delivered with a wink, and if only he had stopped there. But he made to shiver the pocket nerves of the Americans of the Manila City Club who heard him, for he laid down the theory that the Filipinos' taxes ought to be spent as they, and not their rulers, thought best. He gave a knock-out blow to the idea that the Filipinos "ought to want" certain things, and whether they did or did not, they were to have them. He actually stated that, aside from the primary essentials of order and sanitation and international obligations, it is the Americans' duty to spend the Filipinos' money for what they want, whenever there is a difference of opinion between them and the American administrators of that particular hour. Of course, the American business man saw what that meant—recognizing the Filipino as a thinking animal with some rights in his government. It was as if some one had risen in meeting in Atlanta, Georgia, and said that negro Americans ought not to be taxed without representation in their government. The monopoly of the white race was jeopardized at once. Treat a dark-skinned man like a human being? The whole structure of Anglo-Saxon civilization totters at the thought.

The joke of it all is that when Mr. Denison was on the way to his post they called him "the white man's hope"—because he had been a Republican, and is a Progressive, and not a Democrat like his associates of Mr. Wilson's choosing, and it was expected he would uphold the Taft-Forbes policy. After this speech he was the white man's hope no longer. Those wretched Filipinos have actually called him their George Washington, their Lincoln; they have dwelt on the fact that no other American official in the fourteen years of our occupancy has admitted that the Americans could learn something from the Filipinos. Mr. Denison has been learning from them by going among them to ask their wishes. When he reached Manila he found that 14,000 Philippine dollars were being spent to print the results of ethnological research into the habits of the Bukidnons and other non-Christian tribes, when there was no money to provide 40,000 people in Palawan with a single doctor; when the Palawan Moros were without a school-teacher, and the Culion leper colony was desperately in need of two more nurses and $50 a month spending money. Mr. Denison cut out the 14,000 dollars for ethnological research and 500 more for photographing molluscs—and his official head is still upon his shoulders!

Being ourselves recreant to the theory that the Filipinos exist only to be guided and exploited by Americans, we confess to unbounded satisfaction that there is such an official at Manila as Mr. Denison. It is, as we have often pointed out, all in the point of view. We have been criticised because we declined to take the former Governor-General, Mr. Forbes, at his own and his friends' estimate. The trouble with him was his point of view; a sufficient indictment of his administration was that never in his years of service did he give utterance to such sentiments or assume such a pro-Filipino attitude as Mr. Denison's. As a British Governor-General Mr. Forbes would have been a thoroughgoing success; as an American, he gave no evidence that he was imbued with the true principles of democracy upon which this republic was founded, and which ring through all of Mr. Denison's speech. Somehow or other, since Mr. Taft quitted the islands, we have had no genuine *rapprochement* between natives and Americans. An austere school-masterly attitude of our officials, conscious or unconscious, has intensified the natural suspicion and the inability of the Filipinos to appreciate in fullest degree just what are the motives behind our policies. We cannot but hope that Mr. Denison's attitude will be that of the entire Manila Government.

In these days when we are beholding millions led to slaughter by rulers without much reference to their wishes or desires, is it not a breath of inspiration, a cause for rejoicing and fresh courage, that, thanks to Mr. Wilson, we seem to have at last a government in Manila which really seeks to be the servant and not the master of the governed?

Chronicle of the War

The precision and rapidity of the German advance through Belgium and across Northern France has so startled the imagination of the world that in the past few days there has been exhibited a disposition in many quarters to believe that there is nothing which that amazing fighting machine cannot achieve. Since August 23, when the Germans entered Namur, up to last Saturday, when their lines were close to the guns of Paris, they had advanced a distance of 175 miles. Namur, Lille, La Fère, Laon, and Rheims were successively taken or abandoned without resistance. We have the testimony of British accounts that so rapid was the German advance that the retreating British forces on the left wing were at times compelled to march at five miles an hour. Nothing, it seemed, could stop this impetuous rush. If Namur feli in two days and other fortresses were abandoned, why should not the same onward sweep carry the German attack over the fortifications of Paris?

It is unnecessary now to point out against the argument that fortifications are no check to German progress, that if Namur fell, or was abandoned for strategic reasons, Liège and Longwy offered a stubborn resistance, and Maubeuge is still holding out. The German armies have themselves replied to that contention by the movement away from Paris in a southeasterly direction that was begun towards the end of last week. To suppose that Paris is susceptible of being taken by assault is to believe the German army not the highly perfected fighting machine that it unquestionably is, but a force endowed with supernatural powers. Great as has been the achievement of the German troops, that of the Allies has been hardly less remarkable. It would not have been surprising if the continuous retreat that they have been making for close on three weeks had been turned into a rout. So far from that having happened, the army remains intact, and the determined attempts of the Germans to turn the left flank have been frustrated and have now been definitely abandoned. Furthermore, information from all sources, including a significant letter from the Berlin correspondent of the Associated Press published on Tuesday, agrees that the German losses have been out of all proportion to those of the Allies.

With the sweep of the German armies towards the southeast and away from Paris, we enter the third stage of the operations in the west, the first and second having been the initial operations in Belgium and the great drive through Northern France. Again it is necessary to draw attention to the fact that the news that reaches us often alludes to events that occurred two or three days previously. When we wrote last week, for instance, we assumed that the French line ran from somewhere between Amiens and Péronne, on the Somme, through La Fère and Laon, to Rheims. An isolated dispatch on September 1, speaking of an engagement between the English forces and German cavalry in the neighborhood of Compiègne, some fifty miles from Paris, and roughly the same distance from Peronne, was only explained three days later when we heard that La Fère was occupied by the Germans on August 29 and Amiens on the following day. A belated

dispatch last week also told us of German troops being reported near Beauvais, and a French official report mentioned that there had been no contact in the neighborhood of Compiègne and Senlis (some thirty miles from Paris) since September 2.

The Allies' line, then, a week ago we may assume to have been from Creil, on the Oise, to Senlis and Crépy-en-Valois, thence northeast to Soissons, southeast to Rheims, and across to Verdun. Rheims was given up apparently on Thursday or Friday of last week. The left wing of the Allies has fallen back upon the outer fortifications of Paris; the right wing continues to rest on the Meuse at Verdun, extending southwards to Nancy and Belfort, and the line, instead of forming a bow towards the north, has fallen back to a similar formation towards the south. The Allies' position, then, at the beginning of the great battle which started on Sunday or Monday, and which, as we write, is presumably still in progress, was south of the Marne, on the line Meaux, Sézanne, Vitry-le-François, Verdun, Nancy—a front of some 150 miles and a right flank of fifty. For the time, Paris is relieved from the prospect of an attempted assault by the German movement towards the southeast, which leaves the German forces opposing the Allies' line, from left to right, in five armies, those of Gen. von Kluck, Gen. von Bülow, the Grand Duke Albrecht, of Württemburg, the Crown Prince Wilhelm, and Crown Prince Rupprecht of Bavaria. It is obvious, too, that the German plan does not contemplate an investment of Paris—a dangerous operation with the enemy's army in the field—until the Allies' forces have been decisively defeated.

The battle that is now in progress is bound, therefore, to be a momentous one. As we write, no possible forecast of its result can be made. Indications are that the German endeavor will be to cut the centre of the Allied line, driving the left back on Paris and isolating the right along the Meuse. This supposition is strengthened by the reports of successes on the left wing, where the Allies are said to have advanced a considerable distance and appear to be attempting a turning movement. If this is so, it would seem to indicate that forces have been withdrawn from the German right to reinforce the centre. If the Allies have brought up sufficient reserves to enable their centre at Vitry-le-François to hold firm, the turning movement on the left may develop considerable importance and imperil the German right flank. Cautious mention should also be made of the persistent reports of the landing of troops—Russians or East Indians, or both—in Belgium. Should there be truth in these reports, and should the new army assembling in Belgium be of any considerable strength, it is obvious that not only would the German lines of communication be seriously threatened, but that the army in France would be exposed to an attack in the rear. It is barely possible that this danger may account for the German movement towards the southeast as an attempt to regain direct touch with Germany on the eastern frontier and to form new lines of communication in that direction. It should be noted, also in this connection that there has been renewed German activity in Belgium. On Saturday Termonde was taken after sharp fighting. Ghent was surrendered on Tuesday by agreement, and there are reports of a projected attack upon Antwerp.

The situation in the eastern campaign has become considerably clearer during the past week. We spoke last week of the main Russian attack being directed on Berlin by way of Posen, and pointed out that the main Russian army was delayed in striking for its objective by the Austrian invasion in the Lublin district. It has now become apparent that not only has this army been delayed by Austrian successes around Lublin, but that the battle at Allenstein, to which we referred last week, was a serious reverse, and that Germany, with her miraculous faculty for apparently making two men grow where only one grew before, was able to put many more troops in the field in Eastern Prussia to repel the Russian invasion than was generally supposed. German accounts of the capture of 70,000 prisoners in this battle may safely be discounted as on a par with the official denial of the taking of Lemberg two days after its occupation was admitted in Vienna, but there is no doubt that two Russian army corps were seriously defeated at Allenstein, and that this defeat had to be remedied before the main Russian army could make further progress.

The Russian offensive may be considered as a whole as stretching from near Königsberg, in Prussia, on the north, through Poland, to Lemberg, in Austria, on the south, its right and left flanks advanced beyond its centre. The German victory at Allenstein has been counterbalanced by a Russian victory over the first Austrian army in Galicia and the capture of Lemberg, news of which was received on Thursday of last week. The battle resulting in the occupation of Lemberg was evidently an engagement of first-rate importance. It is unsafe to accept any estimate of the number of losses inflicted on the enemy, but all accounts agree that the Austrian army was decisively defeated, and the fact that large quantities of stores were taken at Lemberg may be of appreciable advantage to the Russians in hastening their advance. In Galicia also they have seized Halicz, presumably that they may command the passes of the Carpathians, and are threatening the fortress of Przemysl, fifty miles east of Lemberg, which is the last stronghold in Galicia, and the taking of which would open the way to Krakau, the base of the Austrian army in Poland.

The Russian success at Lemberg immediately put the Austrian army operating in Lublin in the gravest peril of a flank attack, which, according to reports received on Tuesday, has already been undertaken. According to these accounts Gen. Ruzsky, commanding the Russian forces in Galicia, immediately after his victory at Lemberg, moved north and attacked the flank of the Austrian second army under Gen. Auffenberg. At the time of writing that army is said to be on the defensive and a big battle is in progress. Caught between two fires, the Austrian situation would seem to be exceedingly precarious. Should the Russians gain another decisive victory in this battle, the principal obstacles to the immediate invasion of Prussia will have been removed, and it is probable that a simultaneous advance on Berlin, by way of Posen and of Breslau, will be undertaken.

Foreign Correspondence

THE FALL OF NAMUR—LORD KITCHENER'S MAIDEN SPEECH—THE PROSPECT OF A PROLONGED STRUGGLE—THE COST OF THE WAR.

By SIR HENRY LUCY.

WESTMINSTER, August 28.

It would be difficult to exaggerate the disappointment that spread gloom throughout London when news came of the fall of Namur, quickly followed by announcement that, after desperate fighting lasting through a day and a night, the Allied forces were compelled to withdraw from the favorable position taken and to retire on the line of defence originally planned. It was confidently anticipated that this famed fortress would make a stand against the invaders stouter even than that maintained by Liège. Three months was, upon high authority, specifically named as the period of its successful defence. With Namur fallen almost at the first blow, the rest followed as a matter of course. But, though the public of all classes was smitten by disappointment, the more keen because it followed close upon a period of exultation, there was no sign anywhere of departure from the stern resolution to see this business through to the finish. The British soldier cheerily marching to the front sings, "Are we downhearted?" and answers his own question with a prolonged shout of "No." London under the first shock, though painfully surprised, is in no measure downhearted, an attitude reflected throughout the land.

In Tuesday morning's papers there appeared a brief dispatch from the seat of war giving the names of three or four men, including a Scottish peer, who have been wounded. There was a common disposition to accept this as the whole of the story, a misleading impulse that made greater the shock which smote the town on Tuesday afternoon when official announcement was made on the authority of Sir John French that over two thousand men of the Expeditionary Force had been knocked over, some killed, the rest wounded or missing. This brought the meaning of war home to countless hearths. The absence of names added to the anguish of the situation. Every one who had a father, son, or brother at the front was stricken with apprehension that he might be among the doomed two thousand. There was, further, the prospect that even if the cherished one escaped with life and sound limb from this first battle, there was an indefinite succession of deadly risks in store.

Lingering hope that the war may be of brief duration, a hope cherished in the rosy atmosphere of last week, has been dispelled by Lord Kitchener's maiden speech in the House of Lords. While talking cheerfully of the condition of the Expeditionary Force, extolling its gallant stand at Mons, the War Secretary did not attempt to disguise his conviction that we are in for a long job. He talked quite coolly about a duration of three years, and made it clear that his plan for maintaining the strength of the army was based upon that contingency. For how long so ever the war lasts, he intends to maintain in even increasing strength the army at present in the field. In a concluding passage he hinted that if the voluntary system of enlistment is not equal to the emergency, "ex-

ertions and sacrifices beyond any yet demanded will be required from the whole nation and Empire." That, of course, means conscription. While this memorable speech had an immediately chilling effect as pointing to indefinite prolongation of the war, it comforted the audience and the nation, breathlessly listening at the door of the House of Lords, with assurance that through the critical time coming it will always hear the full truth when Lord Kitchener speaks. He has no honeyed words, whether for soldier or civilian.

The war now opening on the Continent will be notable, among other things, as marking the final supersession of the war correspondent. It is true that a member of the staff of the *Times* had the good fortune to find himself within riding distance of Dinant when an engagement took place between detachments of the French and Germans, and made the most of it by dispatching to his paper a column of description. But that was an accident, and the order issued at the suggestion of Sir Edward Grey prohibiting English correspondents to attach themselves to any division of the Allied forces will make repetition impossible. As a matter of fact, the war correspondent's occupation, like Othello's, is gone. Time was, so recently as 1870, when correspondents representing the leading newspapers on both sides of the Atlantic were recognized by the headquarters staff of the several combatants. On the brink of the present war the most influential journalists, seeking to obtain permits for their representatives to accompany one or other of the armies, met with uncompromising refusal.

There is no doubt that, for military purposes, this attitude is justifiable. It is, nevertheless, a profound disappointment to the public and, in some degree, a lack of incentive to officers and men personally to distinguish themselves, knowing that within twenty-four hours England will be ringing with the story of their valor. "Billy" Russell, Archibald Forbes, McGaghan, and other brilliant war correspondents were born in due season. They would find themselves to-day hopelessly hampered in the performance of their accustomed work.

When, thirty-seven years ago, Disraeli asked for a vote of credit with the avowed intention of defending Turkey against incursion by Russia, he modestly fixed the amount at six millions sterling. One hundred millions to begin with was Mr. Asquith's demand, necessity being created by certain prospect of war with Germany, a request unhesitatingly, almost enthusiastically, conceded by the House of Commons. It is too early to talk of the cost of a war imposed upon this country by the unbridled ambition of the German Emperor. It may, however, be reckoned upon a scale proportionate with that of 1870. In 1899 the British Government responded to President Kruger's ultimatum by asking for a vote of credit for ten millions, a sum the House was assured was based on an estimate liberally designed to cover all contingencies. Labouchere elicited a scornful laugh when, in Committee of Ways and Means, he prophesied that the cost of the war would not be less than one hundred millions sterling. In the end it ran close up to two hundred and fifty millions.

The colossal sum already voted for the service of the present war does not mean an immediately consequent increase of taxation. It and subsequent drafts of approximate magnitude will be met by a loan. Hitherto, differing from the policy of its predecessors, the Government has in all cases involving increased war expenses, whether naval or military, paid its way out of the revenues of the year. Such Spartan probity would be impossible in dealing with the charges of this war. Nor would it be an arrangement fair to the taxpayer of to-day, who has through a succession of years patriotically borne the burden of keeping up the navy to the state of perfection that makes it capable of meeting a national crisis. We might have purchased temporary peace by accepting what Mr. Asquith in an historic phrase described as the "infamous proposal" of the German Emperor. The country has chosen the better way. It means to fight it out to a finish with the "Bully of Berlin," and so deliver the next generation from the tyranny of that spirit of militarism that has cost us so much during the past twenty years.

ITALY'S NEUTRALITY AND ITALIAN PUBLIC OPINION.

GENOA, August 17.

No policy, no ideal even, has held Italy so compact and united, not only in feeling but in purpose, as its declaration of neutrality. Government and people are absolutely one in this, and present an encouraging spectacle in the midst of an awful historic drama.

Whether the foresight of her statesmen is responsible for her present enviable position, or whether it can be traced to the solid common-sense of the Italian mind, matters little; what does count is the unanimity of the sentiment for peace, as it gives hopeful assurance of its continuance. To have resisted, even so long as it has, the promises and blandishments on the one hand, and the thinly veiled threats on the other, has been no easy matter, especially when we consider that at this trying moment Italy's alliances do not harmonize with her political interests or with the sympathies of her people.

What has helped her in keeping from the pitfalls that have been dug all about her by the belligerent states who court her support, has been a strict adherence to well-defined and incontrovertible principles of the duties and obligations of a neutral state, without fear or favor. In other words, while her more powerful neighbors are daily committing acts which are a denial of law, Italy stands like a rock on the obligations and observance of international juridic principles. Her enemies may call this an unvalliant and too technical a policy, but thinking men must read in Italy's neutrality the one reconstructive hope of European civilization. And if, after the smoke of battle clears away, the price of her "inaction" shall be, as some of her friends threaten, that she shall come out as heretofore "with clean but empty hands," yet will her prestige compensate enormously the failure of her material aggrandizement.

Whatever the secret treaty of alliance with Austria and Germany may contain, it is admitted that it calls for joint action by the contracting Powers only in case of aggression; and the facts regarding the beginning of hostilities by Austria-Hungary against Servia, and by Germany against Russia and France, cannot be distorted by international casuists into that *casus fœderis* which would compel Italy, under the treaty, to join in the struggle. But irrespective of this, the essential object of the Triple Alliance was the maintenance of the *status quo* in the Balkans, and Austria's action against Servia was a nullification of this purpose of the treaty.

There is, however, a political consideration of immense importance, affecting Italy's treaty obligations towards her ally. The Viennese Government cannot be ignorant of the obvious fact that the one supreme desire of the Italian people is to wipe out the bitter remembrance of Lissa and to regain the Adriatic littoral of the Venetian Republic. Nothing would be more popular than a war against Austria, and never perhaps would the time be so propitious as now, when her ancient enemy is so sorely pressed.

And yet Italy stands neutral! This is the magnificent and inspiring fact—a fact made possible not by any imposition or pressure of the Italian Government, not by very doubtful treaty guarantees, but by the deliberate, soberly reasoned purpose of the people—of the whole people—of United Italy.

In the dingiest *osterie*, no less than in the "literary" cafés, not a word is spoken that might give offence, however free is the expression of sympathy and admiration for the Triple Entente. The newspapers, though uncensored, are models of restraint and good judgment, and though the country's heart throbs with one great, unspoken hope, it does not smother the country's mind in the labor of directing the ship of state.

It may well happen that Italy may be compelled to change her attitude, and Italy does well to prepare for any fate. But even in this her procedure has been admirable. She has husbanded her resources, taken stock of her assets, and distributed as much as possible the inevitable business and physical hardships of preparing for war. Her mobilization is done very gradually, she is distributing her returning immigrants who have fled from the war states by the thousands, where there is a shortage of men from the calling out of the reserves, and is taking ample measures to safeguard her finances.

To-day, except for the presence of frightened Americans and weary refugee-immigrants, Italy looks the same happy, fascinating land that we have always found her. But it seems to me that over its fair face there shines a seriousness and a purposefulness that betoken national maturity and national self-reliance. If she shall have to descend into the lists, hers will be the one army of all the military hosts of the great Powers which is fresh and unweary; hers will be the exchequer that has been the least drained and the most added to during the present conflict, and hers will have been the fortune and distinction of being the last to submit to the arbitrament of the sword the sordid desires and the racial hatreds of "civilized" Europe.

GINO C. SPERANZA.

MEMORIES LOST IN THE STORM—JEAN JAURES AND JULES LEMAITRE.

LAUSANNE, August 8.

Something should be said of Jean Jaurès before his memory is lost in the storm that has swept over our civilization. His dreams were of a new civilization, and he lived to wake from them long enough to see the German comrades of his *Internationale* face about and march after their War Lord. Among his last day's utterances in his daily organ, *L'Humanité*, there is a confession of Man's irremediable need to save his family and country even through armed Nationalism. Perhaps it was the nation's growing distress as well as uncomprehending political animosity that drove mad the poor simpleton who assassinated him. All his disciples, even

the Syndicalists who verge on anarchy, have taken up the cry of every nation of men struggling for their common life:

> Strike for your altars and your fires!
> Strike for the green graves of your sires!

The words seem commonplace—and are universal. Marcel Sembat and the other leaders have since wheeled Socialists into line with all Frenchmen; and they are but following the lead of Jaurès in his last days. In the paling and ineffectual fires of Pacifism, its *enfant terrible*—Gustave Hervé, who preached in peace the General Strike as an *ultima ratio* against war—has gone to the front to fight as a common soldier, calling back a fit epitaph till the time comes when the dead leader can be better remembered: "They have assassinated Jaurès—let not us assassinate our country!" Jaurès was a curious product, whole and entire, of that civilization which he was willing to change—and which seems to be changing actually under the clank of arms far more quickly than his mind, all for peace, could have foreseen. The future Gibbon will tell whether it was the decline and fall of European civilization as it has been and whether this shall have been replaced by another painful birth of Humanity. *Tantæ molis erat Germanam condere gentem!* Jaurès came forth from the old rhetoric and philosophy a reasoner, for himself and others, exactly fulfilling the definition given by John Stuart Mill: "A man is often called a great logician, or a man of powerful logic, not for the accuracy of his deductions, but for the extent of his command over premises; because the general propositions required for explaining a difficulty or refuting a sophism, copiously and promptly occur to him; as in the case of Chillingworth, or Samuel Johnson." Other physical and mental, and perhaps moral, parallels might be found in Jaurès and Dr. Johnson—and not too fanciful. There was the bulk of the men, though Jaurès had legs enough shorter to be characteristic. There was the thunderous voice, which Jaurès used with an art ranging from the organ-pipe tones of a cathedral canon to the hurrying strains of La Carmagnole sung from the top of a wineshop table. Then there was the strong common-sense, which enabled Jaurès to weave intelligible arguments while his brother prophets were wrapping up their Socialist counsel in unskilful words.

Jaurès began with the old metaphysics just as Johnson began—and continued—with the old High Church theology. His thesis for the doctor's degree—for he became a university professor of philosophy—was a stout volume on the "reality of the external world" or the existence of matter. In a memorable page of Boswell, Dr. Johnson solved the same question against Berkeley by kicking at a stone—*solvitur ambulando*. Except for some curious and complete biographer, it may be doubted if the philosophy or even the speeches of Jaurès—and he passed his later life speechifying and writing leading articles—will win more than vague mention in books on a man that has helped to make history. It was the sword of his word that turned the Government scale in the Dreyfus affair and made possible the Radical-Socialist *bloc*—and last spring's triumph of Socialism which a physical sword is now likely to undo. The patriarch of French Socialists, Jules Guesde, had been of another opinion: "Dreyfus is a *bourgeois*—let the *bourgeois* settle their own quarrels!"

There is one several-volumed, uncompleted book of Jean Jaurès—for it is really his in inception and plan, and largely in execution, though a coöperative product—which is insufficiently known now, but may last. It is the Socialist history of the French Revolution. Just as Dr. Johnson's wide culture gave him historical *lumina* that still enlighten, so Jaurès's "extent of command over premisses" gave him an insight which is often wanting utterly to narrower documentarians.

Poor Jules Lemaître is another Frenchman who has died just at the monent when his passionate desire to know what is coming to the world—and to France—must have been acutest. Perhaps it is better for him; the world's Becoming may prove to be something that would have been his despair. When there is again breathing space to think, his memory may be taken up and receive that obituary glory which the iniquity of the times now denies him. His career was significant of the France that is passing—and in France alone was it possible. He was the son of the school-teacher of a peasant village near Orléans; and the Church gave him the charity of a strong classical formation in one of her *petits séminaires*, where young boys study until they are old enough to decide whether they will go on to the *grand séminaire* and become priests.

Jules Lemaître chose to go up to the Government Ecole Normale, to which his brilliant attainments gained him easy admission. The famous school was still at the height of its literary and scientific renown, though Jules Lemaître took little of the scientific spirit of the day from it, save for a keenly critical intelligence and a smiling, unpronouncing view of life in accord with the reigning skepticism of Renan. Every one then was for Taine or Renan; and Lemaître has at least lived to see both those luminaries sink beneath the waves of intellectual change. His own intelligence survived with all its qualities, although he said of the young men immediately following him—Maeterlinck and the others—that they left him feeling "devoid of all mental security." They, too, have passed in France; and Jules Lemaître, their elder, leaped over into essential sympathy with the still newer generation. His critics said it was a phenomenon of heredity and a reversion to his early clerical education. It was one consequence of the Dreyfus affair in its manifold activity, wherein Dreyfus was the least part. Jules Lemaître himself said it was the revival in him to intense life of the Frenchman he had always been. Beforehand, he had done the work for which he will be remembered—that fine, clear, subtle, erudite, wonderfully expressed criticism of the "Contemporains" which comes nearest to the "Causeries" of Sainte-Beuve—and with this should be joined his "Impressions de théâtre."

After the change came a political avatar with years perhaps not wholly wasted; and then the incomplete resignation of later years, with the first manner not entirely regained, and yet sharpened by the second in profitable, if partial, views of Fénelon and Racine, Rousseau and Châteaubriand—each of whom wrote for Revolution or Counter-Revolution, as he had himself written for both. Towards the end, as in so many French writers of this evil day, there was a growing sense in his writing of the needs which the old religion supplied—"the old mother, the Church, crooning her children to rest," of a famous Parliamentary apostrophè of Jean Jaurès, when he finally cut loose from Jules Lemaître's old France.

Poetry

WAR.

Fools, fools, fools,
Your blood is hot to-day.
It cools
When you are clay.
It joins the very clod
Wherein your foe shall be,—
Wherein you look at God,
Wherein at last you see
The living God,
The loving God,
Which was your enemy.

WITTER BYNNER.

Books and Men

THE CONSTANT TOPIC.

The newspaper cartoonists suffer not so much from lack of technical skill (if an untrained eye may judge) as from lack of ideas. The man or woman who tries to say something, whether with pencil, brush, or pen, at certain regular intervals, must not be criticised too severely. He or she deserves the consideration which was solicited for the pianist in the Western mining camp—"Do not shoot at him; he is doing the best he can." The necessity of creating something once a year hinders an artist; a monthly production bothers him; a continual state of absent-mindedness besets the man who must be ready once a week; what it means to answer the daily call for a picture, an editorial article, or a column of paragraphs, let those who have suffered declare.

Stevenson declined ten thousand dollars for weekly articles for a year, at a time when the sum meant almost fabulous wealth to him. Owen Seaman prays a lady:

So, if you would grant a favor,
In your orisons recall
One whose smile could scarce be graver
If his mouth were full of gall;
Let your lips (that shame the ruby)
Pray for mine all wan and bleak
With the strain of trying to be
Funny every week.

'Tis a task that haunts me waking,
Like a vampire on the chest,
Spoils my peace, prevents my taking
Joyance in another's jest;
Makes me move abroad distracted,
Trailing speculative feet;
Makes me wear at home a rack'd head
In a dripping sheet.

The title of this department is "Books and Men," and for five weeks it has been my ambition to confine these articles to books, and to say little or nothing about the great and terrible events which engage the men of Europe and Asia. So far, I believe that I have scored a complete failure. The war has crept into everything I have written. It is significant of these world-shaking days that even men who are so far removed from action as to spend their lives amongst books

cannot talk for five minutes or write for ten without finding themselves in the thick of the one absorbing topic.

There is no moment of the day, no situation in which we may find ourselves, that does not lead us straight to it. An hour after sunrise this morning I was walking through a country lane, a mile from the nearest house. The famous passage from Carlyle's "French Revolution" kept running in my head—the apostrophe to the evening sun of July, shining peacefully upon the fields of France, upon cottagers before the doors of their homes, upon tight-jacketed hussars dancing with the ladies of Versailles, "and also upon this hell-roaring porch of the Hôtel de Ville!"

The old, old contrast came to me, as it comes to thousands of others every day now. The sun rising through the mists, the September meadows, brown and green, with a few, fading black-eyed susans here and there, a flight of crows overhead, and nearer, three or four blue-birds—their autumn gatherings commenced—all this vanished away to give place to the swarming fields of Picardy, to men standing and falling, as they were doing at that instant, amidst the horrible din of bursting shells, and to the heaps of what three minutes before had been living soldiers.

By breakfast time the papers have come, and although you try to avoid the subject, every one has at least seen the headlines, has learned what new countries are being dragged into the conflict, what charges and counter-charges of inhumanity are made and denied. On the train that carries you to the city, or the street-car to your office, men are absorbed in their papers as never before. You are not allowed to forget the war for an hour. People talk of it in offices, everywhere. Extras are roared down the streets. Ten thousand, twenty thousand, seventy thousand men have been killed at some place you never heard of before. The great machine is grinding on. The devil of militarism has long been caged—like Mr. Hyde's, it has come out roaring. At the luncheon hour there are more papers—it is nearly evening over there now, and only an hour or two of daylight left. Many men, however, can be killed in an hour. And the coming of night does not stop the killing by any means. We have new inventions; science has taken wonderful strides..

At the restaurants men argue, grow red, almost shake their fists in others' faces. The people you pass on the street are talking about it; you catch their stray words—"Paris," "the Russians," "Turkey." From people sitting on park benches the same words come, and the talk of the war drifts to you across the lawns of suburban houses. The great, tragic game of humanity is being played by more players and on a wider field than ever before—is it any wonder the spectators talk about it?

More papers, when the crowds turn to come home from their work. Cities have fallen, armies been captured, forts battered, ships sunk. We are fed full with horrors, our minds dulled and understandings atrophied—we read of the death of a thousand men without half the emotion we should feel if a man in the next seat should pinch his finger in the window.

In a novel published a few months ago, one of the characters is represented as taking part in a great European war. He is crouching in a trench, somewhere on the plains of Belgium, listening to the German guns battering Namur. He reflects that, like himself, on that day, a million men, from Holland to the Alps, are crawling and crouching and seeking to shoot each other. The ghastly idiocy of the whole thing appalls him. (You will find it in "The World Set Free," by H. G. Wells.)

"The thing is idiotic to the pitch of impossibility," he says. "It is a dream. Presently I shall wake up."

Six weeks ago we called the book fiction.

All this week the harvest moon has shone, sometimes in a clear sky, sometimes through a mist, but always attended by that great planet which sails across the southeast every night. Drifting mists hang over the meadows, upon which the moon's rays fall. You cannot look on it without a sense of the horror of contrast. You are lucky if you do not see in your mind's eye the sleeping lines of men whose night, over there, is ended. It is time for them to rise up and kill each other. You are lucky if you do not think of that larger and more pitiful host who lie down in trouble, and awake to anxiety, of those whose sleep is prevented by thought of the death which rains down out of the sky.

EDMUND LESTER PEARSON.

Correspondence

THE UNITED STATES AS BATTLEFIELD.

TO THE EDITOR OF THE NATION:

SIR: With all the attention that international congresses have given to defining the position of neutral states during time of war, one inevitable danger has been overlooked. That is the danger which the neutral states must suffer as the diplomatic battlefield of the warring Powers.

A neutral state, to remain neutral, must adopt sooner or later a censorship of the press. This censorship may be voluntary, as that in the United States at present, or legal, as in Switzerland. It is, nevertheless, a censorship. Moreover, the inhabitants of a neutral state must be excessively guarded in every utterance concerning the international situation. Why, then, when the neutrals themselves must exercise such care, should they be subjected to the incendiary efforts of foreign diplomats?

As neutrals, we in the United States have the power to keep out the armed forces of belligerent countries. Why should we not have the power to silence the diplomatic forces of those same countries? We certainly cannot keep out these official representatives of friendly Powers; but why cannot we confine them to their official functions, instead of allowing them to do what we ourselves are forbidden to do? Some of them (fortunately not all) take almost daily occasion to instruct us in what our attitude should be, with whom we should cast our sympathies, why we should cut short our admiration for others, in brief, why we should think and act precisely as they would have us think and act.

I do not say that these foreign representatives may not be instructing us rightly. That has nothing to do with the fact that as neutrals we have as much moral right to protect ourselves from such partisan influences as we have to protect ourselves from the passage of belligerent troops. The lesson we are learning is not one of to-day and merely for this war; it is a lesson for all time and for all international complications.

As we all know, in any war between allied forces, the main object of diplomacy is to separate the allies by creating real or imaginary jealousies. To do this, diplomacy must have that double-edged tool, the power of suggestion. Now, no diplomat would be so tactless as to make suggestions himself to his diplomatic opponents. But in as conglomerate a country as the United States, he finds no end of innocent but effective mouthpieces. The partisans of a strident democracy, in particular, are only too ready, upon skilful provocation, to make invidious comparisons between autocrats and democrats, and to proclaim the impossibility of reconciling the democratic and autocratic principles.

If we but remember that Germany and Austria have democratic Italy as an ally, and that democratic France and England are hand in hand with Russia, we can see what an admirable tool of suggestion our blatant democrats might become. We cannot help our prejudices and our beliefs; but it seems that in all justice we should be able to protect those prejudices from being exploited by belligerent countries.

This, then, is a case for the first "peace" conference held after the present slaughter is over and people recollect once more that they are in an "enlightened age." In the meantime, what are we to do? Not only is our present neutrality greatly endangered by our powerlessness against the diplomatic feuds at Washington, but our sense of justice, as well, which would keep us from adding the slightest irritation to the wounds of Europe, is outraged. Whatever mistakes we may make as a nation young in diplomatic intrigue, we have but one genuine desire, and that is to see the war terminated at once. But if these foreign diplomats have their way with us, we shall only be instrumental in starting a series of misunderstandings, jealousies, new alliances, and counter alliances which will inevitably draw out the conflict to a war of years. How can we prevent this? A future conference may rectify this anomaly of the neutral state; but now we must act for ourselves.

We can, of course, be as deaf as those who won't hear. But we are quite human enough to be curious about all that is said, and once we hear, our prejudices are apt to run away with us. Either, then, the press must undergo a further voluntary censorship and refuse to print statements of foreign diplomats, or Washington must politely request these gentlemen to refrain from quarrelling while they are our guests. What should we think of two gentlemen who would indulge in reprisals in their hostess's drawing-room? Should we continue to call them gentlemen? I think not.

Most certainly I should think the hostess justified in politely reminding the men that the place for the quarrel was elsewhere.

President Wilson has shown remarkable tact and dignity so far; is it straining a point to ask that for the safety of the country and to satisfy our sense of justice and etiquette, he should make this further effort? RICHARD DANA SKINNER.

Cambridge, Mass., September 1.

PERPLEXITY OVER THE WAR.

TO THE EDITOR OF THE NATION:

SIR: A constant reader of the *Nation*, I am in great perplexity over three points brought up in your late issues as to the horrible war now going on in Europe, and I hope that I may be helped out in some way through the *Nation*:

(1.) How can I reconcile your strong arguments for England's burning zeal to preserve the peace of Europe with the report from your London correspondent that England had secretly made ready for war weeks before the clash came? (*Nation*, August 27, p. 245).

(2.) How can the Kaiser be described as hungering for blood when his reign of twenty-six years, down to the present conflict, has been one of unbroken peace?

(3.) When Germany's record for peace is so superior to that of her four great adversaries, why is she singled out as a horrid example of a nation mad with militarism? During the forty-odd years from the Franco-German encounter to the present strife, Japan waged two considerable foreign wars, Russia two, France had at least two instances of serious fighting, and England nearly half a dozen—while Germany had none of any importance. I leave out the movement in which all engaged against the Boxers in China. Perhaps on the last two points above, one of your correspondents, Mr. B. E. Schmitt, Western Reserve University, can throw some light.

It may be that the study of the past conduct of a person or a nation as one insight into the springs of action is all wrong, but if any one knows a better means of getting at the basal principles of character, I pray that he will tell me.

At any rate, I trust that some one within your circle of influence can relieve my mental distress on the above matters.

C. MERIWETHER.

Washington, D. C., August 30.

[(1.) Preparation for war may be accounted for by the conviction that the party prepared against intends to fight; it is not incompatible with a sincere desire to avert war.

(2.) It is not necessary to accuse the Kaiser of "hungering for blood"; that he did not desire to avert this particular war is, in our judgment, incontrovertibly proved by the official record—by the British "White Paper" and the German Foreign Office memorandum alike; but his notion of his duty and his prerogative as the *Kriegsherr* of Germany, his view of what was demanded by her interests as a great Power, and his estimate of the military opportuneness of the present moment for a successful war, are sufficient to account for his course, without ascribing to him any love of bloodshed for its own sake.

(3.) It is impossible to judge of the dominance of militarism in a country by a simple count of the number of wars it has had in a given time. That the military caste, and militarist ideas, have had a tremendous sway over the life, the aspirations, and the international attitude of Germany, is a fact attested in a thousand ways. In fifty-three years, beginning with 1846, the United States had three wars, while Germany, as our correspondent points out, had none in forty-three years, beginning with 1871; but nobody in his senses would think of classing the United States as a country under the sway of militarism, while Germany is universally so classed.—ED. THE NATION.]

LOUVAIN ABOUT 1600.

TO THE EDITOR OF THE NATION:

SIR: Just now, when the horrified attention of the world has been turned on Louvain, it may be of interest to point out a descriptive work in which a seventeenth-century scholar and lover of the beautiful celebrated the fair city. The new vandalism has swept away, apparently, almost everything that remained from his time.

In 1605, while living in Louvain as historiographer and professor, Justus Lipsius published this little treatise in three books. It was entitled "Lovanium: id est, Oppidi et Academiæ ejus Descriptio." The loyalty he felt for the town was due partly to the fact that some of his ancestors had been residents of it, but still more to his own life there as student and teacher. Viewing Louvain on a summer's day from a hill near by, he determined to commemorate it in prose, "nam amo locum." The glory of it, to his mind, was fading, since he remembered the time, thirty-seven years before, when seven or eight thousand students were gathered there, Batavi, Frisii, Menapii, Galli, Britanni, Hispani, Itali, he particularized, and even "ulteriores Germani"—alas! After devoting two books to the political and social history of the city, and to an account of its important buildings and conventual establishments, he proceeded to a description of the university, the soul of Louvain. "Hæc mea castra sunt," he cried, "hic ager quem colo."

The verses he appended to one chapter of his tribute deserve quotation, if only to show that the imperial German opinion as to Louvain's unimportance has not always been held. Can it be that the twentieth century is less civilized than the seventeenth? Or is it only that Germany has suffered a relapse into barbarism?

Salvete Athenæ nostræ, Athenæ Belgicæ,
O fida sedes artium, et fructu bona,
Lateque spargens lumen et nomen tuum!
Te Gallus, et Germanus, et te Sarmata
Invisit, et Britannus, et te duplicis
Hesperiæ alumnus, quam frequens frequentia
Stipavit olim, et advenarum copia!
Quæ minuit aliquid civicus, fateor, furor
Et Mars cruentus: sed fuere, quis neget?
Et fructus etiam apparet, o quot millia
(Ita dico) protulistis insignes viros,
Auxilia vel consilia publicæ rei?
Quot Famæ in æde consecrastis nomina,
Perennibus victura scriptionibus?
Et porro proferetis, et sacrabitis,
Si donat aliquam mitior pacem Deus.
Donabit autem, vota vos modo et preces
Concipite, et in partem advocate Virginem,
Patrona quæ vestra audit, et Dei parens.

GORDON HALL GEROULD.

Roxbury, N. Y., September 4.

THE PROFESSOR'S COMPENSATION.

TO THE EDITOR OF THE NATION:

SIR: There is a popular impression that it is the college professor's personal advantage that is sought in the various returns made to him for his services, that he is the enviable recipient of special favors. As a matter of fact, whatever the college does for the professor it does first of all for its own advantage—that is, for the advantage of its students. This will become evident upon a consideration of the various elements of the professor's compensation. These are: salary, pension, fewness of lecture hours, holidays, vacations, and sabbatical years; not to speak of social standing, which, after all, depends largely upon himself. All these features together make up an amount of attraction that in the long run determines the grade of ability represented in the faculty of any given college, and, as regards the whole country, the grade of ability that can be drawn from the other professions or from business into the highest walks of teaching.

The feature that is usually first thought of is the salary. On this in most cases depends the professor's physical existence. It should obviously be large enough to house, clothe, and feed him and his family, to provide him with books and periodicals, to educate his children, and to suffice for some of the amenities of life; otherwise he will be forced to do outside work to eke out his living, and this will mean a drain on the strength that ought to be given to his classes.

It is a striking commentary on the importance of pensions that the best-known work of the Carnegie Foundation for the Advancement of Teaching is its pension system, which finds its application only after the teaching has been done. The professor's pension advances teaching principally by making it possible for the college to get men at salaries far less than they would come for if they had to lay by for old age out of their monthly pay. Pensions are an enormous educational economy, for most professors never receive the benefit of the system, either they or their wives. If every man had to provide for himself an income of two thousand dollars at the age of sixty-five, he would have to put into the savings bank, at the current rate of 4 per cent., $678.87 a year from the age of thirty onwards; and to make this possible, that amount would have to be added to every salary. It is therefore the college that, in actual dollars and cents as well as in the greater efficiency of the professor, when his mind is freed from financial anxiety for the future, is the chief beneficiary of the pension system.

The average American professor teaches from fifteen to eighteen hours a week, say, three hours a day for six days in the week. This seems a short time compared with even the business man's hours, but as a matter of fact, this estimate takes no account of the time spent in preparation or in that frightful waster of academic energy, committee work. But compare the intelligence displayed by American college trustees in utilizing the professor's efficiency, with that shown by his students in utilizing the efficiency of a champion baseball pitcher. One game a week is all that they ask or even allow him to play—the time of a single lecture hour; and even this brief period is broken up into nine parts. They know that more in quantity means less in quality, and they thoroughly appreciate the difference between the two. So far as the pro-

fessor's bodily health is concerned, eighteen hours of teaching a week may not be excessive; it is the college that suffers. Instead of inspiration and intellectual quickening it has a right to expect from such a demand no more than drill and routine.

American professors have virtually no holidays; the periods that go under this name are merely opportunities for reading examination papers and catching up with back work. They do, however, have a summer vacation of approximately three months. This is clearly not an indulgence, but a necessity. It is a time for recovering from the strain of the year past and for storing up a stock of energy for the year to come. On this account it is not sufficient for any important intellectual work; or, if it is put to that use, the case becomes one of burning the candle at both ends. Similarly dangerous is the practice of allowing college professors to teach in summer schools. Their college cannot afford to let them do this, though it can hardly prevent such pot-boiling except by making it unnecessary.

For about a generation some of our colleges have had the commendable practice of granting their professors a year's leave of absence every seventh year. As the leave is with only half-pay, President Eliot some years ago lamented the fact that only professors with some independent means could take advantage of the sabbatical privilege. The advantage to the college of the professor's year of rest and change of scene is so great that the college cannot afford to allow him to miss it. The intermediate step has already been taken in several colleges of allowing a sabbatical half-year on full pay. This is a distinct gain; but the next and final step can be only a question of time; for the colleges most alive to their own interest will take it, and the others will have to follow.

One more question remains to be considered: Would not a sudden increase of salaries in a backward college to bring them up to the normal involve overpaying some of the present incumbents? This objection is most often put in the form of a direct statement, and it may frankly be admitted that in some cases overpayment might be involved; but to no such extent as the previous underpayment. If some professors seem to be below par in efficiency, it is only fair to ask what efforts have been made to develop their highest efficiency. Possibly they fall short only because they are forced to divide their energies for the sake of the money that is withheld from them. If, by establishing a salary that all ought to deserve, the college seems to overpay some, it is well to remember that, as Huxley said, all teachers are underpaid, and to ask whether those who seem overpaid are really so or only so by comparison. Salaries can, of course, be increased for some and kept at the present rate for others. Invidious as this practice is, and hard as it is to apply with justice, it is not unheard-of in American colleges; but to hold back increase of salaries from the great majority because to make it universal would be to overpay some, is, for the institution that practices it, slow but sure suicide. There is a movement now on foot in many of our colleges to raise the grade of salaries and to make other improvements in the status of the professor. These efforts should be supported not in the interest of charity or justice, but as undertakings absolutely necessary to the efficiency of the colleges themselves.

H. L. Koopman.

Providence, R. I., August 20.

Literature

LECTURES ON LEGISLATION.

The Mechanics of Law Making. By Courtenay Ilbert, G.C.B. New York: Columbia University Press.

If every member of the various legislative bodies in this country were compelled to master this modest treatise, the condition of our statute law would be much improved. Undoubtedly, many of the details of law-making in England, which Sir Courtenay lucidly describes, could not be observed here. Our Legislatures do not possess the unlimited powers of the British Parliament, and our people would not tolerate the restraints which English practice imposes upon "private bills" and "private members' bills." We are told (pp. 134-140) that a private bill deals mainly with the grant and regulation of franchises; that it is initiated by petition, and, being regarded as a privilege, for which a price should be paid to the State, pretty heavy fees are required at the several stages of its passage. A private members' bill is entirely different from a private bill. It may be a "public bill"; that is, one that alters the general law. But, as it is proposed by a private member and not by the Government, it stands small chance of enactment, unless the sunshine of Government favor smiles upon it. As a result, very few private members' bills succeed in getting through Parliament (pp. 84, 85).

Even though our legislators would not tolerate such restrictions, they might learn many valuable lessons from Sir Courtenay's pages. First of all, each legislative body can insist upon having official draughtsmen, to whom every bill shall be submitted, not only for corrections of language, but for such substantial changes as are necessary to enable the bill to accomplish the purpose intended, and no other. The gains to English statute law from the establishment of a parliamentary counsel's office, as set forth by our author, have been great; and he speaks with authority upon this topic, for he was at the head of that office for many years, and is now clerk of the House of Commons. He is of the opinion that an office such as that of parliamentary counsel is not suitable to the conditions of legislation in the United States, but he offers a number of wise suggestions for American legislators, who may wish to establish official agencies of a similar character. Another valuable lesson is contained in the sixth lecture, relating to "the art and craft of preparing and framing statutory enactments." Every legislator and every student of legislative draughtsmanship should read and re-read this lecture with care.

Probably no part of the book deserves more serious study, and certainly none is more interesting, than the lecture on codification. It is thoroughly intelligible, and the layman as well as the lawyer will rise from its perusal with the feeling that he has gained knowledge as well as entertainment from this masterly discussion of a well-worn theme. Sir Courtenay declares that "in England, codification on the more extensive scale has made no way, is making no way, and has practically no effective body of professional or public opinion to move it on; while in countries like France and Germany it is not only a success, but a popular success." He believes that this radical difference is due to the fact that in France and Germany a pressing need was felt for the unification of the substance of the law, throughout the various portions of each of these countries; while in England the law has been uniform for centuries. His argument on this point is illuminating. He insists that Benthamitic codification is not possible in England. All that can be hoped for is the codification of special topics, after the fashion of the Partnership act and the Sale of Goods act. These statutes content themselves with the statement of general principles, and do not attempt to supply rules applicable by an ordinary intellect to every possible case.

Although these lectures were prepared primarily for the law students of Columbia University, they were listened to by many laymen, and the book ought to have a wide circulation among those outside the legal profession. It affords an excellent example of what university schools of law are now attempting in the way of properly popularizing legal ideas and ideals.

CURRENT FICTION.

Love's Legend. By H. Fielding-Hall. New York: Henry Holt & Co.

We have here Fielding-Hall's second Sentimental Journey. The first, "One Immortality," we remember leaving at Venice before it was well started. It was an unconscionable time getting off, and when finally the last whistle blew, somehow we missed the boat, and the Sentimentalists sailed without us. Since then we have followed the author in his interrupted philosophical excursion till, in "The World-Soul," he solved the whole moral and religious problem to his own satisfaction. We were only sorry that he seemed to have said the final word—it had all been said so well. However, we might have reflected that philosophy and religion are not everything, and we were not unduly surprised when, early in the present year, he breezily settled the problem of Indian unrest in "The Passing of Empire." In the second Sentimental Journey he figures as Mr. Gallio, sailing down his own familiar Irawady with his newly wedded Lesbia. The incidents of the journey, amusing in themselves, are but a setting for the statement and solution of the difficulties that beset the newly married. They are resolved into two awkward facts—one, the essential and fundamental difference between man and woman, unbridged betimes, and later often unbridgeable; the second, and perhaps the corollary of the first, woman's jealousy of man's past. Now the Gallio of history was a scholar and a gentleman, and incidentally the originator

of Masterly Inactivity as a fixed policy. The modern Gallio pursues his ancestral method, mitigated by fairy stories—the only stories that are really true—while the wisdom of the East, making its last stand in Burma, is administered in moderate doses to open eyes recalcitrant to the truth.

The initial difficulty crops up at the outset:

A man married, expecting to find certain things in his wife. It seemed to him part of the contract that he should find them. Apparently he didn't. They weren't there. . . . Suppose you engaged a girl for a dance, and, when you went to claim her, found that she considered that a mutual writing of names on programmes was the main thing, and that for the rest you went out for a walk on opposite sides of the street.

And Gallio teaches his Lesbia to "play the game," using the story of the Princess with the Bandaged Eyes for his purpose. So far, so good; but the very next day we have forebodings of evil:

For some reason that I do not know, I very much dislike to hear him talk of his past life. I think, perhaps, that I am jealous of that life, because he lived before—before yesterday.

Quite early in the voyage, Lesbia, sitting by her sleeping husband, solves the riddle of Beauty and the Beast. But that is only one step. For the rest, she learns many things—and it is to be hoped that Gallio does, too—especially to see life as it is, not as it ought to be.

Broken Music. By Phyllis Bottome. Boston: Houghton Mifflin Co.

The Torch Bearer. By Reina Melcher Marquis. New York: D. Appleton & Co.

We suppose the continued interest of current novelists in heroes and heroines of genius must be justified by some sort of steady demand; but we suspect that demand comes from a limited and largely feminine audience. The temperamental hero is by now almost as conventional a figure as the muscular hero, and rather more tiresome. The disease of genius is rare; why be continually manufacturing "cases," and gloating over them?

The Jean d'Ucelles of "Broken Music" is, his alleged gift apart, a feeble and contemptible youth, and, as his genius is merely asserted, there seems to be no good reason for tolerating the rest of him. A poor but talented young Baron, he comes to Paris to seek his fortune. After a momentary impulse towards asceticism, he becomes the kept lover of that staple character in current fiction, the greatest actress on the French stage. Tiring of her merely well-preserved charms, he assumes a more equal relation with a young girl (with a marvellous voice) whom he deserts temporarily for the sake of a married siren, and permanently for the sake of his "career." "Something has made a new man of me," are his parting words, "and I have an idea that this new man will make a little music. Mon Dieu! broken music, perhaps, but one cannot have everything complete! At the bottom of all beauty I find that there is grief." But feebleness and selfishness and nastiness—are these also at the bottom of beauty and of the genius which creates it?

Nothing of this too familiar moral is implied in "The Torch Bearer." The woman who is its subject does not prove her genius by becoming anybody's mistress; but we gather that she almost profanes it by becoming a plain man's wife. The plain man does not perceive that she is essentially an artist, with a special duty to perform. He has the old-fashioned notion that a normal woman may fulfil herself as a wife and a mother. He does not suspect that his wife is abnormal, a creature with (again we must take the author's word for the fact) a crying need for self-expression in the form of literature. He does not perceive that, being simply an honest, hard-working citizen, he is the inferior of a person with a passion for arranging words. This she resents, but motherhood and a crisis connected with it lead her to sacrifice her gift on the altar of domestic virtue. When, after many years, she feels herself free to write, she finds that the power has left her. This seems to the author of the story a tragic thing. The husband, who has come to understand what his wife has given up, is full of tremulous self-reproach and yearning sympathy. For many pages we are in an atmosphere of mourning for a priceless treasure which has been lost. Our only comfort lies in the discovery that the son has inherited the mother's gift. "It would have its fruition in Eric—and perhaps in Eric's sons and his sons' sons. She was granted a vision of a torch passed on from one trustworthy hand to another throughout the years, and beholding that vision, she was aware that nothing she had suffered mattered at all." The truth is, unless the reader is of the class which is moved to a thrill and an obeisance by the mere words Art and Artist, he is not likely to feel that the inspired Shella's sufferings did matter very much, Eric or no Eric. The world as a whole is too busy to enjoy coddling the mere symptoms of genius.

Ten Minute Stories. By Algernon Blackwood. New York: E. P. Dutton & Co.

This volume shows a ripening of the manner which began with "The Empty House," and an advance in conciseness of expression and power to focus narrative effects. A psychological story which is brief is a novelty, and these are brief and full. Again, whereas the author once used the supernatural and the psychically abnormal for the definite production of eeriness, he has now learned to make his goal the shadowing-forth of personality and states of mind. The tale of horror has become the tale of fancy and of character. A comparison of "The Wendig" in "The Lost Valley" with "The Impulse" in the new collection is not unfair; the former the narrative of some fee-faw-fum Canadian *were-wulf*, the latter the simple account of a London gentleman on £1,000 a year, cold, selfish, introduced as refusing a small loan to a pinched friend; who receives an announcement that his income is halved, and passes through a most agonizing dream-realization of what it meant to live always as the pinched do. Or we may take "The Strange Disappearance of a Baronet," whose sudden realization of his social uselessness becomes a monomania, in which he believes himself physically dwindling, in danger of crushing by the footman, lost in his bed. The author moves always in the pure realms of mind, tracking its abnormal reactions like a detective. In part he assumes an unreal world; in part its unreality is traceable to an ignoring of the heart and the physical emotions, and in part to the inaccuracy of his psychology.

THE SPECIAL GENIUS OF THE JEWS.

The Jews and Modern Capitalism. By Werner Sombart. New York: E. P. Dutton & Co. $5 net.

Professor Sombart thinks in terms of flesh and blood, even when he is most busily employing statistics. He exhibits the Jewish race not as a collective intellect, but as the embodiment of forces that appeal fully as much to the historical and romantic imagination as to the economic. In the present work we have a fusing of economics, history, rabbinical lore, biology, psychology, and we may even say poetry. It would be bard to recall a more interesting book in recent years, or a more effective.

Mr. Sombart discloses his method in his opening sentence. There are two possible means of discovering to what extent any group of people participated in a particular form of economic organization. One is the statistical; the other the genetic. Along these two lines he conducts his argument. We are not warranted in drawing the conclusion that he holds a brief for the Jews, but obviously he is one who cannot possess facts without generalizing from them, and it must be admitted that occasionally he comes near to giving point to the definition of genius as the ability to generalize from one induction. Yet, if we are unable to agree with him every time on first thought, we are always impressed by him on second.

The signal fact of the sixteenth century was the shifting of the economic centre of Europe from the south to the north. Historians have ascribed this to the discovery of America and of the new route to the East Indies. Mr. Sombart is unable to see why the Italians, the Spaniards, the Portuguese should have suffered in the least from these discoveries. Equally flimsy is the argument that the Northwestern countries were strong consolidated states, while Germany and Italy were disunited. Is it a fact that Venice was a weaker state in the sixteenth century than the Seven Provinces in the seventeenth? And did not the empire of Philip II excel all the kingdoms of his time in power and renown? Moreover, why was it that, although Germany was in a state of political disruption, cities like Hamburg and Frankfort-on-the-Main reached a high degree

of development in the seventeenth and eighteenth centuries, such as few French or English cities could rival?

The fifteenth and sixteenth centuries witnessed the expulsion of the Jews from Spain and Portugal, from Sicily, Naples, Genoa, and Venice, and from the old German commercial cities—Cologne, Augsburg, Strassburg, Erfurt, Nuremberg, Ulm, and Ratisbon. This dispersion was synchronous with the economic decline of these communities. It is interesting, in passing, to note that Leghorn, which was one of the few Italian cities enjoying high prosperity in the sixteenth century, opened its arms to the Jews. The increasing importance of Hamburg and Frankfort, coincidental with their liberal treatment of the Jews, may also be significant. It was in the sixteenth century that these wanderers invaded the Netherlands and England in considerable numbers. Mr. Sombart, of course, refuses to base arguments on mere coincidences. He turns to documentary evidence, and with no small success; along with much that appeals more to the imagination than to the reason, there is a residuum of fact that predisposes one to many of his conclusions. When, for example, the Senate of Venice, in 1550, decided to expel the Marannos and to forbid commercial intercourse with them, the Christian merchants of the city declared that it would mean their ruin, and that they might as well leave Venice with the exiles, seeing that they made their living by trading with the Jews. The Jews controlled the Spanish wool trade, the trade in Spanish silk and crimsons, and that in sugar, pepper, Indian spices, and pearls. Indeed, a great part of the entire export trade was carried on by them; they supplied the Venetians with goods to be sold on commission; and they were also bill brokers. In the middle of the sixteenth century, the Government of the city of Antwerp entered a protest, on similar grounds, to the Imperial decrees against the Jews. It is a remarkable thing, Mr. Sombart declares, that the brief space during which Antwerp became the commercial centre and the money-market of the world should have been just that between the coming and the going of the Marannos, or crypto-Jews. In the seventeenth century the Sous-Intendant of Languedoc said that, without the Jews, the trade of Bordeaux and of the whole province would be "inevitably ruined." In the same century, the Dutch Government had a period of real anxiety lest the Dutch Jews should transplant themselves to England. About this time the Jews were regarded as indispensable to the growth of Hamburg. On one occasion the Senate asked that permission should be given for synagogues to be built; otherwise, they feared, the Jews would leave Hamburg, putting the city in danger of sinking to a mere village.

But even such contemporary evidence is far from convincing. We must find from the original sources what contributions the Jews made to the building up of modern economic life from the end of the fifteenth century onward—the period when Jewish history and general European economic progress tended in the same direction. Mr. Sombart's study of these sources appears to have been inexhaustible: the results which he submits for our judgment are voluminous and infinitely varied in character. In the development of his argument from the point of view of statistics, he discusses the quickening of international trade, the foundation of modern states and colonies, the predominance of commerce in economic life, the growth of the capitalistic point of view. Summed up, the importance of the Jews was twofold. On the one hand, they influenced the outward form of modern capitalism; on the other, they gave expression to its inward spirit. Above all others, they endowed economic life with its modern spirit; they seized upon the essential idea of capitalism, and carried it to its highest development.

What was it that enabled the Jew to exercise so decisive an influence in the process that made modern economic life what it is? Mr. Sombart devotes half of a rather bulky volume to answering this question, and his narrative is absorbing. He explains the Jew, and yet, in so doing, gives him an added touch of mystery. He assigns four causes for the success of the Jews: their dispersion over a wide area, their treatment as strangers, their semi-citizenship, and their wealth. Yet he does not stop here; he asks if these objective circumstances alone explain the economic rôle of the Jews. Are there not perhaps special Jewish characteristics which must be taken into account? Unmistakably, there is an aptitude for Capitalism, the objective circumstances of which we have just mentioned. Midway between the objective and the subjective factors of Jewish development is the Jewish religion. Mr. Sombart thinks that this has the same leading ideas as capitalism: he sees the same spirit in the one as in the other. We must remember that a rigidly minded scribe, Ezra, was its author. It came into being not as an irresistible force, not as the expression of the deepest needs of contrite souls, not as the embodiment of the feelings of divinely inspired votaries, but on a deliberate plan, by clever deductions, and diplomatic policy, which was based on the cry, "Its religion must be preserved for the people." In all its reasoning it appeals to us as a creation of the intellect, a kind of thought and purpose projected into the world of organisms, mechanically and artfully wrought, destined to destroy and to conquer Nature's realm, and to reign itself in her stead. Just so does Capitalism appear on the scene; like the Jewish religion an alien element in the midst of the natural created world; like it, too, something schemed and planned in the midst of teeming life. The sheaf of salient features is bound together in one word—Rationalism. Rationalism is the characteristic trait of Judaism as of Capitalism, a deadly foe alike to irresponsible mysticism and to that creative power which draws its artistic inspiration from the passion-world of the senses.

Intellectuality is the fundamental quality of the Jew. As a result of extreme intellectuality his outlook is teleological or that of practical rationalism. Added to the teleological attitude we find a strong will, with a large fund of energy. Then, too, all Jews possess mobility of mind—quick perception, and mental versatility. These four elements, intellectuality, teleology, energy, and mobility, are the corner-stones of Jewish character, so complicated in its nature.

But even yet we have not touched bottom in our attempt to solve the question of the Jew. We know him objectively and statistically; we have studied his subjective processes, and discovered, as we think, his racial characteristics; but we have still before us the most interesting task of all—what was the origin of the Jewish genius? In answering this question, Mr. Sombart displays great dexterity in the use of anthropological facts and a remarkable fund of historical information, and strengthens us in the belief that the anthropological character of the Jews, no less than their intellectual attributes, has remained constant for thousands of years. Yet this does not prove that the Jewish genius is rooted in he race. Mr. Sombart lays emphasis on three points: the original aptitudes of the races from which the Jews sprang as exhibited in their mode of life, the manner in which the various elements mingled, and which of these aptitudes survived under the influence of Jewish history. From it all we form the conclusion that the Jewish characteristics are rooted in the blood of the race, and are not in any wise due to educative processes. Fundamentally, the importance of the Jews in the world's civilization, and more particularly in economic life, is due to the transplanting of an Oriental people among Northern races, and the cultural union of the two. A similar assertion has been made, not without an element of truth, regarding the civilization of the classical world, of the Greeks more especially, and also of that of the Italian Renaissance. It has been suggested that they resulted from the mixture of Northern peoples with the autochthonous inhabitants. The Jews are a desert people, a race which brought its special characteristics to maturity amid an environment which had not altered since the Ice Age. Their instincts when settled in Canaan remained nomadic. Mr. Sombart draws a fine contrast between forest and desert: they are the two great opposites which sum up differences in countries and their inhabitants. In the North man is brought into closer touch with nature than in the hot countries. Man is part and parcel with nature. In the North there are between Nature and even the most prosaic of men bonds of love and friendship unknown to the Southerner. In the South man regards Nature only as an instrument in the work of civilization. Would it be too much to say that the Jewish characteristics have received their peculiar impress from thou-

sands of years of wandering in the Wilderness? Economic differences may be traced, at bottom, to the contrast between the nomadic and the agricultural life, between Saharism and Sylvanism.

THE JANSENISTS.

The Little Schools of Port Royal. By H. C. Barnard. New York: G. P. Putnam's Sons. $2.50.

Whatever a person's religious views, he can hardly resist admiration for the intellectual and moral achievements of the Jansenists. A sect never numerous, and flourishing only for a short time, they made a deep impress on French literature and thought. For their famous schools, though the duration of these was scarcely fifteen years and they perhaps never had more than two hundred and fifty pupils in all, the Jansenists are no less deserving of admiration. Their ardent teachers, few in number, wrought as enduringly as the countless Jesuits who taught the thousands enrolled in the Jesuit colleges of the seventeenth century.

Mr. Barnard has written a very satisfactory study of the *Petites Ecoles.* The narrative, though at times dealing with minor matters of school administration and the details of the curriculum, is useful to the student of the general question of Jansenism. In fact, some people, puzzled or bewildered by discussions about sufficient and effective grace or the five propositions, may be glad to realize how practical were the "solitaries" in their retreat, and how by their teaching they anticipated later and more popular educationalists.

Mr. Barnard brings out the contrast between the soberness of Jansenist instruction and the florid Latinity of the Jesuits. He shows the *via media* followed by the contemporary Oratorians no less than the conservative scholasticism of the University of the day. The instruction in all these establishments was what would be called secondary, as opposed to primary and higher. The Jesuits based their teaching on the language of the Catholic Church and tried to turn out rhetoricians and men of the world. The Jansenists, without losing sight of Latin, favored Greek and French itself. The Jesuits, during a period of two hundred years, educated great men such as Condé, Bossuet, Descartes, Montesquieu, Corneille, Molière, Voltaire. The Jansenists, in a decade and a half, brought up only a handful, the greatest being Racine and the historian Lenain de Tillemont, whose writings were of service to Gibbon. But the achievements of Lancelot, Coustel, Nicole, and Walon de Beaupuis were not confined to schoolmastering: the "Logic" of Port-Royal has remained in use to our own times, and Lancelot's "Jardin des racines grecques," though now discarded, held its place for two hundred years in French schools.

The author of the present handbook devotes some attention to moot points in the history of the *Petites Ecoles:* the actual number of pupils, the dates of their disappearance. He has also "placed" Port-Royal in educational theory and related it to its educational predecessors. The volume is not marred, like many works in English or French subjects, by frequent misprints, though the name Fénelon receives superfluous accentuation in the appendix and the index, and the indexing of proper names under the prefix "de" is confusing.

THE WISDOM OF AGE.

Things Learned by Living. By John Bascom. New York: G. P. Putnam's Sons.

The ripe wisdom of a great teacher, and the pregnant summary of a long life of intellectual leadership, are compressed within the covers of this little book. We know of nothing in literature quite like it; perhaps the nearest analogy would be with the "Autobiography of John Stuart Mill." But Dr. Bascom is even freer than Mill from the bondage of events, and he is much less concerned than is Mill in tracing the development of his ideas and theories. With less than Mill's strict logical coherence, Dr. Bascom gives us in compensation flashes of imaginative insight; instead of the even and rather colorless clarity of Mill's style, we find in Dr. Bascom a style compact, rugged, sometimes obscure, but abounding in memorable and poetic phrase, and rising at times into noble eloquence. In style "Sartor Resartus," if its calculated oddity were left out, would be more nearly a parallel. Events, chosen for their significance and presented always with the illuminating comment of maturer judgment, are dismissed in the first chapter—the longest in the book, to be sure, and not the least interesting. Succeeding chapters deal with Health, Recreations, Persons, Forms of Work, and Writings. Finally, there are three chapters in which Dr. Bascom has distilled the essence of his experience and his beliefs: The Formula of Personal Life, The Formula of Social Life, and Religion.

Of old New England stock, with clerical traditions, John Bascom was born at Genoa, N. Y., in 1827. His father, a country minister, died a year later, and his mother was left in extreme poverty, with the task of bringing up four children. Of that brave and sternly religious mother, with her hidden tenderness, who "coveted and deserved more affection than she was able to win," we get many glimpses:

> Often at the close of a summer Sabbath I sat on the ground, while my mother milked, and learned from her lips the catechism, till I could find my way along its rugged path of words, deep, solemn, impenetrable. . . . I hardly know how the same amount of inexhaustible impression could have been secured more quickly and more efficiently. Those ideas which, at best, only glimmer before the mind and are constantly losing themselves in mist and darkness, play the same part in the spiritual imagination as do bold, rugged, inaccessible mountains in the landscape. The world is wholly different because of them. Its magnitude and mystery are indefinitely increased.

One is tempted to linger over these charming sketches and impressions of a sensitive childhood in the country. What a characteristic picture is that of Benjamin Joy, the village worthy whose deeply religious temper impressed the boy John, while his inconsistencies at the same time shocked him:

> His barn joined our garden; he used it as a devotional closet, and I frequently heard, with indescribable awe, the voice of earnest prayer. . . . I remember, however, that some incongruities of character, even then, startled me. I was always tenderly disposed toward animals and never inflicted pain except in sudden anger. I was astonished at the heat with which he flung stones, and at the unconscionable size of the stones he flung at hogs to be driven from his orchard.

College life at Williams the young man found almost altogether enjoyable. Looking back upon it, Dr. Bascom thinks it was profitable through student friendship and association rather than through formal instruction. Instruction, indeed, was much too formal, and was especially deficient in language and literature. "With a single exception, the instructors in my college life were little more than driven stakes to which we were tethered." Praisers of the good old times will find not much to encourage them here. After his graduation in 1849 Bascom tried teaching and the study of law before deciding to enter the theological seminary. His return to teaching was "not a premeditated result, but one which grew out of circumstances." He adds:

> It has been a decided preference with me, though the principle bears a somewhat passive and feeble appearance, to shape my choices to conditions I had not myself secured. I have not liked to apply for places nor to force results. I have loved to feel that the shuttle of life was not driven both ways by the same mechanical, calculated stroke—that it played between those wide providences which rule the world and my own immediate purposes under them. . . .

Perhaps it was this wise acceptance that gave to whatever Dr. Bascom said or did a sense of authority, of inevitableness.

At Williams he occupied the chair of rhetoric for nineteen years; then came the call to the presidency of the University of Wisconsin. At Williams he had to fight for freedom of speech in religion; at Wisconsin for freedom of speech in politics. He speaks very briefly of the great development of that institution during his administration, and scarcely at all of the profound personal influence which he exerted over the students both there and at Williams. During this whole period, in addition to the work of teaching and administering, he was pursuing strenuous studies and writing surprisingly good books on a variety of subjects bewildering to a scholar of this generation. These things he did on a very slender margin of health, keeping at bay, as he says, many spirits of mischief by patient hygiene. After his resignation from Wisconsin in 1887, he intended to retire from active teaching; but

the loss of the savings of a lifetime forced him to give up this plan. His loss was the infinite gain of many classes of students at Williams. In his previous period of teaching there, he had introduced English literature and æsthetics into the curriculum; now he introduced sociology. He continued giving regular courses until 1903; and the reviewer can bear personal testimony to the extraordinary vitality and power of his teaching during its latest years.

Almost everywhere the book tempts quotation. It is hard for a lover of mountains to pass by the noble praise of mountains in the chapter on Recreations; it is hard for a teacher to leave unquoted the admirable discussion of what constitutes good teaching in the chapter on Forms of Work. We can only refer to the brilliant and searching, though not altogether sympathetic, characterization of Mark Hopkins in the chapter on Persons. Williams had two teachers of the first rank in the last century, and it is interesting to see how, when they were working together, they must have complemented each other.

Great teachers owe their influence and success to commanding personal force. It is strange that so few of them have been able to make the written word carry even a portion of their power; they seem often to have striven to write impersonally, as if they did not realize that in literature, as in the classroom, personality is everything. "Things Learned by Living" is a notable exception to this rule. To one who knew Dr. Bascom, at least, the very tones of his voice seem to ring in sentences like these:

> If we once more strike in, in this long race, we shall find that the inner energies, the inspirations of the conflict, are not evenly divided between us and our adversary, the senseless and dull soul of things, but that they are all with us, the last living force of things.
>
> The mind is always and above all things entitled to the truth. . . . The very fact that there is so much misapprehension to be removed, so much resistance to be overcome, is ground and reason for haste. If the morning is cold and misty, so much the greater occasion for the sun.

Dr. Bascom never surrendered to the reaction towards conservatism and compromise that most men yield to as they grow old. The wisdom of age came to him in rich measure; but he never bartered for it the priceless wisdom of youth. No disillusioned cynic could see more clearly or state more powerfully the apparent hopelessness of individual effort; yet out of the very conditions of hopelessness his indomitable spirit draws faith in liberty. And no youthful idealist could be a more ardent lover of truth, or could be governed by a more imperious faith in her conquering and redeeming power.

[We omit Notes from this issue owing to the large amount of kindred matter in the Educational Supplement. The omission of certain other usual features is explained on similar grounds.—Ed. The Nation.]

Drama

THE DRAMA LEAGUE OF BOSTON.

The interests of the Boston League are so closely bound up with those of its sire, the Drama League of America, that, often, when the child is speaking, the parent is speaking also; nevertheless, the younger league has made—and is making—history of its own, dictated by conditions peculiar to Boston.

The Boston League is the largest of the offshoot branches; having borne on its membership roll, during its three years of life, an average of over twenty-three hundred avowed supporters. It has also been fortunate in its president, Professor Baker, of Harvard University, under whose wise leadership the League has been kept from temptations to join the repertory movement, with its gilded illusions and annual corpses. Two distinct avenues are open: the Drama League movement, which links itself with the practical stage, seeking to improve its conditions; and the repertory movement, which, holding aloof from the stage as we know it, seeks to draw a special audience to itself. No one can, at this moment, look far enough into the future to foresee the outcome of these two movements; it would seem wise to let each pursue its own course.

To win ticket-buying audiences for the worthy play as we know it, the Drama League of America has had, from the start, an eminently practical working idea—the idea, namely, of issuing bulletins. It is hard to dissociate the movement from these bulletins. Its success is bound up with them. Consequently they should be prepared with the utmost care, no effort being spared to raise them from mere news-announcements to critical and educational documents. The Boston bulletins deservedly rank high for their analytic criticism, formed on the basis of a liberal appreciation; their public appeal could be augmented by applying a method of criticism more genuinely interpretative, which *pari passu* would add a more vital judicial estimate. This suggestion is made with full appreciation of the arduous task confronting the Play-Going Committee and the ensnaring difficulties besetting its labors. Special notice, for reasons other than critical, should be given to the bulletin issued at the opening of the season of 1911-12, which brought a list of the principal plays of the preceding season in the cities of New York, Boston, and Chicago, with a numerical record of their performances, and also to the bulletin issued in September of that year on the Irish Players, which fixed the dialect of each writer and contained a terse account of the whole repertory.

That the Boston members have actually been influenced in their theatre-going by the League's bulletins has been shown by a post-card canvass, though, it must be admitted, the responsibility was not felt as keenly as one would wish. Perhaps the best results were accomplished in making successful the engagements of the Manchester Company and the Irish Players. Disapprovals of the League's recommendations have been few. The post-card canvass brought to light other important facts; for instance, a lessening of interest on the part of Boston members in musical comedies and farces, since bulletined plays of this sort received the lowest scores of attendance.

If the supporters of the good cause in Boston failed to respond with whole-souled enthusiasm to all the bulletins sent out, their enthusiasm brought to bear upon the lecture entertainments offered by the League has been given in overflowing measure—literally, for the aisles of the theatres where most of them took place were often crowded with women and—yes, there were also men—who could find no seats. The managers, who in the beginning met the whole movement with scorn and a sneer, would never have unbent had they not seen the leaguers together in a body. Ocular demonstration did it. These lectures were more than mere sweetmeats. They have had an intrinsic educational value, in awakening a more intimate understanding of the art of the drama, and have been potent factors in changing the whole social atmosphere about the theatre. People talk more about the theatre than they used to before the days of the League; actors and actresses are seen more frequently at social gatherings; and professors from the other side of the Charles, beyond the red brick gateways, are melting theatreward: they go more often to the theatre, some are even willing to appear with the star of the troupe before the footlights and declare, in l ng pent-up lighter vein, their interest in the living stage.

The educational influence of the Boston League has passed beyond its own immediate border. Its advice and assistance have from time to time been sought by clubs, societies, schools, and individuals; largely in matters of that important branch of play activity, the amateur theatricals, where taste for the art of the theatre is forming. It has given assistance of this kind to nearly a hundred organizations, and has prepared a comprehensive list of plays for amateurs, based upon material gathered to meet these requests for aid. As to the discrimination shown in the selection of the plays, I cannot speak; it is plainly evident, however, that this special service is materially extending the usefulness of the League. Here, indeed, may be found one of the League's sources of life. For the fact cannot be concealed that the members of the League, certainly a large part of them, come from a class of people supposed to know a little more about the needs of the theatre than the infinitely larger class outside its own borders. To reach this larger class must, in the end, be the League's chief aim. It will be the wave on which alone the idea of the circuit-support of the worthy play can successfully ride. The League must seek to enlarge the circle of its usefulness from the few to the many; it must try to come into close touch with the young generation; it must endeavor to acquire a trusted influence over all other

smaller organizations engaged in matters dramatic; in particular, with special affectionate consideration, it must lend a helping hand to the worthy American play and playwright; it must stand before the people as the custodian in matters of dramatic conscience. The influence of the League is just beginning to be felt; the possibilities of its becoming a people's organization are great.

The Boston League has recently appointed an organizing secretary, and hopes soon to strengthen its position as a centre and further the whole scheme of the national organization, by the establishment of other leagues in the larger towns and cities of New England.

Important services have been rendered by the publications prepared by members of the Drama Study Committee of the Boston League. Of these, special mention must be made of the selected list of "Essays and Books about the Drama and the Theatre," prepared by Mr. Frank Chouteau Brown, issued in 1912, with a supplementary list, issued recently; also of "The New Irish Drama," prepared by Prof. Katharine Lee Bates, of Wellesley College, issued in 1911. Both of these monographs are commendable contributions; the one, to the bibliography of dramatic literature, the other to the history of the new Irish dramatic movement.

ROBERT M. WERNAER.

"WARS OF THE WORLD."

There is much to be said for the spectacular when it pretends to be that and nothing more. Only when what is artistic in itself is subordinated to the merely spectacular, as was the case with the last production at the Hippodrome, Gilbert and Sullivan's "H. M. S. Pinafore," is it time to raise a protest. In their present production the management of the Hippodrome have happily not repeated that desecration of a work of art. "Wars of the World" is, as such a production should be, composed especially for spectacular presentation. The dialogue is of entirely secondary interest and the appeal is almost wholly to the eye. The first act is by far the most interesting and original and follows more closely than the second act (the third is simply the usual Hippodrome "Fountain") the theme propounded. The second episode, showing an abbey in a forest, a religious procession, the dedication of crusaders, a joust, and a merry rout of Robin Hood and his men, is perhaps the most beautiful. Another effective episode is that dealing with the Civil War, and the succeeding tableau, showing "the Price of War," is commendable for its restraint. In the second act the interest wanes somewhat and in the matter of good taste some of the Mexican scenes are open to question. On the whole, however, "Wars of the World" is to be commended as a magnificent spectacle, well engineered and well rehearsed, which is worth seeing, once at any rate.

S. W.

Sir Herbert Beerbohm Tree is beginning his preparations for the celebration in 1916 of the tercentenary of Shakespeare's death. He intends to produce at His Majesty's Theatre the chronicle plays, beginning with "King John" and ending with "Henry VIII."

Music

Liège has been called the cradle of violinists. Among the famous wielders of the bow who came from that heroic city are Ysaye, César Thomson, Edouard Dethier, Ovide Musin, and the violoncellist Jean Gerardy. The great composer César Franck was also born at Liège.

Eighteen members of the Philadelphia Orchestra are fighting for Germany and two for France, but the conductor, Stokowski, is back safe from Europe, minus his baggage. He managed, however, to save the score of Mahler's eighth symphony, which he will produce on March 5 and 6 with a chorus of one thousand singers and an orchestra increased to 125 men. It will be the first performance in America of this colossal work.

Philadelphia has a new vocal society known as the Choral Art Club. Its founder and director is Alexander Matthews, and the membership is made up of prominent local singers. Its purpose is to present choral compositions of a wide range, from Palestrina and Bach to the latest products of the French, Russian, and English schools.

For this year's festivals in Portland and Bangor, Me., Mr. W. R. Chapman has a chorus of 800, and the list of soloists includes Emma Eames and Emilio De Gogorza, Cordelia Leo (violinist), Helena Dardinel (pianist), Nina Morgana, Artha Williston, Florence Otis, Jean Cooper, Salvatore Giordano, Millo Picco, Ernest J. Hill, Carl Morris, and Cuyler Black. The Bangor dates are October 1, 2, 3; the Portland dates, October 5, 6, 7. The Portland festival will be held in the new Auditorium, which will be dedicated on the opening night. Portland is distinguished as being the only American city that has a municipal organ and an organist of the first rank paid by the city. The organ is the gift of Cyrus H. K. Curtis and the organist is Will C. Macfarlane, formerly organist of St. Thomas's Church and the Temple Emanu-El, New York. Mr. Curtis's desire was that the organ might become a vital factor in the life of the Portland people; and his wish has been realized. In the season of 1912 and 1913 over 225,000 persons attended the various recitals, concerts, Sunday afternoon services, with half-hours of organ music, and summer afternoon recitals.

Among the novelties promised in Milan during the coming winter season—if there is one—are two new one-act operas by Mascagni, entitled "L'Allodoletta" and "La Faida di Commune"; Giordano's "Madame Sans Gêne"; Franchetti's "Notte di Leggenda"; Pizzetti's "Fedra"; De Lara's "The Three Masks," and Richard Strauss's "Legend of Joseph."

Ossip Gabrilowitsch and his wife (the daughter of Mark Twain) were in Switzerland when the war began. Their manager, Loudon Charlton, announces that these two distinguished artists will without doubt make their promised American tour during the coming season.

The industrious Max Reger has completed still another work, a set of Variations on a Theme by Mozart. It is to have its first performance—war permitting—at one of the Gewandhaus concerts in Leipzig, under the direction of Arthur Nikisch, next winter. Among the other works chosen by Nikisch for these concerts—which used to be the most famous in Europe—are Korngold's Sinfonietta, the second symphony of a new Viennese composer named Franz Schmidt, Bruckner's Ninth, Liszt's "Faust," Strauss's "Don Quixote" and "A Hero's Life," Tchaikovsky's "Manfred," the F major symphony of Goetz, Stravinsky's "Le Sacre du Printemps," Ravel's "Ma Mère l'Oy."

Marie von Bülow, the widow of the eminent pianist, is no longer president of the German Brahms Society. She resigned because of certain statements regarding her husband made in the official Brahms biography by Max Kalbeck.

It is rather surprising that two of the world's greatest national anthems were created by prominent native composers. Haydn wrote the Austrian "Gott erhalte Franz den Kaiser," while the Russian hymn, the most majestic and inspiring of all patriotic tunes, was composed by Alexis Lvoff: and what is more astonishing still, was composed to order. The story of how it happened is told in detail by Lvoff in his memoirs, and is quoted in English by Mr. Montagu-Nathan's recently published "History of Russian Music" (Charles Scribner's Sons).

"Wagner as Man and Artist" is the title of the latest book on the Bayreuth master. It is by Ernest Newman, and the American publishers are E. P. Dutton & Co. Mr. Newman has not tried to write a new biography of Wagner, having "shrunk appalled from the magnitude of the task." As his book was going to press, he "learned that a new edition of his correspondence, containing some two thousand hitherto unpublished letters, is to appear under the editorship of that indefatigable Wagner researcher, Dr. Julius Kapp. But," he adds, "it ought to be possible to reconstruct the man from the 2,700 letters of his that we already have, though the picture will no doubt need some filling-in, and perhaps some corrections in detail when Dr. Kapp's edition is available."

A hymn to Napoleon III and a fanfare called "The Crown of Italy" have been discovered among the unpublished compositions of Rossini. When he died, in 1868, there were found among his papers no fewer than 154 instrumental pieces and songs that had not been printed. His widow was willing to sell them at once, but she demanded so large a sum that they were left on her hands. Five years later they were sold, but only four of them were given to the public. A recent number of the *Guide Musical* contains an article on these miscellaneous unpublished works of the great opera composer. The manuscripts are bound in sixteen volumes; among them are seventy-four numbers for the voice, an "album of nothings" for piano, a group of twelve pieces for children, and four entitled 'Hors d'œuvre" (radishes, anchovies, cucumbers, and butter), which seems to indicate that the composer of "The Barber of Seville" anticipated one of the latest phases of programme music. There is a "Hygienic Prelude," and a set of waltzes with the following titles: "Anti-dance Waltz," "Mourning Waltz," "Valse Torturée," "Halting Waltz," "Boudoir Waltz."

After the recent production in London by a Russian company of the opera-ballet called "Coq d'Or," with two casts, one of which sang while the other acted what was sung, it was pointed out in the *Telegraph* that this method of presenting a work was by no means

now, as most of the spectators imagined. In the twelfth edition (1835) of Adam's "Roman Antiquities," the following information is given: "Livius Andronicus, who was the first Roman to write a regular play, A. U. C. 512, and who acted in his own compositions, 'being obliged by the audience frequently to repeat the same part, and thus becoming hoarse, he asked permission to employ a boy to sing to the flute, while he acted what was sung (*canticum agebat*), which he did with the greater animation as he was not hindered by using his voice,'"

Finance

TWO INCIDENTS OF WAR TIME.

The two incidents of the past week whose bearing on the financial situation is of chief importance were the concerted movement of the New York banks to take care of New York city's maturing European obligations (thereby relieving the deadlock in foreign exchange which has existed since the war began), and the assurance that the European war itself would be prolonged, and not brought to a sudden close, even by the fall of Paris.

The problem which confronted our banks had to do with requirements of $100,000,000 in the financing of New York city, and it was greatly complicated by the fact that approximately $80,000,000 short-term notes of the municipality, placed on the European market at various dates before the war broke out, were due to mature between now and 1915. The providing for these requirements, in face of the present abnormal home and international banking conditions, involved two questions. First came the arrangement to advance the total sum required, for use by the city as its needs arise; secondly, arrangement to pay off the notes maturing in London, to the extent that they should not be renewed by the foreign holders. As to the first, it was manifest that preservation of the city's credit is the absolutely paramount consideration. New York must pay its bills, and the banking community must provide the means. This conclusion was not open to dispute, if the financial good name of the American community was to be preserved.

Payment for such of the city obligations as are held in London involved some more perplexing considerations. To the extent that foreign holders would not consent to renewal, the payment would technically necessitate purchase of something like $80,000,000 foreign exchange. Our grain and other exports will provide a part of this; the balance could be met only through sending gold to Ottawa, there to be credited to the Bank of England and drawn against as a London credit. Our banks quite naturally dislike to reduce their cash reserves, under present conditions; but this is a proper and necessary use of them.

New York bank reserves, it is true, are already considerably below the 25 per cent. ratio to deposits maintained in ordinary times. But the New York banks still held, at last Saturday's return, a reserve of 23 per cent.—far more than that required by the new banking law—and in that reserve was included $260,000,000 specie, practically all gold and exclusive of $57,000,000 held by trust companies. To draw on this reserve, for such a purpose, would be to accept the lesser evil in order to avoid the incomparably greater.

These aspects of the situation the New York banks recognized promptly, and with commendable public spirit. All of them are to subscribe, in proportion to their several resources, for the new loan of $100,000,000 to be placed by the city. Each, again in proportion to its individual resources, is to guarantee to provide either exchange on London or gold for export, to the extent that the foreign holders of the maturing city notes call for redemption. The immediate effect has been sudden lifting of the deadweight on international exchange. Sight drafts on London sold, last week, as high as $5.06 to the pound sterling, whereas $4.89 is the maximum in normal times, because at any higher rate gold can be used more cheaply than ordinary exchange bills to settle foreign dues. But the news of the attitude of our banks sent the rate down almost immediately to $4.97½.

The other important development which financial markets had to consider was the very positive assurance in the British Premier's Guildhall speech that the English Government is looking for a long and obstinate war. This, to be sure, has been the feeling of this financial community ever since the German forward movement from Belgium into France began. The belief was perhaps a little shaken by the sweeping successes of the German campaign in France, by the prodigious losses which must have been incurred, and by the nearer possibility of the fall of Paris. Last Friday's London speeches, however, by leaders both of Government and Opposition—supplemented, next day, by news of the joint agreement by England, France, and Russia that none of the Governments would treat for peace unless by consent of the other two—prove that England is drawing no such inferences of slackening in the campaigns against Germany, and to that conclusion we must adapt our own affairs.

BOOKS OF THE WEEK

FICTION.

Bacon, J. D. To-day's Daughter. Appleton. $1.35 net.

LVX ET VERITAS

CICERO OF ARPINUM

A Political and Literary Biography, Being a Contribution to the History of Ancient Civilization and a Guide to the Study of Cicero's Writings.

By E. G. Sihler, Ph.D.

Professor of the Latin Language and Literature in New York University, and Author of "Annals of Cæsar," "Testimonium Animæ," etc.

This important work is designed to be a full and comprehensive biography of M. Tullius Cicero. It is the result of years of study, of patient research, and of the ripe scholarship of Professor Sihler, who has won for himself a sure place, both in this country and abroad, as a classical historian of the first rank. *8vo. Cloth binding. 450 pages. Bibliography. Index. Price $2.50 net.*

A SELECTION OF LATIN VERSE

Edited by Members of the Latin Faculty of Williams College

In this compilation, representative of the best Latin poetry of all periods, the instructor will find material suitable for freshmen and for upper classmen as well. In their text criticism the editors have secured clearness and simplicity without a sacrifice of scholarship, making a selection full enough to enable the instructor to draw at discretion from the supply contained in a single volume. The book has been adopted for use in several prominent colleges.

16mo. Cloth binding, 134 pages. 75 cents net, delivered.

THE COLLEGE CHAUCER

Edited by Prof. HENRY NOBLE MACCRACKEN.

Instructors in English who are choosing their textbooks for the coming term will do well to consider this book, which has already been adopted as the official Chaucer text in the English departments of Columbia, Brown, Yale, Wellesley, Smith, Florida State College for Women, Allegheny College, Butler College, Western State Normal School, and the Universities of California, Virginia, Indiana, West Virginia, and Minnesota.

12mo. Cloth binding. 713 pages. $1.50 net, delivered.

SOME TEXTUAL DIFFICULTIES in SHAKESPEARE

By Charles D. Stewart

Published under the Auspices of the Elizabethan Club.

Strictly speaking, the original intent or purpose of the work is to clear up the famous cruxes which have remained unsolved. The book takes up forty of these passages that have proved most perplexing, beginning with the notorious "Runaway's eyes" in "Romeo and Juliet." *12mo. Board binding. 230 pages. Index. Price $1.35 net. (In preparation.)*

ESSAYS ON MILTON

By Elbert N. S. Thompson, Ph.D.

Through the separate essays, or studies, which comprise this volume, there runs a clear sequence of thought. Each essay in itself treats some single phase of Milton's poetry or prose. *(In preparation.)*

12mo. Cloth binding. 230 pages. Index. Price $1.35 net.

THE MENTAL HEALTH OF THE SCHOOL CHILD

The Psycho-Educational Clinic in Relation to Child Welfare

By J. E. Wallace Wallin, Ph.D.

Professor of Clinical Psychology and Director of Psycho-Educational Clinic School of Education, University of Pittsburgh.

In nineteen chapters of pointed discussion and original statistical contributions the author presents a fund of information in regard to the scientific study and improvement of backward, precocious, or mentally unusual children.

12mo. Cloth binding. 450 pages. $2.00 net, delivered.

THE FUNDAMENTAL BASIS OF NUTRITION

By GRAHAM LUSK, M.D.

"In this concise and readable manual Dr. Lusk discusses the historical study of nutrition and modern investigations in that field. He includes very important statistics showing how men in different occupations should be variously nourished and how the maximum number of proteins may be obtained at a minimum cost. The whole presents the principles of nutrition which our generation has done so much to discover and in a form to benefit the layman."—*Chicago Medical Recorder. 12mo. Cloth binding. 55 pages. Index. 50 cents, delivered.*

THE CHALLENGE of FACTS and OTHER ESSAYS

By the late William Graham Sumner

Professor of Political and Social Science, Yale College.

Edited with an Introduction by ALBERT GALLOWAY KELLER, Ph.D., Professor of the Science of Society, Yale College. (Uniform with "War and Other Essays" and "Earth Hunger and Other Essays.")

Like the two preceding volumes of Sumner's essays, for which there has been a large demand, this collection contains some of Professor Sumner's shorter and most characteristic utterances on sociological and political subjects. *(In preparation.)*

8vo. Cloth binding. 375 pages. Gilt top. Price $2.25 net.

WILD LIFE CONSERVATION IN THEORY AND PRACTICE

By William T. Hornaday, Sc.D.

Director of the New York Zoölogical Park.

Identifying himself with the fight for the preservation of wild life in America, Mr. Hornaday has aroused public sentiment in favor of his good cause, he has instigated the preservation of game in national parks, he has fought for good legislation, and, in the face of strong opposition, he has met with unexpected success. *(In preparation.)*

12mo. Cloth binding. 230 pages. Eight illustrations. Price $1.50 net.

NOTEWORTHY NEW BOOKS

ANCIENT LANGUAGES

SMILEY AND STORKE'S FIRST YEAR LATIN COURSE $1.00
By JAMES B. SMILEY, Principal, Lincoln High School, and HELEN L. STORKE, Assistant Principal, West High School, Cleveland, O.

RIESS AND JANES'S CAESAR. GALLIC WAR. Books I.-II. $0.85

HARDING'S NEW MEDIEVAL AND MODERN HISTORY $1.50
By SAMUEL BANNISTER HARDING, Ph.D., Professor of European History, Indiana University.

Correspondence regarding these new books is cordially invited

AMERICAN BOOK COMPANY

NEW YORK CINCINNATI CHICAGO

FOR THE STUDENT OF MODERN HISTORY, PUBLIC AFFAIRS AND LITERATURE

MODERN GERMANY. Her Political and Economic Problems, Her Policy, Her Ambitions and the Causes of her Successes and Failures. Fourth and greatly enlarged edition. By J. ELLIS BARKER. $3.00 net.

This new edition of a standard work of great weight is practically a new book. About 250 pages of entirely new material bring it to date. With Germany looming so large on the world's horizon its republication is most opportune.

AMERICAN PUBLIC OPINION. Opinions of the American Public on International Questions. By JAMES DAVENPORT WHELPLEY, Author of "The Trade of the World," etc. $2.50 net.

In illustrating the influence of America in the affairs of the Powers the book touches most of the international problems which this administration has had to face, making it a useful study in contemporary politics, especially in foreign relations.

THE MEANING OF MONEY. A lucid account of a subject frequently made difficult. By HARTLEY WITHERS, Author of "Poverty and Waste," "Money Changing," etc. $1.50 net.

Mr. Withers's gift for lucid exposition is so well known and his accuracy so admitted that the Institute of Bankers, London, invited him, an outsider, to lecture before its members on one of their own financial subjects, "Foreign Exchange."

VARIATION, HEREDITY AND EVOLUTION. By R. H. LOCK. $1.50 net.

A summary of recent progress in the field of genetic research. Third edition, including a brief statement of recent discoveries.

A HISTORY OF SOUTH AMERICA, 1851-1904. With an additional chapter bringing the history to the present day. By C. E. AKERS. $6.00 net.

"For the general reader who desires insight into the present political situations in South America there is no work in any way comparable with that of Mr. Akers. It is equally useful to the special student."—*Annals of the American Academy.*

GEOFFREY CHAUCER. By EMILE LEGOUIS. The point of view of a French critic. $1.50 net.

Inasmuch as Chaucer is really more akin in many respects to French literature than to modern English, this study by a famous Frenchman is a particularly illuminating text for the student of Chaucer, and of his relations to world literatures.

Everyman's Library

The Temple Shakespeare

40 volumes

A play to a volume.

Edited by one hand, that of a scholar of international reputation, Dr. ISRAEL GOLLANCZ.

Most attractive of all pocket editions of Shakespeare.

NEW BOOKS OF NOTE

Outlines of European History

By JAMES HARVEY ROBINSON, CHARLES A. BEARD and JAMES HENRY BREASTED

Part I, $1.50.....Part II, $1.50

A two-year course in general history for high schools, with the emphasis on institutions and conditions and on the significant developments of modern times. Part I, notable for the number and excellence of its illustrations, covers ancient and medieval history to the eighteenth century. Part II covers the eighteenth and nineteenth centuries to 1912, with an illuminating treatment of the developments that have preceded the present European crisis.

Problems in Political Evolution

By RAYMOND G. GETTELL.....$2.00

A scholarly attempt to formulate, and to trace the evolution of, the fundamental problems of government. As a readable analysis of past developments, present conditions, and future needs, it should be of interest to all who would understand the problems of present-day democracies.

Business English and Correspondence

By ROY DAVIS and CLARENCE H. LINGHAM.....$1.00

A well-rounded exposition of the fundamentals of English, business correspondence, and their mutual relations, with an abundance of practical exercises.

Essays in Exposition

Edited by BENJ. P. KURTZ, Ph.D., HERBERT E. CORY, Ph.D., FREDERIC T. BLANCHARD and G. R. MacMINN.....$1.30

A college course in exposition. The introduction takes the place of the usual rhetoric and is followed by over 500 pages of selections (representing twelve authors) intended for analysis.

A Book of Prose Narratives

Edited by CHAUNCEY W. WELLS..... $1.25

More than 20 models from standard authors for the writing of simple narration. The book excludes stories, but covers a wide range of history, legend, and autobiography.

Legends and Satires from Mediaeval Literature

Edited by MARTHA HALE SHACKFORD.$1.25

Selections, not hitherto available in translation, from the highly significant minor literature of the Middle Ages, including examples of allegory, satire, homily, debate, and other characteristic medieval forms.

American Literature

By WILLIAM J. LONG, Ph.D..... $1.35

A companion volume to Long's "English Literature," written in the same spirit and organized on the same distinctive lines. The emphasis throughout is on the development of our literature as an expression of national life and national ideals.

Play and Recreation for the Open Country

By HENRY S. CURTIS.....$1.16

An attempt to show some of the ways in which the adventure, romance, and social co-operation which the country had in the days of the pioneer, but which it has so largely lost, can be brought back to country life. Its suggestions for the organization of recreation in the rural home, rural school, and rural community are definite, helpful, and interesting.

An Outline of German Romanticism, 1766-1866

By ALLEN WILSON PORTERFIELD....$1.00

The growth and development of German Romanticism, its economic background, and twenty sections on its various phases. Each section comprises an explanatory introduction and biographical sketches of the various writers, with bibliographies and carefully selected reading lists of their best work.

The Medieval Popular Ballad

Translated from the Danish of Professor Johannes C. H. R. Steenstrup by EDWARD GODFREY COX.....$1.75

A fascinating discussion of ballad origins and distributions, including comparisons with the Norse sagas and the ballads of Germany and generous quotation from the ballads of Denmark.

THE INFLATED A.B.

Not long ago a member of one of our university faculties, while seeking some recent literature in mathematical logic, discovered to his amazement that the room in which he had expected to find the mathematical seminary was equipped with six gas ranges and a complete outfit of pots and pans. Continuing his search, he was confronted in the next room by a number of dressmaker's "forms." On the floor below he found one of the college's business staff teaching a class in the art of bookkeeping. And not far away one class was receiving instruction in the elements of machine-work, another in the elements of joinery. All of these were courses in "the college of liberal arts"; and in all of them the students, with a satisfaction not unmixed with humor, were receiving credit towards the degree of bachelor of arts. In this connection we learn that one of the most distinguished State universities, where credit is given for football, rejoices in the possession of a hat-trimming expert. Clearly, this is an academic age. In the State of Michigan one cannot settle comfortably into a barber's chair without facing a certificate to the effect that the man behind the chair has successfully passed his canonical examinations—though not yet in the State university. But it is only a question of time when the tonsorial art will take its place among the other liberal arts and when in decency and consistency a few distinguished members of this, as well as of the gastronomic and sartorial professions, will have to be rewarded from time to time with the honorary degree of doctor of laws.

Are we to say, however, that a field of inquiry so deeply related to human well-being as that of the home—and withal so full of perplexities—is intellectually contemptible? Or that intelligence in this field is without the flavor of culture? Perhaps it would be safer to say that every field is worth cultivating precisely for what it can be made to yield. Clearly nothing is more important than a fine intelligence in the home, but so far there is no evidence to show that such intelligence is developed through domestic science. It is a little hard to believe that any laboratory of cooking can furnish an experience comparable in informing power with that to be gathered in a well-ordered kitchen in a household that respects good food.

The real question, however, is whether proficiency in the arts of cooking, or sewing, or joinery, or what not (and why not, then, the tonsorial art?)—a proficiency, we must remember, which is likely to be surpassed by that of men and women of little education who have practiced the crafts—is to count towards a degree which by common consent has been reserved hitherto for the recognition of liberal culture. A generation ago a similar question was raised in connection with the sciences—physics, chemistry, and biology. And the question is still an open one so far as training in science consists chiefly in weighing and measuring or in drawing from microscopic views. Yet the student who grasps the conceptions underlying the sciences has gathered a rich intellectual heritage accumulated through at least three centuries of strenuous and painful thinking. The newer vocational sciences have no such endowment to offer. Domestic science, to repeat our illustration, is without a history; it possesses no organized body of knowledge; and its countenance shows none of the marks of seasoned thought. It is chiefly a collection of odds and ends from the other sciences gathered for the sole purpose of having a "domestic" science, and cemented together in a mass of the trivial and the obvious. In the State universities, which are mainly responsible for enrolling domestic science among the instruments of culture, its purpose is frankly that of advertising, of "making the university strong with the people."

For moral justification we shall be referred, of course, to the easy-going theory of the democracy of studies, from which we learn that every department of human life is capable of developing an intellectual content, and therefore the possibilities of culture. To this ancient contention we need only reply that an academic degree is supposed to stand for developed actualities. And it is no faith in democracy that underlies the inflation of the degree in arts. We have only to remember that those who stand for the superior, if not, indeed, the exclusive, value of a training in science have as a rule indignantly rejected the degree of bachelor of science; and as for a "Bachelor of Education" or a "Bachelor of Home Economics," it is not to be thought of. The truth is that, amidst all the emphasis laid upon practical ends and all the scorn both of the humanities and of pure science, vocationalism is ill at ease without the social stamp of culture. In estimating the vocational motive to which our colleges, and first among them the supposedly democratic State universities, are now appealing for an increase of numbers, this ele-

ment must not be overlooked. It will help to explain why, while ministering, as they profess, to the most varied needs, they prefer to recognize no distinction either of value or of character in undergraduate studies. Not an honest democracy, where each subject and each man stands squarely upon his own feet, is the end in view, but a spurious aristocracy.

And this is the vice of the whole matter. Theoretically there is no reason why different educational standards should not be represented side by side in the same institution —if only they are kept distinct, but the great question at present is whether a thorough general education, having for its chief aim mental culture and discipline, is not a better preparation for any walk in life than a specialized training. The only proof of the pudding is in the eating. The attempt to solve a question of these dimensions in the psychological laboratory is futile. But no proof is possible at all unless the product of each theory of training bears its distinctive mark. It looks, however, as if our academic democracy were resentful of distinctions and preferred to obscure them rather than bring them to the test. Not only do the vocationists pretend to be apostles of culture; the representatives of pure science, and sometimes of the humanities, are on their side eager to show that they, too, have a vocational importance and can "place" their graduates in well-paying positions. The final outcome is the colorless mixture of aims and of values embodied in the denatured A.B.

It must be only a question of time when the degree of bachelor of arts will confer as little distinction as a passport and less than a life-insurance policy. When, finally, it stands neither for mental culture nor for useful knowledge, then perhaps practical necessity, reinforcing the love of truth, will compel a revision and a distinction of educational values; and in the first place a more guarded definition of liberal culture. Such an investigation need not be confined to the vocational studies. It may with equal propriety consider the merely edifying and "socializing" courses in literature, ethics, sociology, and civics which are supposed vaguely to be a "preparation for citizenship." Meanwhile there should be a possibility of success even now for a college which would restrict the courses leading to the degree of bachelor of arts to those of proved intellectual content. The body of students would not be large, but (more to the point) it would be large enough; and the degree must shortly confer an envied distinction.

The Decline of Lecturing

By L. P. JACKS.

WILL THE BOOK KILL THE CHAIR?—LECTURES BECOMING MORE AND MORE A SUBORDINATE INSTRUMENT OF TEACHING.

In a famous scene of "Notre-Dame" Victor Hugo puts into the mouth of the Archdeacon a prophecy which may serve as a motto for the present theme. The time is the end of the fifteenth century; printing has just been invented. On the table of the Archdeacon's cell is a newly printed volume from Nuremberg; outside, seen through the window, is the architecture of the cathedral. "*This*," says the Archdeacon, with his hand on the book, "will kill *that*"—pointing to the cathedral. "*Ceci tuera cela.*" Then, commenting on the words, Victor Hugo adds that they bear a double sense. Literally they foretell the decay of church-architecture as a means for the expression of the human spirit—a prophecy which time has fulfilled. Symbolically they indicate the gradual supersession of the spoken by the printed word. "C'était la chaire et le manuscrit, la parole parlée et la parole écrite, s'alarmant de la parole imprimée. . . . Cela voulait dire: La presse tuera l'église."

Will the prophecy be fulfilled in the second sense to the degree in which it has been fulfilled in the first? Will the pulpit and the chair gradually lose their power as means of expression and as instruments of education under the influence of reading habits and cheap books?

The question has been often asked, and some may think that history has already supplied the answer. In certain respects it is obvious that both the chair and the pulpit have lost a measure of their power. The clergyman has long ceased to be the sole instructor of the people in matters religious. Very pathetic indeed is the delusion still prevalent in certain clerical quarters that the knowledge of the laity about these things is limited to what the clergy choose to tell them. Thanks to the abundance of easily accessible literature, the laity are often better informed in respect of doctrine than are the clergy who profess to be their guides. Knowledge and criticism now produce a lively reaction to the word of the pulpit wholly unknown in the days when ignorance and submission prevailed in the pew. And conditions partly the same are operating upon the work of the "chair." Students are becoming less and less dependent on lecturers. In our ancient universities there are distinguished scholars with European reputations whose lectures are attended by a mere handful of students—if, indeed, any "hand" can be imagined sufficiently small to justify the metaphor. Had men of equal learning been similarly engaged in the fifteenth century, they would have drawn crowds of eager listeners from half the countries of Europe.

Along with the decay of interest in the audience there has been a parallel decline in the quality of the lectures, or the lecturers, themselves: no doubt the one thing is the cause of the other. I do not mean a decline of learning, or in the technical value of the matter offered; this may be as great as or even greater than before, and is certainly governed by higher standards. The decline has been in manner, expression, delivery. Concurrently with the growing ennui of the audience the lecturer himself grows dull and perfunctory. Lecturing, like architecture, tends to become a lost art. There are some, indeed, who draw large audiences, but they are decidedly a minority. The majority have never taken the trouble to study the technique of their business; highly equipped perhaps as scholars, of "pedagogic" they have little and of "rhetoric"—I use the term in its best sense—they have literally none. In the midst of conditions where lecturing is becoming more and more a subordinate instrument of teaching, they take no pains to acquire the power of impressing or persuading or even interesting their audience. They have knowledge; but they do not know how to communicate it by the spoken word. Their strength goes into their books, not into their lectures. *Ceci tuera cela.*

It is plain that a double, or reciprocal, process is here at work, tending, whichever side of it one considers, to destroy the art of lecturing. On the one hand, the scholar, the thinker, the teacher becomes more and more a writer of books, thereby obtaining a wider audience in the world at large, and the chance, and often the reality, of a higher remuneration. The learner, on the other hand, becomes a reader rather than a listener. Not only does he think that he can get all the instruction he wants from books, and get it cheaply, but he can also choose his own time. Few students, if asked whether they would derive the greater advantage from thirteen or fourteen hours a week spent in listening to the lectures of experts or from the same amount of time devoted to the literature of their subject, would hesitate for a moment to declare in favor of the latter. And they would give a double reason; they would tell you that the lectures were likely to be bad, while the literature, on the other hand, was good. Even of the very teachers whose classrooms the student attends he might say that their lectures were inferior to their books, the spoken word being often little else than a monotonous amplification of the written, or the mere addition of a mass of illustrative detail which a few books of reference would readily supply. He would probably indicate one or two among his teachers who still honor the lecturer's calling for its own sake and retain enough of the artistic temperament to select for oral teaching just that part of their knowledge which the living personality of the teacher is needed to enforce. But of the majority he would tell you a different, indeed, an opposite, tale. You would hear of professors who in the treatment of their subject take no care to

disengage what is essential from what is subordinate; who seldom introduce the synoptic idea which requires the voice and face for the expression; who are exhaustive without being suggestive; whose lectures, in fact, would be more valuable if printed as footnotes to existing books.

Of this kind of teaching there is, beyond all doubt, a vast amount in all universities, and one can well believe that so far as education is concerned its results must be at best of no great importance, while at the worst they represent mere tedium and expenditure of time which might be far better employed both by the teacher and the taught. And time itself is becoming ever more precious in education. A good system of education, whatever else it may be, is one that wastes no time over an inefficient method. So vast is the range of modern knowledge, so extensive is the literature even of those subjects which come within the most old-fashioned curriculum, that a modern minute has the value of a mediæval hour—at least, for the student. And yet it must be confessed that universities—and I think this holds true in America as well as in Britain—still retain a method of teaching which could only be justified if printing had never been invented. Students are becoming acutely conscious of the evil. They are growing more and more reluctant to offer themselves as victims to the decayed art of lecturing. *De facto* they are right.

None the less deplorable is it that the art of lecturing should have been suffered to decay. No one could listen to the late William James, or Professor Bergson, not to mention many others, without realizing that light and inspiration may be found in the lecture-room which can be obtained nowhere else. Just because the range of modern knowledge is so vast, just because the printed sources from which knowledge may be drawn are so multitudinous and confusing, there is need of some means by which the student can be placed at the living centre of his subject. This can be provided only by the living personality of a master, and to the end of time there will be no other way. Deprived of this instrument, the educational process breaks up into confusion. Endow a man with a whole library of well-written books, but leave him without an inspiring personality at the centre of his subject, and the chances are a hundred to one that he will remain a dabbler.

This is not equally true in every subject—but it is true in a measure of all. The importance of the lecturer's function varies between wide extremes. I hardly dare to say when it stands at the lowest; but its highest level is probably reached in philosophy, a subject whose deepest meanings can hardly be rendered by the printed word, requiring rather to be interpreted by some personality in whom the doctrine has become, as it were, incarnate. The same may be said with yet greater emphasis of religion, so far as religion is the subject of direct teaching. It is among the teachers of these and cognate subjects that the best, and the worst, lecturers may be found to-day. There are a few men, relatively few that is, scattered through the universities of the Western world, who, as personal exponents of these things, have a power and influence which ranks them among the greatest of world forces. The debt of philosophy, and of students of philosophy to these men, is incomparably greater than that which is owed to any book or books, great as the latter debt may be. The grim prophecy of Victor Hugo's priest does not apply to them as yet. The art of printing has not superseded them—"*this*" has not killed "*that*." They remain as object lessons to prove the truth of Carlyle's saying, "The world has yet need of yonder talking man." Unfortunately, these men are exceptional.

The reverse side of this truth is equally worth consideration. Those branches of knowledge in which the lecturer's function is most precious are also those in which least good is to be expected from the mere dissemination of cheap literature. I doubt if culture is making any great gain from the multitude of popular books which deal with the philosophic sciences. There is little doubt that popular handbooks are responsible for the spread of gross misconceptions as to the whole nature of philosophic science. They encourage the notion that philosophy is a set of conclusions which can be learned, together with the arguments on which they are based, just as we may learn the Newtonian Physics. They obscure the truth that philosophy is essentially a *life*, a life which can hardly be communicated except by those in whom it already exists. When the book comes first and the living teacher becomes a mere commentator on its pages, the result at best is mere opinion; it is never philosophy.

I abstain from pursuing the question along lines with which I am less familiar. If there is any truth in the foregoing its application can be readily made to particular cases. My general conclusion is that the art of lecturing has fallen into deep decay at the very time when it is most needed to counteract other conditions. Out of the very wealth of modern knowledge arises the need for *selectors*, that is, for men who represent and embody just those elements of knowledge which can be translated into life. This is preëminently the lecturer's function. He is needed to represent the living interest, the *vital* importance of his subject. As a mere talking book, or a mere commentator on print, he misses his vocation and adds to the very evil which it is his business to cure.

Judged by the amount of lectures provided in educational institutions of one kind or another, one might conclude that the lecturer's office is at the very zenith of its glory. Judged by the quality of the lecturing, and the amount of interest it arouses in those for whom it is provided, one would reach a very different conclusion. It is a sad story of wasted effort and inability to read the signs of the times. It is an instance of doing over again what is far better done by another agency, namely, the printed book, and of neglecting to do what the printed book requires for its complement. The function of the lecturer to-day is extremely difficult; but it is essential that it should be performed. The very causes which have produced its decline clamor for its revival. If "this" kills "that" it also kills all that is best in itself. Obviously there is room for a great reform.

A New Battle of the Books

OR

THROWING OUT THE MIDDLE AGES.

(Suggested by the *Nation's* excursions into Allegory in the last Educational Number.)

A gentle knight was pricking along the path of rectitude and honor. He was clothed in the stately garb of old Rome. He was walking backwards, not because it was convenient, but in sign of protest. His squire, owing to defects of early training, walked somewhat uncertainly in the path of rectitude and honor. There was about him something of the insouciant air of fancy's child. His hand played with a collection of thunderbolts neatly tied with string. He was wandering blithely in the opposite direction from the majestically calm retrograde of his master, but such is the virtue of the path of rectitude and honor that they always came out at the same point.

"We must throw them out," the knight muttered from time to time. "We must throw them out."

"'Naturam expellas furcâ tamen usque recurret,' as Horace says," diffidently suggested the squire.

The eye of the knight kindled at the sound of the well-known vocables, but swiftly his brow darkened.

"Horatius! Horatius!" he protested. "We must get rid of this vile mediæval habit of referring thus familiarly to our great classic writers." And then he fell once more to muttering, "We must throw them out. We must throw them out."

"Sir knight——" ventured the squire.

"Do not call me *Sir* knight," was the slightly petulant interruption. "It suggests those absurd mediæval creatures who dedicated themselves to the accomplishment of impossible achievements."

"But are you not——?"

"No, I am not. I am a Roman knight of the equestrian order. Observe the narrow purple stripe on my toga. I intend to rehabilitate the word knight and purge it of its mediæval connotation." Then he took up once more, in a different key, the burden of his earlier meditation: "We must throw them out. We must throw them out."

The way being rather dusty and singularly devoid of company, the squire, too, found himself chanting, at first gently, but with rapidly increasing energy, "We must throw them out. We must throw them out." And

others who were passing in various directions, sometimes a long way off from the path of rectitude and honor, took up the song: "We must throw them out. We must throw them out." The oftener they said it the more pleasure they derived from saying it.

Ere long they came to a castle, a very great way off from the path of rectitude and honor. The knight became furiously enraged at the sight of it. "What disgusting lack of balance and restraint," he cried. "How different from our dear Parthenon! We must destroy it at once!"

With great effort they picked their way across the intervening morass. At the gate sat two hideous giants. One masterly stroke and the uglier of the two giants, Sir Ulfilas, turned into thin air, and the other, though he had the strength of thirty men, fled without a blow. At his heels went off a crowd of lesser giants: one in homespun, dancing and singing as he went, whose name was Sir Balladino; another clad in tinsel and lame of a foot, called Sir Thopas; and with them went a swarm of monks and friars. One figure with an air of infinite patience stood as in a doubt what to do. He was not born a giant but a fay, and had long been held in base servitude by the giant race, forced to drudge and sweat at their bidding. Him the knight entreated not to run, promising that he would free him and heal of his great harms. But what became of sweetest Sir Will in the end we do not know.

Pressing forward undaunted through the obscure and devious passages of the castle, the knight, followed by a now large and various company, came at last upon the central room, in which sat a venerable wizard, his beard snow-white and his back against the wall. In his hand was a book of witchcraft. "Archimago," thundered the knight, brandishing his gleaming stylus, "Archimago, I have thee at last! It is for this I have labored so long; all that I have done tends towards this. Avaunt—pardon me, I should say *apage*, *procul*, get out! Undo this horrid spell."

What happened next is variously reported. The knight would have it that Archimago muttered as if in token of surrender: "Tempest, act five, scene one, lines fifty-four and following." But most aver that he paid not the slightest heed to all this hurly-burly, continuing in rapt contemplation of the page before him. What the knight did is, however, well known to all. Without pausing for a reply, he flung out his catechism with fine neo-classic vigor.

"Will you henceforward teach that the English language was invented by Dr. Johnson?"

"Will you hereafter use Gothic only in the sense of disgusting?"

"Do you acknowledge the supreme literary importance of Buddhism and Deism?"

There was a murmur of dissent from some of his followers at these questions which was not quelled at once by the knight's triumphant remark, "We have thrown them out."

H. M. A.

A Leaf Out of an Old Book

By PERCY HOLMES BOYNTON.

THE AMERICAN UNDERGRADUATE, PAST AND PRESENT—A MEANS SUGGESTED TO REHABILITATE THE TRADITION OF HARD WORK AT COLLEGE.

The important thing is to realize that the American college is deficient, and unnecessarily deficient, alike in earnestness and in pedagogical intelligence; that in consequence our college students are, and for the most part emerge, flighty, superficial, and immature, lacking, as a class, concentration, seriousness, and thoroughness.

This is enough to make any one think again—to wonder whether the situation is quite as discouraging as it seems, and whether it is worse now than it used to be. It tempts one first to dwell on the clever and self-confident investigator and the chances of his being misled when generalizing on so complicated a subject as the American undergraduate. Probably the American undergraduate will never be found, for the same reason that the great American novel will never be written—because the country is too big to be represented by one type. One is tempted to quibble. Yet even though the faithful student survives—Rollo grown up to be concentrated, serious, and thorough—there are enough of the other kind at college to make one speculate as to where they come from and how long they have flourished.

Apparently always. At any rate, they were well established when Milton mourned his college friend who tended "the homely, *slighted*, shepherd's trade," while the others were sporting

with Amaryllis in the shade
Or with the tangles of Neæra's hair.

And they seem to have thriven nobly for a hundred and fifty years until Wordsworth, sitting in Milton's old room one day, drank "libations" to his memory, hustling "ostrich like" away, just not too late to reach the evening chapel. To be sure it was Wordsworth's only carouse, but that is why he used to be so lonely at Cambridge.

I.

A century ago in America the whole college schedule seems to have been arranged on what modern skepticism would call the naïve assumption that students went to college primarily to study. There is not so much data at hand about the routine of an ordinary day as about matters which were more picturesque and exciting, but there is enough to banish all doubt. For example, Stephen Salisbury, Harvard, 1817, explained to his father:

I hope you will excuse my not writing more frequently, for I have so much to do now I am pressed for time, for I have (every other day) to-day to go to writting school from eight to ten after that I have to get four pages of Latin to recite at quarter past eleven we get out of recitation at twelve then we dine at one, then after dinner we have to get a lesson in Geometry to recite at four we are kept in the recitation till most five then we have prayers and immediately afterwards supper and in the evening we have to get three or four pages of latin to recite at six o'clock next morning so you see Sir we have full employment.

No wonder that with such a programme he had no time to punctuate. Even as it was, Father Salisbury seems not to have been sufficiently impressed, for a few days later he wrote:

I notice in your letters you often mention how hard you have to Study. I hope you do not View it as a task—but the most desirable and pleasant amusement.

Stephen, somewhat abashed, detailed another day: 6 A. M., chapel; 6:15, recitation; 7:30, breakfast; 9:00, French; 10:30, recitation; 11:15, lecture; 12:30, "commons time"; 2:00, lecture; 3:00, recitation. With the parental admonition in mind, he this time tempered his commentary.

The reppetition of these exercises is no doubt tedious to you, Mama, but how much more so must the performance of them. But perhaps tedious is not a proper word I meant to say fatiguing. They would appear sufficient to occupy our time to any reasonable person But beside all these the government have seen fit that we should attend another course of lecture to begin next week. . . . As to my studies Mama if my performance of my exercises equalled the labour I bestow on them I think I should do very well.

This somewhat dubious comment on his actual performance as a student seems not to have been ill-judged, for when the final honors were distributed Stephen had to content himself with a very modest position on the commencement programme.

To the worldly-wise student of to-day, the interest that centred in the old-time commencement exercises is marvellous to recall. It was a culmination of months of anxious preparation, weeks of anxiety before the appointments were made, and on the part of many, whole college life-times of emulous competition. As the length of the programmes was something preternatural, the critical question for the serious-minded was not as to getting a place as a speaker, but wholly as to what that place should be. Here are the words, for instance, of one J. Tallmadge, who took his degree at Brown in 1798. Early in March his heart is palpitating at that important crisis in which he and his class-mates are, in the jaunty epistolary language of the day, "to listen to the irrevocable mandate of Fate, in which our future destiny is to be pronounced, and upon which our future existence almost depends—I mean the allotment of our parts for commencement. Scarcely did I ever reflect on the nearer approach of that interesting and important hour but 'big round drops in piteous chase' roll from my eyes." It appears that in anxiety for advancement, the class is all studying furiously, "bowing with profound adoration" as they pass faculty members on the street; and not only that, but stealing portions of their

orations from obscure eighteenth-century sources, apparently without serious penalty. Three weeks later Tallmadge writes again of the fateful day. "The night before, the class was so disturbed that"—as he records in a diction which does not seem quite that of the student to-day—"Morpheus, the ever-adorable god of sleep, deigns not to bless some of us with his presence." Exhausted in the morning, they go to chapel. "After prayers they all looked with anxious expectation. If you have ever seen the sable cat from under the barn door glare with her flaming eye-balls, imagine if you can endure the thought, twenty-seven of them in one row, with eyes, if possible, more terrible than usual, looking you full in the face, and you will have a good representation of our class and the deplorable situation of little *Jock*."

This cavalier title was intended to designate the president of the college. His announcements included the names of twenty-two, who were to speak at the great occasion. Maxwell, who was thirteenth on the list, talked with the president, "and at length told him it was a damned partial distribution," and went off in a rage to Newport. Another member of this same class, writing a fortnight after, shows that Tallmadge did not overstate the case: President Maxcy has been housed for a week; Professor Messer (who seems to have been well named with reference to the complications), has been treated with contempt by the students, among whom Sabine scowls, and Carey's eyes are still red.

The commencement day, which came at an uncanny time in midsummer, was a truly festive occasion for all friends of the college—so festive, indeed, that a Providence newspaper protested at the confusion into which a whole community and nearly a whole State were thrown. A ceremonial parade in the morning led the hypnotized audiences to a programme in "Old Baptist" from 9:00 to 12:00, and after a hurried collation, for two or three hours more of afternoon oratory. Unintelligible Latin and indistinct English held sway before the admiring crowd, after which the president conferred degrees on the little flock, who had paid their bills and subjected themselves to instruction for the prescribed four years.

The programmes were heavy as well as long. Cotton Mather at seventeen assailed the philosophy of Aristotle in so vigorous a Latin oration that the president would have stopped him had not the village pastor interceded, also in Latin: "*Pergat, quæso, nam doctissime disputat.*" Dear to the heart are these themes of young manhood: Philip Freneau and Hugh Henry Breckenridge in a dialogue at Princeton on "The Rising Glories of America"; Trumbull at Yale at the same period on "The Use and Advantages of the Fine Arts," and so on and so on down to Longfellow at Bowdoin in 1825 on "The Writers of America," of whom he disposed in seven minutes of fervidly youthful eloquence.

These oracular utterances, natural to any graduating student, were part of the daily experience of boys of a century or more ago. The chief student organizations of those days were the debating societies. They might be of the informal sort to which Emerson belonged, or they might, as was often the case, include in two rival organizations the whole membership of a college—all ruthlessly coralled without regard to their controversial tendencies. This sort of thing survived till well within the memory of many living college graduates. And the zest in electioneering was quite as great as that of fraternity rushing now. When President Angell was a student he recorded gravely that the campaign "was carried on with such vigor during the early weeks of the year that the freshmen had scarcely time left for their regular duties." If I were forced to choose, as he was, between the Philermenian and the United Brothers Societies, I can easily conceive of losing sleep and student energy in the face of such a dilemma. Emerson's journal of his junior and senior years tells us what they discussed in his society. March 6, 1820, "Which is the most conducive to individual happiness, a state of celibacy or matrimony?" "Which is the strongest passion, love or ambition?" March 20, "Whether the accession of the Canadas to the territory of the U. S. A. would be for the best interest of this country"; "Whether Cicero or Demosthenes be the greatest orator." March 21 of the next year, "Would it be beneficial to the students to spend much time in the acquisition of the polite accomplishment?" And the subjects for individual themes reported on these occasions were: "Envy wishes and then believes"; "Futurity"; "The Miseries of Human Life."

II.

But if the commencement exercises were the outgrowth of such ebullitions of youthful wisdom, the commencement occasions as a whole throw a light on a strikingly different phase of college life. One periodical protested in these terms as late as 1827:

> Of the vast concourse who visit the town on commencement day, but a very small proportion care a farthing about the literary exercises; they come only to see and to be seen—to indulge in hilarity, fun, and frolic—to visit their relatives, the theatre, and the circus; and then return to their homes, without deriving the least benefit.
>
> The lower and disorderly classes of society make the whole an affair of amusement, drink to excess, quarrel and fight, neglect their useful employments, get bloody noses, and a night's lodging in the bridewell. In the midst of the scenes of bustle and confusion, pickpockets are busily employed at their vocation, infamous women throng the town, counterfeiters, thieves, and swindlers are on the alert, and the whole town is infested with a visit from all of the dregs of creation, who come among us only to depredate and destroy.
>
> The prostitution of a grave college occasion by a dissolute populace appeals to one's sympathy; but unfortunately the town was not the only sinner. The gown was quite as guilty. In the early eighteenth century an act was passed for reforming the extravagances of commencement at Harvard. It provided that henceforth "no preparation or provision of either Plumb-cake, or Roasted, Boiled, or Baked Meates or Pyes of any kind should be made by the commencer" and prohibited any "distilled lyquours" under heavy fine. The overseers further recommended an act which seems strangely familiar to-day "to restrain unsuitable and unseasonable dancing in the college," and to prevent "the great disturbance occasioned by tumultuous and indecent noyses." Even to the officials, however, this legislation seemed too severe, so that it was formally rescinded a generation later by a resolution that the scholars might in a sober manner indulge in the drinking of punch. The officials could hardly do otherwise in a day when the college buttery, as one historian records, offered for sale to the students in general such articles as it was "proper and necessary for them to have occasionally," and catalogued the most important in the following order: wines; liquors; groceries; stationery. This permission of 1759 brought about perhaps a natural result in the records of Washington Allston, who, before he became an eminent painter, in his capacity of rhyming Secretary of the Hasty Pudding Club, recorded of the annual dinner in 1800:

> And each one to evince his spunk
> Vied with his neighbor to get drunk;
> Nor tedious was the mighty strife
> With these true-blooded blades of life,
> For less than hours two had gone
> When roaring mad was every one.

Even Phi Beta Kappa dinners were not immune from what it may be charitable to call elevation on the part of the annual diners.

What happened at commencement must have had relation to what happened throughout the rest of the year. This would be safe as a theory, but the melancholy facts make no theory necessary. The code of respectability was very different in the old days. The students robbed roosts by way of adventure and pillaged market gardens for the vulgar spoils that they could carry away. Nor did such pleasantries endanger their social status. By the days of the Revolution, and earlier, the exercise of corporal punishment had given way to a system of fines. One table in use at Harvard includes twenty-three items. Absences and tardinesses were paid for in pence, positive offences of conduct in shillings. Three items particularly appeal to the imagination. The cost of "going upon the top of the college" was one and sixpence; of drunkenness, not exceeding one and sixpence; of keeping guns and going skating, one shilling.

Student disorder, moreover, was not merely individual, but frequently organized. One of the greatest sources of discontent was in the conduct of the College Commons, and at various institutions successive protests

at the fare, resulting in no material change, were followed by organized strikes which were sometimes unqualifiedly victorious, and always reduced the ruling officers to an extremely conciliatory state of mind. In fact, I am not sure but this is over-stating it, for there is certain evidence that the college authorities were never too belligerent in their attitude. I have it on the authority of an eminent philosopher, whose reverend father was a tutor at Yale after he graduated in 1837, that in his day every tutor was equipped with two complete sets of windows. This was not on account of danger from storm or earthquake, but in order to be ready for the friendly addresses of the undergraduates. Now and again, as the mood seized them, they would divide into squads, a part manning themselves with clubs at the entrance to a dormitory, and the rest, equipped with coal from the college pile, bombarding the windows of the younger faculty members. The custom was so well established that all knew the assailing forces would withdraw when the last pane was smashed. A second set of glazed windows was then put in place, and it only remained for the tutor to gather up the accessions to his coal pile thus informally delivered, and for the janitor, at the college expense, to reëquip the old windows and store them for use in the next emergency. So much for the good old days as recorded in history.

But literature, as well as formal history, has been dedicated to this subject. John Trumbull, Yale, A.B. 1767, A.M. 1770, wrote among his satires none that was more to the point than a work in three parts entitled "The Progress of Dulness." This about the achievements of Tom, Dick, and Harry—although Harry is transformed to Harriet Simper, who, after a varied career as a coquette, was first jilted by Dick Hairbrain, and finally doomed to an inglorious marriage with Tom Brainless. Our interest for the moment is in the boys. Tom, incapable of any other career, was sent by his fond parents to college, tutored in preparation, and pushed through his examinations by the combined zeal of father and teacher. A few days were enough to weary him of a routine which

> In the same round condemn'd each day
> To study, read, recite, and play.

A short programme of non-preparation, tardinesses, and absences made him subject to "the college evil,"

> Then ev'ry book, which out to please,
> Stirs up the seeds of dire disease;
> Greek spoils his eyes, the print's so fine
> Grown dim with study, or with wine;
> Of Tully's Latin much afraid,
> Each page, he calls the doctor's aid;
> While geometry, with lines so crooked,
> Sprains all his wits to overlook it.
> His sickness puts on every name,
> Its cause and uses still the same;
> 'Tis toothache, cholic, gout or stone,
> With phases various as the moon;
> But though through all the body sprcad,
> Still makes its cap'tal seat, the head.
> In all diseases, 'tis expected,
> The weakest parts be most infected.

in spite of all, however, he survived until after,

> Four years at college dozed away,
> In sleep and slothfulness and play . . .
> He passes trial fair and free
> And takes in form his first degree.

Of the college leopard's spots, however, Tom was one of the smaller ones, for Trumbull pointed out in terms of Dick's experience that college was not merely a place for the harmless incompetent. Young Hairbrain was quite aware of what a liberal education was to bring him, and on his arrival broke out in a rapturous salutation:

> All hail, unvex'd with care and strife,
> The bliss of academic life;
> Where kind repose protracts the span,
> Where childhood ripens into man;
> Where no hard parent's dreaded rage
> Curbs the gay sports of youthful age;
> Where no vile fear the genius awes
> With grim severity of laws;
> Where annual troops of bucks come down,
> The flower of every neigb'ring town;
> Where wealth and pride and riot wait,
> And each choice spirit finds his mate.

Trumbull was so eager to drive home his strictures upon the college that occasionally he interrupted his story for direct comment. He deplored the domination of the classics,

> Can knowledge never reach the brains
> Unless conveyed in ancient strains? . . .
> While half the learning but displays
> The follies of the former days.

Not only were the classics useless, but in his introduction he carried the war against most of the other subjects. Who could be confident that the following was not written in 1914 instead of 1770? "The mere knowledge of the ancient languages, of the abstruser parts of mathematics, and the dark researches of metaphysics is of little advantage in any business or profession of life." Not only so, but with reference to what we nowadays dignify by the title of extra-classroom activities, Dick Hairbrain's "constant course was retrograde."

> O'er Newton's system though he sleeps
> And finds his wits in dark eclipse!
> His talents proved of highest price
> At all the arts of cards and dice;
> His genius turn'd, with greatest skill
> To whist, loo, cribbage, and quadrille,
> And taught, to every rival's shame,
> Each nice distinction of the game.

With an indictment which rejects the collegian's studies as useless and his diversions as pernicious, Trumbull seems to have compassed a fairly thorough piece of criticism. As we think back to the traditions of education in the East, we no longer marvel at the annual and solemn celebration of a day of prayer for colleges.

All this detail is not as confusing as it seems at first glance. The two sets of facts beneath it are not really at variance. The extraordinary eruptions of student disorder arose from the failure of old-fashioned college governments to reckon with the problems of exercise and recreation. Smashing and fighting were forms of athletics. College pranks and debating societies were equally pathetic attempts at friendly play. If there is any lesson which the present generation seems consciously to be applying, it is that the damming up of natural forces is dangerous business. In the neglect of this principle the old colleges were, to use the words of the clever and self-confident investigator, "unnecessarily deficient in pedagogical intelligence." But the other half of his indictment—however true it may be to-day—does not seem to have held good even of John Trumbull's Yale. In spite of an occasional Hairbrain or Brainless, the old college students were not "*for the most part* flighty and superficial," or "lacking *as a class* seriousness and thoroughness." For the old college expected faithful intellectual work, and in the main exacted it, and the students went to college expecting to use their memories and their minds, and pursued their studies as vocational students preparing for the learned professions.

III.

There is always food for reflection in a comparison of old times and new, and quite as much as usual apropos of the college.

We may as well admit at the outset that in the modern situation there is no new element. There have always been flightiness and superficiality in college as well as seriousness and concentration. The distinction between one generation and another is a matter of proportion in part. In part, it is a question of significance, for every social institution to be seen clearly must be seen against its own contemporary background. A matter of indifference at one time may be a source of discredit a decade later. It is no adequate defence, then, of to-day to say that colleges have always had to contend with a shoddy and frivolous element. And in the modern college it is impossible to gainsay that the shoddy and superficial are no insignificant minority.

Let us concede again. It is not easy to be sure of the inner character of a widely scattered student body. It is not easy to be sure of a single collegeful—to use a small unit of measure. The observer may have his doubts even of a single club or fraternity. He may be mistaken in a lone individual. Perfectly clear external facts may be quite misleading. Seriousness does not always wear its heart upon its sleeve. Concentration and thoroughness are not always indexed by casual conversation. Yet, with reasonable care, a safe interpretation may be put on the facts. Students yield to observation, and students indulge in observation on their own situation which is of the highest significance.

To draw a comparison, then, first with reference to the play idea, it is quite clear that this generation has completely discredited the ill-timed asceticism of early scholarship. It is no longer considered admirable to mortify the flesh. Even the scholar owes an apology to himself and his family and his students if he permits himself to be "sicklied o'er." The Horatian concept of a sound mind in a sound body has

become so popularized that we have made a fetish of sport. The valedictorian is overshadowed in the eyes of his fellows by the least of the college athletes. Phi Beta Kappa takes what is overlooked by the eleven and the nine and the eight and the five and the track team and the tennis squad and the golf and hockey and cross country and bowling and swimming and indoor gymnastics, and only the director of physical culture knows what other teams. To paraphrase Lowell in his essay on Thoreau: "Every possible form of intellectual and physical diversion has brought forth its gospel. Chess has its prophets, and the presartorial simplicity of the water-polo team its martyrs. Undergraduate debating has been carried to a pitch that would take away the breath of William J. Bryan. . . . Everybody is devoted to a student activity with a capital *A*, which demands attention to everything but study." Of course, it is now some years since President Wilson called attention to this dislocation of emphasis, and the results are already gratifyingly apparent and auspicious, one hopes, of further reform of the sort. It was necessary, I suppose, that after the mistakes of many college generations towards too great repression of the student, the pendulum when first released should have swung far beyond the perpendicular.

IV.

With reference to the other chief fact of the "good old days," the assumption that the student went to college to study has been steadily maintained in all institutions of higher learning in which it is now the fact, as it used to be in the New England college, that students are preparing for definite careers. In law and divinity schools, the old attitude has been maintained without interruption. Those who have been derisively called "pluggers" in the college keep on plugging, and those who have hitherto derided forthwith learn how to "plug," to their soul's good. So also in the medical schools, the most genial and accomplished loafers undergo miraculous transformations when they sniff the pungent atmosphere which pervades and surrounds the medical laboratory. Possibly because of the presence of advanced scientific students in physics and chemistry, there is a general devotion to these subjects (which, of course, have only recently been introduced into the curriculum) that is lacking among the students of arts and literature. In the newer agricultural and engineering schools, no one dreams of thinking that the students can profitably use a wide margin of time for miscellaneous purposes. Even in graduate schools, which carry on the old subjects of the classics, literature, philosophy, mathematics, the vocational concept makes a worker out of the veriest undergraduate drone.

Yet this vocational concept should be mentioned with caution, for it is easy to juggle it to no good purpose. It is a concept which is vaguely entertained by the student and really apprehended by the faculty. The young professional student when he enters the portals of his graduate school is not immediately recompounded into seven-eighths conscience and the rest remorse. He does his best not because he is prudent—foresighted—but because he will be dropped if he loafs. He sees a connection, to be sure, between his different courses and the profession he expects to enter. He is not baffled by the idea of cultural courses, or wearied by the routine of disciplinary studies. It is easy for him to justify the ways of the god in the machine. All this is negatively calculated to make him contented by removing some of the natural grounds for discontent; but it does not make him industrious. He works rather because he is expected to and because all the other men are working, and they work because he is working, and because it is the tradition of a selected body of students all of whom are actuated by a common motive and willingly subject to common requirements.

It is at this point that the twentieth-century college is most strongly in contrast with both the eighteenth-century college and the vocational school of to-day. This college, whether it is the undergraduate department of a university or a cosey little up-country institution, seldom enjoys its own specially selected constituency. Instead it is a general catch-all. Too many undergraduate bodies are made up like the tag-end of the domestic household introduced into "The Admirable Crichton." When the servants were marshalled in, and announced by the incomparable butler, the last half dozen, defying all description, were lamely summarized with a deprecating smile as "odds and ends." Every self-respecting college enrolls, of course, a considerable number of honest self-respecting students, but every one of them includes also a lot of academic odds and ends who would never dream of enrolling in vocational schools which demand work and demand the ability to perform it. Thus the college in one of its functions becomes an asylum for amiable youths whose chief motive for registering is to postpone for a few more years their entrance into the paternal business, or serves as an ante-chamber to the ballroom and the opera house for favored daughters who know too much to stay in high school, but are not ready to come out in society. This is unfortunate, for there are plenty of expensive academies and finishing schools to take care of the expensively inclined. To students and parents whose purses are not over long, wintering in the colleges ought not to seem any more practicable than putting in the time at Florida or Bad Nauheim or the Riviera. If "atmosphere" is what is wanted, it ought to be much more salubrious on the Gulf Coast or the Mediterranean than within the quadrangles of our colleges.

For within the colleges, granting that exercise and play have their legitimate place, there is need of the same exaction of work as there used to be in the colleges and as there is now in the professional and technical schools. Faculties need to be more urgently devoted to stimulating mental effort, more fully committed to the practice of rejecting from their zone of influence the loafer and the dilettante; and students need to be regarded as students, and either made to become such or be escorted to the gates of the campus and bidden godspeed in pursuit of some other more appropriate avocation. The tendency of the present day is in this direction, and every step which has been taken has demonstrated in most unqualified ways that the instructor who demands the most, the college which is least indulgent, the entrance requirements which are most exacting, are always regarded as challengers to the public, are always respected for the stimulation which they offer, and are always sought by those students who themselves are most worth seeking. There is no more question now than there was in 1814 that there is an enormous amount of student energy eager to be turned to account.

Much student energy which is ready to be converted into work is yet only humanly natural in being equally ready to run to waste if conditions permit. Boys who are willing to dry-rot in lazy inactivity, in most cases will get to work with plenty of vigor if only they feel the pressure of circumstances. And always the boys who have any stuff in them enjoy the swimming better when the surf is high. The thing works negatively as well as positively. There is not one in fifty who will not be a little deprecatory in registering for a "snap" course, even though as between dean and student the pleasant pretence is maintained that there are no "snaps"; and instructors in elective subjects may be as urgent as they will, if only they are reputed to be fair and sympathetic, without endangering the size of their classes.

Students will groan, of course, under the burden of work. Who will not? But the noise they make is chiefly vocal. The college boy may play the fool now and then, but in the classroom he demands to be taken seriously. The dogmatic or unreasonable instructor will stir his indignation, but the giver of "cinch" courses elicits his contempt. Here, for example, are some sentences recently published in a college daily:

> All the definite significance of a [Ph.B] degree is this—it certifies to the fact that the recipient has been in residence four years. . . . Students are able to "get by," and win this recognition with little or no serious work, in spite of efforts on the part of the University to compel more serious work. . . . What should it mean? . . . . Recipients would thus be confined to those who could apply their college education to the production of a really decent scholastic effort.

This is in the West; and in the East another student is in a typical dilemma, protesting at the amount of work demanded, "putting up an awful sob" (in student parlance) because the ones "who get the highest marks are all the biggest prunes,"

and in the same moment deciding not to change alma maters because —— "has a higher standard for work than almost any other college."

There are letters at hand as interesting as any that Stephen Salisbury wrote as a freshman a hundred years ago, but, unfortunately, it is too early to publish them. What they reveal, and what scores of other student reactions reveal, brings us back to the opening quotation from the clever investigator. In the college of to-day there are no small number of "flighty, superficial, and immature" students. Yet some of the flightiest would willingly come down to earth if they only knew what to do when they alighted. When they know what kind of work is expected of them and what will happen if they neglect it or bungle it, a great many students will be scared away from college as they are now fended off from the vocational schools, and most of the remainder will settle down intelligently to the tasks that confront them.

REVIEWS

AN EXAMINATION OF THE TEXTBOOKS PUBLISHED SINCE LAST SPRING.

EDUCATIONAL THEORY.

Amidst the waste of formal pedagogical literature it is refreshing to find a document so human and genial as C. Hanford Henderson's "What Is It to Be Educated?" (Houghton Mifflin; $1.50). It matters little whether we agree with him. His book bears the mark of a wide experience, both in and out of school, which he seems to have kept fresh and vivid, with the result that there is hardly a page which is not good reading, though a few pages are somewhat remote from his subject, and there is a little more of Oriental philosophy and Tolstoyan radicalism than most of us will care to swallow.

Instead of outlining a formal theory of education, Mr. Henderson undertakes to give us a concrete picture of the educated man. First in importance he rates bodily health, decent habits, and good manners. But behind it all lies the idea of producing a "human thoroughbred." Until a boy is fourteen, it makes little difference whether he can read —although, as the author admits, almost any intelligent boy, brought up among intelligent people, will insist upon learning. At this period the important thing is a training in the arts, in the broadest sense: the art of controlling his body, of swimming, of riding, the arts of music and of drawing, the industrial and household arts—to make him independent of the personal services of others —and the art of using tools; but not the contemptible art of "athletics," nor the formal "manual training" of the usual sort. From fourteen to seventeen comes the high school, which is to be devoted to the serious pursuit of intellectual culture and scholarship. The typical high school of the present, with its "adolescent distractions," is "the premature destroyer of childhood." At seventeen comes the *Wanderjahr*, preferably a trip around the world for those who can afford it, but in any case, if possible, a change of scene—for example, for the Western boy a year in the East. And then, for the relatively few who seem to be called, the college.

There is much in this Platonic scheme which calls for discussion. But there is one note that commands special attention. Amidst all the talk of what education is *for*, it is rather pleasant to hear that the first motive of education should be "immediacy." In other words, a boy is to be educated "for" himself. Education is nothing less than the process of "personal salvation," not a means but an end. "I do not want to make him [the high-school boy] a docile citizen, or a smug shopkeeper, or an incipient artisan, or a walking encyclopædia, or an expert linguist, or, for that matter, any other special creature. I insist quite frankly upon the higher claims of human graciousness and charm. If our three-year high-school course makes the lad more interesting, more lovable, more resourceful, more of a person (as our expressive phrase has it), then the process is commendable education."

It is a little hard to account for all the fuss that has been made over the Montessori method. Most informed readers of the "Method" must feel that, while the author is a clever and ingenious woman, her science is rather thin, and her consciousness of originality is due to imperfect information regarding the educational developments, not only of the past, but of the present. In a thoughtful and well-written little book, "From Locke to Montessori" (Houghton Mifflin; $1.25 net), William Boyd, lecturer at Glasgow, subjects her system to a scholarly criticism. His tone is sober and courteous, with only a touch of irony here and there, but there is little left of Montessori at the end. In "the individuality of the pupil" she adds little to either Locke or Rousseau. Her conceptions both of individuality and of freedom are incoherent, and in her schools "the freedom of the child" is largely fictitious. As a matter of fact, her scientific prepossessions and her lack of imagination, as shown in her exaggeration of the need of sense-training and her contempt for stories, plays, and games, really prevent her from understanding the child's point of view.

One would wish to emphasize by a lengthy review the importance of "The Montessori System Examined" (Houghton Mifflin; 35 cents net), by William Heard Kilpatrick; but the book is so short—67 pages—and the author's treatment of the subject so clear and concise that it seems better to recommend it without reserve to the attention of all teachers, rather than to attempt an analysis of its contents. One feels especially justified in this course because the very low price of the book places it within the reach of all. Dr. Kilpatrick is fully acquainted with the history of pedagogical development, and thoroughly conversant with the psychological basis of educational theory, and the modern critical studies founded upon it. He has made a careful study of Dr. Montessori's theory, and of her practice at first hand; and in this book attempts to show wherein these differ from those of the kindergarten system which they would aim to displace, as well as from the pedagogical principles upheld by his colleague and master, Prof. John Dewey. His mode of procedure enables him to present in a clear light the weaknesses, as well as the strong points, of both the new system and of the older system of Fröbel as it has been developed by his disciples. He gives to Dr. Montessori full credit for her scientific aims, and for some of her practice, especially as it is carried out in Italy at the *Casa dei Bambini*. But he does not spare critical judgment where it appears warranted; and his attitude is so thoroughly judicial throughout that one feels confidence in the conclusions he draws.

English readers who wish to be enlightened regarding the theory and practice of vocational education will be grateful for the translation by C. K. Ogden of the volume of addresses entitled "The School and the Nation" (Macmillan; $1.60), by Georg Kerschensteiner, director of the Munich schools. Dr. Kerschensteiner, who more than any other is responsible for the present vocational movement, is everywhere interesting because all that he has to say rests upon a background of experience and reflection; and the present volume, though a collection of scattered lectures, gives a clear account of the history of the Munich continuation schools and of the ideals underlying them, while the appendices supply the details. One idea underlies all, namely, that education—or, at least, the education of the masses—is to be guided wholly by the place of the individual in the economy of the nation. The individual is wholly and simply the citizen. From this point of view a "general" education, for purposes of personal culture, is meaningless. At any rate, the general education—which, in the end, is by no means despised—must seek its justification in the broader needs of the special vocation, which is to serve as its foundation; in the traditional view this order is reversed. Nothing could be more satisfactory than this exposition of the logic of vocationalism. It is clearly the logic of the social system in Germany. How far it will harmonize with ideas and institutions in the United States is open to question.

The eight educational addresses published under the title of the first of them, "Education and the New Utilitarianism" (Longmans; $1.20), by Alexander Darroch, professor at Edinburgh, are, on the whole, instructive reading, though not specially striking. Most suggestive are the author's comments upon the outcome of public education, regarded as "education for democracy." While an extension of the range of studies has been unavoidable, the modern curriculum issues in an "aimless variety" which fails to provide the discipline that even a democracy needs, if men are to work together. Nor are the ends of democracy promoted by a system of which the chief purpose and recommendation are that it enables a child to pass from his own social class to a higher one. On the other hand, owing to a mistaken notion of "equality," public education tends to disregard individual fitness. At the same time, it diminishes the sense of responsibility of the parent. And in the end there is a striking disproportion between the magnitude of our organization of education and the number of really educated persons.

In a little book entitled "A Path to Freedom in the School," which is at least stimulating (Macmillan; 60 cents), Norman MacMunn, of King Edward VI School, Stratford-on-Avon, tells of his success with the ideas of freedom and partnership. Doubtless. Perhaps we may say that every teacher who is alive and responsible is entitled to his own method. But

when he tells us that "'I think it would be good fun to do this' is a frequent prelude of mine, and it very rarely excites anything but an enthusiastic response," we are obliged to wonder—about the strenuousness of the "work," or the honesty of the boys (we assume that the teacher is sincere), or their intelligence.

Among the educational works calling for briefer mention are the following:

"The Modern High School: Its Administration and Extension" (Scribner; $1.75) is a rather bulky volume, the thirty chapters of which are written by the editor, Charles Hughes Johnston, of the University of Illinois, and some twenty-five others. The present volume is the second of a series of three, and is devoted to "the strictly socializing work" of the high school. One gets the impression that the high school is being "socialized" to death, but many chapters of the book are informing, though—since the book is to serve as a text for a pedagogical seminary—few are inspiring.

In "Dr. Montessori's Own Handbook" (Frederick A. Stokes Company; $1 net), Maria Montessori warns us, over her autographed signature, to beware of imitations and accept this as "the only authentic manual of the Montessori Method."

"The Thinking Hand" (Macmillan; $2.25 net), by J. C. Legge, Director of Education in Liverpool, contains more than a hundred pages of interesting photographs showing what is being done in the way of "practical" (*i. e.*, manual) education in the Liverpool elementary schools. The text is brightly written, but is mainly an introduction to the illustrations. The appendices contain much relevant information.

"Steps Towards Educational Reform" (G. P. Putnam's Sons), by another Liverpool teacher, C. W. Bailey, will be of interest as reflecting the liberal attitude towards educational needs in England.

A more conservative note is sounded in a volume, which is none the less good reading, by the headmaster of Eton, Edward Lyttelton, entitled "The Corner-Stone of Education" (Putnam; $1.50 net). Dr. Lyttelton stands for the old-fashioned view that the corner-stone of education is home training and respect for parents, which implies, as he believes, a Christian home.

On the other hand, the trend of liberalism in India is illustrated by "Introduction to the Science of Education," by Benoy Kumar Sarkar, of the National Council of Education, Bengal (Longmans; $1.10), which offers the plan and promise of a larger work to contain a complete system of education based upon the inductive method. The "inductive method" is an old story to Western ears, and not yet an absolute success, but to Mr. Sarkar it promises complete salvation.

"Physical Training (Junior Course), Swedish Exercises, Games, Swimming, Diving, Life-Saving," by E. John Solano, and "Physical Training" (Senior Course), by the same author (Indianapolis: Bobbs-Merrill; 75 cents net each) give simple though somewhat meagre instructions which, while designed for the "use of adults of both sexes, . . . without special training in the subjects," are obviously adapted chiefly to furnish suggestions for the guidance of teachers of classes in physical training.

Those who are interested in what Fisher has called the "conservation of national vitality," and particularly in that phase of the movement which seeks to apply the principles of modern hygiene and preventive medicine to the conduct of family and institutional life, will find "Health and the Schools—A Round-Table" (Appleton; $1.50 net), by Frances W. and Jesse D. Burks, informing and suggestive. Indeed, the indirect evidence furnished in its pages by the references and bibliography is impressive in regard to the extent to which this propaganda is permeating the management of our schools and other public institutions. We may congratulate ourselves upon these signs of an awakening consciousness on the part of the community in regard to its hygienic obligations, for in spite of a tendency to overdo matters and to adopt hastily what may prove to be passing fads, the movement is in the right direction. In this book the subject is developed in the form of round-table conferences, a mode of presentation which to some of us is uninteresting or even irritating. The reader can scarcely avoid the impression that the round-table method of discussion is a pretence—men of straw are demolished with a facility that bears but little resemblance to the stubborn conflicts of actual controversy. The author endeavors to support the general thesis that the "enforcement of health" is a duty of the community, and especially of its governing bodies, as important and as feasible as the recognized obligation of the "enforcement of learning," and no one can find fault with the general principle as thus stated. The only criticism that arises perhaps is in regard to the manner in which these principles shall be advocated and effected. It must be admitted that the earnest promoters of many of our social reforms show a regrettable tendency towards exaggeration, as regards both the evils of the present system and the outcome of perfection to be expected under a new order of things. Dire predictions are founded on selected instances of awful examples, and sweeping generalizations upon very meagre statistics.

This book may be criticised, also, but in no unkindly spirit, for the completeness of the reforms that it advocates. The conscientious reader is likely to be confused by the multitude of duties thrust upon him, and the serious-minded parent, although he may be convicted of his sins, especially his sins of omission, will be overwhelmed and disheartened by the number of details and the amount of information that he must master, if he hopes to protect his offspring successfully from all the dangers to health and efficiency that threaten the human organism from within and without. The preservation of perfect health cannot, of course, be guaranteed by the science of hygiene. Even if we were entirely amenable to control, after the manner of the plants and lower animals, hygienic knowledge is still too incomplete in many directions to be applied with any certainty of success. It may be said, indeed, that so-called rules of health, even if they fail in their purpose, can do no positive harm, but it would be better if in popular presentations a clearer distinction were made between facts and fancies. If we take books of this kind as guides for practical conduct, the use for which they are designed, the criticism may be made that they often fail to differentiate between the certain knowledge of science and the various more or less ill-founded opinions of scientists which are still under discussion. One may speak with confidence of the value of vaccination in small-pox or of the use of antitoxin in diphtheria, and may lay down simple rules to follow. But in the matter of individual nutrition, for example, the use of meats, the value of cane sugar versus fruit sugar, and other details of the daily diet, one may make suggestions, good, bad, and indifferent, but these suggestions ought not to go to the layman as the accepted findings of science.

"The Mental Health of the School Child" (Yale University Press; $2 net), by J. E. Wallace Wallin, is described by its author in his sub-title as a series of "Contributions to a new science of orthophrenics and orthosomatics." A new science should patiently await the gathering of data, the discrimination of data thus gathered, and the perfecting of methods of classification of these data and of modes of deduction from them, before asserting that it has discoveerd general principles, or attempting to apply these hypothetic principles. The book before us furnishes complete evidence that this preliminary work has not yet been accomplished, and that the votaries of the "new science" should not be encouraged to induce the public to spend large sums in the application of the methods suggested by the author, and others of his group, until this tentative stage has been passed. Workers in this field too often overlook the fact that the human organism is a system of coördinated minor systems, which latter seldom if ever develop coördinately. This is clearly evidenced in the bodily, as well as in the mental, growth of the child. Some minor systems grow faster than others for a time, and then delay their development until the others catch up with them. What thus appear as abnormalities at one period of growth may entirely disappear as such at a later period, and in general do thus disappear. Nature is on the whole self-corrective in this particular. This fact should lead the investigator of the problems here considered to greater caution than is usually observed in the application of the principles which he thinks he has established. Most of the difficulties which our author finds in the application of eugenics (pp. 264 ff) apply as fully to the new science of which he is so enthusiastic a devotee. That some splendid work in this direction has been done, with thorough scientific caution, by such men as Witmer, is not to be denied; but men of this type are difficult to find, as our author himself shows (p. 114 ff); and it would seem the part of wisdom to avoid attempts to press upon the public the application of the "new science" on a broad scale, as our author does, until its principles and methods are firmly established by patient labor. In such matters we should remember that we are experimenting, and that we are experimenting with human beings; a procedure which should not be undertaken without a grave sense of responsibility.

ENGLISH.

COMPOSITION.

Acquiring an education must be a pleasant business in these days. The appeal is so artfully directed to the immediate interests of the student, the educational wares are so tastefully displayed, that nothing short of invincible ignorance could fail to be delightfully enticed along the "rue royale" to learning. But why not? The doctrine of winning folk to heaven by "fairnesse" needs no defence.

At the moment "oral" English is all the cry. In "Oral Composition" (Macmillan; $1), Cornelia Carhart Ward has more to offer that is both fresh and useful than can be found in many books of similar title. Her object is to develop the ability to speak informingly and readily. It does not at all detract from the merit of the book that it keeps the traditional divisions of exposition, description, narration, and argumentation; the intention of extemporaneous discourse is never lost sight of. This portion of the book, with its fertile suggestions for practice and its skilful use of models drawn from the speeches almost of the hour, offers a more solid contribution than the earlier pages on phonetics and the history of the language. In a brightly written little volume, "The Teaching of Oral English" (J. B. Lippincott Company), Emma Miller Bolenius tells what she has accomplished with boys and girls, by means of "one-minute talks." Teachers will find it packed with suggestions and directions, and, as we began by saying, it must be fun to be the pupil. Incidentally, Quintilian would stare and gasp at the realization of how much he has to contribute to this very modern subject.

Prof. Robert Huntington Fletcher's "Principles of Composition and Literature" (A. S. Barnes) also falls into two parts. They are of very uneven length, and, apparently, value. The first is a brief treatment of the elements of the conventional rhetoric. Part II is a substantial volume of more than 350 pages which begins boldly with a definition of literature, passes on through an analysis of the emotions, defines Classicism and Romanticism and kindred terms, quails not before the question "What is poetry?", and is patient with details of phonetics and metre. The result is a closely packed and really useful contribution to one of the *desiderata*—an encyclopædia of literary studies.

Tobias O. Chew's "Practical High School Speller" (Allyn & Bacon; 40 cents) is compiled on the basis of many thousand replies from high school teachers to the request for lists of words most commonly misspelled by their pupils. "Separate" leads all the rest, and nearly last, but surely not least, is "Macaulay." "Disappoint" and "occasion" occupy high place. Each word appears first in script, to aid the student's visualization, and again in bold type as part of a brief phrase, with syllables and stresses indicated. A page of convenient rules and an index complete this decidedly useful little volume. The two books of "Daily English Lessons" (J. B. Lippincott), by Prof. Willis H. Wilcox, supply a lesson for each and every day of the five years preceding high school. The work is carefully and fully laid out so that the teacher of limited training or opportunity will find all things needful between the covers. The uniform grammatical nomenclature adopted by the National Education Association last year is employed.

LITERARY HISTORY.

In his "American Literature" (Richmond: B. F. Johnson Publishing Co.), Prof. John Calvin Metcalf succeeds in his very manifest desire to be fair to all sides. Naturally, a good deal of space is devoted to Southern writers from Poe to O. Henry and Henry Sydnor Harrison, but the author's treatment of them is strikingly temperate, just as that of the New England group falls neither in scope nor in sympathy. Without rising to independence of judgment or brilliance of presentation the book serves as a good guide to sober, established critical opinion and well-attested fact.

Prof. Charles Sears Baldwin's "English Medieval Literature" (Longmans; $1.25) is avowedly an "Introduction," designed not to enlighten the scholar, but to gain appreciative readers for our pre-Elizabethan literature. It should succeed in this purpose, for it need hardly be said that Professor Baldwin writes well; quotations, too—and this is an essential part of his method—he presents skilfully and at length. The convenience of having in a single volume a conspectus of both Anglo-Saxon and Middle English literature is apparent. The ballads, the beginnings of the drama, and the background afforded by the mediæval church are not neglected, and a usually slighted writer, Walter Map, receives fresh and extended treatment. The book invitingly points the way to the exploration of the rapidly accumulating mass of mediæval literature in translation.

ANTHOLOGIES.

Several different methods of compiling anthologies are to be noted. There is, first, the frankly simple chronological method of Percy Lubbock's "A Book of English Prose" (Cambridge University Press; 3s. 6d. net), which offers from two to four pages each under most of the great names from Malory to Stevenson. Of the two slender volumes Part I is arranged for preparatory and elementary schools, and Part II, which covers much the same ground but is rather "harder reading," is designed for secondary and high schools.

Another method is to group the selections so as to illustrate the technical aspects of the literary art. This Prof. Carroll Lewis Maxcy has done in his "Representative Narratives" (Houghton Mifflin; $1.50). "Setting," for example, is studied in selections, prefaced in each case with a brief analysis, from Poe, Frank Norris, Guy de Maupassant, and Lafcadio Hearn. In a similar manner characterization and plot are studied, with not a little attention to dialogue. The collection closes with three examples, Balzac's "La Grande Bretèche," Hawthorne's "The Birthmark," and Arthur Morrison's "On the Stairs," which in the editor's opinion illustrate nearly all the "points" of the short story.

Modernity is the lure which is held out to the wayward attention of the high school student in Margaret Ashmun's "Modern Prose and Poetry for Secondary Schools" (Houghton Mifflin; 85 cents). Hopkinson Smith, Aldrich, Stedman, Mary Johnston, Mary Antin, Howells, James, William Vaughan Moody, and many others are presented in brief but happily chosen extracts, embroidered with annotations, exercises, and collateral readings. By the side of this Prof. Waitman Barbe's "Great Poems Interpreted" (Hinds, Noble & Eldredge; $1.25), which, like the author's "Famous Poems Explained," sets twoscore gems of literature in a silver sea of commentary, seems almost old-fashioned. But all the poems chosen are worth study and the information provided is usually to the point. "Lippincott's Fifth Reader" ($1.50), which is compiled by Homer P. and Elizabeth Lewis, is vastly more literary than earlier avatars. The authors represented, both in prose and verse, are of the highest quality. Happy the child that comes into living contact with them. But of such a book as this, with its brief and, as they stand, rather difficult selections, the success depends on its falling into the hands of a capable teacher.

For the Macmillan Pocket Classics Dr. Claude M. Fuess has gathered into a volume a hundred or so very brief "Selections for Oral Reading" (25 cents), drawn from the Bible, Homer, Demosthenes, Cicero, and a host of moderns. It is prefaced with a few remarks on what one of its masters used to call the obsolescent art of reading aloud. Prof. Victor Alvin Ketcham's "Theory and Practice of Argumentation and Debate" (Macmillan; $1), is of a more formal sort. The practice is treated first, and clear and precise directions are given covering all stages of the debate, from the framing of the question and the collection of evidence to the final delivery of the argument. Most frequently referred to as models are the Lincoln-Douglas debates. The appendices contain among other things specimen agreements for debating leagues. The second part of the book—the theory—is an elementary treatise on logic.

HISTORICAL GRAMMAR.

Nearly fifteen years have elapsed since the publication of Kaluza's "Historische Grammatik," the last comprehensive work on English historical grammar, and in the interval active investigation has been carried on in the field. While no such striking advance is to be recorded as during the decades when Child made his study of the language of Chaucer or when Sievers produced his grammar of Anglo-Saxon, nevertheless the boundaries of knowledge have been steadily extended, and the scholars of the last few years have not been without new methods and points of view. The number of investigators occupied with the subject has probably been greater than ever before, and the mere mass of their productions makes the publication of a *zusammenfassende Arbeit* highly desirable. Prof. Karl Luick, whose part in the advancement of the science has not been small, might be expected to give a thoroughly competent survey of the state of knowledge and to add something of his own to the common stock, and the first instalment of his work, "Historische Grammatik der Englischen Sprache," Erster Band, erste Lieferung (Lemcke & Buechner; $1), indicates that the expectation will be fulfilled. There is an element of novelty in his general theory, or at least in his mode of presentation. He criticises previous writers for having given simply schematic accounts of the grammar of different periods—of Anglo-Saxon, Chaucerian English, modern English, and the like—and for not having sufficiently described the continuous development of sounds or formations. They have presented the subject, he declares, only in cross sections (*Querstriche*), and it is his purpose to show the vertical sections, to lay stress upon chronology and the processes of change, in short, to write a properly historical grammar. In the brief beginning of *Lautgeschichte* contained in the first *Lieferung*, the method thus described is carried out very satisfactorily, and this new organization of the material of English grammar cannot fail to be of value to all students of the subject. It should be added that the same historical purpose is served, and general intelligibility greatly promoted, by the way in which Professor Luick constantly supplies phonetic explanation for phonological changes.

Of grammar, in the strict sense, however, there is very little in the part of the book

thus far published. Most of the space is taken up with the introduction, which deals with what the author calls the "äussere Geschichte" of the language—the general history of the component dialects and of the foreign elements that have entered into the vocabulary. As a whole, the introductory chapters are excellent, and some subjects (such, for example, as palæography and orthography, dialectology, and the origin of the literary language) are much more fully and serviceably discussed than in previous grammars. In other places too much has been sacrificed to brevity, and opinions which are at least dubious have been set down without necessary qualifications. Thus the account of the Saxon conquest ignores difference of opinion as to the date; the discussion of the Romanization of Britain takes no account of Haverfield's important arguments from archæology; the passage on the Celtic element in English dismisses too briefly the general Germanic loans and does not distinguish sufficiently between the two branches, Goidelic and Brythonic, of the Insular Celts. In spite of omissions, however, and perhaps of occasional errors of judgment, Professor Luick's compact introduction of less than a hundred pages is one of the best sources of information on the history of the language.

SELECTED TEXTS.

Among new texts for the classroom may be noted "Selected Idylls of the King," three of them, discriminatingly edited by Prof. Franklin T. Baker for the Riverside Literature series (Houghton Mifflin; 25 cents). Among Merrill's English Texts (Charles E. Merrill Co.; 40 cents) have appeared Mrs. Gaskell's "Cranford," edited by Helen Elizabeth Davis, and "Selected Short Stories," the choice of Dr. Claude M. Fuess. Professor Neilson's editions of "The Tempest" and "Romeo and Juliet" bring to nine the Shakespearean plays which he has edited for the Lake English Classics (Scott Foresman; 25 cents). In the same series are now available "Tom Brown's School Days" (35 cents), edited by A. B. de Mille, and Stevenson's "Kidnapped," by Arthur Willis Leonard, and "Addison and Steele, selections from the Tatler and Spectator," by Herbert Vaughan Abbott. For Holt's English Readings Professor Lowes has prepared an attractive edition of "Hamlet."

MODERN LANGUAGES.

FRENCH.

Far above the usual run of French college texts in quality of editorship is Prof. C. H. C. Wright's "Selections from Montaigne" (Heath; 90 cents). Nine representative essays, a few of which are given in extracts, admirably fulfil the editor's expressed purpose of furnishing an introduction to Montaigne's thought. Copious and judicious notes are provided, and to each essay is prefixed an excellent critical introduction. This valuable part of the work, we are interested to learn from the editor, is largely due to a recognized authority on Montaigne, Miss Grace Norton, a sister of the late Prof. C. E. Norton. To students of sixteenth-century French literature, this little volume will be most welcome.

Another textbook of sixteenth-century French which will appeal to advanced students is "Pages Choisies de Calvin," edited by Professor Jordan, of Columbia (Heath; 90 cents). About ninety pages are given, which include portions of the "Institution Chrétienne," the preface to the commentaries on the Psalms, several dedicatory epistles, and eight letters—a selection well exemplifying Calvin's powerful style. The editor presupposes a knowledge of modern French. The introduction, dealing with the life, influence, and language of Calvin, is in French, as are the notes and the explanations of obsolete words.

A new edition of Racine's "Andromaque" has appeared, this time edited by Professor Searles, of Stanford University, and published by Ginn & Co. (40 cents). There is a well-written introduction; much care has evidently been given to the unusually full notes, and a vocabulary is provided.

The latest anthology of modern French poetry, "Les Poètes Français du XIXe Siècle," edited by A. Auzas for the Oxford University Press (3s. 6d.), is noteworthy for the good judgment shown in selecting the material from the twenty-two poets represented, as also for the sound scholarship of the editorial work, which comprises a summary of the principles of French versification illustrated by abundant examples, brief notices of each author, notes on the texts, lists of questions for test purposes, and bibliographies. Following the custom established in England among editors of such textbooks, the *apparatus criticus* is entirely in French.

GERMAN.

Francis A. Wood's translation (University of Chicago Press; 20 cents net) of the "Hildebrandslied" into English alliterative verse and of a late Middle High German version of the same story in the rhymed stanza of the original gives the sense and spirit, and some of the effects of form. A few archaic words and phrases are used, but in the main the English is quite normal, so that the reader's mind is not much diverted to thoughts of artifice.

"An Outline of German Romanticism," by A. W. Porterfield (Ginn; $1 net), is a compendious bibliographical manual in two parts, the first dealing mainly with various groups of writers of literature, the second dealing mainly with the writers of treatises on the aforesaid literature. The second part, however, includes, besides some definitions and general considerations, data concerning scholars, philosophers, musicians, and painters who belong, one would think, more properly with the poets and prose writers of the first part. The final chapter makes suggestions for an introductory college course on the subject. Dr. Porterfield professes to have compiled rather than to have composed his volume. The merit of accuracy in the handling of multifarious details will hardly be denied him. But the grouping of these details leaves a good deal to be desired. There is no more reason why Uhland and Chamisso should be associated with the writers of the Heidelberg group than Fouqué, whose place is among the "side lights"—a galaxy so various as to include Kleist, Heine, Platen, and Mörike. Nor does there appear to be any reason for the conception of the romantic movement as a five-act drama, other than the desire for rhetorical composition. The volume is, indeed, very much composed, in this sense. Obstreperous epithets, antitheses, parallelisms, paradoxes, and metaphors constantly distract attention from the substance to the form. The book may have its uses as a work of reference, hardly as a guide; and it would be more useful if it contained less.

"Easy German Conversation," by P. S. Allen and P. H. Phillipson (Holt; 90 cents), admirably succeeds in giving the aspect of easiness to a difficult art. The book is replete with good humor and sound sense.

G. O. Curme's "First German Grammar" (Oxford University Press; 90 cents net) places special emphasis upon pronunciation, use of the spoken language, and thorough drill in formal grammar. Transcriptions in the international phonetic alphabet and the systematic marking of accent and quantity of vowels are commendable features. The development of power to read German accurately being the author's prime object, the book is skilfully made to combine the functions of grammar and reader. It is compactly printed.

P. V. Bacon's "Elements of German" (Allyn & Bacon; $1) is a series of lessons followed by a summary of inflections and excellent chapters on pronunciation, word formation, and a brief presentation of Grimm's Law. In general appearance the book is very inviting.

THE CLASSICS.

Of the three volumes which form the latest addition to the Loeb Classical Library (Macmillan), one is a continuation and completion of a work already noticed in these columns—Prof. J. C. Rolfe's Suetonius. The present, second, volume contains the concluding "Lives of the Cæsars" and the fragmentary "Lives of Illustrious Men." A full index adds largely to the value of the book; and, indeed, it is fair to say that the general and particular editors have been very generous in this important matter of indexing.

The other two volumes introduce us to new works, one Greek and one Latin. We now have the first half of Xenophon's "Cyropædia," edited and translated in adequate form by Walter Miller, although here and there, as was inevitable, the English version does not show quite the easy grace of the original. We observe that this volume extends only to four hundred pages, and so avoids the faults of flimsy paper and blurred printing which have been complained of in so many of its Greek predecessors. This amelioration may be due to the accident that the "Cyropædia" is too long to be crowded into a single pair of covers, and is short enough to be comfortable between two pairs; but we should like to believe that the managers of the publication have seen a light, and are going to reform. They have still, however, a good deal to learn in regard to the manufacture of books. Even in this volume of the "Cyropædia" the leading is unnecessarily erratic. A little mechanical intelligence would have made a very pretty book out of one which can still be recommended as a convenient edition of the first great piece of historical fiction in Western literature.

With the Suetonius and the Xenophon comes also Cicero's "De Finibus," from the editorial hand of H. Rackham, of Christ's College, Cambridge. We have followed the translation through a good many pages, and have found the technical, or half-technical, terms skilfully transferred to English, and the movement of the original well preserved. The printing, particularly the justification of the pages, is by no means above reproach.

A short treatise on "Quantity and Accent in the Pronunciation of Latin," by F. W. Westaway (Cambridge University Press; 75 cents net), will be welcomed also by American teachers as giving in brief compass the results of the most recent study of Latin accentuation. The author is a devout follower of Professor Postgate, who has done so much to bring about a correct pronunciation of Latin in England, and seems inclined to follow him even when he should not be followed. Thus it is contrary to common-sense to suppose that in the reading of prose the Romans elided, weakened the final m, and ran the words always together. This would make the first chapter of the *Bellum Gallicum,* which is given as a specimen, a monstrosity. That in the case of certain combinations of words something similar occurred may be true. The author believes in slurring rather than elision of vowels—but here, too, the matter is not one of universal rule, but of the behavior of individual words. This can be easily gathered from the very statements of Cicero which Postgate quotes to prove the opposite. The statements with regard to verse and prose accent are sound, and the numerous examples make the little book valuable for drill purposes. Especially amusing is the author's sharp handling of the customary English pronunciation in his preface.

The edition of Cæsar's Commentaries on the Gallic War with Hirtius's supplement, by T. Rice Holmes (Oxford: Clarendon Press; 8s. 6d.), is intended not only for schools, but for teachers and general readers who have neither time nor inclination to study Mr. Holmes's large works on Cæsar's Conquest of Gaul and Ancient Britain. Accordingly the greater part of the commentary is devoted to critical discussion of the narrative itself and of the Latin text. Numerous references to the larger works make the further study of the various statements a simple matter, though often unnecessary. In the constitution of the text the editor is a pronounced adherent of Meusel, to whose greatness as a critic of Cæsar he has paid generous tribute in a recent number of the *Classical Quarterly.* He preserves his independence, however, in many passages. The discussions are always clear, and almost always convincing, sometimes assuming too much technical knowledge on the part of the reader, and frequently marred by references to books and articles inaccessible to most students. Throughout the commentary are scattered notes on syntax and style, obviously intended for very young students. Mr. Holmes says he has aimed to avoid giving any information which the learner can easily acquire for himself through the medium of grammar, dictionary, or such other books as he may fairly be supposed to have. In that case, "he may fairly be supposed to have" very little, for the majority of these notes are infantile in their quality and comport very ill with the value of the rest of the work. An extensive and very readable introduction covers the usual subjects that we look for in introductions to Cæsar, but these are treated with a sense of mastery and independence which we have come to associate with Mr. Holmes's works. Judging from the books in common use in the United States, this edition would not be suitable for school use, but it would be invaluable for the teacher of Cæsar, in affording him the material with which to illuminate the story to his pupils. The text of this edition has been reprinted with very slight changes, which are summarized in the *Classical Quarterly,* VIII, 164, in the Riccardi Library of the Medici Society (London; £1 1s.).

The second volume of Prof. C. E. Bennett's monumental "Syntax of Early Latin" (Allyn & Bacon; $4), which follows the first after an interval of four years, is devoted entirely to the syntax of the cases. Mr. Bennett observes the same method of treatment in this volume as in the former; copious bibliography, exhaustive and in many cases complete citations of examples, and a restrained and judicious discussion of current theories. In regard to the original force of the cases he now inclines to the local as against the grammatical theory in all of them except the nominative. In so doing, he abandons his former view of the genitive as an adnominal or grammatical case, because such a theory, he says, requires the genitive to be used with nouns alone in early Latin, whereas it is plain that this case was used with verbs even in the *Ursprache.* But such an assumption is unjustified and obscures the fact that at the beginning the distinction between noun and verb must have been merely one of usage, and many so-called verbs must have had the nominal idea prominent in the earliest usage. The goal-idea, too, which Mr. Bennett now accepts as the fundamental idea of the accusative, can be just as readily deduced from the grammatical function ascribed to it by most scholars. Fortunately, however, as he himself says, the theory of origin is usually of small importance in deciding upon the proper classification of different examples, and few critics will be disposed to find much fault with his analysis. In a large work of this kind there must be many passages about the interpretation of which scholars will differ, but on the whole the probability so far as this examination has gone lies usually with the author.

"The Roman Elegiac Poets," with introduction and notes by K. P. Harrington (American Book Co.; $1.50), is a very serviceable selection from the elegies of Catullus, Tibullus, Propertius, and Ovid. A careful and adequate introduction sketches the history of this style of composition in Greece and Rome, and dwells with more detail upon the four poets whose poems are included. All recent literature seems to have been consulted, but with critical and sober judgment. The commentary, which appears together with the critical notes on the same page as the text, is excellent, but sometimes over minute, and marred by references to inaccessible books. We miss, however, any summary of the stylistic peculiarities of the different authors, and this is the more to be regretted in the case of Propertius, who seems in many places not to have written Latin at all, if Postgate's analysis of his style is to be accepted. English renderings of his peculiarities often show what we would like Propertius to have written, rather than what he did write. The inclusion of critical apparatus on the same page as the commentary is an improvement on the customary critical appendix. Still, such notes are of doubtful value in an edition which is designed to meet the needs primarily of undergraduates. Since the manuscript variants are rarely made the subject of comment, they might well be left out altogether. This book was, as Professor Harrington tells us, begun many years ago by his father, the late Prof. C. S. Harrington, and many of the notes are followed by his initials. In its completed form it is a worthy monument to the dead as well as a valuable addition to our list of college textbooks.

Three new Latin beginners' books have recently been added to the already extensive list of such books: "Introduction to Latin," by J. C. Kirtland and G. B. Rogers (Macmillan; 85 cents); "Latin Lessons," by M. L. Smith (Allyn & Bacon; 80 cents); "First Latin Book," revised edition, by C. W. Bain (Heath & Co.; 90 cents). Two of these aim to teach Latin, while "Latin Lessons" aims also to "make Latin seem alive." To this end every lesson is preceded by a familiar Latin quotation, such as State mottoes, legal phrases, etc. Some stories of old Rome hold up the ideals of old Roman virtue, while an appendix treats of the value of Latin in science, mathematics, and English. Five Latin songs with music are also added. The reading exercises are almost confined to detached sentences. Much attention is paid to English derivatives, every lesson containing five English words to be traced back to Latin. Much drill is demanded, but though the vocabulary and syntax are Cæsarian, no particular desire is indicated to prepare immediately for Cæsar. The "Introduction to Latin" does, on the other hand, have Cæsar particularly in view. Hence the vocabulary and formal arrangement are more carefully adapted to early reading in mass. Extensive selections from Eutropius, Nepos, and simplified Cæsar are inserted frequently, beginning with the seventeenth lesson. In the vocabularies some attention is paid to English cognates. The explanations are simple and clear. A feature is the employment of the new grammatical terminology, hence we find past for imperfect, harmony of tenses for sequence of tenses, etc. The "First Latin Book" is essentially a new book, though purporting to be only a revision. Vocabulary and syntactical treatment have been modified to lead directly to the reading of Cæsar. A new and distinctive feature is the insertion of extensive reading lessons at definite intervals, beginning with the thirteenth lesson, designed to serve as reviews of the previous sections, and to interrupt for several days the steady learning of forms. The variety of opinion indicated in these books is interesting. Mr. Bain thinks introductory lessons on English grammar essential, Miss Smith agrees, while Mr. Kirtland denies their value absolutely. Miss Smith regards the study of English derivatives as essential, Mr. Kirtland tolerates it, and Mr. Bain looks upon it as a frill. Extensive reading is urged by Mr. Bain, seconded by Mr. Kirtland, subordinated by Miss Smith to the other features. But all three are good books and show everywhere experience and pedagogical skill.

Prof. W. S. Davis, the well-known writer of the classical novels, "A Friend of Cæsar" and "A Victor at Salamis," has prepared an elementary handbook on Greek Private Antiquities under the title "A Day in Old Athens" (Allyn & Bacon; $1.25). The book purports to set forth the experiences at Athens of a visitor in the year 360 B. C. The tourist lands at Piræus, follows the outside road to Athens, visits the marketplace, then the home of a well-to-do gentleman. In connection with this he gives all the necessary information as to the various members of

the family—shows the position occupied by the women and the slaves, with chapters also on the children. A visit to the law-courts, which are described, is waived in favor of a session of the public assembly in the Pnyx, with its wrangling orators and excitable listeners. Other chapters treat of the physicians, trade and manufactures, amusements, country life, etc. The style is vivacious, the information reasonably accurate,-and the whole presentation interesting. The book will find its widest use in the schools, but it will also appeal to older readers who desire an interesting rather than a learned sketch of life in Athens.

The question as to the composition of the Homeric poems has not been prominent in recent years, most scholars having tacitly agreed that the time and labor spent on this problem might have been more profitably spent in other ways. The book of Austin Smyth on "The Composition of the Iliad" (Longmans; $1.75) comes therefore as a distinct surprise, but not an unpleasant one. For Mr. Smyth presents a new point of view, and argues withal with such vivacity and cleverness that the reading of the book is a delight. This is due perhaps to the fact that Mr. Smyth is librarian of the House of Commons, and thus brings a new atmosphere into this driest of regions. The object of the essay is, as he frankly tells us in the preface, "to demonstrate that the Iliad of Homer at one time consisted of 13,500 lines, neither more nor less, divided into 45 sections of 300 verses each, with major divisions after the fifteenth and thirtieth of these; from which it follows that the remaining 2,193 verses, which appear in our present texts, are more recent additions and ought to be removed." This he proceeds to do, and he does it with such plausibility and skill that we are often almost convinced against our will. Thus the first book consists of 611 lines, with a natural pause after v. 311, leaving just 300 lines for the complete episodes of the second part. In the first part, out of the 311 lines 11 contain a list of the chiefs of the Lapithae inserted by Nestor in his speech to the kings. This list is entirely rejected by Leaf, and some of the verses had been regarded as spurious before. But the omission of this list leaves just 300 lines for the first section. Of course, many of the sections do not yield so readily to the treatment, but involve violent transpositions and unjustifiable excisions, and, likewise, of course, no poet ever worked out such a careful numerical scheme, but the discussion is, nevertheless, most entertaining. In a short appendix on the Odyssey Mr. Smyth presents a similar scheme in accordance with which this poem originally contained 11,700 lines divided into 26 sections of 450 lines each, leaving but 410 too many in our texts.

CELTIC.

The past academic year has been marked by the publication of three important contributions to Welsh philology: "A Glossary of Welsh Mediæval Law," by Timothy Lewis (Longmans, Green & Co.; $5 net); "The Welsh Vocabulary of the Bangor District," by Prof. O. H. Fynes-Clinton (Oxford University Press); and "A Welsh Grammar, Historical and Comparative," by Prof. J. Morris Jones (Oxford University Press). The first two make valuable additions to Welsh lexicography, concerning which the existing sources of information are far from being either complete or trustworthy. The only comprehensive Welsh dictionary, that of William Owen Pugh, though indispensable to the student, nevertheless antedates the era of exact philological knowledge or method. It is based largely upon texts which were imperfectly edited, and contains much misleading speculation, not to say invention, on the part of the compiler. The more trustworthy work which was begun by the Rev. D. Silvan Evans never passed the letter D. Consequently scholars who need to go beyond the purely practical vocabularies of the modern language have been at a loss for adequate help, and all additions to their resources are most welcome. Mr. Lewis's book, though it is of the nature of a special glossary, being based upon the legal texts in the "Black Book of Chirk," contains in reality a large amount of material of use for students of literature and history, and supplements extensively the existing vocabularies of mediæval Welsh. Mr. Fynes-Clinton's work, which deals with the other end of Welsh development, chronologically speaking, namely, with a contemporary dialect, is no less important as a contribution to the knowledge of the language. The tendency of Welsh grammars and dictionaries has been in some degree towards the construction of an artificial speech, and such a description of actual usage as Mr. Fynes-Clinton has produced serves as a valuable corrective. By the testimony of those whose acquaintance with spoken North-Welsh authorizes them to judge, he has done his work well; certainly it gives evidence of sound method and careful execution. We would question, however, without meaning any disparagement of the book, whether the author's enthusiasm for phonetics has not carried him in one respect too far. If he had arranged the words under their ordinary spelling and added the phonetic notation, instead of making the phonetic the primary arrangement, there would surely have been no loss in accuracy, and the work would have been more convenient for rapid reference.

More important still than these excellent dictionaries is Prof. Morris Jones's grammar. Its appearance has been long awaited, and one may say without hesitation that the expectations of scholars have been fulfilled. Now for the first time there exists a comprehensive account of Welsh phonology and accidence of all periods, historically treated. The author is not only a scholar of high attainments, but also an accomplished writer of Welsh prose and verse. He is therefore well fitted for the task on which he has spent unstinted labor for many years, and he has produced a monumental work which is not likely soon to be superseded. He has, of course, his personal bias and limitations, and these are reflected here and there in the character of the book. His knowledge of general philology, or even of the Celtic languages outside of Welsh, is much less thorough than of Welsh itself, with the result that his work on the comparative side is not so masterly as on the historical and descriptive. He has, too, a proneness to rather bold theorizing, which he exhibited years ago in a striking essay on the non-Aryan elements in Welsh syntax (published in the appendix to "The Welsh People," by J. Rhys and J. B. Jones), and the same readiness for conjecture appears in many doubtful etymologies in the grammar. Perhaps too much space is given to this debatable material, but it does not particularly impair the value of the work. The elementary student will probably ignore such matters in any case, and the trained scholar will find it easy to distinguish between statements of ascertained fact or principle and statements of theory. In one other respect Professor Jones's personal leaning may expose his work to criticism. By virtue, probably, of his training and activity as a bard, he is a jealous protector of the best literary traditions, and condemns many laxities in the practices of modern writers. The purpose of his work, then, is partly normative, to establish standards of diction and construction, and he has already been charged with something like purism. But this again does not make the grammar less valuable, so long as facts of usage are not suppressed in the interest of any of the author's preferences. On the contrary, the foreign student. in particular, profits greatly by the use of a work in which the refinements of usage are competently discussed.

Celtic scholars are still very ill provided with such encyclopædic helps as have long been available in the fields of classical or Germanic philology. Although the grammars of Pedersen (for general Celtic), Thurneysen (for Irish), and, most recently, of Morris Jones (for Welsh) have made a great body of strictly linguistic knowledge conveniently accessible, no Müller's *Handbuch* or Paul's *Grundriss* has yet been compiled to codify the facts of Celtic ethnology, antiquities, mythology, and literary history. For even commonplace information on these subjects Celticists are dependent either on miscellaneous and scattered works or on such private collectanea as they happen to possess, and the burden of both instruction and investigation is much increased by the necessity of keeping together a mass of bibliographical data. The National Library of Ireland has consequently rendered a very welcome service in publishing a "Bibliography of Irish Philology and of Printed Irish Literature" (Dublin: Stationery Office, 1913). This is an admirably arranged catalogue of the published materials relating to the Irish language and literature in all periods. Much information concerning manuscripts is also included, though no attempt is made to catalogue their unpublished contents, and the time is hardly ripe for such an undertaking. The portion of the work dealing with literature is minutely subdivided so that, while it does not to any considerable extent set forth chronological development, it affords an excellent conspectus of Irish literary production. The catalogue deserves praise throughout for its fulness and accuracy, as well as for its arrangement. Such omissions as are noted will be published by the editor, Mr. R. I. Best, in *Eriu*, the periodical of the Dublin School of Irish Learning, where it is intended that later instalments of the bibliography, announcing new publications, shall regularly appear.

It is not often that we have to record the appearance of the third volume of a work after an interval of forty-two years from the publication of the second. But this is the case with Dr. P. W. Joyce's "Origin and History of Irish Names of Places" (Longmans, Green; $1.75 net), of which the first two parts

were published in 1869 and 1871, respectively, and the third part reached us shortly before the death of the author, a few months ago. The value of the treatise has long been recognized—indeed, until very recently it was the only substantial source of information on the subject—and it is a satisfaction to have preserved in print the additional materials that Dr. Joyce collected through so many years. In the earlier volumes a great deal of space was given to the discussion of principles; to the explanation of the various circumstances to which place-names owe their origin, and of the phonetic development of Gaelic names in English. The actual lists were thus introduced largely as illustrations of the processes described. But in the present volume such explanatory matter is reduced to a short introduction, and nearly the whole book is made up of a compact dictionary. The quantity of new material presented is, therefore, considerable. Throughout the whole work the author has endeavored to make a trustworthy record of native usage in the pronunciation of Gaelic names, and this testimony will be of permanent value even in cases where the etymologies he proposes have to be abandoned. For the most part, too, his etymologizing is of a sober sort, which demands serious consideration. In one respect the third volume seems oddly contemporaneous with the other two. The authorities cited are chiefly men of the older generation —O'Donovan, O'Reilly, Pictet, and Lewis— and one gets the impression that Dr. Joyce did not follow closely the grammatical literature of the last twenty years.

The reason for this may be that he was primarily an historian rather than a philologist. His principal work was his "Social History of Ancient Ireland" (2 vols., Longmans, Green; $7.50 net), of which he brought out a revised edition also in the last few months of his life. This treatise, which has practically superseded O'Curry's "Manners and Customs," has taken its place as the chief book of reference on ancient Irish institutions. While hardly more than a beginning of critical scholarship has been made in the field, and while Dr. Joyce lacked the special equipment in philological science, or in the history of mythology and religion, to enable him to approach the solution of some of the most difficult problems, his very wide knowledge of the facts of Irish tradition and his lucid and sensible presentation of them will make his book indispensable for at least a generation. The new edition, so far as we have been able to discover, is only slightly revised. A few pages of notes are added, and the author acknowledges in the preface certain corrections sent him by Dr. Kuno Meyer, of which he says he has made use. But the pagination is hardly disturbed at all, and we have not found that the author's opinions on controverted questions have been either modified or supported by new arguments. Little account, too, seems to have been taken of the publications that have appeared between the two editions. Thus, in the chapter on the subdivisions of population there is no mention of Professor MacNeill's important paper in the Proceedings of the Royal Irish Academy for 1911. Again, in the discussion of human sacrifice (the existence of which is denied in rather sweeping terms), though the author could hardly have seen the treatment of the subject in the "Kittredge Anniversary Papers" (pp. 185 ff.), he might be expected to have cited the piece of evidence brought forward by Dr. Kuno Meyer in *Eriu*, II, 86. But we would not seem to dismiss the book, or Dr. Joyce's career, with a word of disparagement. By his fruitful labors, continued to ripe old age, he rendered a service to Irish scholarship such as was given by very few men of his generation, and his "Social History," however much opinion may change as fresh knowledge is acquired, will always remain a worthy monument.

ECONOMICS.

In "The Economic Organization of England" (Longmans; 90 cents net), Prof. W. J. Ashley has gathered together a course of lectures which he delivered before the Colonial Institute of Hamburg. They are similar to the brief course which he has been in the habit of giving for the last few years at the University of Birmingham, and are an admirable philosophical survey of English economic history from the self-sufficing manor of the thirteenth and the narrow gild of the fourteenth centuries down to the gigantic iron amalgamations, shipping rings, and other monopolistic combinations of the twentieth century. He does not argue theories about manorial and gild origins, but begins directly by describing concrete institutions as they actually existed in mediæval England. If he omits much that one expects to find in a textbook of economic history, he also enriches his pages with thoughtful suggestions of his own and mature conclusions on the suggestions of others. He has an apt way of quoting or characterizing great thinkers of the past to show how their thinking may be a cause or a reflex of changes in the economic sphere. Therefore his volume, though intended for beginners, has food for those who already know something of the subject. After surveying the increasing strength of the powerful associations in which capital and labor are organized against each other, and after recounting the inevitable failure of such expedients as profit-sharing and coöperation, this student of history, teaching in a great industrial centre, comes to a conclusion which is worth quoting as much for its sane historical-minded optimism as for the knowledge and experience on which it is based:

> Society is feeling its way, with painful steps, towards a corporate organization of industry on the side alike of employers and employed; to be then more harmoniously, let us hope, associated together—with the state alert and intelligent in the background to protect the interests of the community. The world has never yet had complete individualism; it will never, I believe, have complete socialism, for the egoistic sentiment is as permanent an element in human nature as the social. It has to create a working compromise suited for each age. . . . This is the lesson of that newer philosophy of social organisms which is based, as by Gierke, on the study of history.

Mr. George Guest, barrister-at-law and headmaster of St. Paul's School, Bournemouth, is writing a "new concentric" school history of England. In three successive parts he proposes to deal respectively with social, constitutional, and politico-imperial affairs. The first part, "A Social History of England" (Macmillan; 40 cents) is a good elementary outline of economic development with brief chapters on social life and with some illustrations. It is adapted for high-school rather than college students. This may explain in part why half the volume is devoted to the centuries prior to the Tudors; the main features of town and country life in the Middle Ages can be more simply stated and easily comprehended than the complex world-wide economic phenomena which resulted from the Industrial Revolution. There are a few minor inaccuracies, but the book is clearly written and looks quite teachable.

The London School of Economics and Political Science has already to its credit a long list of monographs written by various lecturers and students of the school, under the general editorship of the director, W. Pember Reeves, formerly High Commissioner for New Zealand, and under the immediate control of such distinguished scholars as Sidney Webb and Hubert Hall of the Public Record Office and secretary of the Royal Commission on the Public Records. Recent additions to the series are "A Select Bibliography for the Study, Sources, and Literature of English Mediæval Economic History" (King & Sons), and "Emigration from the United Kingdom to North America, 1763-1912," by Stanley C. Johnson (Dutton; $2 net). The bibliography, which has been compiled by the members of Mr. Hall's seminar, lists more than three thousand titles, and is well indexed. It is very useful, as such a work is bound to be, but its value is somewhat impaired by the failure to add critical comments to the volumes entered, an omission not entirely rectified by the admirable series of prefaces and introductions to the sections.

Mr. Johnson's volume, in origin a dissertation approved for the degree of doctor of science in the University of London, is of more general interest than doctoral dissertations usually are. It contains a great mass of information about emigration from the United Kingdom to the United States and Canada during the last 150 years. The preliminary survey, dealing with the period after 1763, is, however, misleading as far as averages are concerned, in that it interprets a very unusual movement from Scotland during the 'seventies, due to the rent-racking policy of Scottish landlords, as if it were part of a normal outflow. The work becomes trustworthy only after 1815, when definite statistics are reached, but the best sections are those that concern the conditions of emigration at the present time.

HISTORY.

MEDIÆVAL AND MODERN.

Among the Clarendon Press English school texts is Macaulay's "War of the Succession in Spain." This brilliant little review of Lord Mahon's History first appeared in January, 1833, and for fourscore years has continued to delight and misinform countless readers. High-school pupils may still enjoy Macaulay's sharp contrasts in black and white, but they are now judiciously warned as to his inaccuracies and exaggerations by the good introduction and notes of C. T. Atkinson, a specialist in military history. He follows Col. Parnell in pointing out the almost certain unauthenticity of the "Memoirs of Capt. George Carleton," which were relied on by Mahon and Macaulay, which have been ascribed to Defoe, but which were probably by Swift.

Another English school text is W. Murison's careful edition of Burke's "Thoughts on the Cause of the Present Discontents" in the Pitt Press series (Putnam; 80 cents net). This is one of Burke's best constructed and most effective earlier pamphlets. He published it in 1770

after submitting it for approval and suggestion to Lord Rockingham, and he aimed to show that the existing discontents of the time were due to George III's attempts at personal government. The editor has added a brief sketch of Burke's life, a helpful analysis of the form and contents of the pamphlet, and sufficient explanatory notes.

The expectation that a teacher of history who has written successful novels on Imperial Rome, the Crusades, and the Lutheran Reformation could write a history which would be interesting and accurate is fulfilled in the "Mediæval and Modern History" of William Stearns Davis (Houghton Mifflin; $1.50). As the volume is intended for secondary schools the author wisely obtained the coöperation of N. S. McKendrick, of Phillips Exeter Academy, who provided helpful apparatus for teachers in the way of questions, suggested readings, and tables and maps. The books for reading topics might well have been extended somewhat beyond the few handbooks indicated. Also the suggested list of books for a small school library includes several titles which in the reviewer's opinion might have been better replaced by others. The period covered by Mr. Davis extends from the Battle of Adrianople to that of Kirk-Kilisseh, but no undue prominence is given to military history. More is said about men than institutions, as is wise in a school textbook. The amount of space allotted to events is increasingly ample as recent times are approached; there is a longer discussion of Napoleon than of Charlemagne, and of the "March of Democracy" than of Feudalism. The narrative is readable and accurate; with the aid of inoffensive heavy type it is also cast in a form which ought to be easy for the pupil to remember and review. Occasionally the author indulges in words which the pupil will not understand, and once in a word which he himself does not understand—"immanence" (p. 205), where he means "imminence." We are dubious as to the author's practice of putting much of his information into footnotes; it may relieve the text and train pupils in the laudable practice of noticing what is at the bottom of the page, but it disturbs the continuity of the narrative. The illustrations are fresh, authentic, and appropriate. It is more elementary and less full than the similar texts of West, Harding, Myers, and Robinson.

The purpose of Prof. A. L. Cross, in his "History of England and Greater Britain" (Macmillan; $2.60) is "to trace the course of events by which England and the adjacent countries became the United Kingdom, and by which the United Kingdom has become the greatest sea power ever known, has developed a foreign commerce larger than that of any other country of the world, and has fashioned an empire with an extent of territory nearly a hundred, and a population almost ten, times its own." In the course of eleven hundred pages he fulfils this purpose well. His method is strictly chronological. He dispatches the pre-Norman period with commendable brevity in seventy-five pages. He gives in admirable fulness the subsequent growth of English institutions, especially in the Tudor and Stuart periods; this is wise, for American students are the inheritors, in large part, of these institutions and should know how they came into being. The nineteenth and twentieth centuries receive sufficient attention to give a clear account of the Irish, imperial, and other important political questions. Military history is largely suppressed. Especially welcome, on the other hand, are the excellent characterizations of the more important works in the long range of English literature from Beowulf to Browning. They ought to help much towards the greater coöperation between teachers of history and teachers of English, which is one of the desiderata of modern education. The defect of the book is that it fails to make the reader grasp in a concrete form the way in which institutions actually worked. Professor Cross describes the contents of the great statutes, names the law courts, touches upon the features of the manorial system, and chronicles the cabinets; but he does not make the inward eye of the imagination really see these organisms functioning as realities; he has not the gift of Seebohm and Maitland. There is nothing particularly original in the volume, unless it be the unusually good chapters on the later Stuarts. Professor Cross has been content, as he modestly says in his preface, to light his candle at the torches of others. But sober judgment in the matter of proportion and clarity of exposition is of more moment in a textbook than originality. In his admiration for England he slides rather too gently over such less fortunate episodes in her diplomacy as Disraeli's policy towards Turkey in 1878 and Sir Edward Grey's assistance in the strangling of Persia. It is a book for colleges rather than high schools. Except for the absence of illustrations (which we regret), and the considerable attention to the history of the last fifty years (which we rejoice in), Professor Cross's volume approaches, on the whole, in arrangement, fulness of information, matter-of-factness, accuracy, and emphasis on purely political history, more nearly than any other textbook we happen to know, to S. R. Gardiner's justly famous "Student's History"—which is high praise.

Pictures, broadsides, and medals relating to the flight of James II and the assumption of the British throne by the Prince of Orange appropriately make up the bulk of the illustrations in the third volume of Professor Firth's sumptuous edition of Macaulay's History of England (Macmillan; $3.75 net). This volume carries the narrative from the presentation to William of the proposal by the Whigs for a descent upon England to the raising of the siege of Londonderry and the battle of Newton Butler. It is no easier to say, concerning this volume than either of those preceding, whether the ballads or the caricatures are more amusing. In not a few instances, the palm would go to the supposedly serious production, as in the case of "Popery's Downfal, and The Protestants Uprising by the Crowning of King William and Queen Mary," to the tune of "Hey boys up go we," with its emphasis upon the economic phase of what we must in consequence term the transaction:

> But now all heartily rejoice
> to see this happy day;
> With Bells, with Bonfires, and with voice,
> as very well we may;
> That we have got a King and Queen
> that will encourage Trade,
> That by the Papists villany
> was very much decay'd.

Beside this outburst, the fun in the cartoon of "The Protestant Grind-Stone" or "The Quakers Synod" seems pale and thin. How much this kind of thing adds to the value as well as to the interest of an historical work, in reproducing the atmosphere of the time, it is unnecessary to argue.

AMERICAN.

Prof. William B. Munro's "Selections from the Federalist" (Harvard University Press) will be a boon to teachers and students who have been deterred, by the bulk of the original work, from using in the classroom what is still, for many purposes, the best introduction to the historical study of American federal government. The text is that of the first collected edition of 1788, and the selections, based upon the editor's experience as a teacher, are drawn from the first fifty numbers. There are no footnotes save such as appeared in the original edition, but Professor Munro has provided a brief introductory account of the formation of the Constitution.

"The Period of Discovery," by Joseph V. McKee and Louise S. Roemer (Century Co.; 50c.), is an American historical reader for fifth-year pupils. The stories and bits of narrative—the former kept as closely as possible in accordance with facts—and the poetical selections are well chosen, and the language and style of presentation are such as to appeal to children. The last five stories deal with elementary problems of citizenship from the standpoint of the young immigrant. The plan of the book conforms to the New York Regents' Syllabus of History.

We hesitate to affirm that Prof. Willis M. West's "American History and Government" (Allyn & Bacon) is the best high-school textbook of American history now on the market, because high schools, like the courses which they offer, present almost infinite diversity in standards, methods, and aims. In scholarly thoroughness and completeness, however, as well as in the arrangement of its matter for practical classroom use, the volume certainly has no superior for schools which are willing to take the study of American history seriously. The distinguishing features are the combination of governmental or administrative topics with the historical narrative; the extended treatment of Western development, the labor movement of 1825-1840, and the recent "progressive" movement; and the elaborate use of footnotes for additional discussion or reference to documentary sources. With all its up-to-dateness, however, Professor West has not lost his sense of proportion, as is witnessed by the fact that less than one-fifth of his space is given to the period since the Civil War. The chief fundamental criticism of the book is its almost entire obliteration of military details. There are fifty-six maps and plans, and thirteen illustrations. The usual elaborate indications of collateral reading, in practice, we fear, honored in the breach as much as in the observance, are omitted, their place being taken by brief lists of books most valuable, with comments on the character and scope of each. A word should be said for the excellent mechanical make-up, which allows the book to lie open freely without breaking.

MILITARY.

A year ago Prof. Hans Delbrück, the distinguished editor of the *Preussische Jahrbücher* and student of military history, came over to London and gave in a couple of lectures, entitled "Numbers in History" (University of London Press), the conclusions by

which he has been upsetting traditional notions as to the size of armies in ancient and mediæval times. Scholars have had to decimate the alleged size of the hosts which were defeated by the Greeks, Carthaginians, Normans, and Swiss, though they do not go quite as far as he does. Professor Delbrück's point is that nothing gives more pleasure to the soul of a people, nothing is more willingly narrated, than that a small host has conquered a greater; Henry V says at Agincourt—

> If we are marked to die, we are enow
> To do our country loss; and if to live
> The fewer men the greater share of honour.

So legend has been at work magnifying enormously the numbers of the defeated where a signal victory has been won by a small well-disciplined force. Having fought in the Franco-Prussian War, and being familiar with the problems of topography and food supply which arise in the case of really large modern armies, Professor Delbrück has shown statistically how preposterous are the figures of Herodotus. He has come also to the conclusion that victory in the past has been usually obtained because of discipline, organization, and martial spirit, not because of numbers or of bravery. Is his conclusion to be confirmed by the events of to-day?

SCIENCE.

PSYCHOLOGY.

William Glover's "Know Your Own Mind" (Cambridge University Press; Putnams; 60 cents) is an attempt to put into simple form the main tenets of the Herbartian psychology; and in reading it therefore one is carried back to a past age. It is difficult enough, in any event, to write a good elementary work on this subject; and such a task should not be assumed by one who, like the author, is unwilling to take the trouble to grasp the principles of psychology as they have been developed since Herbart lived.

William James's famous chapter on Habit in his Psychology has been reprinted in separate form in a neat little book (Holt; 50 cents net). Here appear his characteristics of thought and of style: breadth of knowledge; hazarding of hypotheses that, once stated, seem indisputable, at least while one reads; plenitude of illustration; a tendency towards colloquialism, and particularly, here, practical application of the results of the reasoning through which he has been carrying his reader. In the end, his consideration of what was apparently a purely mental phenomenon turns out to have important moral implications, and psychology seems a more philosophical ethic, if not a better-based religion. There is a bad arrangement on pages 15 and 16, where a note, having to do with the first line on page 16, is put at the bottom of the page preceding.

LOGIC.

There is an element of humorous paradox in the plan of Alfred Sidgwick's "Elements of Logic" (Cambridge University Press; 90 cents), which will nevertheless appeal to many teachers of the subject as resting upon a solid basis of truth. Part I is a presentation of the traditional rules of logic which treats them "as obediently as we can"; Part II explains how and why they are not to be taken too seriously. This comes very near the mark. No one is entitled to disregard the rules of logic who has not mastered them. Defective and archaic they may be, yet they still constitute our only systematic test for correct thinking; and with all their imperfections they are indispensable both as a discipline for the student and as a general guiding principle for mature thinking. The difficulty, as Mr. Sidgwick shows, is that, perhaps inevitably, they take all our meanings to be fixed, whereas, in point of fact, the meaning of every statement depends upon the purpose of making it, and the purpose is often obscure. This accounts for the various "risks of reasoning," all, it seems, reducible to the case of an ambiguous middle term, which are pointed out in Part II. The book is worth trying as a text. It should be suggestive to the teacher and, at any rate, an excellent introduction to the subject for the independent reader.

CHEMISTRY.

The teacher of organic chemistry in the college course often experiences an embarrassment in selecting a textbook. The book that is suitable for the highly specialized work of the university or technical school is likely to be too voluminous for his use. The field of organic chemistry is so large that even the smaller textbooks are apt to be somewhat terrifying to the student whose interest in the subject is not vital, and he is in danger of being overwhelmed and discouraged by the mass of material that he has not time to assimilate. Prof. John T. Stoddard, of Smith College, has endeavored to meet this difficulty in his "Introduction to Organic Chemistry" (Blakiston's), His book is written frankly for the college student, whose needs the author can appreciate by reason of his long experience as a college teacher. Avoiding long discussions of the more intricate problems, he presents the general and fundamental principles of the subject in a clear manner and at the same time makes the student familiar with the uses of the various substances that are considered. The result is a book of about 400 pages that is readable, teachable, informative, and logical. It is up to date, and even the more advanced student will find in it much that will repay him for reading it. Numerous tables take the place of extended description of many comparatively unimportant compounds.

In "Some Fundamental Problems in Chemistry, Old and New" (Van Nostrand; $2.50 net), by Professor E. A. Letts, of Queen's University of Belfast, the author undertakes to contrast certain ancient views of the constitution of matter and the mediæval ideas in regard to transmutation with the modern conception of electrons and the discovery of the changes which radio-active elements experience; the modern discoveries proving, "as Ladenburg said, 'Dass unter den Griechen und Römen Männer waren, die sich in jeder Beziehung mit unsern Denkern messen konnten,' and secondly, that even in science, history may repeat itself." The first ninety pages are devoted to "The Older Chemistry," and most of these are taken up with the discussion of Dalton's atomic theory and the periodic law, and include the discovery of the argon gases. "The Newer Chemistry" occupies a little more space, and includes an excellent summary of the work on radio-activity, the theory of electrons, Lockyer's views on the question of inorganic evolution, and Arrhenius's "Worlds in the Making."

It is undoubtedly true "that the discovery of radio-activity has effected a revolution in our fundamental ideas concerning the nature and properties of matter"; and we have convincing evidence that the chemical elements are not independent creations, made up of individual atoms. The thought of some genetic relationship among the elements is, however, almost as old as Dalton's atomic theory; and, starting with Prout's untenable hypothesis, was revived in Döbereiner's triads, Newlands's law of octaves, and, most seriously, by Mendeleef's illuminating presentation of the periodic relations existing between the properties of the elements and their atomic weights. Probably no thoughtful chemist for nearly a century would have been willing to deny the possible divisibility of the atom. Experimental evidence of the composite nature of the atom and transmutation of the elements, a logical corollary of these speculations, was, however, unlooked for. Mme. Curie's discovery of radium and the work of Rutherford, J. J. Thomson, and their fellow investigators have brought the demonstration. But the observed transmutations are hardly to be considered as a realization of the old alchemical doctrine, "namely, that it is possible to transmute one element into another." Helium has been obtained from radium, and some thirty "transient" elements, whose estimated life periods vary from a fraction of a second to thousands of years, have been listed as products of the disintegration of uranium, radium, and thorium. Their appearance, however, is spontaneous, and no approach has yet been made to a controlled or directed transmutation of matter, which was the alchemist's idea in his dream of the production of gold from the baser metals. Those whose imagination has been stirred by the extraordinary properties of radium and the discoveries which have followed, will be much interested in this well-written and readable book.

PHYSICS.

An elementary textbook for schools and colleges on "Sound," by Dr. J. W. Capstick, Fellow of Trinity College, Cambridge, which has been added to the Cambridge Physical series (Putnam; $1.40), is well up to the standard of that excellent series. In many ways sound is the most difficult subject in physics to teach. Its theory is complicated, not only in its physical aspects, but also because it lies in the borderland between physics and psychology, where much is debatable. But the most serious difficulty comes from the fact that it seems necessary to deal with the art of music in its relations to acoustics. Dr. Capstick meets these difficulties by subordinating the mathematical theory to the experimental development of the subject, by almost entirely omitting psychological aspects, and by giving a brief and well-considered discussion of music and musical instruments. The text is excellent, clear, concise, and well arranged, and, like its companions in the series, it is the result of careful study and not a mere compilation from previous books.

A valuable book on the "Electrothermal Methods of Iron and Steel Production," by John B. C. Kershaw, has been published by the Van Nostrand Co. ($3 net). The production of iron and steel by the method of the electric furnace is expanding rapidly, yet there has been hitherto no carefully prepared handbook on the subject. The author wisely limits his discussion to the practical

applications of electric heating to this industry. The various forms of electric furnaces are described in detail and the question of cost of each is discussed. Especially useful are the appendices, which contain lists of furnaces in operation or under construction, and of patents issued.

"Thresholds of Science" (Doubleday, Page) consists of several simply written monographs on mathematics, zoölogy, botany, chemistry, and other branches, by recognized scholars. They were first published in France, and designed to enable laymen to learn, and to guide their children in learning, something of what one means by scientific facts and laws of nature. This laudable aim is well followed in C. E. Guillaume's little book on "Mechanics" (50 cents net), where a few admirably written general directions in the study of nature are further explained in connection with such topics as motion, force, acceleration, the work of forces, motionless forces, rest, oscillation, calculation in mechanics, impact, resistance of materials, and artillery. The work, which contains numerous illustrations, is well worth the attention of those whose knowledge already includes far more than is here presented.

ASTRONOMY.

The object and plan of the slightly enlarged edition of Prof. F. R. Moulton's "Introduction to Celestial Mechanics" (Macmillan; $3.50 net) are the same as in the original edition. The object is to give the reader such an all-round acquaintance with the elements of the mathematical theory as will be well worth while if he does not continue the study and as will at the same time enable him to specialize in any one of several directions. The central theme in mathematical astronomy being the theory of absolute perturbations, this subject is treated with special fulness both analytically and geometrically. The work is pedagogically as well as scientifically good: problems are stated before they are attacked and the steps in the solution are indicated in advance. The most notable revision occurs in the treatment of methods of determining orbits. The usual presentations of the methods of Laplace and Gauss have been departed from with no little gain in respect of mathematical intelligibility. The famous problem of three bodies is well handled, but we miss any and all reference to Sundman's immortal theoretical solution.

MATHEMATICS.

In his "Memorabilia Mathematica" (Macmillan; $3 net), Prof. R. E. Moritz has brought together in very attractive form over one thousand utterances regarding the nature and worth of mathematics. The quotations, which vary in length from a line to several score of lines, are all of them in the English language. The list of more than three hundred authors, which represents all historic times, includes not only mathematicians, but students of natural science, poets, philosophers, theologians, statesmen, and historians. Each passage is referred to its source. Several criteria have been employed in determining admissibility, as eminence of authorship, value of content, and felicity of expression. Thus Shakespeare contributes three passages, Goethe ten, Euripides one, Henri Poincaré five, Newton seven, Klein twenty, Laplace eleven, Leibnitz and Descartes each seventeen, De Morgan fifty, Plato nine, Emerson two, Pliny and Daniel Webster each one, and so on. It is the first English work of its kind, and, except for a small number of very important deliverances, it does not duplicate Rebière's "Mathématiques et Mathématiciens" or the "Scherz und Ernst in der Mathematik" of Ehrens. It always has been and always will be necessary to depend for the most part upon borrowed estimates, absolute independence of authority being an unattainable ideal. Herein is the justification of Moritz's collection. It is difficult to imagine how any scholar, much less any student or teacher of mathematics, could fail to find delight and instruction in this admirable book.

For a book by an Englishman, A. S. Redgrove's "Experimental Mensuration" (Van Nostrand Company; $1.25) is an extreme reaction from the procedure of Euclid. It is an attempt to teach geometry by observation and experiment. It does pretend to demonstrate theorems, but as it dispenses with fundamental or primitive assumptions, strict demonstration is of course impossible. The author, however, is a practician and thinks "straining after absolute truth" (the exact sum of the angles of a triangle, for example) "is foolishness." He appears to think that to follow the geometric ways of Euclid is like teaching natural history out of Aristotle or Pliny or like going to the alchemists for chemistry. The work itself shows the author to be less wayward than his professed tenets indicate. His readers will learn much useful matter resembling geometry, but they will not learn geometry.

Mr. C. M. Bookman's "Business Arithmetic" (American Book Company; 65 cents) is an up-to-date book, excluding puzzles, entirely practical in its content, computing profits on selling price, insisting on accuracy and rapidity of computation.

Dr. L. Silberstein's "The Theory of Relativity" (Macmillan; $2.50) is probably the best scientific exposition of the subject in any language, and it will be eagerly read by such physicists as are mathematically qualified for the task. The modern doctrine here treated has its roots in classical mechanics and physics, and this genetic connection of the old and the new is clearly and fascinatingly explained in the introductory chapter. The manner reminds one of W. K. Clifford's happiest expositions. The following nine chapters place in one harmonious perspective the various contributions of Lorentz, Einstein, Minkowski, and others. Equipment for reading the work includes a knowledge of differential equations, and the elements of quaternion and vector analysis.

NATURAL HISTORY.

"The Natural History of the Farm," by J. G. Needham, professor in Cornell University (Ithaca, N. Y.: The Comstock Publishing Co.; $1.50 net), is a compact encyclopædia of information in regard to the original sources of farm products. The wild plants which can be used as food or utilized in other ways in our daily life and the improved varieties derived from these plants are here dealt with in an attractive manner. But the author does not stop at this point. He proceeds to trace the history of the wild and domesticated animals of the farm, and makes many excursions into allied fields of biology, by which the reader is enabled to form a sufficient picture of the life of lower organisms in brook and marsh, as well as forest and meadow. The guidance through these paths wisely leads through the three principal seasons, October to January, February to May, and June to October. Practically nothing has been omitted in this comprehensive survey, and yet the treatise has been so skilfully constructed that it is not at any point a wearisome enumeration of details. It is agreeable reading throughout. Especial attention should be called to the marked value of the handbook as a help in sound "Nature Study." It is well arranged for class-work and for private study without a teacher. It accomplishes what Professor Huxley desired to see done in all departments of natural history, and in a broader way what he illustrated so well by his elementary works.

"Beyond the Pasture Bars" (Century; 50 cents net), by Dallas Lore Sharp, is an excellent little book for the child student of wild life, and not too juvenile for his elders. It is intended for use as a school reader, and it should surely stimulate the curious youngster to go beyond the schoolroom through the pasture bars into the woods and fields where furred and feathered things make their homes. The book is attractively illustrated by Bruce Horsfall.

FARMING, HORTICULTURE, AND FORESTRY.

The Business of Farming. By William C. Smith. Cincinnati: Stewart & Kidd Co. $1.25 net.

The Farm Woodlot: A Handbook of Forestry for the Farmer and the Student of Agriculture. By E. G. Cheyney and J. P. Wentling. New York: Macmillan & Co. $1.50 net.

A Pilgrimage of British Farming. By A. D. Hall. New York: E. P. Dutton & Co. $1.50 net.

The business of farming is not the same thing as the science of agriculture. Business, we may suppose, can never be merely a science. Its human element is too strong—its traditions and usages, above all, its emotions. The business of farming, certainly, is wrapped up in sentiment. Farm journals reek with it, and farm literature of a more serious kind is always dropping into poetry. Mr. William C. Smith, "of Indiana," is, we gather, a practical man. He has made a good deal of money out of farming, and has written a book on "How to Grow 100 Bushels of Corn Per Acre on Worn Soils," and "The Book of Vetch." Under the title, "The Business of Farming," he might have been expected to produce a sternly matter-of-fact treatise. In the event, his practical advice might have been given in a fifth of the space here devoted to it. What he has to say, excellent in itself, is said with a good deal of repetition and diffuseness; and a very large proportion of his pages are hortatory or lyrical. He is a man with a theory, but fancies himself even more as a man with a message.

His theory is the now familiar but still insufficiently heeded one that business and economic principles ought to be applied to farming as to other industries. In beginning, he does well to emphasize an ancient paradox—that though farming is the oldest and most important business of mankind, it is still the most carelessly and inefficiently conducted business. Farmers in the mass still live upon hand-to-mouth relations with the soil, mak-

ing, where they can, an immediate profit at the expense of the future. The once fertile lands of Palestine are a desert; the homestead farms of New England are worn out and many of them abandoned; even the rich prairie soil begins to show exhaustion. Again, farmers are still relatively unprosperous because they have not learned to work together; co-operation is still in its infancy. Until the farm comes to be recognized as a manufacturing plant, to be equipped and administered for the greatest possible efficiency, its methods will still be fumbling and its output uncertain. But Mr. Smith, though he has chapters on administration and marketing problems, is really more interested in questions of soil-making and preservation. The steady exhaustion of the soil seems to him the great crime and folly of the modern world, and he has a panacea which makes him impatient of milder remedies. The theory that crop rotation is in itself sufficient to maintain the fertility of our soils he treats with scorn:

> Even our Government, through its great Agricultural Department that has done so much to make the business of farming flourish, has promulgated the infamous doctrine that our soil is in no real danger of exhaustion, and that soil will not wear out, and yet almost within a bird's-eye view from the dome of our splendid Capitol at Washington thousands of acres of agricultural lands lie abandoned which less than one hundred years ago were occupied by a hospitable, chivalric people living in stately Southern homes and mansions surrounded by fertile fields abounding with a plethora of farm produce.

These lands were farmed under the best methods then recognized, including a proper rotation of crops. Yet they are exhausted and abandoned. The remedy for such soils is deep ploughing, followed by the continual use of cover or soiling crops to provide the humus without which no soil can keep its health. Mr. Smith makes some extraordinary assertions about the prevalence of shallow ploughing. An investigation of ploughing done in the great corn belt, upon all kinds of soils, with all kinds of ploughs, from the walking plough to the great tractor, showed the average depth ploughed to be three and one-half inches, instead of the nine inches which this author thinks to be the minimum of profitable ploughing. That a pair of horses should find it difficult to plough sod-land deeper than five or six inches is easy to understand, but that the big tractors, with their gang ploughs, so often pictured turning up a dozen furrows at once, should have the same difficulty is surprising. Few of them, says Mr. Smith, are able to plough nine inches, unless "at too great expense for fuel, or too slow a speed for economy." As for what is here said about methods of cultivation, and the use of soiling crops, we find little that is new, but much that is worth harping upon. The rest of the book is "Grange" rhetoric, including the usual back-to-the-land peroration.

"The Farm Woodlot" is at the other extreme of farm literature. Its authors are the director and an associate professor of the College of Forestry in the University of Minnesota. They here undertake "a handbook of forestry for the farmer and the student of agriculture." Their tone is strictly impersonal and scientific—not a lyrical note in these pages. A tree, to them, for all we know or need to know, is an object of care and use, and not of worship. They stand upon the safe if not enchanted ground of definition: "The study of the growing of trees in forest plantations is sylviculture. . . . Sylviculture is primarily an art and as such it is based on a science. This science is sylvics. Sylvics is the knowledge of the sylvicultural characteristics of forest trees," and so on. What could be neater, less provocative to erring feet? It is like walking the ties of a railway track. And this is as it should be, for emotion in a handbook were as untimely as statistics in a song. A chapter on Dendrology provides a compact key to the common trees of the farm woodlot, with some admirable illustrations. Other chapters lay down the principles of sylviculture, of renewing and thinning woodland so as to maintain it as a permanent and profitable part of the farm; of the nature and uses of different woods; of methods of ornamental planting; and the book closes with a chapter or two on the wider aspects of forestry. Finally, there are some miscellaneous tables and a not too exhaustive Index.

Still another type of book is "A Pilgrimage of British Farming." The author is a former director of the Rothamsted experimental station, and has published, besides a record of the Rothamsted experiments, three manuals on "The Soil," "Fertilizers and Manures," and "The Feeding of Crops and Stock." This writer avoids the sentimental manner on the one hand, and the dry-as-dust on the other. The present book, which appeared originally in the form of a series of contributions to the London *Times*, is solid without being wooden. It describes a series of expeditions undertaken during the years 1910-1912—particularly trying years for the British farmer—among the farms of England, Scotland, and Ireland.

The conclusion to which this careful first-hand observation leads the author is that British farming is in a sound and normal condition. No wholesale reforms are necessary: "There is nothing revolutionary in sight; America and the Colonies, so often quoted as examples of modern farming, have nothing to teach us, and the lesson of the highly farmed Continental countries—Holland, Belgium, Denmark—is not the transplantation of this or that industry, but that intelligence and foresight will be always finding openings for profit in various directions." The British farmer, in short, knows his business; what he needs is to pay a little stricter attention to it, to take more care with his bookkeeping, to coöperate more, to give that unremitting attention to detail which is necessary for success in other businesses.

Conditions of British farming are, of course, very different from our own. The tenant farmer is the rule, and the system, this author believes, has worked well in the main—perhaps better, under all the conditions, than any other system could have done. That many of the larger landlords are now selling out their farming land is due to the fact that the tenant has commonly had the better of the relation. Advances in rent have not kept pace with increased taxation; improvements have been at the landlord's charge. They amounted, in the course of a generation, in one instance cited here, to more than the original value of the property. The doctrine of *noblesse oblige* has been costly to the landowner. "The ownership of land in this country is not entirely treated as a matter of business; there is a give and take, a rough partnership, between tenant and owner, which finds its working expression in the fact, vouched for by a recent departmental inquiry, that land is mostly let at rents below its competitive value." And the British tenant farmer's easy relation with his landlord, with a system which leaves him free to put his capital into his business, is not offset by the problem of labor, which is becoming so acute in America. In many districts farm laborers are plentiful at 14 to 16 shillings a week, and the writer speaks repeatedly of a pound a week as liberal pay—about half what the same grade of labor fetches here, under the most favorable conditions.

For the future of farming in the United Kingdom our pilgrim has no fear, and of the present he speaks with a touch of that quiet enthusiasm which, sentimentalism apart, real love of the land seats in the hearts of men: "Whatever the future may have in store for our agriculture, we can still be proud of its state to-day, for it need fear no comparisons whether we regard it as a living art or as a mother of men."

"The Standard Cyclopedia of Horticulture," in six volumes (Macmillan; $6 per volume), has in Prof. L. H. Bailey an editor possessed of remarkable qualifications. He is a clear writer, untiring in his industry, and has a gift for selecting hard-working associates. The present work bears evidence of having received an immense amount of careful supervision, so that it may be regarded as a safe guide for reference with respect to generic and specific descriptions and cultural directions. A good many of the figures in the text leave much to be desired as regards attractiveness, but they all appear to be truthful, and that is, after all, the main thing. This work should find a place in every public library, and have a warm welcome to the shelves of every horticultural amateur. Its value as a work of reference would be increased by prefixing to each volume the list of abbreviations which are employed.

"The Beginner's Garden Book," by Allen French (Macmillan; $1), is admirable for children and for adults, as well. It is written in a conversational style, and, since its counsels are wise and up to date, the volume might well serve as a handy guide to the proverbial commuter "whose talk is" not "of bullocks," but of early vegetables better than his neighbors'. The skill with which the author leads his pupils through some perplexing mazes in gardening is worthy of all praise.

The surprising advance which scientific agriculture has made in the United States during the past few decades is clearly marked by the respect which now is shown on all sides for our national Department of Agriculture, our experimental stations, and our agricultural schools. But perhaps this remarkable advance is even better shown by the multiplicity of excellent textbooks covering the whole range of the subject. One of these is devoted to the best methods of cultivating our cereals, legumes, and fibre-plants. "Field Crop Production," by George Livingston, professor in Ohio State University (Macmillan; $1.40), a textbook designed primarily for use in agricultural schools, is instructive to general readers, and is very interesting as an illustration of the new methods of teaching. More than this, it shows plainly the lines in which recent substantial advance has been made in one of the specialties. Some of the engravings are good, a few seem superfluous, and more than one can be termed un-

intelligible. With this slight reservation, the handy treatise can be cordially commended to the attention of those who wish to learn the best modern systems for cultivating field crops. It is a useful member of the useful series which Professor Bailey is editing under the title, Rural Textbook series.

"Productive Orcharding, Modern Methods of Growing and Marketing Fruit," by Fred C. Sears, is one of Lippincott's series of Farm Manuals, edited by K. C. Davis. In his work on orcharding, Professor Sears, though doubtless writing with the agricultural student especially in mind, has given much common-sense and straightforward advice to the man who already owns and operates an orchard, or who vaguely dreams that he may some time own one. Every detail relative to character of soil, varieties of fruit and their purchase, the cultivation of the orchard and the implements needed, pruning, fertilizing, cover crops, spraying, harvesting, storing, marketing, and advertising is fully covered. The book is thoroughly readable, and impresses one with the fact that the author has not only gained experience worth passing on to others, but, to use his own phrase, "he has got the fun out of the fruit business that he ought."

Prof. George E. Day states in his preface to "Productive Swine Husbandry" (Lippincott) his twofold object in preparing the book, namely, that it shall be one to "serve as a textbook for agricultural students," and also one to be placed "at the disposal of the busy farmer as a reference book which will give him, in concise form, the findings of the best experiment stations in regard to the problems involved in the successful handling of swine." The subject-matter is comprehensive and painstakingly explicit. The numerous breeds of swine are discussed in detail. One section deals with the results of experiments in swine feeding; marketing and curing occupy another section. There are some dissertations to make the mouth water, not on roast pig exactly, but on "Wiltshire sides," a delicacy "especially designed to meet the requirements of a certain class of English consumers." Professor Day's chair is in Ontario Agricultural College—the connection is obvious. As is the case with all of this Lippincott Farm Manual series, the illustrations and colored plates are numerous and excellent.

Walter H. Godfrey's "Gardens in the Making" (Scribner; $2 net) is not a book for the man with a small plot of ground at his disposal; rather it is for the man of ample acres, who can divide his garden into many gardens, all forming together one harmonized scheme. Mr. Godfrey is not a grower of plants; he is an ally of the gardener. He concerns himself solely with the art of garden-design, and shows with much wealth of detail how to prepare the way for the gardener, so that the surroundings will form almost as much the environment of home life as the house itself. He is prolific in ideas, and discusses with authority such things as entrance gates and lodges, approaches, courtyards, boundaries, walls and hedges, flowers, enclosures, borders, paving, terraces, balustrades, furniture, and numerous other features that make the perfect garden. The book is valuable to the ambitious man. It is copiously illustrated with useful designs by the author and Edmund L. Wratten.

Mr. Gifford Pinchot's book, "The Training of a Forester" (Lippincott; $1 net) is more than the title implies. Although ostensibly for the information of prospective students of the profession, it is equally informing upon the broader aspects of forestry as a public concern. In fact, it furnishes a summary, and a very interesting and illuminating summary, of the growth and present activity of forestry in the United States. The matter of the book is roughly divisible into three parts. The first deals with the nature of forests and the meaning of forestry. The second and largest describes the practice of forestry in the United States, with particular and vivid reference to the United States Forest Service, not only its organization, administration, and functions, and the details of the work performed by its officers, but also the ideals and qualities which should (and usually do) actuate the forest officers themselves. The third part expounds the academic and technical training that the intending forester must obtain, and indicates the kind of openings that lie before him. As a whole, the book is a document of distinctly educational value, and contains much of suggestive comment, as well as of striking illustration and foresight. Many readers will remember how greatly responsible is its author for the wonderful progress he describes; all will realize that forestry, both as a national policy and as a career, is established, and that in point of opportunity for service and intellectual demands it may without exaggeration be classed among the educated professions.

DOMESTIC SCIENCE.

The applications of science to the affairs of common life and scientific explanations of familiar experiences have, in these days of emphasis on vocational training, become part of the regular instruction in many institutions. As a result, formal textbooks are appearing to meet the needs of these new courses, covering the ground which has hitherto been cultivated by writers of more or less popular presentations designed for general reading and home instruction. "Chemistry and Its Relations to Daily Life," by Professors Kahlenberg and Hart, of the University of Wisconsin (Macmillan; $1.25) is a textbook for students of agriculture and home economics in secondary schools. The first half of the book of 379 pages is on elementary chemistry. This is followed by chapters on paints, leather, textiles, rubber, the soil, fertilizers, plant and animal life, foods, and poisons for farm and orchard pests; and the concluding sixty pages are filled with directions for laboratory experiments. The practical half of the book is good, the chapters on agriculture being especially interesting and informing. In the chemical part, the atomic and molecular theories have been deliberately omitted and the chapter on the gas laws and reduction of gases to normal volume, which is always a feature of an elementary chemistry, is absent. There is no mention of hydrolysis, or of the ionic theory. In fact, there is no theory to aid or confuse the pupil—all is plain statement of fact with no attempt at explanation; and this in a book of this kind is certainly better than going to the other extreme. Where formulæ and chemical equations are so freely used, however, a brief discussion of the atomic theory is desirable; and the pupil surely should not be taught that H stands for 1 gram of hydrogen, Cl for 35.5 grams of chlorine, O for 16 grams of oxygen, etc. (page 43). It may possibly be true that "those who have completed it successfully will doubtless have gained information and sound scientific training which will compare favorably with that received in the pursuit of courses usually taken in preparatory schools," but with the requirements for college entrance what they are the book does not offer the material necessary for the examinations. The appearance of the book is marred by the excessive use of italics for emphasis of words and sentences, and a number of illustrations which do not aid the imagination, such as those of "a carboy of hydrochloric acid," "a can filled with liquid sulphur dioxide," "a barrel of white lead," etc.

To meet the needs of pupils in home economics who have had no previous instruction in chemistry is the especial purpose of the "Elementary Household Chemistry," by Professor Snell, of McGill University (Macmillan; $1.25 net). At the same time, he entertains the hope that "it may also be found useful in the many institutions in which the student of household chemistry approaches the subject after a preliminary training in general chemistry." Though much shorter than the book of Kahlenberg and Hart, this little volume includes more applications of chemistry and a more satisfactory chemical treatment. In addition to most of the subjects dealt with in the former, we find here discussions of light and illumination, fuels and the relation of combustion to heat, much attention to the composition of foods with many tables of composition in the Appendix, and a fuller treatment of the proteins, soaps, etc. Chemical theories are not avoided, and those which are given are stated simply and well. It hardly seems worth while, however, to take four pages for a statement of the doctrine of ionization of which no practical application is made. Directions for 171 well-chosen experiments are included in the text, and the book is adorned with twelve full-page portraits of eminent chemists, ranging from Mrs. Ellen H. Richards to Robert Boyle. An unusual feature is the shortness of the chapters, which are forty-three in number and average about six pages in length. The longest are those on textile fibres of vegetable origin (14) and on dyeing (13). The book is well adapted to its purpose, giving much interesting and valuable information and a good elementary idea of chemical principles.

Those who are teaching physics as an aid to housekeeping rather than as a science will find "The Physics of the Household" (Macmillan), by Prof. Carleton John Lynde, a useful text. The treatment differs from the usual preparatory school texts mainly by taking illustrative examples and applications from household appliances, and in using the English system of measures. The author's pedagogical thesis, that young students should learn physics in order to acquire knowledge which they will use in everyday life, is open to serious objection if, as many still believe, the purpose of learning is to develop the mind rather than to provide a livelihood. Such texts as this should be restricted to vocational courses; as a general thing, it is poor policy to limit one's education to daily needs.

BUSINESS MANAGEMENT.

The first volume, entitled "Business Management," of the ten volumes of the Library of Business Practice (Chicago: A. W. Shaw Company) gathers into 140 of its 198 pages some exceedingly interesting talks by men who have tackled the problems of executive management, and "made good." Among those who thus speak, or are quoted parenthetically, are twoscore or more successful merchants, railway presidents, and manufacturers. Some are known nationally, others are now building a national reputation for the future. These are mainly "self-made" men, and it is surprising to find as one reads how the dreaded "efficiency" and "scientific management" pop up again and again under other names. These big men lean hard on their subordinates. They control great organizations through marvellous systems of executive reports, whereby the condition of the business is shown on a blackboard, or a single sheet of paper laid on the president's desk—behind which are all the work orders, job tickets, reports, records, books, and other paraphernalia of system. The lesson to be learned is that right systems for the acquisition and analysis of facts are an immense aid to any man, no matter what his life-work—and that, no matter how good the system, it won't work without a man of decision and action behind it. The A. W. Shaw Company, as publishers of "System" and "Factory," are perhaps as well qualified as any authority in the country to condense the big subject of business practice into ten compact volumes; for they possess a unique fund of business knowledge and a most unusual business library. The thoroughness with which the subject is treated in The Library of Business Practice is indicated by the forty-eight-page index to the ten volumes at the end of Volume I.

"The Job, the Man, the Boss," by Dr. Katherine Blatchford and A. Newcomb (Doubleday, Page; $1.50 net), is not the first book to point out the often haphazard relations of these elements in business; but the pages which it devotes to exposing the evil and discussing reasons for the adoption of the authors' particular system of correction will prove interesting reading, both to those uninformed as to the present tendencies in business organization and to recalcitrant employers who still regard scientific methods for the employment and training of workers as the idle dreams of sentimentalists. Briefly summarized, the plan implies substituting for hit-or-miss methods an employment department, whose principal function it is to obtain by time and study a correct analysis of every job and then to fit into it a human being possessing the requisite qualifications leading up to further developments in scientific management. This may imply a compromise with the existing limitations imposed by the character and mental type of the immediate superior or boss of the man to be engaged—or it may necessitate the substitution of a boss who can work more harmoniously with the most desirable type of employee for that particular job. Such a department judges applicants both by observation of the physical man and by analysis of his answers to many test questions. The practical success of the plan depends—as with all ventures into the field of efficiency—upon a human equation of high degree and many terms. The winning over of the general management and the department heads, the training of persons competent to resolve human beings into their elements and to tag each with an analysis by which the efficiency engineer can determine treatment and function—these are not as easy as to determine the relative weights of iron, carbon, tungsten, phosphorus, and sulphur in a bit of steel, and to relate that analysis to the output of a lathe. The success of Dr. Blatchford's personal efforts is doubtless due in a measure to something peculiar to herself. Such an employment department as she recommends is right in principle, but should not receive arbitrary powers at the start. It should be checked by actual results and prove its worth; for we suspect that it will not always have Dr. Blatchford's own keen discernment, though it may have learned the details of her system. "The Job, the Man, and the Boss" is written in an interesting and by no means technical style. It is not too long nor too dogmatic, and the plan it presents is sufficiently elastic to meet the needs of a large or a small organization.

The publication of a Canadian edition of the Alexander Hamilton Institute's Course, "Modern Business," Vol. I, Applied Economics, by James Mavor, and the appearance of the fourth edition of Robert J. Frank's "Science of Organization and Business Development" (Chicago: Laird & Lee; $2.75 net), are prima facie evidence that books on business are more and more widely read. Twenty years ago there were few authoritative works on business practice. To-day there is a large and rapidly increasing library of information to which the business man can turn for his own education, as well as that of his organization. Business colleges, of which there used to be widespread distrust among practical business men, are in better position to help young men and women to a grounding in first principles. State universities, scientific schools, and other educational institutions are devoting their trained powers of analysis to the study of applied economics, and their work is supplemented by that of specialists in law, finance, organization, production, scientific management, organized selling, advertising, and so on. The fact that the average small business man or manufacturer, and many a big one, too, is still largely wasteful and inefficient, is due in great measure to his ignorance or contempt of sources of information. He does not yet realize that there are certain fundamental principles of business operation established in practice, analyzed and formulated by authorities, and available in published form; while there is in existence an increasing number of trained experts who can help him to establish economic principles in his business. Neither does he realize that thousands of the "hard headed," "practical" men, whom alone he respects, are giving up dead reckoning for scientific navigation. Nevertheless, the situation is encouraging. The elimination of business diseases is not to be accomplished by legal restriction and punishment alone, but through the voluntary adoption of prophylactic measures by the men who control in business councils. Anything that encourages this movement helps the cause of national wealth, individual prosperity, and the elevation of the workers to a higher plane.

There is much to commend in the two books, "News, Ads, and Sales: The Use of English for Commercial Purposes" (Macmillan; $1.25), by John Baker Opdycke, and "Business English and Correspondence" (Ginn; $1), by Roy Davis and Clarence H. Lingham. They respond to the challenge of those critics who summarize the indictment of modern education by the business man, citing the inability of the average college graduate to write a good letter, to express himself well as a salesman, or readily to adjust himself to the current of industrial life. They are honest attempts to supply a definite and admitted lack in the equipment of the average youth. The authors would doubtless not insist upon destroying the ideals of college life, nor upon lessening that insistence upon the greater importance of the "higher things." But they do plead for a few hours in school or college in which the youth's vague idea of the "larger life beyond" shall be subjected to definition. "Business English" presents first a concise course in grammar, punctuation, spelling, and the fundamental principles of composition. It then makes the application to various forms of business correspondence, including the important subject of collections, and to advertising, reports, summaries, etc. The appendices include postal information, proof-reading, filing correspondence, and definitions of commercial terms. Practical exercises are suggested with each chapter. The extent to which the more subtle application is made will depend on the teacher. The chapter on The Advertisement, for example, amounts to nothing more than a few definitions, and the chapter on The Selling Letter is but the briefest introduction to the subject, and is not as stimulating as the chapter on The Friendly Letter. Nevertheless, the book could be studied with profit not only by the boy or girl at school, but by many who have been carrying on business correspondence for years—and committing the most egregious blunders daily.

"News, Ads, and Sales" deals with the same subject, but assumes a preliminary course in English composition along industrial and commercial lines. Part I of the book is devoted to the newspaper, and is highly informative and instructive, though it may result in a rather idealistic conception of the newspaper as it is. Part II, on Magazines, Advertising, and Salesmanship, is largely suggestive and interrogative. It presents a series of lessons, each consisting of ten or more questions which cannot be answered without investigation and observation. Unless the teacher is a man of broad business experience, this method may well result in a very erroneous conception of advertising and selling. Even in a school of journalism or a distinctly commercial course in school or college, the instructor will find many of these questions difficult to answer. In the more academic institution the teacher will be as much a learner as the pupil. Furthermore, to cover in a thorough manner the work outlined would far exceed the time limitations. To suggest to the average pupil that he write an advertisement for a product of whose manufacture and markets he knows nothing, or formulate a sales plan for real estate, shoes, or pianos, is absurd on the face of it, unless it be accompanied by hard study under expert assistance and direction. In the "Foreword" the author states that it is not his aim to make great newspaper men, advertisers, magazine writers, or salesmen of our pupils, and the use of the book in a secondary school can be justified only if this is kept in mind. In so far as the course develops observation and the acquisition of facts by the average pupil, it is invaluable, and should aid in developing creative abilities along specialized lines.

HARVARD UNIVERSITY PRESS

THIS AUTUMN'S EDUCATIONAL BOOKS

Scientific Management

By C. B. THOMPSON, Instructor in Manufacturing in Harvard University. 8vo. 876 pp., with plates and diagrams. $3.00 net.

The most significant articles on a subject of increasing importance, brought together for the first time in permanent form and in such a way as to provide ready reference for managers and students.

Municipal Charters

By NATHAN MATTHEWS, Mayor of Boston, 1891-95, and formerly Lecturer on Municipal Government in Harvard University. 8vo. 235 pages.

In the author's words, "The object of this book is to prepare a practical handbook of municipal charter making, rather than to engage in a discussion of political theory."

Cases on Constitutional Law

By EUGENE WAMBAUGH, Langdell Professor of Law in Harvard University. 8vo. In four volumes, each $1.25; bound together, $5.00 net.

Volume I, 298 pages, is sufficient for the college classes.

The Governments of France, Italy and Germany

By ABBOTT LAWRENCE LOWELL, President of Harvard University. In preparation for immediate publication. A revision of parts of "Governments and Parties in Continental Europe."

Greek Lexicon of the Roman and Byzantine Periods (B. C. 146-A. D. 1100)

By E. A. SOPHOCLES, Professor of Greek in Harvard University, 1861-83. Third Edition. 4to. Buckram. 1202 pages. $10.00 net.

Corporate Promotions and Reorganizations

By A. S. DEWING, Assistant Professor of Political Economy in Yale University. 8vo. 615 pages, with charts. $2.50 net.

A study in contemporary "big finance," which is being widely used as a textbook this fall. "Its painstaking examination of the promotion and reorganization of typical consolidations, its scholarly balancing of motives and results . . . are an invaluable foundation for the construction of a programme of reform."—*Nation.*

The Oberlehrer

By W. S. LEARNED, of the Carnegie Foundation for the Advancement of Teaching. A Study of Factors in the Development of the Modern Schoolmaster in Germany. 8vo. 150 pages.

The Mary Carleton Narratives, 1663-1673

By ERNEST BERNBAUM, Instructor in English in Harvard University.

A Missing Chapter in the History of the English Novel.

Materials for a Study of the Self

By R. M. YERKES, Assistant Professor of Comparative Psychology in Harvard University, and Psychologist to the Psychopathic Hospital, Boston; and by D. W. LARUE, Professor of Psychology in the State Normal School, East Stroudsburg, Penn. Second Edition, revised. 4to. Cloth. 36 pages of questions and outline, and 24 blank sheets. $1.00 net.

Physical Laboratory Manual

By E. L. CHAFFEE, Instructor in Physics and in Electrical Engineering in Harvard University.

Including many entirely new experiments worked out in the Jefferson Physical Laboratory.

Selections from the Federalist. Edited by W. B. MUNRO, Professor of Municipal Government in Harvard University. 8vo. 202 pages. $1.00.

List of References on the History of the West. By F. J. TURNER, Professor of History in Harvard University. 8vo. Paper. 130 pages. 75 cents.

College Laboratory Manual of Physics. By E. H. HALL, Professor of Physics in Harvard University. 8vo. 138 pages. 80 cents.

A Laboratory Course in Physiology. By W. B. CANNON, George Higginson Professor of Physiology in Harvard University. 4to. Cloth. 250 pages. $2.50.

A COMPLETE CATALOGUE OF PUBLICATIONS SENT UPON REQUEST.

CAMBRIDGE **HARVARD UNIVERSITY PRESS** MASSACHUSETTS

A periodical that stands steadfastly for good literature.---*The Dial*

Poet Lore

Title Registered as a Trade Mark.

A MAGAZINE OF LETTERS *ESTABLISHED 1889*

A Pioneer Magazine for Pioneer Readers

POET LORE, in subject matter as well as in appearance, is unique among periodical publications.

It has been the business of POET LORE for the past 25 years to discover the greatest contemporary European dramas and to introduce them to the English-speaking public.

POET LORE publishes in each issue, in addition to one American drama and the best poems and essays of the day, a complete English translation of the European drama that is certain to remain in the literary history of the world.

If you want to follow the crowd in recognizing greatness, do not subscribe to POET LORE. But if you want to share in the exhilaration of discovering the giant literary spirits of our age, you will become a regular reader of POET LORE.

It was through POET LORE and its readers that this country first became acquainted with such masters as Maeterlinck, D'Annunzio, Strindberg, Gorki, Schnitzler, Björnson, Hauptmann, Sudermann, Hebbel, and many others like them.

POET LORE publishes the masterpieces of every country under the sun, from Iceland to Japan.

POET LORE is discovering *to-day* the dramatists who are to become world-famous *to-morrow.*

POET LORE has recently been substantially increased and new features have been added to it.

POET LORE is issued bi-monthly and is published at $1.00 a copy, $5.00 a year.

SPECIAL INTRODUCTORY OFFER—To you, as a reader of *The Nation,* we will send *Poet Lore* for four months for $1.00, which will be credited on your subscription if you become a subscriber.

THE POET LORE COMPANY, 194 Boylston Street, BOSTON

HARPER'S EDUCATIONAL BOOKS

SUPPLEMENTARY READERS

Secrets Out-of-Doors

Told and illustrated by WILLIAM HAMILTON GIBSON. Selected from the Books and Pictures of William Hamilton Gibson, for Home and Outdoor Reading, and for Supplementary Use in the 6th, 7th, and 8th Grades. *Ill. 50 cents, School*

Travels in History, by MARK TWAIN. Selected from the Works of Mark Twain by C. N. Kendall, State Superintendent of Education in New Jersey, and Arranged for Home and Supplementary Reading in the 8th Grade. *Illustrated.*

Travels at Home, by MARK TWAIN. Selected from the Works of Mark Twain by Percival Chubb for Home and Supplementary Reading in the 7th Grade. *Illustrated.*

Boy Life

Stories and Readings Selected from the Works of WILLIAM DEAN HOWELLS and Arranged for the 6th Grade by Percival Chubb, Leader of Ethical Culture Society in St. Louis. *Illustrated. Each of the above, 50 cents, School.*

THE CHILDREN'S PLUTARCH

Tales of the Greeks.
Tales of the Romans.

By F. J. GOULD, with an Introduction to each volume by W. D. HOWELLS.

The classic for children of ten to fourteen years. The aim of the books is to open the treasures of Plutarch's Lives and to tell these tales in simple language. Mr. Howells writes: "It is more a pleasure than I can well say to write of these books which Mr. F. J. Gould has made for the children."

Illustrated by WALTER CRANE. 12mo, Cloth, Two volumes, each 50 cents, School. "Greeks," 6th Grade; "Romans," 5th Grade.

Favorites from Fairyland

An approved Selection of the best Fairy Stories arranged for Home and Supplementary Reading in the 3rd and 4th Grades, with an Introduction by Miss ADA VAN STONE HARRIS. *Illustrated by Peter Newell. 12mo. Cloth. 35 cents, School*

TALES OF AMERICAN HISTORY

Strange Story Series

STRANGE STORIES OF COLONIAL DAYS.
STRANGE STORIES OF THE REVOLUTION.
STRANGE STORIES OF 1812.
STRANGE STORIES OF THE CIVIL WAR.
Illustrated. Cloth, each 60 cents. For 6th, 7th, and 8th Grades.

GEOGRAPHIC READERS

By Prof. WILL S. MONROE, State Normal School, Montclair, New Jersey, and Miss ANNA BUCKBEE, State Normal School, California, Pennsylvania.

Our Country and Its People

A simple, graphic story of typical phases of American life in its association with broad, geographical concepts. A presentation new in many respects and founded upon the results of experience and the needs of the newer education.

Europe and Its People

Will serve as a suitable text for the study of the geography of Europe in the 5th and 6th Grades. Follows the plan of "Our Country and Its People." *Illustrated. 12mo. Cloth, each 40 cents, School. For 4th and 5th Grades.*

FOR HIGH SCHOOLS AND PRIVATE SCHOOLS

A New Text Book of Civics

How Americans are Governed in Nation, State, and City

By CRITTENDEN MARRIOTT, author of "Uncle Sam's Business," etc. With an Introduction by Dr. JAMES SULLIVAN, Principal of the Boys' High School, Brooklyn. New edition revised by WILLIAM W. ROGERS.

The plan and methods of American government, national, state, and city, are told with simplicity and interest of style. Topical questions follow the chapters. *Post 8vo, Cloth, $1.00, School*

Uncle Sam's Business

By the same author. *Post 8vo, Cloth, $1.25.*

"The book is to be praised. . . . A clear exposition. . . . Children of a larger growth may also find it illuminating."—*N. Y. Evening Post and N. Y. Nation.*

FOR TEACHERS AND NORMAL SCHOOLS

The Work of the Rural School

By J. D. EGGLESTON, recently Chief of Field Service in Rural Education, U. S. Bureau of Education, and ROBERT W. BRUERE.

Ranked by official experts as the best book on the subject. Three state adoptions in the first few months. *12mo, Cloth, $1.00, School.*

Class Teaching and Management

Practical, Helpful

By WILLIAM ESTABROOK CHANCELLOR

Adopted by the State of Virginia and elsewhere.

"A brilliant book, most valuable for the young teacher, no less so for the experienced one."—WILLIAM McANDREW, *Principal, Washington Irving High School, N. Y. Cloth, $1.00, School.*

Correspondence invited.

HARPER & BROTHERS

IMPORTANT BOOKS

The Rural School
(Its Methods and Management)

By HORACE M. CULTER, *Professor of Rural School Administration, State Normal School, Emporia, Kans.,* and JULIA M. STONE, *Teacher, Model Rural School, Hays, Kans.* 365 pp. $1.10.

A recent book on a subject of vital importance. It is broad-minded, public-spirited, and thoroughly practical. It not only shows what should be done to improve the rural school, it shows how to do it. *Well illustrated.*

Psychology as Applied to Education

By DR. P. M. MAGNUSSON, *State Normal School, St. Cloud, Minn.* 345 pages. Illustrated. $1.50.

An up-to-date, well-poised and practical pronouncement on the application of the principles of pyschology to the work of teaching.

"Laboratory Psychology," "Child Study," "The Montessori Method," "Educational Reorganization," the Boy Scout and Playground Movements are a few of the interesting subjects discussed.

Get the Facts About the War

German Uhlans!
Russian Cossacks!
Zeppelins!
French Aviators!
Belgian Cyclists!

With the bewildering rapidity of a three-ring circus, these various performers are flitting around in the daily news dispatches.

You cannot quite comprehend what their activities mean.

You need a guide-book to set you clear about the war.

The War Gazetteer

Just Issued by The New York Evening Post.

The War Gazetteer is a book of 36 big pages, full of war facts and figures. No editorial views! No expert opinion! Just known, authentic facts on every phase of the war situation. The compilation is brand new. Look over the table of contents—see the range of information.

There is no other book like the War Gazetteer. It is a guide-book, an argument settler, a war geography—the book for which you have been waiting. Read the war news with this reservoir of facts at your beckon, and you will always know the precise war situation.

TABLE OF CONTENTS

1 Chronology.
2 Table of comparative wealth, resources, financial condition, and war expenditures.
3 The armies of the nations.
4 The navies of the nations.
5 The air fleets of the nations.
6 Wireless telegraphy in the war.
7 Defences of coasts and frontiers.
8 The European Alliances; —and how they were formed.
9 Colonial possessions of warring nations.
10 Estimated general cost of the war.
11 Biographical sketches of the kings, counsellors, and leaders.
12 Table of distances in war zone.
13 Text of Anglo-Japanese treaty.
14 Text of President Wilson's Proclamation of Neutrality.
15 Rights of neutrals at sea.
16 Information for American shippers.
17 Chronology of Franco-Prussian war.
18 Large folding map.
19 Six smaller maps.

Winnipeg, Canada, F. R. Morris.

Professor Münsterberg's Important New Text Book

PSYCHOLOGY: General and Applied

By Hugo Münsterberg

Professor of Psychology, Harvard University.

Professor Münsterberg has aimed to make his new text book widely different from all others now in the field. One of the distinctive features is the inclusion of applied psychology, with special reference to education, law, commerce, industry, art, science, and medicine. Moreover, the work contains social psychology, as well as individual psychology.

12mo. Cloth. $1.75 net. Postage extra.

RETAIL SELLING AND STORE MANAGEMENT

By Paul Neystrom, Asst. Prof. of Political Economy, University of Wisconsin.

A valuable work for the retail store manager, or salesperson, taking up in detail the problems of the retail store and the various activities with which salespeople are closely connected.

12mo. Cloth. $1.50 net. Postage extra.

THE FUNDAMENTALS OF PLANT BREEDING

By John M. Coulter, Head of the Department of Botany, University of Chicago.

A popular work written to show how new and desirable plants are developed. It gives the latest information on plant breeding, making it invaluable to farmers, florists, gardeners, teachers, and every one concerned in raising plants of any kind.

Illustrated. $1.50 net. Postage extra.

RURAL CREDIT

By the Hon. Myron T. Herrick, formerly Ambassador to France.

The author has made an exhaustive study of the subject of credit conditions among farmers in this country and abroad and this authoritative account, written without bias, furnishes a clear and comprehensive review of the subject from every possible viewpoint.

12mo. $2.00 net. Postage extra.

READINGS IN THE HISTORY OF THE AMERICAN NATION

By Andrew C. McLaughlin, Professor of History, University of Chicago.

A collection of source material on American History for the use of students and general readers in connection with McLaughlin's History of the American Nation or any other standard American history. Arranged chronologically with many excerpts from contemporary writers.

12mo. $1.50 net. Postage extra.

TEACHING CHILDREN TO READ

By Paul Klapper. Instructor in Education, College of the City of New York. (In Preparation.)

Containing a rich fund of suggestion for the teacher who would develop a literary appreciation in the child as well as train the purely mechanical building of the vocal cords, and vision.

Cyclopedia of American Government

Edited by ALBERT BUSHNELL HART, Professor of the Science of Government, Harvard University, and ANDREW C. McLAUGHLIN, Professor of History, University of Chicago.

Every question you can ask about government in the United States is answered in this great work. The history, principles and practice of the American legal and political systems are covered in minutest detail. The work is arranged alphabetically in cyclopedic fashion, and every article carries numerous cross references to others allied with it. From the earliest times to 1914 everything is here, and so easy to get at that you will find it a real joy to look up and familiarize yourself with all those problems of government which have perplexed you so long. It is as important as a dictionary and should be in every private and public library.

SCRIBNER FALL PUBLICATIONS

The American Natural History

A Foundation of Useful Knowledge of the Higher Animals of North America.

By WILLIAM T. HORNADAY, Sc.D.

Director of the New York Zoölogical Park, author of "Our Vanishing Wild Life," etc.

Entirely reset in Four Crown Octavo Volumes; with 16 full-page illustrations in colors, 67 full-page illustrations from original drawings and photographs, and nearly 300 text illustrations; and with numerous charts and maps.

Since the first edition of this standard work was published, in 1904, the conditions affecting the wild life of North America have changed greatly. In this revised and enlarged edition Dr. Hornaday has embodied all the scientific facts that have been accumulated by specialists in that interval, and these facts he has presented so that their significance will be apparent to the lay reader.

The set, in a box, $7.50 net; postage extra.

On Acting

By BRANDER MATTHEWS

The result of the author's observation is that there is no art the principles of which are so little understood (even by hardened playgoers) as that of acting. And he has tried to declare some of the elements of the art, illustrating by "apt anecdote and unhackneyed stories."

75 cents net; postage extra.

Plays by John Galsworthy

Third Series.

The Mob The Fugitive The Pigeon

$1.35 net; postage extra.

The above plays are published singly at 60 cents net each; postage extra.

The Poems of Edward Sandford Martin

In this complete collection is the varied and charming product of the author's muse in all her moods, grave and arch, serious and tender. No one has a lighter touch gracing more thoughtful substance whether in verse or prose. *$1.50 net.*

FICTION

Gideon's Band

A TALE OF THE MISSISSIPPI

By GEORGE W. CABLE

A voyage up the Mississippi in one of the big river steamers, immortalized from another point of view by Mark Twain; a love story with a heroine who is the embodiment of Southern charm, and the atmosphere of perhaps the most picturesque period of our history.

$1.35 net; postage extra.

The Woman in the Alcove

By JENNETTE LEE

Jennette Lee here maintains the high standard of her literary achievement in a beautiful love story with a unique plot. It is the story of a dull domestic life which became glowingly romantic through a strange revelation of love.

$1.35 net; postage extra.

The Wall Between

By RALPH D. PAINE

A story of high honor upheld through sacrifice and in the face of danger. He has put into this story all the vigor and dash characteristic of all his earlier work.

$1.35 net; postage extra.

The City of Numbered Days

By FRANCIS LYNDE

A story of the ephemeral life of a town founded in the bottom of a prospective lake. A story of tense situations and ingenious denouements.

$1.35 net; postage extra.

The Fleet Goes By

By MARY SYNON

A charming tale of revived patriotism of an American girl who had lost, for a time, her love of country through the ambitions of her Spanish grandmother.

50 cents net; postage extra.

The Stranger's Pew

By THOMAS NELSON PAGE

A story of rare spiritual quality, prompted by a certain unchristian distinction between the rich and the poor; and suggesting in a touching and mystical way a visit of Christ to the earth.

50 cents net; postage extra.

Modern Theology and the Preaching of the Gospel

By WILLIAM ADAMS BROWN, D.D.

Author of "Christian Theology in Outline," "The Essence of Christianity," etc.

In this book Professor Brown shows that modern theology is a good working theology, that it has a gospel vital and potent. *$1.25 net; postage extra.*

The Holy Land of Asia Minor

By Rev. FRANCIS E. CLARK, D.D., LL.D.

President of the United Society of Christian Endeavor

This book is a record of the personal experiences and impressions of Dr. Clark on his visit to the Seven Cities of Asia. He shows that while each of the seven churches had its own individuality, yet the seven epitomized "all churches in all ages." *Illustrated. $1.00 net; postage extra.*

The Beginnings of the Church

By ERNEST F. SCOTT, D.D.

Professor of New Testament Criticism in Queen's Theological College

In this volume, which contains the Ely Lectures delivered last year, Professor Scott combats the idea that "the purpose of Jesus was frustrated at the beginning and that the whole labor of the Christian ages rested on a misconception."

$1.25 net; postage extra.

Criticism

By W. C. BROWNELL

This suggestive essay is a systematic exposition and defence of criticism by one of the foremost American critics. It considers philosophically the field, function, equipment, criterion, and method of criticism in a way that will equally delight readers, authors, and critics.

75 cents net; postage extra.

The Works of Edgar Allan Poe

Pocket Edition in Ten Volumes.

Edited with memoir, introductions, and notes by E. C. STEDMAN and G. E. WOODBERRY.

The set, flexible cloth, $10.00 net; limp leather, $12.50 net. Single vols., flexible cloth, $1.00 net; limp leather, $1.25 net.

REFORMLESEBUCH

Edited, with Notes, Fragen, and Vocabulary, by WILLIAM RALEIGH PRICE, Inspector in Modern Languages, University of the State of New York.

This German reader is constructed largely on the lines of the "reform" or "direct" method of teaching. It is not meant, however, to take the place of a grammar or lesson book, but rather to follow and supplement such a book.

The author has provided the largest possible vocabulary of daily usage in as attractive and interesting a form as possible. He has skilfully pieced together literary extracts, filling in and altering the original material where it seemed advisable; the result is a complete narrative of the lives of two boys from the Vorschule through the University, interspersed with little poems within the sphere of interests of pupils of high-school age.

NEW YORK, THURSDAY, SEPTEMBER 17, 1914.

Summary of the News

The tide of fortune in the war has turned in favor of the Allies during the past week. In the western field of operations the result of the recent fighting was described by Gen. Joffre as "an undeniable victory"; on the eastern frontiers the Russian armies have defeated the Austrians in Galicia. We review the operations in greater detail elsewhere.

There have been many rumors during the past few days of negotiations for peace passing between this country and the various belligerent Powers. Whatever communications may have been exchanged have been of an entirely informal nature, the President, it is understood, having inquired informally of the Kaiser whether his Government desired to discuss terms of peace with the Allies at the present juncture. So far as is known up to the time of writing, no definite reply has been made by the German Government. The attitude of Great Britain is stated to be that the subject will only be considered seriously should definite proposals of peace be presented, and these, it may be assumed, to receive consideration, would have to include, among other provisions, an ample indemnity to Belgium for the violation of her neutrality. The New York *Times* on Sunday published a dispatch from Washington giving a chronology of the negotiations which are said to have taken place.

Meanwhile, the United States, as the most important of the neutral Powers, has been made a sort of clearing house for the disputes of belligerents as to the "atrocities" mutually charged against each other. On September 9 the Kaiser addressed to President Wilson a telegram protesting against the alleged use by the Allies of dum-dum bullets, and stating that his "heart bled" on account of the measures which it had been necessary to take against the Belgian population at Louvain and elsewhere. On September 11 President Poincaré cabled to President Wilson vigorously denying the charge on behalf of France, and on the same day the Belgian commission appointed by King Albert to convey to the United States Government a formal protest, citing charges of atrocities committed by the German army, reached New York.

Other political developments in the international conflict may be summed up in a paragraph. There have been renewed rumors of an agreement of Greece, Bulgaria, and Rumania to act together on the side of the Allies should Turkey enter the war with Germany, and telegrams from Berlin and from London confirm the impression that sentiment in Rumania is strongly in favor of Russia. It has been stated, but not absolutely confirmed, that Japan has informed Russia that she will adhere to the agreement entered into by the other Allies not to conclude peace except with the consent of all. Premier Asquith on September 10 introduced supplementary estimates in the House of Commons asking for a further increase of the British army by 500,000 men, bringing the total of all ranks in the army up to the figure of 1,400,000. A striking example of the extent to which the wounds left by England's last war have been healed was evinced in a speech by Premier Botha in the Assembly of the Union of South Africa, in which he promised the whole-hearted support of the Union to the Imperial Government, at the same time giving out the information that Union territory had been invaded by German forces and that steps were being taken to repel the incursion. It was announced by the British Admiralty on September 12 that the British Pacific fleet had on the previous day occupied Herbertshöhe, the seat of government of the German Bismarck Archipelago and the Solomon Islands. A sharp action preceded the occupation.

The conference report on the Trade Commission bill, which had already been approved by the Senate, was adopted by the House on September 10.

The million-dollar appropriation for extra expenses of the diplomatic and consular services on account of the European war was passed by the Senate on September 9.

President Wilson on September 11 vetoed the bill to raise the limit of individual deposits in postal savings banks to $1,000, on the ground that it contained a provision repealing a section of the new bank law, which provides that Federal funds must be deposited only with members of the Federal Reserve system.

At the conference of the managers of the two houses on the Clayton Anti-Trust bill on Saturday, the House conferrees virtually agreed to accept the Senate amendment relating to the exemption of labor unions from the operation of the Sherman law, and restricting the use of injunctions in labor disputes.

Considerable opposition, to which we allude elsewhere, has developed to the proposed tax of 3 per cent. on freight bills, which was a feature of the new Revenue bill agreed to by the Democratic majority in the House Ways and Means Committee on September 10. Other proposals of the Committee, which appear to be generally approved, are for an additional tax of 50 cents a barrel on beer and of 20 cents a gallon on wines. From these sources it has been estimated that a revenue of $42,000,000 out of the $100,000,000 required would be obtained. The proposal to extend the scope of the income tax to lower incomes than are at present exempt was rejected at the instance of the President. A suggestion which has met with a good deal of approval is that a stamp act, similar to that of 1898, be introduced.

The elections in Maine on Monday resulted in a victory for the Democrats by a narrow margin, Oakley C. Curtis being elected Governor. The Republican ticket was supported by the Progressives who voted for Roosevelt in the election of 1912. There is no change in the representation in the House.

There has been not a little evidence recently that diplomatic loquacity is a fault not confined to the representatives of this country in foreign capitals. His Excellency A. Rustem Bey, the Turkish Ambassador, last week caused a mild sensation by giving out an interview, in which he appeared to contrast the "daily lynchings" in the Southern States and the "water-cures" in the Philippines unfavorably with practices that have been attributed to Turkey. The President is understood to have asked for assurances that these diplomatic indiscretions would not be repeated.

The Red Cross ship, carrying units for service among the various armies in Europe, finally sailed on Sunday. The departure of the vessel had previously been delayed on account of the protest of the British Ambassador at German citizens being included among the crew. The objection was met by the manning of the ship entirely by Americans.

Following an announcement in the House of Commons on Monday that both the House Home Rule bill and the Welsh Disestablishment bill would be put on the statute books this week, Premier Asquith on Tuesday introduced a bill to suspend the operation of the Home Rule act for one year "or for the duration of the war."

That the situation in Mexico is regarded as eminently satisfactory by the Administration is sufficiently indicated by the fact that on Tuesday orders were issued for the withdrawal of American troops from Vera Cruz. Together with the announcement of the order, the statement was given out that "this action was taken because of the entire removal of the circumstances which caused the troops to be sent there first." The American Administration, in accordance with proposals made to Gen. Carranza, will recognize the new Provisional Government, and it is stated that Gen. Carranza will himself be eligible for the Presidency.

No more has been heard since we wrote last week of the participation of Turkey in the war on the side of the Dual Alliance, but the Government of the Porte, evidently considering the present an auspicious moment for the rupture of treaties, on September 10 notified the nations of the world that it had abrogated the series of conventions, treaties, and privileges in accordance with which foreigners in the Ottoman Empire have been exempt from local jurisdiction in civil and criminal cases. Through their Ambassadors, Great Britain, France, Russia, Italy, Germany, and Austria-Hungary have replied to the communications of the Turkish Government, pointing out that as the capitulations which it is proposed to abrogate are a matter of treaty, the abrogation will not be recognized without the consent of all the parties to the treaty. It is understood that the notes of the first four Governments mentioned were identical in terms, while those of Germany and Austria-Hungary were in general agreement as to the principles involved.

The deaths of the week include: Sir John Henniker Heaton, Dr. William L. Dudley, Baron O'Brien, September 8; Dr. H. Seymour Houghton, September 11; James B. Haggin, September 12; Ludwig Englander, ex-Senator Charles M. Felton, Horace Hale Stanton, September 13; Henry Bratnober, September 14.

The Week

The proposed tax on railway freights has been dropped with even more celerity and emphasis than was the previous proposal of an increase in the income tax. In regard to both of these schemes, intelligent opinion had asserted itself so unmistakably that the party leaders could not fail to understand how their adoption would be regarded by the country. The Democratic caucus of the House was unanimous in its action Tuesday night and adopted in lieu of either of these experimental and objectionable plans the scheme of taxation which was resorted to at the time of the Spanish War, and which worked so satisfactorily. Details, of course, may remain to be adjusted, but the broad lines of the measure are fixed upon, and it can be but a matter of days when it will be licked into shape and promptly passed by the House. "All's well that ends well," is the comment that would naturally be made on the whole episode; and it is, to be sure, just cause for praise that a party, or its leaders, should have the good sense to get back promptly on the right track when it is pointed out to them that they have been going astray. But there is another Shakespeare title which is equally pertinent —"Much Ado About Nothing"; for it is a very mystery of perversity that the Democratic leaders in the House should have made those two false starts when the right path lay so plainly before them.

The threat of a Presidential veto of the Rivers and Harbors bill has effectively seconded Mr. Burton's opposition, for it is stated to have obtained agreement to a cut of $20,000,000. This is almost two-fifths of the immediate expenditure of the bill; and if, as is probable, it affects the vague projects for work to be begun but not finished, it should mean a final saving of many millions more. In his assaults last week, Senator Burton complained that "the moment you begin to criticise any item, a storm of protest . . . proves what I have repeatedly said, that it is the objectionable items that have the strongest support." He repeatedly enumerated proposals that had not a shadow of justification, and others on which even army engineers disagreed. Were the bill now reduced to a mere emergency appropriation, designed to keep workmen busy on existent projects, it is not likely that it would carry over $15,000,000—its opponents say $12,500,000. Until some machinery can be devised for scientific administration of waterways improvements in the United States, much could be said for regarding all such measures in this light, and for cutting them to the last cent. Even Argentina long ago learned to govern her internal improvements without waste or graft; and it is not for want of feasible plans that we have not done the same.

The shape in which Senators Shively, McCumber, and Hitchcock, a sub-committee on foreign affairs, have reported the Nicaragua treaty—the shape in which it will pass if it passes at all—must give cold comfort to dollar diplomacy. We buy the rights to the canal site and to some coaling stations for $3,000,000; but that is all. Every application of the Platt amendment, and of clauses by which Secretary Bryan would have assumed a bolder control than Platt or Knox ever thought of, is eliminated. We should be the more pleased at this refusal to stultify President Wilson's stand of a year ago, because it has been made after Mr. Bryan's personal defence of his treaty before the Foreign Relations Committee. There is no doubt of the financial weakness of the little republic, and $3,000,000 will afford only a temporary relief against obligations exceeding $20,000,000. But we should find some other way of reconstituting tranquillity and prosperity in Nicaragua than by impairing, through negotiations with a Government doubtfully supported by Nicaraguan public opinion, her liberties.

The fighting in Nyassaland and Belgian Congo, the British occupation of Togoland and Apia, with Premier Botha's announcement of an expedition against the Germans of Southwest Africa, are proof that the war for outlying possessions is not to be fought solely in Europe. The instinctive desire of legionaries to wreak their national resentment upon each other may account for some of these engagements; but there is a possibility of deeper designs. In drawing up peace treaties, the possession of a distant territory has frequently been the deciding factor in arranging its future sovereignty. We are familiar with the part that George Rogers Clark's forcible annexation of "the county of Illinois" to Virginia in 1778 played in giving America a claim to the vast prairie country east of the Mississippi. The Seven Years' War was fought in Europe, but it was minor overseas operations which gave England her claim to Canada, India, and Florida, and almost made her mistress of Cuba. If by an unfortunate deadlock the present should be a drawn struggle, the issue of the fighting in Africa might decide certain of the peace clauses. Again, Germany has given ground for belief that, if her victory at home were decisive, she would remake the colonial map, regardless of what had happened outside Europe. But the Allies, who are not now hungry for more possessions, would on the other hand be far less likely to expand in Africa if boundary lines had remained intact during the war than if temporary possession had given them an appetite.

In testifying before the Royal Commission on the Civil Service, which has been sitting in London, Mr. Francis W. Hirst, editor of the London *Economist*, on July 11 made the suggestion that the British Foreign Office should take cognizance of the efforts of belligerent nations to carry on their wars by the help of loans raised in England. He referred to a recent well-known case of two great countries "having gone to war and having financed themselves" by the help of loans raised in Paris and in London, and insisted that the Foreign Office, in the event of such a happening, should say to applicants for financial aid: "England must be neutral, and therefore we must not supply either belligerent with the sinews of war." Just what Mr. Hirst suggested would be the proper policy for the Foreign Office to adopt, Mr. Wilson has done in his expression to J. P. Morgan & Co. of the undesirability of a French loan being placed in this country. The more we consider this, the more we think it a statesmanlike and far-seeing act, with far-reaching consequences for the world's peace. Incidentally, we hear rumors of an effort being made by German bankers to float privately in this country an issue of bonds for the German Government, the idea being that it could be done without publicity and the money obtained by private subscription. We should be very sorry indeed to see anything of the kind undertaken; it would only increase prejudice against Germany.

The most magnificent feat of arms as yet recorded in the European theatre of war is not the German capture of Namur, or the Russian triumph at Lemberg, or the splendid retreat of the Allies from Belgium, or the shattering of the German offensive on the Marne, but the total annihilation by the official British press bureau of an entire Russian army which came from Archangel to Ostend by way of every British port that readily occurred to the imagination. Anywhere from 70,000 to 300,000 Russians, all of them six feet tall and more, have thus been swept out of existence. Though their fate is

now known, there is still a vast curiosity as to the manner in which the Russian army was brought from the Arctic to the Belgian coast. On this point the *Nation* congratulates itself on being in a position to give to the world a special, uncensored, wireless dispatch from Thrums, Scotland, by way of Drumtochty and Liliput:

> September 14: Jean MacGregor, whose family has lived in this place for more than 200 years, and whose reputation for veracity is unquestioned, was overheard to remark to her friend Maggie Campbell this morning that on going to the railway station for the purpose of buying a ticket to Glasgow, she was halted by a sentry and told that no trains were running to Glasgow.
>
> "And how is that?" said Miss Campbell.
>
> "Rushin' troops to Belgium," said Miss MacGregor, nodding significantly.

Thus one of the greatest strategic achievements of the war stands explained.

The dispatches are vague as to whether Turkey has raised her tariff 100 per cent., or to 100 per cent.; but while we hope that the latter is the case, Senators Smoot and Penrose must regard either action as a mighty victory. If only Americans were as enlightened as the grave Turk! Dr. Cyrus Hamlin, founder of Robert College, must have turned in his grave with joy at this moral strengthening of protectionist sentiment. A few years ago he published a heated appeal "for the maintenance of the protective system in the United States because he had witnessed the prostration of Turkish industries by the introduction of the manufactured wares of Europe." He was unfortunately hushed up by the Republicans. Most of them were maintaining that the justification of American protection was to keep our high-paid laborers from ruinous competition with the "pauper labor" of Europe; and they could not reconcile this with Dr. Hamlin's argument that the worse-than-pauper labor of Turkey needed tariff protection against the prosperous workman of Germany and England. It came too near supporting the Democratic contention that the countries of high wages are the countries of cheap production. But the standpatters are more adept than ever in glossing over inconsistencies, and it will not be surprising if 1915 sees the Stamboul workman pointed out as an inspiration to the American masses.

It is announced that the centenary of the signing of the Treaty of Ghent will be celebrated on Christmas Eve, just as if nothing had happened since the beginning of the arrangements for that event. The centenary cannot be expected to attract the attention that was hoped for it at first. In the meantime the whole of Europe has been giving an object-lesson of the horror of war beside which the proceedings of the most skilfully planned celebration must seem tame. And yet this very cataclysm will impart a timeliness to the Ghent centenary that it could not otherwise have had. What more contrasting background could be imagined for a celebration of a century of unbroken peace between two nations that had fought two wars than the smoke and flame of the greatest war that has been waged since those two nations laid aside the sword? Napoleonic memories are inextricably intertwined with the memory of our own war of 1812, and thus the celebration of the Treaty of Ghent would, under happier circumstances, have been a celebration also of a century throughout which even Old World wars have been "localized." The sudden shift in affairs that has negatived that possibility will add force to the honoring of the peace principle and policy.

A melancholy interest will attach to President Wilson's signing of the bill prohibiting the use of dwelling houses in Washington alleys four years from now. This was the matter which troubled Mrs. Wilson's last hours more than her own condition, until the District Committee of the House, learning of her desire, reported a bill carrying an appropriation for the purpose of wiping out the alley slums. This is not the bill finally passed, as doubts of its constitutionality led the Senate to substitute a bill putting into effect the provisions of an old act framed for the same purpose, except that it allowed the objectionable dwellings eight years longer instead of four. The method by which Mrs. Wilson's wishes were finally made effective—that is, by the reviving of a law already on the statute-books—makes it hard to think of the action of House and Senate as merely sentimental. But it also shows the value of the part she played in the result. Whatever the history of the old law, there was evidently too little interest in it or too great opposition to it to permit of its enforcement. What greater or more appropriate lesson could an occupant of the White House leave than the lesson that laws are made to be carried out?

South Carolina last week made her repudiation of Blease complete at the second Democratic primary by nominating for the three State offices of Governor, Lieutenant-Governor, and Railroad Commissioner the anti-Blease candidates. The majority for each of them was about 30,000 in a total vote of 115,000. At the first primary a few weeks ago, Senator Smith received a majority over his three opponents, including Blease. No one, however, had a majority for the State offices, and hence a second primary was necessary for the two leading candidates for each of these. The result was not regarded as doubtful, but the completeness of the victory is gratifying outside of South Carolina as well as within it. The anti-Blease candidates carried all the counties of the State except two. At the same time, the Assistant Attorney-General of the State, who was formerly Blease's law partner, was defeated for Congress by the present Representative from the district. The fight against the political bosses in this country was long and often discouraging, but the demagogues do not seem to have so tenacious a hold—which is the exact opposite of what many students of democracy would have predicted.

Roger Sullivan's smashing victory in the Illinois Democratic primaries is not much of a surprise except for the size of his plurality. It is, of course, an extremely unfortunate choice, especially when we remember that his Democratic colleague in the Senate, if he wins in November, will be that picturesque rather than statesmanlike figure, James Hamilton Lewis. This is a fine pair of Senators for the Democracy of Illinois to send to Washington! Yet it is easily possible to overrate the significance of Sullivan's triumph. The contest was not a straight-out fight between bossism and decency. On the contrary, the issue was confused by the activity of the unspeakable Hearst-Harrison alliance. Forced to choose between an admitted politician of the old type and a candidate who, whatever his personal qualities, had the support of the most sinister political combination in Chicago, the voters elected to risk the lesser evil. Nor was this negative argument the only one in Sullivan's favor. His declaration, "I heartily endorse every public act of President Wilson," repeated in every section of the State, undoubtedly made its impression upon persons who have not forgotten that Sullivan threw his strength to Wilson at Baltimore at a critical moment. In this view, the result is an endorsement of Wilson. Nevertheless, it is unfortunate that this nomination means the probable addition of one more to the list of unworthy men who have ridden into power on the rear seats of the President's wagon.

Had the world been at peace, the centre of interest for Americans during the past week would have been at Baltimore, which has been giving itself to a brilliant and appropriate celebration of the centennial of the Star Spangled Banner. To Baltimoreans the twelfth of September has always been a day to celebrate, as the anniversary of the battle of North Point; a Lilliputian fight when we think of the gigantic struggle now going on across the Atlantic, but one to the making of which went the same qualities of heroism and patriotic devotion which are being shown by the vast hosts that are today contending for victory. It is not many years since the passing away of the last of the "Old Defenders" whose annual parade, though with ever thinning ranks, was, for perhaps three-quarters of a century, the leading feature of Baltimore's Twelfth of September. For the country at large the memory of this little battle had no special appeal; but the defence of Baltimore has left its permanent trace in the stirring song which it inspired one of her sons to write in the heat of the moment, and which, at the end of a hundred years, continues to hold its undisputed place as the national anthem. It is to Francis Scott Key's song, and not the fighting at North Point or Fort McHenry, that Baltimore has been doing the homage of its celebration; and on last Monday, the song was sung by millions of school children in the public schools throughout the country.

The announcement of the closing of the George Junior Republic will be received with general regret. Ever since its founding fifteen years ago, it has appealed not only to those interested in methods of reforming juvenile delinquents, but to the imagination of the whole country and even of foreign nations. It is not too much to say that the Republic has been one of our few show-places. As the result of good management it has led to the starting of similar institutions throughout the country. It seems strange that after such a career it should now suffer a lack of funds so serious as to make its closing necessary; and, indeed, no such event appears to be demanded by the situation so far as it is revealed by the statement that there is a deficit of $17,000 in the current receipts. This sum, which is a third of the amount required to run the Republic for one year, would normally be too small to trouble the trustees of such an institution. The recent investigation of the personal conduct of its founder, together with the unsatisfactory character of the report following, has cast a cloud upon the Republic which doubtless interfered with the raising of money for it, but the work undertaken at Freeville is too important to be dropped.

For a confounder of prophecy, commend us to Gen. Villa. His rapid and steady emergence from the reputation of being the worst of cutthroats and robbers into that of a shrewd, sagacious, and patriotic leader, as well as a military captain of remarkable ability, is one of the most extraordinary phenomena we can recall in the history of any public figure. A year ago, if anybody had said that the people of this country, deluged and sickened with the horrors of a war engulfing the whole civilization of Europe, would be able to find in the doings of "Pancho" Villa a bit of real comfort and solace amid the general gloom, he would have been regarded as the silliest of jokers. Yet that is precisely what has occurred. Those who have not forgotten everything that happened before July 31, 1914, will remember that in the most critical period of the American occupation of Vera Cruz, and of the negotiations which finally resulted in the retirement of Huerta, Villa was a great stand-by of the United States through his influence on the Mexicans generally and on Carranza in particular; and, in spite of occasional items of news pointing towards possible trouble, it seems clear that his conduct ever since has been that of a loyal citizen and a friend of peace and orderly government. To crown all, we have now a statement of the plan he proposes for the institution of a permanent Constitutional government in Mexico; and, besides being of a perfectly reasonable character throughout, it includes the provision that "no military man be a candidate for President or Vice-President, or Governor of any State."

Premier Asquith's announcement that the Home Rule bill will at once be put on the statute books was expected, but it nevertheless guarantees a stroke of moral, political, and strategical value. A cautious step defers its operation for a year, but heated opposition is very unlikely to be revived; the war has already fulfilled Fox's hope, that one day the garrison of Ireland would be the Irish people themselves. Germany could scarcely deny that her belief in England's disablement by the Irish troubles played an important part in her war calculations; and the truce of parties has ended the whole legend of a portentous Ulster disaffection. Last week Sir Edward Carson was urging his "Ulster Volunteers" to enlist *en masse* in Lord Kitchener's second army. Orangeman and Irishman are so welded into one by external menace that many are eager thus to proclaim the end of internal differences. And another significance of the bill's passage is pointed out by the London *Nation*, which regards it as marking the ebb-tide of the imperialistic ideas which came to their farthest point at the time of the Boer War. Rhodes's issue of scholarships to German students, Hobhouse's "Democracy and Reaction," above all Balfour's speech against South African self-government, were in a measure expressions of the infection of the philosophy that dominates the thought and the policy of Germany. English Liberalism can with some justice regard the final extension of self-government to Ireland as an evidence to the world of the spirit in which her democracy has entered upon the conflict.

Those who feared that the discovery of the Poles would remove important fields of daring and adventure will be reassured by the stories now coming in from the Stefansson Arctic expedition. The fate of the leader is not known, as he was in one of the several parties into which the expedition was divided, and of which only one, that aboard the ill-fated Karluk, has been accounted for. The financial responsibility for the expedition was assumed by the Canadian Government early in 1913. Stefansson's intention was not to make a "dash" for any point, but to spend three or four years in studying the archæology and the ethnology of the Eskimos, together with the zoölogy and geology of the region between Alaska and Coronation Gulf, which is on the American mainland near to one of the two main bases established by the expedition. He also proposed to map unexplored coasts, and to look out for new land in that part of the Arctic. All this was prepared for with that thoroughness that we expect in a modern exploring undertaking. The expedition included a scientific staff of eleven men. The Karluk sailed in June of last year, with provision for three years, but, after being caught in the ice and set free several times, drifted out of sight in September, when Stefansson himself, thinking the vessel fast for the winter, was ashore. Nothing was heard of her until June of this year, when the report of her loss in January reached here. The rescue of part of her company is the result of the dispatching of the revenue cutter Bear on the receipt of the news of the disaster.

TIES THAT WILL BIND.

Professors of the leading German universities have declared their intention to renounce all distinctions bestowed upon them by British universities or learned societies on account of Great Britain's attitude in the war.

A dispatch from London a few days ago gave the above as part of an official statement sent out from Berlin, and received by the Marconi Wireless Telegraph Company. On the same day, a dispatch was reccived stating that Professor Roentgen, upon whom, in recognition of his epoch-making discovery, the Royal Society had bestowed the gold medal which conveys its highest distinction, had given the medal to be melted for the Red Cross, and had declared that he no longer wished to retain it, in view of England's course in the present conflict.

To pass over the significance of these reports, even if the attitude there disclosed is less general than they indicate, would be to cherish a foolish optimism. Nor would it be any wiser to indulge in criticism or reproach, or to enter into the question of the actual merits of the judgment pronounced, at this time of trial and of passion, by the men of learning and genius who have thus manifested their feelings towards the nation with which their own is now engaged in a deadly grapple. The plain fact is that nearly all Germans feel that England has thrown her sword into the scale against them without just cause; and they resent her conduct with a bitterness far beyond any which they may feel towards either France or Russia, whose alignment in the struggle had been a foreordained certainty. From this feeling, sweeping over the whole nation, its intellectual leaders are, with probably a few exceptions, no more exempt than the plainest citizen; and it is safe to say that the same phenomenon would be witnessed, under the same circumstances, in any nation under the sun. So far, then, from either disputing the seriousness of this exhibition of national animosity or pointing the finger of scorn at those taking part in it, one must recognize in it a fact deplorable, indeed, but inevitable; so clearly inevitable that surely there must be many who have been looking forward to that phase of the evils brought on by the war as one of the most painful to contemplate.

It must be acknowledged, then, that one of the consequences of the war, for a shorter or longer term of years, will necessarily be a sad breaking of that tie of common aspirations, common interests, and common endeavors which unites the men of science and the men of letters, of all nations, into something like a real and inspiring union of heart as well as of mind. Particularly poignant must be the regret that attaches to this thought in the case of Germany and England. Of kindred speech, and in many ways of kindred traditions and ideals, there have been, in the case of these two great nations, over and above those relations which occur as a matter of course in the intellectual world, some examples of mutual appreciation and of reciprocal benefit which shine with a special lustre, and have been peculiarly precious to both peoples. The German reverence for Shakespeare, and the maintenance of the Shakespeare tradition upon the German stage, have been of incalculable value to England as well as to Germany. The influence of Goethe upon Carlyle, and through Carlyle upon two generations of Englishmen, is something rare in literary history; and the name of Coleridge is sufficient to suggest the part that has been played by German thought in the shaping of English literature. To mention but one other instance, it was in Germany that the most illustrious of the English scientists of the nineteenth century made his first general conquest in the scientific world; for the teachings of Darwin had been accepted at their full value by the leading German scientists at a time when in England Huxley was still fighting an uphill fight for recognition.

But it is one thing to look forward to a temporary break in a noble tradition, and quite another to think of it as final or lasting. That this will prove to be the case, we do not for a moment believe. The tie that binds together the noble spirits and lofty intellects of the world is too strong to be snapped for good and all by the doings of a time of strife and bitterness, even so terrible as that through which we are now passing. And more than that is true. For it is not only the intellectual leaders, but the rank and file, too, that are united by bonds of the intellect which know no national boundaries. The devoted labors of the searchers for scientific truth, the idealistic efforts of men of letters, the obligation of gratitude which these labors and efforts impose upon all who love the true and the beautiful—these are agencies that will work constantly towards the wiping out of bitter memories, the obliteration of resentment and hate. Time is on the side of the children of light, and they will conquer in the end. The loss that would be involved merely in an abandonment of the German feeling about Shakespeare would in itself be tremendous, incalculable; but it will not take place. Even at the outbreak of hostilities, there came from some of the foremost men of letters and science in England a protest against the war, inspiring above all by a feeling of the awful sacrifice involved in breaking the ties that bound to each other the German and the English intellectual world. We may rest assured that, whatever the feeling of the moment, that feeling still exists, deep down in the hearts of the scholars and scientists and literary men of both countries. And the time will come when that feeling will not only reassert itself in their relations with each other, but will be one of the powerful agencies towards the re-establishment of a humane and friendly sen timent between the peoples of the two countries, as a whole.

TURKEY AND THE CAPITULATIONS.

It is not necessary to read any warlike meaning into Turkey's formal announcement to the Powers that she has abrogated the entire system of agreements, or "capitulations," by which the exceptional status of foreigners in the Ottoman Empire is regulated. The move is simply an attempt to strike the iron while it is hot. Out of the great European conflict, no matter in which direction victory inclines, a new European order is bound to emerge, and the Porte has evidently determined to enter the great Congress which will fix the new order on the Continent with the advantage of a *fait accompli*. Whichever side wins, Turkey's assertion of independence in her internal affairs is seemingly bound to receive a respectful hearing. If the Kaiser dictates terms, Constantinople's claims are bound to be received with sympathy because of the existing close ties with Berlin. If the Allies have the upper hand, they cannot so belie the principle of nationality for which Great Britain and Russia are now engaged in war as to reject Turkey's plea for consideration. That the moment is opportune for an assertion of Ottoman rights is evident. The Powers are too much absorbed elsewhere. Though the Allies have formally protested against Turkey's action, we must assume that for the time being they will be contented with that.

The privileges of exterritoriality are a handicap and a stigma under which a nation rising to self-sufficiency naturally chafes. The most notable example is that of Japan. In the carly ninetics, Japanese public opinion demanded the abrogation of existing treaties under which foreign Powers exercised consular jurisdiction over their sub-

jects. It was held that by the establishment of parliamentary institutions Japan had definitely taken rank as a modern nation, and that the Japanese Government was in a position to guarantee protection and equal treatment to foreigners. The war with China brought a postponement of negotiations, but the decisive victory of Japan only strengthened her case. In 1899 the new treaties with the foreign Powers came into force, but not until the Japanese Government had given guarantees through the enactment of a new code of civil rights, and new laws in regulation of commerce and patent rights. It is noteworthy that in China there was for many years a similar agitation in favor of the abolition of the special status of foreigners. With the establishment of the Chinese Republic the question of abrogating the system of exterritoriality came up anew. The arguments brought forward at Peking were substantially the same as those ably formulated by the Turkish Ambassador at Washington. The existence of special rights for foreigners is more than a reflection upon the status of a nation: it is a positive hindrance to the establishment of that modern system of law and order upon the absence of which the capitulations are premised.

Unlike Japan, the Porte does not announce its emancipation from foreign tutelage on the morrow of a successful war. But the present war is Turkey's opportunity. Were Europe now at peace the situation in the Near East would be such as scarcely to win a hearing for Turkish demands. With the Balkans in a state of unstable equilibrium, with outstanding questions between Turkey on the one side and Greece and Italy on the other, with parties within the Empire contending for mastery, the Powers would hardly be inclined to agree that conditions in the Ottoman Empire were such as to guarantee security to foreigners. But, as we have said, the Powers have neither the leisure nor the desire to take up the Ottoman challenge at the present moment; unless it be our own Government, which has broad interests at stake. Yet even at Washington the feeling must be present that to make an issue with Turkey to-day would bring us nearer to the European maelstrom which it is so earnestly the desire of the Administration to avoid. At the same time the Porte can make out a plausible case for itself. Like Japan, it has instituted a parliamentary system of government and a Constitution under which racial and religious equality is guaranteed. This provision, Constantinople will argue, removes the need for the special treaties under which American missionaries, for example, at present carry on their work.

Yet there is one important consideration which militates against Turkey's assertions of full equality among the nations. She may abrogate the treaties under which exterritorial jurisdiction is exercised by foreign Powers, but she cannot do away with the great fact that her finances are under international control, and must so remain. And as long as the power of the purse is exercised abroad, the Powers must have a voice in the management of internal affairs in the Ottoman Empire. It is an argument which may work both ways. On the one hand, the Powers may hold that a nation which remains under financial guardianship can hardly be called self-sufficient. On the other hand, the Powers may feel that the hold which they exercise through the control of Turkey's finances gives them a sufficient basis for exercising necessary pressure without bothering about the question of exterritoriality.

THE RAILWAYS' APPEAL.

The appeal of the six railway heads to President Wilson last week did not, as expected, turn out to be only a direct request for higher rates; it was also a plea for an era of good feeling and coöperation towards the railways during this grave national emergency. The rail carriers, they stated, had been hard hit during the past fiscal year, for which their gross earnings were $44,000,000 less than during the preceding twelve months, while expenses and taxes went up $76,000,000, leaving a drop in net income of $120,000,000. On top of that comes the present crisis, unequalled in the world's history, and in its face these spokesmen of the railways ask that, whatever the past wrongs may have been, that past be now forgotten, and that railway credit be upheld by coöperative and sympathetic support of the public and of all governmental authorities. They also urge that governmental authorities, State and national, refrain from putting further burdens on the roads at this time, and that additional revenues be supplied whenever possible.

With the general spirit of this we find ourselves in sympathy. It is a pleasant change from past methods to have the railway heads going openly to the White House to state their troubles, and thus to lay them before the public. When the Administration is lying awake o' nights to come to the rescue of our ocean-carrying trade, it is but just that it should leave no stone unturned to aid the railways over this acute emergency. It is also no time for further regulative legislation by individual States, unless it should be in the direction of a temporary easing of burdens. But when all is said and done, there remains the fact, which the railways should not forget, that they are in no especial class by themselves in the matter of curtailment of income. Practically every form of industry is suffering similarly, and many important lines are unable to turn to the White House for sympathy, counsel, and aid. Even governmental entities like the city of New York are suffering seriously. Its bonds are recognized as one of the three or four best investments in the world; but to replace its $80,000,000 of short-term notes now maturing it has had to call in the aid of the leading American bankers and to go as high as 6 per cent. in order to refund these notes, which it has heretofore obtained at 4¼ per cent. The railways have obligations aggregating $563,156,800 maturing prior to December 31, 1915, to meet, 25 millions in this month, October, and November. That they will find themselves compelled to pay more for money, and that money will be timid, is to be expected. That is a great hardship; yet it is light compared with the lot of those bankers and brokers whose business has been absolutely stopped by the cessation of all exchange trading.

Now that the railways have thus made their appeal for sympathy and support, we look to them for vigorous and effective action along the line of reforms suggested by the Interstate Commerce Commission—reforms all the more desirable now that the situation has become so much worse. Readjustment of terminal charges and reduction of expenses, increases of passenger fares in coöperation with State Commissions, as they have been recently increased in New England, the elimination of free travel—aggregating in 1913 the equivalent of $18,520,000—the increasing of freight-car efficiency, the expedition of freight traffic, the laying before the Commissions of rates clearly unremunerative, etc. It is a great administrative opportunity which presents itself to our railway executives, and it is not lessened by the fact that such new methods and retrenchments as they must seek are compelled by the spur of a great necessity. We have prided ourselves upon being not only the most practical of nations, but the most adaptable and ingenious. Never was there a clearer call to public service than the emergency offers to our railways.

For ourselves, despite the gravity of the

situation; we can neither regard it as hopeless nor as certain to bring about that collapse of the whole system which some pessimists foresee. That dividends may have to be sharply cut we do not deny. But the ocean-carrying trade is rapidly recovering; there are magnificent domestic crops to be moved and an enormous volume of trade within our own area is sure to go on. Certain lines of travel may even benefit by the suspension of tourist traffic to Europe. It is a passing phenomenon we are witnessing, however awe-inspiring; and it may be of shorter duration than had been expected, in view of the unexpected Russian successes. Public sympathy we believe the railways can count upon. As for the larger and longer outlook, we would recall to them the fine spirit of hopefulness which was thus voiced by the Interstate Commerce Commission in its 5 per cent. rate decision:

> We may justly feel proud of the development of our transportation system. Despite occasional discreditable chapters, the history of our railroads has been marked by great achievements. There is among the carriers a growing spirit of coöperation with the Commission in its efforts to enforce the law. With the application of correct and helpful accounting, the establishment of sound business methods, and a better understanding by both carriers and the public of their mutual obligations, to which we believe this investigation has contributed, the future is full of promise. We see no reason why our American railroads should not enjoy a large measure of prosperity consistently with just and reasonable rates.

MAINE HEARD FROM.

With returns virtually complete, the Maine election makes a showing in which some things stand out very plainly; although it must be remarked, first of all, that in the September election of two years ago, with which comparisons would naturally be made, there was a fusion between the Republicans and the Progressives, so that in measuring the gain or loss of the three parties we have to take the Presidential election figures of November, 1912, as a basis to begin with. The story told by this comparison is one that plays havoc with the assertion of the Progressives that they are a solid and genuine party, and not a mere band of followers of a personal leader, rallied to the polls in a wave of hysterical enthusiasm. In 1912, Maine gave Roosevelt more than 48,000 votes; on Monday, the Progressive candidate for Governor got less than 18,000. In other words, the party's vote for Governor was one-third of what its vote for President had been two years ago. And this took place not in any degree because of a smaller total vote; on the contrary, the total vote for Governor was bigger by about 12,000—or nearly 10 per cent.—than the total vote for President two years ago. In round numbers, the Progressive vote shows a loss of 30,000, the Republican vote a gain of 32,000, and the Democratic vote a gain of 11,000.

These mere figures of a single State election, even one usually regarded as so significant as that of Maine, would, of course, in themselves form a slender basis for a broad political judgment. But there are two things which must be remembered in connection with it. One is that this election was not a perfunctory affair—a fact attested not only by the large size of the vote, but also by the character of the campaign. Of this it was stated in the dispatches that "more speakers of national prominence" took part in it than were "ever before sent into Maine in an off year." Col. Roosevelt himself went there to arouse the faithful; on the Democratic side, two members of the Cabinet, Messrs. Redfield and Daniels, took part; while the array of Republican speakers included, besides ex-Vice-President Fairbanks, such strong men as Borah, Weeks, and McCall. And secondly, this is no case of one swallow not making a summer. The cutting down of the Progressive vote in Maine to one-third of what it was at the Presidential election is but in keeping with indications that have been steadily coming in, month after month, from all parts of the country, especially in the shape of the insignificant numbers appearing in the party enrolments. What has been witnessed in Maine is what there is every reason to believe will be seen in practically every State at the coming November elections. If the Progressive party is to make any showing of power in 1916, it will have to be through a repetition of the revivalist enthusiasm which swept over the country when Roosevelt raised his banner in 1912; and the improbability of that, as a psychological phenomenon, is evident enough.

Of even greater interest than the bearing on Progressive prospects is the question of what the Maine election reveals concerning the drift of public opinion regarding the Democratic party. But upon this it would of course be rash to set much store, unless the showing happened to be extremely pronounced. No such character can be assigned to the Maine figures; yet it is not too much to say that they point emphatically away from any notion that the country is under the sway of a reaction such as is so often manifested against the party in power, in the middle of the Presidential term. To begin with, the Democrats have retained the one seat which they got in the House at the election of 1912; which, though it might be explained by the fact that the Progressives and Republicans were not this year united on their Congressional ticket, as they were in 1912, is good as far as it goes. But the figures on the Governorship likewise show no sign of disaffection towards the Democrats, such as would naturally go with a general reaction. Compared with the vote on the Presidency, the Democratic vote for Governor, as has already been stated, shows a gain of 11,000, while the combined vote of Republicans and Progressives shows a gain of only 1,000. This, however, presents a more favorable picture of the Democrats' showing than is justified by the facts. We have to put alongside it a comparison with the Governorship vote in September, 1912. In that election, the Republicans (with whom the Progressives had fused) polled 68,000 votes; on Monday, the Republican and Progressive votes combined amounted to 76,000, a gain of 8,000; while the Democratic figures were 71,000 in 1912 and 62,000 on Monday, a loss of 9,000. This second comparison, however, is as unfair to the Democrats in one way as the first was unfair to the Republicans in another; and on the whole the conclusion must be that the Democrats have about held their own in Maine, in the two years that have passed since the Presidential election.

Taken all in all, so far as it affords ground for a forecast of the Congressional elections of next November, the Maine election indicates that the Progressive vote will be small, but yet large enough to enable the Democrats to carry by plurality vote a considerable number of constituencies in which, if the Republicans and Progressives were united, they would be victorious. Upon this circumstance rests the prospect of the Democratic party continuing to control the House by a comfortable majority. Some reaction against them will unquestionably appear. It would be a miracle if this were otherwise; for, however creditable has been the record of Congress as a whole, and however general the respect and admiration which President Wilson has won among men of all parties, the tariff legislation has at various points made enemies, and the business depression, quite regardless of all thought as to its causes, weighs inevitably against the party in control of the Government.

Chronicle of the War

The accounts from Berlin and from London and Paris of the operations in northern France during the past week have shown the usual discrepancy, but the respective positions of the armies alone are sufficient to show that the Germans have sustained very serious reverses. So serious have they been that, despite a praiseworthy attempt on the part of the French and British press not to exaggerate the importance of them, there is apparent an inclination to assume that the severest ordeal of the war is over and that all that remains to be done is a work of completion of that which has already been well begun. It may be that the back of the German offensive has been broken, but it is well to point out that, before the end of the war is even in sight, if it shall be fought to a finish, the back of the German defensive must also be broken.

What we said two weeks ago, when the armies of the Allies were retreating rapidly across France, is equally true of the German forces to-day; it is not sufficient merely to drive an enemy before one; what decides a war is a Metz or a Sedan—the capture of large bodies of the enemy's troops. So far, except for entirely natural reports from London and Paris concerning the demoralization of the enemy, there has been nothing to show that the German genius for keeping large forces in touch with one another has been seriously impaired. The line, as we write, is threatened, just as the Allies' line was threatened two weeks ago, but it is still intact. Nor is it conceivable that German discipline will fail to steady the retiring troops to offer formidable resistance at a selected line of defence—the River Aisne, possibly, where a stand is being made as we write, or again further back on the strong positions along the frontier.

On the other hand, it must be conceded to the advantage of the Allies that to turn from a defensive to an offensive position is a much more inspiring matter than the change from an aggressive pursuit to a rapid retreat. Moreover, whereas the Allies in their retreat were spared anxiety concerning their communications, the Germans have long and difficult lines to guard, a task rendered all the more severe by the presence of the Belgian army, and probably of other troops, at Antwerp, necessitating the retention of large forces in Belgium which can ill be spared from the main line. To keep open the lines of communication running by way of Liège and Namur is essential for the safety of the armies of Gen. von Kluck and Gen. von Bülow. The Allies, too, now have the advantage of numbers. Even if the Germans have sent no more than the one army corps which was withdrawn from Belgium back to East Prussia, reinforcements which are sorely needed in the West must have been diverted to the eastern frontier. A rough estimate of numbers would probably give the Allies at least 1,500,000 men to the Germans' 1,000,000.

Before considering the battle of the Marne, which, as we now know, commenced on September 5, and may be said to have lasted for a week, we may notice the strategy of Gen. Joffre which appears to have made possible the sudden reversal of fortune in favor of the Allies. It may be granted at the outset that, as we have pointed out previously, the French adventure into Alsace in the first week of the war was a blunder, dictated by political and sentimental rather than by military reasons. The troops employed in that adventure were sorely needed on the Belgian frontier and, as we all know, they were withdrawn from Alsace. We never heard, however, of these or of the other reinforcements summoned arriving on the main line of battle, and it now becomes apparent that Gen. Joffre took a bold chance which has been justified by success. Reading between the lines of Field Marshal French's report on the operations during the retreat, published on September 9, we discover that the British army defending the left wing of the Allies was not adequately supported by the French troops. The fact seems to have been that Gen. Joffre, instead of sending the troops made available by the evacuation of Alsace and the other levies to the support of the sorely harassed left wing, where they might have arrived too late to be of assistance and simply have been compelled to join in the general retreat, took the chance of the wing holding by its own efforts and dispatched the reinforcements to await the army at Paris. Thus at the critical moment, when the Germans rushing forward had penetrated as far south as Coulommiers, a new French army was hurled against their right flank. The army of Gen. von Kluck only extricated itself from envelopment by a hurried change of direction eastward. and the French and British troops received the necessary respite to enable them to recuperate and to adopt the offensive.

The Allies' line at the beginning of what will probably be known to history as the Battle of the Marne was, as we said last week, Meaux, Sézanne, Vitry-le-François, Verdun, Nancy. The general advance commenced on September 7, and on that day the right wing of the German army, in danger of being outflanked, began to retreat in a northeasterly direction. The retreat was continued on the following day, and on September 9 the British troops on the left crossed the Marne, followed on the next day by the French force on their right at Chateau-Thierry and Dormans. The danger throughout for the Allies was at the centre, at Vitry-le-François, where determined efforts were made by the Germans to pierce the line. On Septembr 11, however, the French War Office was able to announce that the German centre west of this point was retreating, and on the following day it was stated that the whole front was in retreat. Amiens was evacuated on September 13, and the German left was reported to be falling back between Soissons and Rheims, while on the right they were retreating beyond St. Dié and Lunéville. It was on this day that Gen. Joffre announced that "the battle of the last five days has ended in an undeniable victory." The reoccupation of Rheims was announced on Tuesday.

The position on the Aisne River is a strong one, and as we write it is probable that a second important battle is in process there, the German line extending from Soissons and Craonne to the neighborhood of Rethel, on the Aisne, and thence to Metz. There has been some mystery concerning the army of the Crown Prince. The statement has been made from Berlin that Verdun is surrounded, and that its capture is expected. On the other hand, from Paris we learn that the Crown Prince on Monday moved his headquarters from Ste. Menchould to Montfaucon, twenty miles to the northeast, which would indicate a retirement from the advanced position, and this, according to reports from Paris, was already in process on Tuesday. It is interesting to note in passing that no confirmation from French or British sources has yet been received of the fall of Maubeuge, which was officially announced from Berlin on September 9.

The news from the eastern area of fighting leaves but little room for doubt as to the almost complete rout of the Austrian armies. German successes have been reported in East Prussia and admitted at Petrograd last week, and further victories in Russian Poland over the second, third, fourth, and twentieth army corps and some cavalry divisions were reported from Berlin on Tuesday. These reports appear entirely credible, and there seems no reason to doubt that the Russians have suffered more or less serious reverses at the hands of the German army that is now defending East Prussia and has invaded Poland.

It is evident, however, that the operations in this part of the field have not been regarded as of the first importance in the Russian strategic plan. As Germany aimed originally to crush France first before turning her attention to Russia, so the Russian plan has been to dispose first of the Austrian armies. In this object it would appear that success has almost been achieved. The Grand Duke Nicholas, the Commander-in-Chief of the Russian forces, reported on September 13 that the battle which had lasted seventeen days was finishing. That is the battle which commenced with the attack on Lemberg. The result is apparently not in doubt. After his success at Lemberg, Gen. Ruzsky, in concert with the right and centre of the Russian army, attacked the Austrian forces at Rava-russka and Tomaszow. Hemmed in on three sides, the Austrian defeat appears to have become a rout. On last Saturday or Sunday the Russian left was similarly successful in defeating the Austrian army on the line from Grodek to the Dniester.

Owing to the lack of official dispatches from Petrograd couched in the moderately dispassionate tone adopted by the British press bureau, it is a little difficult to gather from the somewhat hysterical telegrams of correspondents precisely what the net result of the battle has been. We have information that a large portion of the defeated Austrian forces have retreated on the fortress of Przemysl, which will undoubtedly be invested, and the German army corps which had gone to the assistance of the Austrians will therefore be lost as an effective force, but there are reports that two of the Austrian armies can retreat only to Krakau, in which case they are likely to be intercepted, or to the Carpathians on the south, where also there may be Russian forces in some strength, since we heard some time ago of the occupation of Halicz. The Austrian losses in this battle are stated to have been enormous. A dispatch from Petrograd to the London *Times* places them at 300,000 in killed, wounded, and prisoners, or nearly a third of the total force, and further estimates that 1,000 guns, or more than two-thirds of the available artillery, have been lost.

Foreign Correspondence

ON THE FRONTIER OF WAR—DIFFICULTIES OF CORRESPONDENTS—THE SILENT MAN OF FRANCE.

LAUSANNE, August 20.

A war correspondent who tries to be active has no easy task just now. Austria has packed all the foreign correspondents she could get hold of across the frontier by special train into Italy. Germany has given notice that no such correspondents need apply, as she has an elegant sufficiency in her own native sixteen. France censures all dispatches and, until now—perhaps because military transport has occupied all the trains—mailed letters have not crossed the frontier unless carried in pockets; and even these are under censure, like letters coming into France, which delays their arrival in spite of the fair and courteous good-will the authorities are showing. As in Belgium, no foreigners are allowed at the front.

Lord Kitchener, for the transfer of British troops to France and Belgium, has obtained complete newspaper silence for a week—to such a degree that, while the censure at Dover was public, not one Continental paper, even in neutral Switzerland and Italy, had wind that Southampton was the port really concerned. The unbroken loyalty of the English press, which, if it knew anything, printed not a word, is to-day the object of universal admiration—a comforting instance of true, faithful, obedient, disciplined patriotism. To the general credit of journalists in these difficult days, it should be added that the press of the belligerent countries, particularly of France, Germany, and Austria, has fallen into disciplined line behind the Governments.

One of my Italian colleagues was hauled up severely, arrested, and obliged to make a heavy deposit as bail for provisional liberty by the Swiss authorities a week ago. They have not extended their censure to letters sent abroad and his correspondence had given details which the Swiss newspapers were forbidden to print. The London *Times* correspondent there at Basel—a vantage point for observing the shock of the French and German-Austrian armies now coming together in Alsace only a few miles away, within hearing of gunshot—has just had to appeal to the representative of his Government for a telegram that had been held up as possibly infringing Swiss neutrality. All this has given a strain of hilarity to yesterday's news announcing the arrival of sixteen American war correspondents in England, furnished with gold to the extent of needing a whole cabin and sentinel to guard it on the way over from New York.

The seemingly hard lines imposed on American and all other foreign correspondents by anxious Governments should also be recognized loyally as best, under the circumstances, for human interests of infinitely greater importance than any news-mongering whatever. It is not forgotten that Moltke in 1870 attributed one of his victories to the indiscretion of an English correspondent with the French army. Perhaps, too, this enforced discipline and compulsory loyalty may start up healthier traditions of journalism than had been existing in the sensational press, which seemed to think human lives of less importance than news. And real news—news that stays true—will not suffer from it.

This adds greatly to the interest of the innovation of a signed telegram of Gen. Joffre, commander-in-chief of the French armies, which was sent from the front the day before yesterday, expressly for communication to the public. It need not be as explicit as a general's report of operations to his ranking superior—and it would be pitiful that the French public should think itself the superior of the man to whom they have entrusted their liberty and their lives. But the General's signature requires that the news he communicates should be the sober truth.

Like William the Silent and Moltke, who was "silent in seven languages," Gen. Joffre is notably taciturn; and he has been silent through a laborious military career of forty-four years. He is now sixty-one, but still in the full vigor of his strength of body and mind—and by far the most noteworthy figure which this surprising war has so far disclosed. Clemenceau sharply criticised him and the others of the General Staff, but he too has reversed his judgment since the mobilization proved their foresight and complete organization of the military resources. A little more and General Joffre will be the incarnation of the soul of France in her life-and-death struggle.

Joffre was a first-year military engineer at the difficult Ecole Polytechnique, and only seventeen years of age, when the war of 1870 broke out. He enlisted and fought like the rest to the bitter end. He came out a lieutenant and was employed, when peace allowed, on the plans for the new fortifications of Paris. Marshal MacMahon, who was himself not a talker, noticed his calm silence amid the other officers in a visit to one of the forts and unexpectedly saluted him—"My compliments, Captain!" So he was a captain at twenty-two, long before his time; and he was sent to organize the defences of Pontarlier, just where the Germans, if they break through at Belfort, may now sweep down along the Swiss frontier. Then he went out to build forts in Tonkin; but Admiral Courbet, who was in charge, scented the born commander, and set him to fighting at the head of the troops. He was kept fighting, next in Dahomey; and he was the first to enter Timbuctoo—speaking never a word. He was silent in Madagascar, where he fortified Diego Suarez mightily. Back in France, he was made a professor at the Higher War School, and became successively general of brigade, of division, and of a corps d'armée. He came to have the confidence of all as a strategist and organizer—and, with all the Radical hostility to the army, he was never reproached with reaction or not being faithful to the Republic. When the nomination of general-in-chief had to be made by the Higher War Council, Gen. Pau, who lost his arm at Sedan, pointed with his remaining hand to Joffre—and the nomination was unanimous.

The public knows little of persons; but it knew that the law of three years' compulsory service which has saved France was due largely to Gen. Joffre's foresight. And these three weeks of his command have made confidence in him universal. Time will tell how far his silence will lead to victory; but, until now, no newspaper correspondent even knows where General-in-Chief Joffre and his headquarters were placed yesterday or to-day, or shall be to-morrow. "Joffre's headquarters?" said a military man who may have known and may not; "It's a monastery!"

S. D.

Poetry

RALPH HODGSON.

By E. V. LUCAS.

England has many new poets to-day, the most famous, each in his own way, being Mr. Masefield and Mr. Noyes. Mr. Noyes has, so far as I know, founded no school, being in fact of a school, one might say of the Laureate school; but Mr. Masefield has set many pens at work accumulating realistic epithets. After these, in point of fame, are Mr. W. W. Gibson, Mr. Abercrombie, Mr. Rupert Brooke, Mr. Drinkwater, and so forth, whose works may be obtained at a modest little establishment in a squalid street off the Theobald's Road in Bloomsbury (close to Gray's Inn), called the Poetry Book Shop, where in an upper room their authors may from time to time also be met in the flesh and listened to as they read their latest productions.

The various tendencies of modern life, and particularly modern intellectual life, are reflected faithfully in the pages of the new singers I have named: in some chiefly perhaps that urgent desire of the moment to penetrate to the springs of passion and to forgive all even before we know all; but through their pages one searches in vain for magic. Many qualities one finds, but not that. Sincerity, often desperately grim, passion, beauty, love of truth, candor often to a fault, sympathy, imagination even—these reward us here and there; but no magic: none of that elusive spirit which one cannot define, but which either is or is not.

Two of the younger men, however, I have not yet named, in each of whom this rare essence is occasionally found and who almost alone of all the leaders of the poetical renaissance of the day could never be overlooked by any future anthologist of lyrics—Mr. De la Mare and Mr. Hodgson. Oddly enough, neither is peculiarly of his time. Mr. De la Mare (or Walter Ramal, as his title-pages used to call him), is of no time at all, and writes as much for antiquity as posterity. He belongs to the reign of Queen Mab rather than George V, and weaves his fantasies apart. When he is at his best (which is far too seldom) he is curiously beautiful, tender and elvish; above all, magical. But Mr. De la Mare is known: he is in "The Georgian Book of Verse." Mr. Hodgson I wish to introduce to American readers.

Ralph Hodgson is a man of about forty, a Northumbrian now living in London, with journalistic ties. He is not much to be met, being something of a recluse, but when you do meet him he is usually in the company of a bull terrier. He says little, but says that little with enthusiasm. Shelley and Wordsworth are his favorites, and he thinks Henry Kingsley's ballad of the Magdalen one of the most beautiful of English lyrics, and carries it in his pocket to display to the uninitiated. He is a passionate lover of birds, and plays billiards with grim earnestness. Incidentally he has written a few of the truest poems of our time.

Mr. Hodgson's work is not published in the ordinary way at all. It is to be found only in four slim yellow pamphlets at sixpence each and in a number of broadsides at twopence: all with woodcuts by a friendly hand, Mr. Lovat Fraser, at whose studio they were, until recently, to be obtained. Today the Poetry Book Shop controls their distribution. The four yellow pamphlets are entitled: "The Mystery and Other Poems," "The Song of Honour," "The Bull," "Eve and Other Poems." There was an earlier volume published à la mode, called "The Last Blackbird," but Mr. Hodgson wishes that forgotten. I do not say he is right, but I do say that he has since improved on most of its contents.

If Mr. Hodgson reminds one swiftly of any predecessor, it is Blake: but the comparison so soon breaks down that there is no need even to set it up. His poetry proceeds peculiarly from himself—his passion for life, his championship of helpless things, his love of beauty, his rage at oppression. His most ambitious effort so far (not yet reprinted from the *Saturday Review*) is a scornful indictment of the slaughter of animals, either furred or feathered, whose destiny it is "to deck a woman." And here is a tiny lyric on a kindred theme:

STUPIDITY STREET.

I saw with open eyes
Singing birds sweet
Sold in the shops
For the people to eat.
Sold in the shops of
Stupidity Street.

I saw in vision
The worm in the wheat,
And in the shops nothing
For people to eat;
Nothing for sale in
Stupidity Street.

It is probably the extreme simplicity of those lines, together with a recollection of the couplet about the Robin Redbreast in a cage, which makes us think of Blake. But a wide gulf (largely perhaps of years) separates Blake from the man who wrote the following poignant stanzas:

THE SWALLOW.

The morning that my baby came
They found a baby swallow dead,
And saw a something, hard to name,
Flit moth-like over baby's bed.

My joy, my flower, my baby dear
Sleeps on my bosom well, but oh!
If in the autumn of the year
When swallows gather round and go. . . .

Beginning with "The Gipsy Girl," one might similarly think of Wordsworth, but again what a gulf (not chiefly of years) separates Wordsworth from the man who could thus bring the poem to an end! I quote in full:

THE GIPSY GIRL.

"Come, try your skill, kind gentlemen,
A penny for three tries!"
Some threw and lost, some threw and won
A ten-a-penny prize.

She was a tawny gipsy girl,
A girl of twenty years.
I liked her for the lumps of gold
That jingled from her ears;

I liked the flaring yellow scarf
Bound loose about her throat;
I liked her showy purple gown,
And flashy velvet coat.

A man came up, too loose of tongue,
And said no good to her;
She did not blush as Saxons do,
Or turn upon the cur;

She fawned and whined "Sweet gentleman,
A penny for three tries!"
—But, oh, the den of wild things in
The darkness of her eyes!

From the longer poems I have no space to quote representatively. "The Song of Honour," the finest, is a psalm of exultation in the joy and splendor and reality of life. In an ecstasy of appreciation the poet enumerates all the most profound and glorious and lovely things:

I heard the hymn of being sound
From every well of honor found
In human sense and soul:
The song of poets when they write
The testament of Beautysprite
Upon a flying scroll,
The song of painters when they take
A burning brush for Beauty's sake
And limn her features whole—

The song of men divinely wise
Who look and see in starry skies
Not stars as much as robins' eyes,
And when these pale away
Hear flocks of shiny pleiades
Among the plums and apple trees
Sing in the summer day—

The song of all both high and low
To some blest vision true,
The song of beggars when they throw
The crust of pity all men owe
To hungry sparrows in the snow,
Old beggars hungry, too—
The song of kings of kingdoms when
They rise above their fortune men,
And crown themselves anew.

I wish I could give more of this rhapsody, which it is an outrage merely to select from.

"The Bull" is the story of a monarch whose day of triumph has passed. Brief and simple as it is, it is also epical. Here is a passage which tells how, when the bull was conquered and ceased to be the lord of the herd, he remembered his early days:

See him standing dewlap-deep
In the rushes at the lake,
Surly, stupid, half-asleep,
Waiting for his heart to break
And the birds to join the flies
Feasting at his bloodshot eyes,—

Standing with his head hung down
In a stupor, dreaming things:
Green savannas, jungle brown,
Battlefields and bellowings,
Bulls undone and lions dead
And vultures flapping overhead.

Dreaming things: of days he spent
With his mother gaunt and lean
In the valley warm and green,
Full of baby wonderment,
Blinking out of silly eyes
At a hundred mysteries. . . .

Dreaming maybe of a day
When her drained and drying paps
Turned him to the sweets and saps,
Richer fountains by the way,
And she left the bull she bore
And he looked to her no more;
And his little frame grew stout,
And his little legs grew strong,
And the way was not so long;
And his little horns came out,
And he played at butting trees
And boulder-stones and tortoises.

And the magic? If you have not already detected any, read "Eve," which I fearlessly call the most fascinating poem of our time:

Eve, with her basket, was
Deep in the bells and grass,
Wading in bells and grass
Up to her knees,
Picking a dish of sweet
Berries and plums to eat,
Down in the bells and grass
Under the trees.

Mute as a mouse in a
Corner the cobra lay
Curled round a bough of the
Cinnamon tall. . . .
Now to get even
And humble proud heaven,
And now was the moment or
Never at all.

"Eva!" Each syllable
Light as a flower fell,
"Eva!" he whispered the
Wondering maid,
Soft as a bubble sung
Out of a linnet's lung,
Soft and most silverly
"Eva!" he said.

Picture that orchard sprite,
Eve, with her body white,
Supple and smooth to her
Slim finger tips,
Wondering, listening,
Listening, wondering,
Eve with a berry
Half-way to her lips.

Oh had our simple Eve
Seen through the make-believe!
Had she but known the
Pretender he was!
Out of the boughs he came
Whispering still her name,
Tumbling in twenty rings
Into the grass.

Here was the strangest pair
In the world anywhere,
Eve in the bells and grass
Kneeling, and he
Telling his story low. . . .
Singing birds saw them go
Down the dark path to
The Blasphemous Tree.

Oh what a clatter when
Titmouse and Jenny Wren
Saw him successful and
Taking his leave!
How the birds rated him,
How they all hated him!
How they all pitied
Poor motherless Eve!

Picture her crying
Outside in the lane,
Eve, with no dish of sweet
Berries and plums to eat,
Haunting the gate of the
Orchard in vain. . . .
Picture the lewd delight
Under the hill to-night—

"Eva!" the toast goes round,
"Eva!" again.

Surely, that is most musical, most tender, most strange, and surely the rare quality inhabits it!

How much more Mr. Hodgson is to give us cannot be said; but he writes only when the inspiration comes, and does not repine if he is silent. He always has his thoughts: now and then they are touched with flame and a poem is added to his slender store. But to have written "Eve" in this our twentieth century is almost to have done enough.

Books and Men

VON BERNHARDI.

President Lincoln playfully greeted Harriet Beecher Stowe as "the little woman who caused this great war." In spite of the enormous influence of "Uncle Tom's Cabin," neither the Civil War nor any other was ever brought about by a book. It may happen, of course, that a single book, or the writings of one man or group of men, may influence or hasten a people towards taking up arms. Such was the effect of "Uncle Tom's Cabin," and such was the effect of Voltaire and Rousseau on the French Revolution.

Is Friedrich von Bernhardi the Harriet Beecher Stowe of this war? I do not know, any more than I know whether the Kaiser regards him benignly in return for his literary services. That his books have figured prominently in most of the discussions of German militarism, and that they (especially "Germany and the Next War") are in great demand in book-shops and libraries, are facts not to be disputed. He is a retired cavalry general, sixty-five years old. He is supposed to represent the German militarist of the most influential type. Is this correct? Let us look at some of his utterances.

It may be profitable to read these quotations from Gen. von Bernhardi, keeping in mind, at the same time, the frequent charge of the German sympathizers that American newspapers are "prejudiced" against Germany. It seems to me that there is a misuse of the word "prejudice." If they should say that the American papers are, in the main, opposed to Germany in the war, that they believe that she is largely if not wholly responsible for its outbreak, and that her success would be unfortunate for the whole world, then they would be quite correct. To say and to reiterate, as they do, that our press is "prejudiced"—*i. e.*, that it decided the case in advance of the evidence—is something they would find it hard to prove. Up to the invasion of Belgium—a topic upon which no German sympathizer will talk for thirty seconds without either evasion or a resort to the *tu quoque*—up to that moment, there was no marked hostility to Germany in our papers.

Since then, they have judged her in the light of the evidence of the diplomatic correspondence, and in the recollection that Bismarck deliberately precipitated the war of 1870, while protesting that "the sword had been forced into his hands," exactly as his successors protest to-day. They believe that Germany has an unwarranted confidence in her right to administer German "culture" to the rest of the world, whether it likes it or not. Those who had read von Bernhardi, and others like him, before the war broke out, think they know the origin of the theories which to-day are put in practice.

This is from the introduction to his "On War of To-day," published in 1912:

We . . . need to enlarge our colonial possessions so as to afford a home and work to our surplus population, unless we wish to run the risk of seeing again the strength and productive power of our rivals increased by German emigration as in former days. Partitioned as the surface of the globe is among the nations at the present time, such territorial acquisitions we can only realize at the cost of other states or in conjunction with them; and both this [*sic*] is only possible if we succeed, above all, in securing our power in the centre of Europe better than hitherto. With every move of our foreign policy to-day we have to face a European war against superior enemies. This sort of thing is becoming intolerable. The freedom of action of our people is thereby hampered to an extraordinary degree. Such a state of affairs is highly dangerous, not only for the peace of Europe, which, after all, *is only a secondary matter for us*, but above all, is most dangerous to ourselves. . . . [The italics are mine.]

The "culture" theory, from the same work:

Germany's output in brain work is at the same time greater than that of any other people. Our prominent importance as a civilizing nation is plain to everybody after the German clans have joined hands to form one powerful State. We ourselves have become conscious of being a powerful, as well as a necessary factor in the development of mankind. This knowledge imposes upon us the obligation of asserting our mental and moral influence as much as possible, and of paving the way everywhere in the world for German labor and German idealism. But we can only carry out successfully these supreme civilizing tasks if our humanizing efforts are accompanied and supported by increasing *political* power, as evinced by large colonial possessions, extended international commerce, increased influence of Teutonic culture in all parts of the globe, and, above all, by a perfect safeguarding of our political power in Europe.

It has been said that the voice of Webster was heard through the roar of cannon during the Civil War, and that his speeches inspired the Union soldiers. Is the author of the preposterous paragraph I have just quoted one of those who are ultimately responsible for ruined Louvain?

On the theory of beginning a war, from the same book:

The issue of the next European war hangs in the balance of strategic offensive; but only that state will derive all the advantages from it which knows how to initiate the war under auspicious political circumstances, and thus to create favorable conditions for the military action itself. The grouping of the neighboring states, brought about by policy, and the choice of the moment for beginning the war, broadly create the conditions under which the war must be waged, and these may be decisive for its whole course. . . . It was, above all, their [the Japanese's] boldness which paralyzed the arm of their far superior enemy, and made them by one stroke the dominating race of Eastern Asia, the same as I hope the German people will assert and maintain itself as the dominating race of Europe.

The following paragraph, from "Germany and the Next War," seems to illuminate the resolve to invade Belgium:

The obligation on the General to stand aloof from politics in peace as well as in war only holds good in a limited sense. The War Minister and the Head of the General Staff must be kept *au courant* with the all-fluctuating phases of policy; indeed they must be allowed a certain influence over policy, in order to adapt their measures to its needs, *and are entitled to call upon the statesman to act if the military situation is peculiarly favorable.* [Italics mine.]

Peace treaties and arbitration courts, the General holds, are not only impractical; they are insincere:

We can hardly assume that a real love of peace prompts these efforts. . . . It must consequently be assumed that very matter-of-fact political motives led the Americans, with their commercial instincts, to take such steps, and induced "perfidious Albion" to accede to the proposals. We may suppose that England intended to protect her rear in event of a war with Germany, but that America wished to have a free hand in order to follow her policy of sovereignty in Central America without hindrance, and to carry out her plans regarding the Panama Canal in the exclusive interests of America. . . .

Certain high officials of Germany were "amazed," they told us, that England went to war. Chancellors and ambassadors had never dreamed of such a thing. If they had only read von Bernhardi! He declares:

A pacific agreement with England is, after all, a will-o'-the-wisp which no serious German statesman would trouble to follow. We must always keep the possibility of war with England before our eyes, and arrange our political and military plans accordingly. We need not concern ourselves with any pacific protestations of English politicians, publicists, and Utopians, which, prompted by the exigencies of the moment, cannot alter the real basis of affairs.

These are some of Gen. von Bernhardi's precepts of foreign policy:

In one way or another, *we must square our account with France* if we wish for a free hand in our international policy. This is the first and foremost condition of a sound German policy, and since the hostility of France once for all cannot be removed by peaceful overtures, the matter must be settled by force of arms. France must be so completely crushed that she can never again come across our path. . . .

It would, in my opinion, have been politically right for us, even at the risk of a war with France, to protest against this annexation [of Tunis, by France] and to preserve the territory of Carthage for Italy. We should

have considerably strengthened Italy's position on the Mediterranean, and *created a cause of contention between Italy and France* that would have added to the security of the Triple Alliance. [The italics in this paragraph are mine.]

Turkey is the only state which might seriously threaten the English position in Egypt by land. . . . It is equally good policy in every way to support Turkey, whose importance for Germany and the Triple Alliance has already been discussed.

From a chapter called The Character of Our Next War:

A war fought and lost under such circumstances would destroy our laboriously gained political importance, would jeopardize the whole future of our nation, would throw us back for centuries, would shake the influence of German thought in the civilized world, and thus check the general progress of mankind in its healthy development, for which a flourishing Germany is the essential condition. Our next war will be fought for the highest interests of our country and of mankind. This will invest it with importance in the world's history. "World power or downfall!" will be our rallying cry.

World power! Germany, when this was written, was the first military power in the world, and had risen from third to second place as a naval power. What did Gen. von Bernhardi mean?

EDMUND LESTER PEARSON.

News for Bibliophiles

A LIBRARY OF CIVIL WAR LITERATURE.

Three hundred copies of the Catalogue of the library relating to the War of the Rebellion and owned by Col. John P. Nicholson, of Philadelphia, have been privately printed. There are some 17,000 volumes. The owner was the translator and editor of the later volumes of the American edition of "La Guerre Civile en Amérique," by the Comte de Paris, and for many years has been chairman of the Gettysburg Battlefield Commission and recorder of the Military Order of the Loyal Legion. He began his collection at the close of the war, in which he served in the Army of the Potomac, at Chattanooga, and on Sherman's march to the sea. The frontispiece of the catalogue, a bulky volume of 1,022 pages, shows a section of the library. As his friend, the late Major William A. Lambert, was making his incomparable collection of Lincolniana and Assistant Engineer Frederick Shober was doing a similar work in regard to the navy, Col. Nicholson did not trench upon their preserves. The bindings, in cloth, morocco, and levant, are examples of the bookbinder's art, done during a period of fifty years by Pawson and Nicholson.

The abundance and uniformity of interest make selection of salient features difficult. There are many rare Confederate imprints, unpublished reports, manuscripts, a wealth of pamphlets which could not be duplicated and which often have notes and corrections by army commanders, personal narratives, official papers, reports of courts of inquiry and courts-martial, maps used at army headquarters, catalogues of museums, war relics, and captured flags, and accounts of ceremonies.

But perhaps the most remarkable feature of the collection, aside from the thoroughness, which makes it the most complete in the United States, is the extraordinary array of autograph letters and extra illustrations which have been inserted in nearly every important volume. The richness of the collection in this respect may be indicated by the treatment of three books—Grant's Memoirs, Sheridan's Memoirs, and Pennypacker's Life of Meade (Great Commanders series). In the first-named volume have been inserted a letter from Grant to Pemberton, dated Vicksburg, March 2, 1863; 82 plates, 8 maps, and a number of reviews, cuttings, etc. Sheridan's Memoirs, presented to the owner by the author, is extended into four volumes, in which are inserted 57 autograph letters and 123 illustrations. The Life of Meade is extended into two volumes, and there are inserted autograph letters, 177 illustrations, 16 maps, and extra printed title-pages. The catalogue describes it as "unique."

With scarcely less lavishness have been treated such books as Gen. Humphreys's "The Virginia Campaign of '64 and '65" and "McClellan's Own Story." The former has two autograph letters of Gen. Humphreys and 38 inserted plates; the latter, letters of Gen. and Mrs. McClellan, 112 plates, 3 maps, etc. Newhall's "With Sheridan in Lee's Last Campaign" contains autograph letters of Sherman, Fitz John Porter, Franklin Warren, Hancock, Gibbon, Meade, Hooker, Secretary Stanton, Longstreet, and Howard, and 30 inserted engravings.

Dabney's Life of "Stonewall" Jackson (London, 1864) contains an inserted bill for erecting a military telegraph from Staunton, Va., to Harrisonburg, twenty-five miles, with certificate signed by Brig.-Gen. B. H. Robertson, commanding cavalry, September 1, 1862, and approval signed by Gen. Jackson. The edition of the history by the Comte de Paris is the original French edition, in which are 2 portraits and 8 inserted autograph letters of the author relating to the work. Here, too, is the author's MS. of Volume VIII of the French edition. De Peyster's sketch of Kearny (killed at Chantilly) contains an original autograph order of two pages for the march after the battle of Williamsburg, dated May 9, 1862, and signed "P. Kearny, Brig.-Gen. Conn. Division." John Esten Cooke's Life of Lee contains an autograph letter of Gen. Lee to Gen. Johnston, dated May 20, 1862. The same author's "'Stonewall' Jackson" has letters of Gens. Johnston, Abercrombie, J. S. Negley, Longstreet, A. S. Williams, Heintzelman, Col. E. D. Baker (killed at Ball's Bluff), Franklin, Banks, and the author.

Gen. Johnston's narrative has 126 portraits and engravings, 11 maps and plans, and autographs of Johnston, Judah P. Benjamin, D. H. Hill, Fitz Hugh Lee, N. B. Forrest, and Longstreet, besides those of a number of Union officers. Here, also, are a number of reports, each endorsed "Copy made for Colonel John P. Nicholson under my supervision. J. E. Johnston." When it comes to war novels, J. W. de Forest's "Miss Ravenel's Conversion" (considered by Col. Nicholson and Mr. William D. Howells to be the most realistic of Civil War novels) contains an autograph of the author, giving a bibliographical list of his contributions to war literature. Mary Johnston's "The Long Roll" and "Cease Firing" are also autographed by the author. Weir Mitchell's "Westways" is a presentation copy to the owner, and contains a letter of the author.

Capt. Robert E. Lee's "Recollections and Letters of General Robert E. Lee" has an autograph letter of Gen. Lee dated March 14, 1865. Among the war maps are Gen. Meade's copy (1863) of the Gettysburg territory, authenticated by a letter from Col. George Meade, of the staff, and the map used at Meade's headquarters in April, 1865.

The address of a present Justice of the United States Supreme Court, delivered at Keene, N. H., on Decoration Day, 1884, has the autograph of Col. Holmes, 20th Mass. Vols. The copy of Gen. Humphreys's address on Gen. Meade, November 18, 1872, in which he said that "Meade at Gettysburg had a more difficult task than Wellington at Waterloo and accomplished it equally well, with no Blücher to help him," is the copy presented by Humphreys to Sheridan, a fact which recalls Sheridan's testimony that he never read Warren's statement in regard to Five Forks. The copy of the Century War Book contains all the cancelled sheets, covers, etc.

Here are H. C. Clarke's "Confederate Household Almanac" for 1863 (Vicksburg), "Confederate States Almanac" for 1862 (same); "The Boston Almanac" for 1863 (George Coolidge), "giving names and regiment of every soldier from Boston"; many soldiers' valentines, 1861-65; a pamphlet account of the opening ceremonies at the Gettysburg Cemetery, published at Gettysburg in 1855; two MS. accounts of the surrender of Vicksburg, written and signed by Gen. Pemberton; Professor Polk's "Leonidas Polk, Bishop and General," with autograph letter of Adjutant-Gen. George W. Brent, dated December 20, 1862, endorsed by Gens. A. P. Steuart and Cheatman and Lieut.-Gen. Polk; Gen. Early's Memoir, printed at Toronto in 1866, and Early's Gettysburg narrative, with Early's MS. notes, and corrections; 8 sermons printed at Savannah and Macon between 1861 and 1864; pamphlets relating to Shiloh, with Gen. Buell's notes and corrections; Garfield's oration on Gen. Thomas (Cleveland, 1870), with an autograph letter of President Garfield; an original report of Gen. John B. Gordon, signed and dated July 22, 1864, not in the war records; Warren's account of Five Forks (N. Y., 1866), with autograph letter of Gen. Warren; Gen. Winfield Scott's Memoirs (N. Y., 1864), with autograph letter dated "Headquarters Army, Washington, September 2, 1861," with 52 portraits and engravings inserted.

Mrs. Hancock's "Reminiscences of Winfield Scott Hancock" contains autograph letters of Gen. and Mrs. Hancock, Gens. Cadwalader, Buell, Burnside, Terry, Gibbon, Gregg, Slocum, Humphreys, Webb, Warren, McClellan, Sherman, Franklin, Sickles, Schofield, Sheridan, Stone, Butterfield, Secretary Bayard, John Hay, Gov. Curtin, and President Hayes.

There are 455 publications in 25 volumes relating to the Sanitary Commission; the Medical and Surgical history; 173 papers in 18 volumes relating to the Fitz John Porter case, with letters, notes, portraits, and maps inserted. Sherman's Memoirs (N. Y., 1887) is extended to 8 volumes and illustrated with 58 autograph letters and autographs.

Swinton's "The Twelve Decisive Battles of the War" (New York, 1867) contains nine autograph letters of army commanders in the battles—Grant, Meade, Sherman, Thomas, McClellan, McDowell, Rosecrans, Sheridan, and Capt. Worden, of the Monitor. Here, also, are the inaugural address and messages

of Jefferson Davis, printed at Richmond during the war, and a number of Vicksburg, Charleston, Savannah, and Richmond imprints. The recent scattering of the large Philadelphia collections of Major Lambert, Chief Justice Mitchell, Hampton L. Carson, and Gov. Pennypacker has caused the hope to be expressed that Col. Nicholson's library may find eventual lodgment in the War Library Building, proposed to be erected on the Parkway, in Philadelphia. For this building a considerable sum is already available, and the city, the Loyal Legion, with a large collection, and the Grand Army of the Republic, whose different posts possess many interesting relics, seem disposed to unite in the movement. Col. Nicholson's collection represents a large money value, as did the other collections named. It is difficult in Philadelphia, as elsewhere, to find men of large wealth who appreciate the importance of preserving such a collection intact.

ISAAC R. PENNYPACKER.

Correspondence

"VERNON LEE'S" MESSAGE TO AMERICANS.

TO THE EDITOR OF THE NATION:

SIR: For the benefit of my American friends and readers, and on behalf of a section of English Liberalism unable to get a hearing when an anti-Liberal, a Tory-inherited, policy is being pursued by an officially Liberal Government and abetted by an officially Liberal press, will you allow me to answer the "Appeal to the American People," which Mr. H. G. Wells has made in the *Daily Chronicle* of August 24, whence it has been reprinted in a great number of English papers?

"It is," writes Mr. H. G. Wells, "of supreme importance that we should ask you now: What are you going to do throughout the struggle and what will you do at the end?" That, sir, is the question which I also, and many thousands of English Liberals and Socialists, will have to put to you fortunate American people, but, as I shall try to explain, in a spirit the exact reverse of that of Mr. Wells.

"We do not"—Mr. Wells is saying to America—"we do not ask for your military help. Keep the peace which it is your unparalleled good fortune to enjoy so securely. *But keep it fairly.*" I have underlined that last sentence because what Mr. Wells calls *keeping the peace fairly* is keeping the peace for the advantage of Britain and to the detriment of Britain's adversary.

Mr. Wells's request falls under two headings. He begs America not to allow the transfer of German merchant ships to the American flag and the use of such naturalized American vessels for the refurnishing of Germany with "war material." Now, sir, I think most American readers may be trusted to know what Mr. Wells appears to ignore, that in time of war neutral vessels are strictly prohibited (indeed, are legally "searched" by belligerents) from carrying material of war to either party engaged, a prohibition which was enforced when the International Arbitration Congress of Geneva awarded the United States a huge compensation for damage done them by Britain's neglect of this prohibition during the war between the Northern and the Southern States. That was the famous Alabama case; and in view of that incident in their history, I think Mr. Wells need scarcely have troubled the American nation to avoid the breach of neutrality thus satisfactorily visited upon the English one. Neither, I suspect, does he really attach much importance to this already provided-against breach of neutrality. It is merely an adjunct, a mechanism for bringing under discussion a very different question, which is not a breach of neutrality at all; indeed, the thing in which America is to show her "fairness" would itself constitute not indeed a breach of international regulations, but a practical, a moral breach of neutrality of a peculiarly atrocious kind. What Mr. Wells is asking of America is exposed under a large-type sub-title: VICTUALLING OUR ENEMIES. This, I know not whether more ingenuously or ingeniously confused with the furnishing of "Contraband of War," is what Mr. Wells is imploring America to desist from. Let not any food supplies reach Germany under the American flag. In plain English: let neutral America lend England and England's allies the most efficacious weapon in all the arsenal of war; the weapon which brought about the surrender of Paris in 1871, and has brought about the surrender of the most indomitable fortresses in every war since the beginning of time and of war: the weapon called *famine* and famine-sprung disease. Let America use and show her neutrality by starving Germany; by reducing, if possible, its inhabitants to the scurvy-stricken and anæmia-undermined creatures I remember still seeing in the streets and shops of Paris in the summer of 1871. Let America use and show her neutrality by putting the fathers and mothers of a nation with whom she is at peace to the most hideous trial which war can impose upon patriotism. Not military help, oh no, Mr. Wells is not asking America for that! He is only asking her to lend him the screw of famine; famine against which, and not for the vain excuses of "international good faith" and the more specious and mendacious catchwords of anti-militarism, this English people (which three weeks ago did not know why she should go to war) is now obliged to fight till the extermination of Germany's naval power.

Sir, I venture to say not only that there are thousands of English men and women who feel only shame and disgust at the proposal Mr. Wells has ventured to make in their name; but that the vast majority of my fellow-countrymen, if war excitement and the passion for self-justification allowed them the use of their normal powers of judgment, would send a postscript to Mr. Wells's appeal to America, saying: "Pay no attention to this person; we would never accept the thing he is asking you for." Be that as it may, for War, alas, brings odd revelations of the hidden meanness as well as the credulity and self-righteousness of mankind, be that as it may, I want to use Mr. Wells's excursion into the domain of international law to remind my American readers of one or two facts concerning it. And to ask them whether they think that this present war would have come about (or been blundered and intrigued into) at all, if, so far back as the 'fifties or 'sixties, the British Government had not disclaimed the proposals of all the Continental nations and the counsels of Richard Cobden, if the British Government (backed by the Admiralty) had not constantly and resolutely refused to forego the piratical right of capturing, selling, or sinking an adversary's private and peaceful property by sea. Would this war and the ill-will and mutual distrust at its back have been possible but for that exhausting expenditure in naval armaments of which the blame is now being fastened entirely on Germany, if Germany's Flottenverein and England's Navy League, both sharing so many of their members with the international armament Trusts which build warships and cast guns impartially for Triple Alliance and Triple Entente, had not been able to loosen the unwilling purse-strings of German and English taxpayers by the threat of the commercial annihilation wherewith the *Spectator*, for instance, has for twenty years frightened alternately its own country and the rival one; and by the far worse threat of such national starvation as Mr. H. G. Wells is at present asking America to help in inflicting upon Germany?

These are bygones, some readers may say. But, sir, it is well to remember our responsibilities rather than foist them all upon our (now quite mythical!) adversary; for it is only by such remembrance of the real, the far back and deep down origins of this war, that we can hope to be in the mood, and hope to face the facts, necessary for the preparation of such a peace as shall not be a mere excuse for more war. Far from any such thoughts, what Mr. Wells is trying is to get America to display, and violate, her neutrality by helping to turn Germany into a vast, besieged, and famished fortress. And this he is asking in the name not of English Chauvinism and Imperialism and enviousness and panic. Oh, no; but in the name of democracy, of progress, of anti-militarism, of disarmament, of the idyllic Utopia of a federated Europe (foreshadowed in his own latest novel!) which may be appropriately presided over by the founder of the Hague arbitration, the notoriously peace-loving Czar. I am not misinterpreting Mr. Wells, I assure you. For while formulating over again (and he does so once a week) the myth of a Germany which has to be famished and routed and crushed because that best-administered and best-schooled of all great European nations is a mere silly craven, unwilling instrument of megalomanian (and, at bottom, he tells us, inefficient) insanity called Prussian militarism, he reminds his American readers "that the Czar has restored the freedom of Finland and promised to reunite the torn fragments of Poland into a free kingdom; that—he and England have engaged themselves to respect and protect from each other (!) the autonomy of Norway and Sweden"—and he adds, not perhaps needlessly, "We ask you not to be too cynical about the Czar's promises and to be prepared to help us *and France and him* to see that they become real."

Ah, just so! England, which helped the realization of the Czar's promises to Persia by partitioning her with him and dismissing Mr. Shuster! And France also, of course. France, to whom the *Daily Chronicle* (Mr. Wells's *liberal* organ) attributes a "hidden" liberal influence on Russia during all those years of military alliance and pecuniary aid which have seen the imprisoning of the Duma, the destruction of Finland's liberties, and those pogroms where Russian officials watched the replacing of unborn children by straw bundles in the belly of the Jewish co-religionaries of the French bankers who helped to float the Russian loan. Yes; once the German Minotaur disposed of (not without help from America's neutral fairness), France will, of course,

help England and Russia to democratize and demilitarize the world! I should perhaps share Mr. Wells's belief in this beneficent democratic rôle of our republican neighbor, if born in France, writing its language almost like my own, and fortunate in almost as many French friends as English, I had not watched how, in France's welter of internecine political strife and corrupt parliamentarism and administration ("Il n'y a pas de justice en France," said Mme. Caillaux, and has been acquitted for saying it!) the idea of *Revanche* has been fed up as sole unifying and purifying power even among the former stalwarts of Dreyfusist anti-militarism; if I did not know that the famous "Principles of 1789," for which France is supposed to stand, were being (forgive the French expression!) *conspués*, "spat upon," by the other vast half of French opinion, the Nationalists, Legitimists and neo-mediævalists with their literary representatives from Barrès and Maurras to Claudel. I know too much of France to believe that she can establish in other countries the free and orderly government which she has been unable, despite all her genius and her "principles," to obtain for herself. Moreover, I cannot believe that France will give efficient (as distinguished from verbal) aid against militarism and self-aggrandizing intrigue, since reading a little book of diplomatic documents (E. D. Morel's "Morocco in Diplomacy," Smith, Elder, 1912), showing how, as a result of the Entente, and especially in 1911, England has abetted France's military annexation of Morocco in the teeth of treaties far more recent (Algeciras, 1906) than the Belgian neutrality one, to respect which Mr. Asquith told us we declared war on Germany. On the other hand, I know enough of Germany, of liberal, Socialistic, anti-Prussian South Germany, to know also that the militarist and absolutist predominance of the Kingdom of Prussia would have diminished automatically, nay, that Prussia herself would have obtained a less antiquated constitution, had there existed a condition of security from without; and, similarly, that this Prussian predominance will be automatically reinforced whenever, as in 1813 and 1870, Germany is confronted with danger or interference from without. And indeed all reliable accounts (for instance, those of Mr. Dudley Ward after the declaration of war by England) show us not the revolution against Prussia which delighted Mr. Wells's liberal English readers (*Daily Chronicle*, August 7), but all German nationalities and parties marching shoulder to shoulder against the long-dreaded aggression of Russia, the long-suspected *Revanche* of France, and the "inconceivable" (the words are Professor Harnack's) "English betrayal of Western civilization into the hands of Byzantine and Mongol semi-barbarism."

Mr. Wells bids us believe that no hands can be safer; let us hope he may be right, for in those hands—at least in the Czar's—western Europe, not only Germany, but France and England, seems at present to be.

One more point. Sir, Mr. Wells has begun his appeal for America's neutral coöperation through starvation of our adversary with a splendid array of flattery. Those fine speeches about America's superiority may, I trust (though in the opposite sense from Mr. Wells's), prove deserved. For myself, and the anti-Government English Liberals in whose name I know myself to be speaking, the finest tribute to America's superiority is in Mr. Zangwill's "Melting Pot." Or, rather, it is not in a work of imagination, but a recital of plain fact, Mary Antin's "Promised Land," which describes how a Russian Jewish family found the status of modern human beings in America after escaping from the dominions of that recent convert to liberalism, the peace-loving Czar. In the light of what Americans have had opportunity of learning from thousands of once miserable and now happy creatures such as that Russian-American Jewess describes, I trust that Americans will not only decline Mr. Wells's invitation to starve Germany, but also continue (despite his assurances) to be skeptical about the liberation of Finland and Poland and (presumably) of such members of the Duma as are at present in Siberia; let alone remaining skeptical about the democratic and anti-militarist "united states of Europe," which shall arise once we are delivered of that mythological, fire-and-poison breathing monster, Prussia.

My reasons, sir, for expressing these two seemingly unpatriotic wishes (it is anti-patriotic not to identify one's country with a momentary majority) are as follows: first, that there is a large though now silenced section of English Liberals (even a parliamentary group) who have long denounced in the Anglo-Russian alliance not only the perpetrator of the dishonorable partition of Persia, but also the constant instigator of French, and through French, English hostility against Germany, the direct or indirect originator of those informal promises, those debts of honor, those "commitments," which have brought to this atrocious and senseless end all the attempts at an Anglo-Franco-German rapprochement which would have automatically undermined Prussian militarism by rendering it unnecessary for Germany's self-defence.

And, secondly, sir, I wish to express these opinions which can no longer be expressed in the Liberal papers of my own country, because like Mr. Wells (but again in a different sense) I also hope that America, in the person of the only great and blameless statesman of our day, may help to end this war. But help to end it not by destroying Germany and driving her to military reorganization (as after Jena) and *revanche*, but in staying the hand of covetousness, of race enmity, and of fear; the hand, also, I am sorry to say, of such idealistic, utopistic, mythopœic self-righteousness as has led Mr. Wells to ask America to deprive Germany of food for the speedier coming of the kingdom and peace and good will upon earth. VERNON LEE.

THE WAR AND AMERICA.

To the Editor of The Nation:

Sir: I have been fortunate in receiving the *Nation* since the war began, and I have been glad to have the views of your valuable paper on the European crisis. It occurs to me that perhaps you may find space for a few words showing the way certain elements in the situation strike an American in Europe.

In consideration of the moral principle involved, I should think that, in spite of the neutrality of our Government, it would be difficult to prevent mass meetings being held at home to protest against the unwarranted German aggressions and German atrocities. It is barbarism let loose, and European civilization, at least, is at stake. What does the United States stand for if not for the upholding of civilization against barbarism, of treaties, and of free states? Every generous-minded person in the world must be crying out against the aggressor and the oppressor! Think of Alsace-Lorraine! of Zabern! of Poland! And now think of Belgium. I wish more of America's feelings in the matter reached our ears on this side. A friend tells me that she has received letters from home saying that we favor the German cause. I was surprised, too, to learn in the *Nation* of August 13 that communications had been received from German sympathizers calling attention to the German justification of the war. Nothing could be better than your reply, but it is hard to believe that any German sympathizer can be an American citizen. Is it not possible that such correspondents are, as in England and elsewhere, paid emissaries of the German Government? For those of German origin in America, as well as those derived from other nations, came to our shores to enjoy the benefits of freedom. Even now in England, under pretended signatures, letters are being sent to the papers the authors of which cannot be found, and which are recognized as being only examples of the contemptible means employed by Germany to cheat the world.

I do not believe that honest American citizens of German extraction countenance the so-called justification put forth by the German Government and her writers. I believed at first with many others, that the military caste was responsible for the war, and I imagined that there would be a revolution and that the Kaiser—who long ago held up the Huns as an example to his army, likening himself with pride to Attila—and his house once disposed of, there would be an end to it, but the Kaiser's military advisers have been supported, inspired even, by the German professors, who represent the "culture" of which we have heard so much, as well as by the commercial classes. If barbarism should again conquer civilization, we in America must be adversely affected, and it should not be forgotten that France, England, and Russia are fighting for us just as Belgium fought for them.

WHAT THIS WAR MEANS FOR AMERICA'S FUTURE.

To the Editor of The Nation:

Sir: I write to express my hearty agreement with the judgments of your recent editorials on German militarism. I trust that the American people as a whole will perceive the truth as you state it.

But I have noted one important omission—a forecast of the result of triumphant German militarism upon the United States' interests and ideals. It would be direct and fateful.

Let me state the inexorable logic of it in four postulates:

(1.) The triumph of Germany would make that country sole master on the Continent. The plans of German dynastic imperialism, openly avowed by its champions, such as Gen. Bernhardi, are well known. A Pan-German Union would bond together Germany (with its dependencies Belgium, Netherlands, Denmark, and Poland), Austria-Hungary, and the Balkan States, as a military unit. France, Russia, England, and Italy would be reduced to the negligible military status which Spain now occupies. Any important policy upon which German imperialism might

set its mind would be always as good as achieved.

(2.) This control would be, in essence, one of force—that is, of force as the latent threat and sanction for every diplomatic demand. Concerts, congresses, negotiations, treaties, would be more or less of a polite form. Germany would have proved that superior brute force is the final test of all disputes—not reason nor mutual debate; and the possessor of that ultimate force would be Germany. The will of Germany—such would be the only standard for international welfare. And that will would be always an aggressive, meddling one, as well as a self-righteous one, secure in its own conceit of ever-justness, and its own mission to govern the world, and intolerant of other wisdom or other fancied rights and interests.

(3.) Germany would soon turn Argentina, Uruguay, Paraguay, and South Brazil into colonies or dependencies, flying the German flag. This is a necessary and avowed part of its ambition to succeed England as the colonial Empire of the 1900s, as well as of its delusion that commercial world-greatness is dependent on political enlargement of territory. The German populations of those countries would effect the needed revolutions within five years after Germany's triumph in the present war.

The Monroe Doctrine would be shattered thereby. Whether it is a sound doctrine or not (and I believe it to have been and to be still the wisest and soundest guarantee for American peaceful living), it would have to be either defended by force or abandoned entirely by 1920.

(4.) A modern republic like ours cannot be successful in war against a military despotism like Germany—especially a Germany when sole master of Europe. Only an enormous increase of fleet and standing army could give us the slightest hope of success. But, for preparing them, there must be ample Congressional debate and an open conversion of public opinion. And the moment such preparations were publicly sanctioned, German imperial ambition would take care to pick the necessary quarrel, before we could be ready to fight on equal terms; and the Hohenzollern would correctly expect to dictate his terms of peace at the White House, and to collect on Wall Street his ransom for not destroying New York.

What would be our situation then?

Either we must be torn, convulsed, and ruined by a long defensive war, with a part of our foreign-blood citizenship taking sides for the foreign dictator, and with ultimate defeat never in real doubt; or we must expect to purchase immunity, for at least a generation or two, by a humiliating subserviency to Germany's diplomatic demands. It was the haughty and insolent domineering of Gage's and Braddock's military officers which ground into the feelings of the American colonists, and supplied the resentful emotional basis for our war of independence. Prussian militaristic diplomacy will exceed anything that ever offended us in England's long past days of George III. I do not care to contemplate the necessary plight of America's diplomacy after 1920, when it has to face the demands of German self-righteous imperialism, in the inevitable clashing of interests between Germany and the United States in world-commerce and on the Monroe Doctrine. I should hope to be dead rather than be an American citizen under those conditions.

The truth is that the world, until now, was solidly on its way to the habitual settlement of its conflicting interests through reason and mutual persuasion. Superior reasoning and moral power were coming into their rightful place as the arbiters of disputes. But now Germany, hag-ridden by militarism, would substitute brute force. And this brute force, as the instrument of a self-righteous aggressive ambition, means the doom of genuine diplomacy for other nations. And America's only real strength is in diplomacy, *i. e.*, brains and moral power. In a clash between the two, brute force will win, and win brutally.

That is why the possibility of a German triumph comes directly home to us. To me, the prospect seems fateful for American destinies.

I do not say for one moment that this nation should at this time contemplate anything but official neutrality. But I do say that no American can afford to shut his eyes to the inevitable future which one issue of this war would signify for himself and for his children.

THE EVOLUTION OF MT. DESERT.

To the Editor of The Nation:

Sir: The late E. L. Godkin has given in one of his essays a very interesting description of the evolution of an American summer resort. The fidelity of the description leaves no doubt that the resort that he had in mind was Bar Harbor. He relates the original discovery of the place by a few cultivated nature-lovers, who, charmed with its natural beauty, put up with the discomforts of boarding with a farmer or fisherman. Later others arrive, and the farmer enlarges his house, which eventually becomes a primitive hotel. Shortly a real hotel is built, and the number of frequenters increases, while a few enthusiasts build very simple cottages. Now the hotel life has become considerably developed, and fashionable people begin to come. Still there are no dress-suits, and the indigenous buckboard suffices for driving. Then there sets in the period of the millionaire's cottage, and the hotel life begins to wane. The original discoverers have long since had to move on because of the rising scale of prices, and the original simplicity of the place is lost. This period was reached about twenty-five years ago at Bar Harbor, and here Mr. Godkin's description ends.

Would that the talented writer had been spared to write the next and possibly the last chapter of Bar Harbor, or to enlarge the theme of Mt. Desert. Would that I had his literary skill, to take up the tale, but with all due apologies allow me to add a few observations on the more recent development of this famous resort, or chain of resorts. Philosophers tell us that the development of the child is an epitome of the development of the race, and the same phenomenon may be seen here, in that the different villages on the Island are now showing the successive stages of the development of Bar Harbor. But to come first to the last stage. To those who have known Mt. Desert for forty years, the changes are remarkably interesting, though not all desirable. Thirty years ago, the Rodick House, famous in song and story, raised its lank yellow-ochred form above lesser erections, and dominated the scene by its sheer ugliness, a monument of the pre-architectural period in New England. This hotel gradually sank into ruin, and was pulled down some years since, together with its contemporaries the Grand Central and West End. Minute traces of their existence may be found by the antiquarian in the form of buildings out of sight and degraded to lower purposes. There remain now only three or four hotels in Bar Harbor, of which all but one are situated inland, where there is no possible view of the water. They are mostly tenanted by the middle class of fashionable people, namely, those who have dress-suits, but are not invited by the cottagers. For the life of Bar Harbor is now in the millionaires' cottages. They are exclusive to a point that renders them no longer desirable to the native. The main street, developed to meet urban needs, is now unmatched for ugliness anywhere. Wooden barrack-like shops, in which post-card photographers alternate with branches of New York emporiums and fruit stands, tempt the passer-by, but the cottagers do not need the buckboards, as they keep their own carriages, and prefer to buy in the cities. And so there has come the passage of the summit, and Bar Harbor seems to be running down. The country club, the building of arts, the concerts where musicians mostly with Russian names give high-priced concerts, the swimming pool where a symphony orchestra dispenses classical music, have not been enough to hold the gilded throng; and so the controversy over automobiles has been engendered. The "natives" want them, the "rusticators" of the old sort do not. Last year the auto-party won. This has resulted in bringing a new class, namely, the automobile week-enders or extreme transients. As automobilists drip money as they do gasolene, this has enlivened the hopes of the natives, but it has dampened those of the cottagers. For this or some other reason, many of the cottages have not been opened this summer.

Another phenomenon particular to this country may also be seen. A millionaire dies, and there being no entail, perhaps no one of the children is able to maintain the place, which goes into the market. And whereas the Ocean Drive and the drive to Hull's Cove are still perhaps the finest in the country, at any rate in the East, and remind one decidedly of the Cornice and the eastern Riviera, one is obliged to ask himself whether the doom of Bar Harbor has not sounded.

But while Bar Harbor is in its senescence, Northeast Harbor is in its full maturity. Here hotel and cottage life co-exist. There is a sleek and prosperous air, the ladies wear modish gowns, the gentlemen "ice-cream pants." Yachting is merrily indulged in, while at Bar Harbor it is nearly over. The other day, on inquiring for a row-boat at Bar Harbor, I was offered the choice of just three. At Northeast any day will see a lively race of knockabouts, while trampers swarm over the mountains. At Seal Harbor the same circumstances prevail, with decidedly more millionaires' cottages. Between Seal and Bar Harbor the coast is high and bold, with no anchorage, and we find villas of elderly professors and of widows of famous people. They look out, but do not get wet. Now cross over Somes's Sound, which cleaves the island into the shape of an oyster shell, and you come to Southwest Harbor, which is Bar Harbor of thirty-five years ago. The hotels are simple, the people love nature.

Here we encounter the fish business as a live issue, and gulls hang continually over the magnificent harbor, fit to hold the English navy. Cross the harbor, and in the little village of Manset (the United States Post Office's christening for the picturesque Mauset), and you find the Bar Harbor of forty years ago. No dress-suits here, no ice-cream trousers, but only people who love the sea, the long line of mountains, here seen to perfection, and who fear not wet nor fatigue. For fifty cents they can reach Bar Harbor, which they hold in contempt, and visit the interned Kronprinzessin Cecilie. Cottages here are almost non-existent, except the native variety. But mark how the development of civilization makes exact repetition impossible. For now we are in the realm of gasolene. The motor boat is with us, and comfort has fled before convenience. Ten years ago this place at night was so still that a cricket could be heard a quarter of a mile away. But what is a lodge in some vast wilderness when gasolene exists? At three every morning the noise of a battery of machine guns, or of a dozen riveters, as you prefer the warlike or peaceful simile, murders sleep with the effectiveness of Macbeth, as the fisherman blithely takes his outward way. It is said that the motor boat has added ten years to the life of the fisherman, as he could row a dory until he was sixty, but with the power-boat he can pull his trawls at seventy. At the above-mentioned hour one wishes to Invent something that will subtract ten or more years from the life of the fisherman. Of course, there is a law requiring mufflers. But this grand State of Maine, mother of heroes and statesmen, is a fine place for the non-enforcement of law. What shall we do? I suspect that the cynical and practical thing to do is to ascertain the comparative value to the community of the fishing and the summer tourist business. I do not speak by the card, but I guess that the leading industry of Maine is lumbering, the second summer visitors, the third seafaring. The moralist may inquire why it is that people possessing advantages are not content to enjoy them without disregarding the rights of others. Why cannot the automobilist enjoy himself without killing and maiming his fellow-men, or splitting their ears with his snorts and Klaxon horns? Perhaps gasolene has endowed man with new vices. We now have it in the air above (an aviator dropped in here this week), on the earth beneath, and in the waters under the earth. May I take such liberty with Shakespeare as to declare that

> It was great pity, so it was,
> That villainous naphtha should be digged
> Out of the bowels of the harmless earth,
> Which many a good tall fellow had destroyed
> So cowardly!

But I digress. There still remain charming portions of this beautiful isle which the sign of the real-estate man has not desecrated, and there are hundreds of miles of woodland trails where one can almost forget the war in Europe. And although every year one finds new spaces laid waste by the axe, the mountains still render appropriate the exclamation of Champlain, when he called it the *Isle des Monts Déserts*. Desert, yes, but heavily forested, and destined for many years to be the health-giving playground for a large part of this country.

ARTHUR GORDON WEBSTER.

Literature

LEE'S MILITARY PROGRAMME.

The Strategy of Robert E. Lee. By J. J. Bowen. New York: The Neale Publishing Co. $2 net.

The title of this work expresses a little more and a little less than the subject matter. The book scarcely touches upon the strategy of Gen. Lee outside of Virginia, making no mention of his unsuccessful campaign in West Virginia, of his influence as military adviser of the President, or of his services as general-in-chief of the Confederate forces; on the other hand, it includes operations in which he took no part, directly or indirectly. The work is divided into eighteen chapters grouped to form four parts. Of the eight chapters in part i, only the last chapter, Manassas to Seven Pines, relates to generalship for which Lee was responsible.

According to the author, the guiding principle of Lee's strategy was, not to end the war, either by defeating the Federal armies or by taking Washington, but to prolong it by threatening Washington; and his object in thus prolonging it was to wear out the North. He does not contend that the Confederates were at any time capable of taking Washington. The movements against it were to be mere demonstrations. There are thus two points to his thesis: (1) The object of prolonging the war by threatening Washington; (2) the idea of wearing out the North.

Let us examine them separately. It is generally regarded as poor generalship to base a plan upon the assumption that the enemy will do what one wants him to do. But peculiar conditions made a signal exception to this rule with respect to Washington. What advantage was taken of this fact by Gen. Lee?

In May, 1862, Stonewall Jackson's pursuit of Banks down the Shenandoah Valley caused McDowell's corps to be withheld from McClellan on the Peninsula, but the author ascribes no credit for this movement to Gen. Lee. On the contrary, he quotes Lee as writing to Jackson (April 25, 1862):

> I cannot pretend, at this distance, to direct operations depending on circumstances unknown to me and requiring the exercise of discretion as to time and execution.

This is hardly fair to Lee, who wrote to Jackson (May 16):

> Whatever may be Banks's intention, it is very desirable to prevent him from going either to Fredericksburg or the Peninsula . . . A successful blow struck at him would delay, if it does not prevent, his moving to either place. . . . Whatever movement you make against Banks, do it speedily, and if successful, drive him back toward the Potomac, and create the impression, as far as practicable, that you design threatening that line.

We are told that in 1862 Lee opposed Johnson's withdrawing from the vicinity of the Potomac to the vicinity of Richmond, "advising him to move back towards the Potomac. He thought that if he had done this, McClellan would have been recalled to the defence of Washington." The author's authority for this statement is a work by Col. Mosby, "Stuart's Cavalry in the Gettysburg Campaign," in which Mosby states that he got it from Gen. Lee, dining with him at his headquarters six weeks before the surrender at Appomattox. Lee could not, in this matter, have assumed a sagacity he did not possess; he was incapable of intentional misrepresentation. But he may have erred in his recollection of what he said or did three years before. Granted that this is barely possible, that whatever he said to Col. Mosby was probably so, Mosby may have misunderstood or misreported him. For it is not Lee's, but Mosby's, representations that we are considering, not what Mosby repeated at the time, but what he wrote, apparently from memory, forty-three years afterwards, when he was seventy-five years of age. This story of his, though not without interest and historical value, cannot by itself be accepted as conclusive evidence. The same may be said of the following comment on it by the author:

> Thus early in the game did Lee realize that the only hope of Confederate success lay in keeping the army out of the last ditch, and that the only way in which that could be done was to threaten Washington.

In the second Manassas campaign, August, 1862, Lee withdrew from the Peninsula, leaving McClellan there, and attacked Pope, who was covering Washington. "He thought," says the author, "the move would threaten Washington and draw McClellan away from Richmond." It may be assumed that he thought it would threaten Washington, but that this was his object in making it, and that he expected it to have any effect upon McClellan, are not to be assumed, but to be determined, if at all, by declarations emanating from Lee himself and before the event. The author is free, not to say lavish, in his quotations. It is hardly an exaggeration to say that about half of his book is made up of them. In his chapter Second Manassas he quotes abundantly from the official records to prove that Lee's operations against Pope caused the withdrawal of McClellan from the Peninsula, but not a line in support of his dictum that this was the object with which they were undertaken. For aught that the author says and proves, Lee's object in turning against Pope may have been to encourage McClellan to remain in front of Richmond, and by defeating Pope to insure himself against interference from that direction on his returning to attack McClellan.

For both the Antietam campaign and the Gettysburg campaign he adduces evidence in Lee's own words, before the event, showing that he favored an invasion of Northern territory with a view, in the former case, of "threatening the approaches to Washington, . . . carrying the enemy north of the Potomac"; and in the latter, of preventing an "advance upon Richmond" that

should force Lee back "within the intrenchments of that city."

By 1864 the preponderance of the Army of the Potomac over the Army of Northern Virginia compelled Lee to leave the initiative to Grant. On February 3 he wrote to President Davis:

> If I could draw Longstreet secretly and rapidly to me, I might succeed in forcing Gen. Meade back to Washington, and exciting sufficient apprehension at least for their position to weaken any movement against ours.

This letter shows, as the author says, "that if Lee had been strong enough he would [in 1864] have repeated his strategy of 1862 and 1863." Grant's advance into the Wilderness restricted Lee to the protection of Richmond, his principal source of supplies as well as the capital of the Confederacy. The only attempt made thereafter against Washington was Early's dash, which caused the withdrawal of Wright's corps from in front of Richmond, but had no appreciable effect on the Federal dispositions in general. The author implies that Lee did not expect from it any material relaxation of Grant's hold upon Richmond. "Lee's tangible reason," he says, "for sending Early to threaten Washington was to induce Grant to repeal Cold Harbor." He quotes Lee as saying (on what occasion or at what date does not appear): "It is so repugnant to Grant's principles and practice to send troops from him that I had hoped, before resorting to it, he would have preferred attacking me." The author hereupon remarks:

> Another Cold Harbor at that time might have resulted in the triumph of the peace party, and Lee was mindful of the necessity of doing anything "honorable to aid that party."

This brings us to a consideration of the idea which the author attributes to Gen. Lee, of wearing out the North. There is not in his work an utterance or statement of Gen. Lee's to show that he ever entertained that idea. The author's line of reasoning on this point is embraced in the following passages:

> Lee was not a provincial Southerner. He had been in the United States army all his life and his home was at Washington. He realized from the first what he had to contend with. He knew that his resources in men and material would not enable him to conquer independence on Northern soil. Therefore his only alternative was to prolong the war until the North should get tired of it. . . . All his strategy, involving desperate movements and battles, was designed to accomplish this one object and nothing more (p. 88). . . . He realized from the first that the only hope of success was in prolonging the war (p. 233).

We are convinced that Lee's general idea was to prolong the war; we admit that he did not, at Antietam or at Gettysburg, or elsewhere, think of winning Southern independence on Northern soil; but we do not see in the author's representations any proof that Lee ever thought of wearing out the North, or, in fact, of bringing the Southern insurrection in any way to a successful conclusion.

His comments on the separate campaigns are interesting and suggestive, if not always convincing. He goes too far in his commendation when he undertakes to prove that Lee was prepared for Hooker's march to Chancellorsville. Preparation for being outmanœuvred as Lee was by Hooker's getting to Chancellorsville before him seems a contradiction in terms.

No proof or authority is vouchsafed for the statement that, in the early part of the campaign of Gettysburg, Lee knew that "Hooker's instructions were to keep always in view the safety of Washington and Harper's Ferry." The author disapproves of Longstreet's proposed flank march around Meade's left, on account of Lee's inferiority in numbers and the lack of concealment, and repeats the familiar charge against Longstreet of disloyalty to Lee on the third day. "Lee's plans," he says, "had gone awry through Longstreet's delay just as on the 2d." But he does not specify, still less establish, the hour at which Longstreet should have advanced, either on the second or on the third.

The work is illustrated with twenty-two portraits, among which are four of Gen. Lee, and one of the author, besides a picture of Valentine's recumbent statue of Gen. Lee. There is no index, and no map. We note as errata: (p. 43), "direction" for "discretion"; (p. 85), "Allen" for "Allan"; (p. 160), "Brook" for "Brooke."

CURRENT FICTION.

Saturday's Child. By Kathleen Norris. New York: The Macmillan Co.

Gifted with something of her famous brother-in-law's talent for realism, Mrs. Norris's story is genuine in stuff, unvarnished in handling. To an unartificial mirroring of the heroine's day-by-day life everything is subordinated. The style is careless; the workmanship upon details of construction is without the slightest artistic rounding. The humdrum conversation of Susan Brown, the humdrum incidents that befall this $30-a-month San Francisco bookkeeper, we accept because character and action have the breath of reality. Yet it is not to be concluded that "Saturday's Child" is without the effects of a larger plot. In brief, the story has three main episodes: the orphan Susan's transient acquaintance with a rich wastrel who comes to work up to a managing position in the office; her affair with an Eastern literary man whose fascination for her, deliberately brought to bear in spite of his married state, is a severe temptation; and her final achievement of a home with a plain, sturdy worker of her own class. The narrative is never uninteresting, though Mrs. Norris has needlessly overburdened its end with her gospel of house and family as the great end of life. Its stenographic fidelity, and the sincere conception of a full stage of characters—more sincere with women than men—make a novel much above the average.

The Lay Anthony. By Joseph Hergesheimer. New York: Mitchell Kennerley.

This first novel is hardly the epoch-making work which the enthusiastic Mr. Kennerley, in his signed announcement of it, would adroitly lead us to suppose, but it is a book of considerable promise. The author has a delicate fancy, genuine power of characterization, and a happy discrimination between essentials and non-essentials. His English would be improved by the avoidance of some affectations. The theme of the story is in these days so refreshingly unusual as almost to deserve to be called original, for, with frequent opportunities for plunging his hero into the mire, the author prefers to keep him unspotted. More amazing still, the temptation is avoided of describing with surplusage of detail the particular kinds of mire which the hero refrains from entering. The author describes his story as a romance, but it is really more of an allegory. Anthony, a typical hobble-dehoy of a small American town, is Youth experiencing the tempest of his own passions, and Eliza Dreen, a charming if somewhat elusive figure, who demands from the man she will love a single virtue above all others, may be interpreted as Chastity. Anthony sallies forth, as Youth must, in quest of adventure, and the story is simply the tale of his temptations and his constancy to the almost mystical Eliza. The arrangement is episodic, and by far the best writing in the book is in the chapters that tell of Anthony's sojourn with an old biologist and his daughter. The biologist, absent-minded and absorbed in his scientific passion, is a familiar figure, but the daughter, Annot, is a real creation, and it is the delineation of this delightful character that most encourages us to look with interest for future work from Mr. Hergesheimer's pen. The conclusion of the story, bearing out the allegory, is ingenious, but somewhat lacking in art.

Granite. By John Trevena. New York: Mitchell Kennerley.

The granite soil of Devonshire, rough mother of strong men who nurse strong passions—such is the setting of Mr. Trevena's latest story. Drink is the particular evil he is concerned with, and the besotted community of Dartmoor is his particular instance. Mark Yeo, born among strong men and heavy drinkers, is himself a physical weakling and keenly alive to the degradation about him. He feels that his mission is to war against the great evil. His homely, untrained, and unauthorized ministrations are vain; he must have the authority of the church behind him. The church refuses him ordination because of his lowly birth; but he forces his way into the ministry by way of Canada. Returning to England, he resumes the struggle, and after five years dies, successful in conquering his own desires, but having made little headway

against the granite perversities of his neighbors. For a contrast to Mark Yeo we have Gerard Spiller, ordained clergyman, who sets out with lofty ideals on the same mission, but is ensnared, falls, and takes to preaching unmeaning doctrine prescribed by his superiors. He succumbs to drink and builds up a barrier of lies between himself and the girl who loves him and whom Mark Yeo loves. Sharp characterization, analysis, and a gift of dramatic narrative—these things Mr. Trevena has. His minor personages stand out well: Old Yeo, who lived and thought in terms of granite; Vid, the usurer; Caleb Starke, miser, who swallows his own gold to save it from imaginary thieves; Patience, his daughter and victim; the croquet-playing minister; Squire Vivian, who desires no evil, but cannot abstain from conjuring with other people's souls to their degradation. All are vivid with the life of strong passions; all are tainted with a poison for which Mr. Trevena can offer no sure antidote.

THE PHILOSOPHY OF SYNDICALISM.

The World of Labour. By G. D. H. Cole. New York: The Macmillan Co. $1.60.

The New Unionism. By André Tridon. New York: B. W. Huebsch. $1 net.

Syndicalism and the General Strike. By Arthur D. Lewis. Boston: Small, Maynard & Co. $2.50 net.

Syndicalism, Industrial Unionism, and Socialism. By John Spargo. New York: B. W. Huebsch. $1.25 net.

Syndicalism. By J. Ramsay Macdonald. Chicago: The Open Court Publishing Co.

One need not be a disciple of Nietzsche to see the force of his plea for a "revaluation of all values." The events of the last few weeks have made such a revaluation necessary. The reappraisal has already gone far enough to convince the world that the interests of the whole of mankind are paramount to those of any class, that law is better than anarchy, that peace is preferable to war, that reason is a safer guide than instinct.

Hence it has obtained a new perspective on syndicalism, whose whole creed may be summed up in the word "instinct." It is one of the paradoxes of history that many, probably most, of the great instinctive movements of the past may be traced back to the preachings of intellectuals. Even Wat Tyler's rebellion had such an origin; for John Ball was a priest. Froissart calls him a "mad priest," but his sermons stamp him as no madder than Karl Marx or Georges Sorel. "Good people," he cried, "things will never go well in England so long as goods be not in common." One of the rhymes to which his preaching gave birth contained the phrase, "Help truth, and truth shall help you." M. Sorel might fittingly have used these words as a text for his whole discourse. Sorel is mentioned in this connection because he is, above all, the philosopher of syndicalism. He is, however, only one of many from the bourgeoisie who have identified themselves with this cause. The syndicalist movement has from its inception, as Mr. Spargo reminds us, been remarkable for the zeal with which it has been espoused by successful lawyers, college professors, and journalists. The influence of most of these, even of Sorel himself, may not be great with the proletarians, but their names have done much to give the cause a standing, and in not a few instances they have had a voice in framing definite lines of action.

Syndicalism may therefore be called a philosophy, though most of its adherents know little and care less about it in that guise. The five works whose titles appear at the head of this review make sufficiently clear what that philosophy is. Briefly, syndicalism's aim is the abolition of the capitalist system; its method is "direct action," and its chief weapon is the general strike. This position has not been reached at a jump. Mr. Cole says that the progress of Labor was beautifully resolved into the gradual evolution of a harmony divinely preestablished by the Fabian Society in the early 'nineties. The history of the recent intellectual unrest is, in great measure, the sign that Labor "has at last used up the inspiration of the early Fabians, and is turning elsewhere for light—to what is vaguely called Syndicalism, from what Mr. Punch has named 'Sidneywebbicalism.'" Mr. Spargo shows us how far the syndicalists have got away from Karl Marx. They accept the catastrophic theory that capitalism will fall with a crash and a new social order be raised in its stead. This whole concept is, however, utopian and anti-Marxian.

Three of our authors, Mr. Cole, Mr. Lewis, and Mr. Tridon, discuss syndicalism amiably, and not without sympathy. Mr. Spargo, a pronounced Marxian and a keen disputant, is frankly antagonistic. So also is Mr. Ramsay Macdonald, who has the faculty of making a phrase do the work of a paragraph, and do it effectively. When he says that the syndicalist is poles asunder from the Socialist in method, and that "method counts for everything in the process of social change," we are better content than if he had multiplied words. Whatever his personal views may be, each of these five writers is perfectly fair in his statement of the syndicalist's point of view. On one fact they are all agreed: syndicalism stands for instinct as opposed to reason.

This being the case, it would be surprising if we did not come across Bergson's name in this discussion. Mr. Cole alludes to the *élan vital* of the Bergsonians, and says that M. Bergson's assertion of instinct as the equal of reason takes on a political aspect which he certainly did not foresee—Sorel has converted the free-will controversy into a political question. "Bergson," declares Mr. Macdonald, "is Sorel's master—and with Bergson stands Nietzsche, with his superman at his elbow." Mr. Lewis maintains that Sorel was a Bergsonite before he read Bergson: "You will note at once how both rejoice in trusting to the unknown, the not-reasoned-out." In expounding Sorel, he makes him say that when a mass of people make up their minds to act upon the world, when a *social* myth is present in the consciousness of *all of them*, they actually succeed in influencing their environment, just as the individual consciousness influences its body; and he adds that Bergsonians will note the Bergsonism of this. It would be easy in the same way to connect M. Bergson with the present European war, which represents perhaps the greatest triumph of instinct over reason in all history.

The European war has affected syndicalism, as it has affected everything else—there has been a general dislocation. The mechanism of exchange may eventually be reconstructed along old lines, political activities may conceivably resume something of their former appearance, but it may be a long time before instinct is again able to dethrone reason on an extensive scale. A few weeks ago syndicalism was a live issue. To-day, it looks archaic, and for that reason we view it with a better sense of proportion. Formerly, we studied it as an interesting thing in itself; henceforth we are bound to consider it as only one of many clashing issues of the past, which may or may not enlist the world's serious attention in the future.

A MALIGNED COURT.

The Rise and Fall of the High Commission. By Roland G. Usher. New York: Oxford University Press. $5 net.

Apparently there has never been a serious doubt in the minds of historical writers in the past that the High Commission, which played so important a part in the reigns of the late Tudors and the early Stuarts, deserved the fate that finally befell it in 1641. Neal, in his "History of the Puritans," wrote that its members "sported themselves in all the wanton acts of tyranny and oppression till their very name became odious to the whole nation"; and Hallam lent the weight of his influence to this view, when he characterized their procedure as "so repugnant to the rules of our English law and to the principles of natural equity that no species of ecclesiastical tyranny seems to have excited so much indignation." Though no history of the Commission and its work had been written and no sufficient knowledge had been obtained whereon to base such sweeping assertions, writers have been content to repeat with varying emphasis these condemnatory statements.

To examine into the truth or untruth of this widely accepted verdict was a worthy but difficult task. The records of the Commission have almost entirely disappeared. That they have been accidentally lost seems improbable. Registry books, act books, immense files of pleadings and lawyers' briefs, and bales and sacks of miscellaneous papers do not, as a rule, vanish without leaving more than a bare remnant behind. The most likely explanation of this wholesale disappearance is that the records were deliberately destroyed by order of the Long Parlia-

ment shortly before 1645, the date of Laud's trial, since when they have never been seen or heard of. Laud's condemnation was decreed beforehand, and papers that might lead to his vindication could not be suffered to remain. He, therefore, who would write the history of the Commission must depend upon indirect evidence. To construct a trustworthy and continuous story of an institution that in one form or another lasted for a century from sources other than its own records, seems almost like making bricks without straw.

Though Dr. Usher began his task before he had written the "Reconstruction of the English Church," published in 1910, he has delayed its completion until he might profit by the knowledge acquired in the investigation of the larger subject. The result is a work definitive in character, admirably compact, direct, and scholarly. As a piece of historical synthesis, it is much more successful than the larger publication, for it is better proportioned and less verbose. In its conclusions it is convincing, and in style is well written and forcible. There is, at times, as the author himself confesses, a provoking vagueness about the actual activities of the Commission itself, but this occasional lack of clear-cut and definite lines in the picture is due to the material available for its restoration and not to any uncertainty of thought in the mind of the writer.

The High Commission had its origin in a body of men appointed in 1535 by Henry VIII to establish the royal supremacy in causes ecclesiastical. Henry, having taken to himself powers formerly exercised by the Pope, needed some instrument for enforcing these powers, and delegated authority to various commissions for this purpose. Similar commissions were appointed by Edward, Mary, and Elizabeth. Thus the Commission was at first merely an executive contrivance for ferreting out and punishing departures from the established religious order. Dr. Usher concludes that during this early period of its history, when it was largely controlled by the Privy Council, its actions were often arbitrary and oppressive. After 1580, when for the first time it can rightly be called an ecclesiastical court, and was largely independent of executive control, its methods, though objectionable from the modern standpoint, were not tyrannical, and its punishments were not immoderate. After 1611, when by the patent of that year its jurisdiction and procedure were more exactly defined, there is nothing to show harshness or illegality. The Commissioners never "arrested men silently, condemned them secretly, and immured them in some dungeon, so that friends only knew that they had disappeared," as the Puritans charged. They did not act as a body of inquisitioners; their business chiefly concerned matters of a disciplinary or matrimonial nature, and heresy and schism, which were not necessarily concerned with either Roman Catholics or Puritans, did not often come before them. Only 5 per cent. of the cases with which they dealt were originated by themselves; 80 per cent. were ordinary disputes between party and party, brought voluntarily before the court for settlement. No Commissioner ever made money out of his office, and charges of bribery and excessive fees, if sustained, arose from the practices of the advocates, proctors, and clerks of the court, which were characteristic of all courts of that day. Delays were due, not to the Commissioners, but to the litigants themselves, who had the seventeenth-century idea that the best way to win a suit was "to tire out an adversary by delays and to ruin him by court charges." Dr. Usher's general conclusion may profitably be compared with the assertions of Neal and Hallam cited above:

> Few things impress the student of the records of the Commission more than the superabundance of evidence testifying to the consistent care and effort shown by the Commissioners that their powers should be exercised with equity, moderation, and absolute fairness, and that their procedure should be free from undue delay, expense, and vexation. That these ends should have been perfectly attained was not to have been expected, but the Commissioners, from the time of Aylmer to the days of Laud, certainly seem to have striven to obviate as far as possible the evils of the administration then apparent in the Commission, in common with all the other courts of the realm.

Whence has arisen the ill repute of the Commission and why was it abolished by act of the Long Parliament in 1641? In the first place, the High Commission was a prerogative court, and its procedure was that of the civil and not the common law. The common-law judges, notably Coke, attacked it vehemently in the reign of James I, endeavoring to destroy the efficacy of its procedure and to impeach its jurisdiction. In weighing the merits of the legal argument, Dr. Usher finds for the Commission and against Coke, whom he charges with unscrupulousness and bad faith. Coke's attack failed, but it played into the hands of the Puritans, who since the days of Elizabeth had charged the Commission with illegality and oppressiveness. Thus, in the second place, the court was attacked because it performed the disciplinary work of the church and dealt with sectaries and the holders of conventicles. In the trial of these men the court employed forms of procedure that were characteristic of all prerogative courts of that period, but are obnoxious to present-day notions. The Commissioners did their best to eradicate abuses, but their hands were tied. Tradition and custom were against them. All prerogative courts had outlived their time, and the fault lay not with the Commissioners, but with the institutional order that they represented. To get rid of the High Commission its enemies manufactured evidence against it. Most of the charges, says Dr. Usher, "so loudly trumpeted forth by the Long Parliament and so dramatically insisted upon by Laud's accusers in 1645 at his trial for high treason" were fabricated. The Grand Remonstrance and the act of 1641 abolishing the Commission, like some other great documents in history, are tissues of untruth. Their importance lies in the fact that men believed in them and acted upon them, and so we have another illustration of the significance of untruth in history. "The ideas about the truth held by great bodies of men are far more potent forces in history than the truth itself."

GERMAN CENTRAL AFRICA.

From the Congo to the Niger and the Nile: An Account of the German Central African Expedition of 1910-1911. By Adolf Friedrich, Duke of Mecklenburg. Illustrated. Philadelphia: The John Winston Co.

The aim of the German Central African Expedition was to make a scientific exploration of certain regions in Africa which were about to come under German influence at the conclusion of the Franco-German negotiations then pending. Its leader was the Duke of Mecklenburg, who two years before was the head of a similar expedition in East Africa, and his staff consisted of eight Germans, four of whom were scientific specialists and one an artist. They separated into different parties for the exploration work, and the book consists of the different leaders' accounts. The Duke's contribution is a description of Lake Tchad and the region just south of it. His companions were the artist, Ernst M. Heims, who describes the journey from the lake to the Niger, and Capt. von Wiese, who took the opposite direction, going up the Ubangi to the Nile. He gives an account of this part of the expedition's work as well as of the journey from the Congo to the lake.

The most interesting in some respects of all the accounts is that of Dr. Shubotz, in which he describes his trip up the Welle River to the Nile. It led him through the home of the okapi, several specimens of which he obtained, and into the Mangbettu country in the far eastern part of the Belgian Congo. Though these people are a cannibal race, and have had but little contact with the outside world, Dr. Shubotz does not hesitate to call them "a highly cultivated people," who possess remarkable architectural genius, and whose pottery, wood-carving, and basket-work far surpass those of any other negro tribe. As an example of their legends and songs which show a love for the beautiful, he gives this verse "taken down at the dictation of an old Mangbettu bard":

> After I have passed away,
> Do not lay me near your dwelling,
> You'll forget me day by day.
> Lay me near the flowing river,
> That the frogs and water birds
> May bewail me there forever.

Dr. Arnold Schultze contributes an account of the German Congo and South Cameroons, "which afforded a rich harvest to the scientist." Some idea of the extent of the investigation undertaken is gained from the fact that the Hamburg Ethnological Museum gave him a list of about a thousand questions, answers to which were

supplied. The concluding chapters are by Dr. J. Mildbraed, describing visits to the Guinea islands, Annobon, and Fernando Po, where he was struck "by the wealth and potentialities afforded by the unusually favorable natural conditions."

The book is a translation of the German work published in 1912, and it is to be regretted that the chapter by Georg Thilenius, giving a summary of the principal scientific results of the expedition, is omitted. The botanical and zoölogical collections were enormous, including 2,900 birds and about 18,000 invertebrates. Only one of the six maps in the original is given. The work of the translator, whose name is withheld, is generally good. The 514 illustrations, largely of the natives, and especially the reproductions in color of the artist, Mr. Heims, add much to the attractiveness and value of the work.

Notes

The authorized biography of the late Lord Strathcona is in preparation by Mr. Beckles Willson and will be published by Messrs. Cassell.

Moffat, Yard & Co. announce the forthcoming publication of: "Memories and Milestones," by John Jay Chapman; "Jim," by Reginald Wright Kauffman; "Germany and England," by T. A. Cramb, and the second series of William Winter's "Shakespeare on the Stage."

"The Commodore," by Maud Howard Peterson, will be published next month by Lothrop, Lee & Shepard Company.

Henry Holt & Co. will publish this month "The Rosie World," by Parker Fillmore, and "American Labor Unions," by Helen Marot.

"Men Around the Kaiser," by Frederick Wile, and "In My Youth" (anonymous) are promised for early publication by the Bobbs-Merrill Company.

"Bamby," by Marjorie Benton Cooke, is announced for publication on September 26 by Doubleday, Page & Co.

Longmans, Green & Co. will shortly reissue Gen. von Bernhardi's "Germany and the Next War" in a cheaper edition. The same house announces that the second and final volume of Sir George Trevelyan's "George the Third and Charles Fox" is in preparation and will appear shortly.

Little, Brown & Co. announce the forthcoming publication of "Famous War Correspondents," by F. Lauriston Bullard, and "Sea, Land, and Air Strategy," by Col. Sir George Aston, K.C.B. A new and revised edition of "Bartlett's Familiar Quotations," edited by Nathan Haskell Dole, will be issued by the same company on November 6.

Stewart & Kidd Company, of Cincinnati, will publish shortly "Four Plays," translated by Barrett H. Clark. The plays are "The Fossils," by François de Curel; "The Serenade," by Jean Jullien; "Françoise's Luck," by Georges de Porto-Riche; "The Dune," by Georges Ancey.

The following volumes are included in Rand, McNally's announcements of autumn publications: "Europe from a Motor Car," by Russell Richardson; "The Promise of Life," by Howard Sutherland; "An Outline of Occult Science," by Rudolph Steiner; "When I was Little," by Edith M. Kelley; "Mary Russell Mitford: Correspondence with Charles Boner and John Ruskin," edited by Elizabeth Lee; "Where He Dwelt," by Alfred T. Schofield; "Love Songs of Alfred, Lord Tennyson," "Love Songs of Robert and Elizabeth Browning," "Love Songs of William Shakespeare," selected and arranged by Ethel Harris; "Told in the Hills," by Marah Ellis Ryan; "Jacob, the Jew Boy," by Mabel Gifford; "Pocket Guide to the West Indies," by Algernon E. Aspinall; "A Quiet Corner in a Library," by William Henry Hudson; "The Art of Living Long," by Luigi Cornaro, translated by William F. Butler, and Honoré de Balzac's "Love in a Mask," by Alice M. Ivimy.

Macmillan's list of autumn announcements includes, in fiction: "The Wife of Sir Isaac Harman," by H. G. Wells; "The Mutiny of the Elsinore," by Jack London; "The Three Sisters," by May Sinclair; "The Rise of Jenny Cushing," by Mary S. Watts; "Saturday's Child," by Kathleen Norris; "Neighborhood Stories," by Zona Gale; "Landmarks," by E. V. Lucas; "The Demi-Gods," by James Stephens; "Faces in the Dawn," by Hermann Hagedorn; "Metzel Changes His Mind," by Rachel Capen Schauffler; "The Game of Life and Death: Stories of the Sea," by Lincoln Colcord; "Neighbors: Life Stories of the Other Half," by Jacob A. Riis; "They Who Question" (anonymous); "Thracian Sea," by John Helston; "Sight to the Blind," by Lucy Furman. Poetry and Drama: "Romance," by Edward Sheldon; "The Congo and Other Poems," by Vachel Lindsay; "Borderlands and Thoroughfares," by Wilfrid Wilson Gibson; "Pagan Poems," by Franklin H. Giddings; "Earth Triumphant and Other Tales in Verse," by Conrad Aiken; "Plaster Saints," by Israel Zangwill; "Van Zorn: A Comedy in Three Acts," by Edwin Arlington Robinson; "How to See a Play," by Richard Burton; "You and I," by Harriet Monroe; "Sword Blades and Poppy Seed," by Amy Lowell; "Poems," by James Stephens; "Gitanjali," by Rabindranath Tagore.

In public affairs, history, biography, literature and art, and travel Macmillan's list includes: "Progressive Democracy," by Herbert Croly; "Property and Contract in Their Relations to the Distribution of Wealth," by Richard T. Ely; "Why Is the Dollar Shrinking?" and "Standardizing the Dollar," by Irving Fisher; "The New Public Health," by H. W. Hill; "Who is Insane?" by Stephen Smith; "The Juvenile Court and the Community," by Thomas D. Eliot; "Concentration and Control: A Solution of the Trust Problem in the United States," by Charles R. Van Hise; The Cambridge Mediæval History, by J. B. Bury and others, Vol. III—"Germany and the Western Empire"; The Cambridge History of India, edited by E. J. Rapson and others, Vol. I—"Ancient India from the Earliest Historical Times to About the Beginnings of the Christian Era"; "Life in the Homeric Age," by Thomas Day Seymour; "The Life of Benjamin Disraeli, Earl of Beaconsfield," Vol. III, by G. E. Buckle; "The Writings of John Quincy Adams," Vol. IV, edited by Worthington C. Ford; "A Life of Napoleon Bonaparte, with a Sketch of Josephine," by Ida M. Tarbell; "Essays on Books," by William Lyon Phelps; Hauptmann's "Parsival," translated by Oakley Williams; "The Complete Poetical Works of Geoffrey Chaucer," put into modern English by Tatlock and MacKaye, cheaper edition; "Lucas's Annual," edited by E. V. Lucas; "Pottery for Artists, Craftsmen, and Teachers," by George J. Cox; "Bernini and Other Studies in the History of Art," by Richard Norton; "A Wanderer in Venice," by E. V. Lucas; "With Poor Immigrants to America," by Stephen Graham; "Through the Grand Canyon from Wyoming to Mexico," by Ellsworth L. Kolb; "Japan To-day and To-morrow," by Hamilton W. Mabie; "Panama: The Canal, the Country, and the People" (revised edition), by Arthur Bullard; "California," by Mary Austin; "Panama, Cape Cod, and Other Artificial Waterways," by A. Barton Hepburn.

For twelve years, from 1881 to 1893, Auguste Angellier kept at his studies for the long and complete book on Robert Burns by which he is best known in and out of France. Then he wrote poems of his own and began publishing them in 1896, at the age of forty-eight. His first volume was a series of 178 sonnets "To the Lost Love." Five more volumes followed; but he died with the fame of one who had not given his full measure. This year, for his friends, there has been privately printed a little book of "Verses of Youth." They show that, had he not left composition to dull age, he might have sung a far-reaching message to all of his speech. The few literal lines that follow are full of the passion stirred by that other war of 1870; and they keep their unhappy power to-day.

In his chair the old Emperor sits wnking;
'Tis now long ago since he could sleep:
He feels harsh remorse, rest never taking,
The companion he shall now forever keep.

Words he murmurs low and swiftly going,
Elbows on table, forehead in his hands—
An old man's hands, but fewer wrinkles showing
Than the graves of men he's buried through the lands.

. . . . . .

The cloth is red before him, red the pages,
And red the great chair wherein he prays;
His lamp shines red as when the lightning rages;
The ink with which he writes is blood that stays.

What is it paints blood-red the walls and ceiling?
What blood-stnins are on windows and the doors?
'Tis red blood that flows from nll these people reeling
From wounds, whcnee their blood in torrents pours.

Unforgiving is this flood of war and daily
'Tis flowing from so many wretched veins:
If men sleep now beneath the ground so pnlely,
'Tis because their blood's before thee in these stains.

. . . . . .

'Tis n mark that no diadem hides ever,
It shall stny on thy heart and pnlid cheek:
Wash in ocean nnd its stain shall quit thee never,
Nor forgotten be when men thy story speak.

A refreshing book, after many modern biographies, collective and individual, is "The Seymour Family," by A. Aubrey Locke (Houghton Mifflin Co.; $2.50 net), dealing, as it does, largely with men and women intimately connected with the outstanding events of their times—Dukes of Somerset, Marquesses of Hertford, and others. It is impossible here to give any adequate idea of the varied interest of the volume, which, in spite of its considerable length, is quite guiltless of the usual padding, and is made up, al-

most entirely, of quotations from original letters and other documents, with the briefest connecting links to eke out the story. The short appreciations of character are often illuminating, as in the case of Edward, the Protector, and his brother, Thomas, the Lord Admiral, sometimes regarded as respectively a hero and a villain. The author suggests that they had the vices of their positions: "The Protector was the man in possession, the Lord Admiral was the rival." From Jane Seymour he coldly strips the halo with which sentimentalists have tricked her out: "Under the semblance of gentleness and tenderness and modesty, the keynote of Jane Seymour's life was inordinate ambition." The unhappy romances of Lord Hertford and Katherine Grey, and of William Seymour and Arabella Stuart, act as a foil to the many less ambitious marriages which contributed to the enrichment of the family. Throughout there is a total absence of scandal for scandal's sake—witness the account of the third Marquess of Hertford, Thackeray's Lord Steyne and Disraeli's Monmouth. In early life we find him depicted as the philosophical man of the world, scholar, and art collector—"All I wish," he writes to Croker, "is to preserve to the King his crown, to myself my coronet and estate." As to his later years, we have the report of his physician: "The brain of the late Marquess of Hertford was a diseased brain"—a view with which Croker, his life-long friend, agreed. That the Seymours had to have a finger in every pie is curiously set forth in the story of Francis Seymour, who lived with Madame du Barry, and whose illegitimate daughter was the mother of Sir Roger Tichborne, personated by Arthur Orton in the famous trial of 1871.

Any one wishing for a brief, authoritative, and readable account of the Lincoln-Douglas debates can do no better than to get "The Lincoln and Douglas Debates," by Horace White (The University of Chicago Press; 25 cents net). The material in this attractively printed pamphlet was originally presented in an address before the Chicago Historical Society. Mr. White, who, as everybody knows, reported the debates for the Chicago *Press and Tribune*, has done much more than to summarize the issues as they were seen and argued by the two contestants. Limited as his space is, he has contrived to provide an historical background, to give a picture of the opposing debaters, and to reproduce some of the atmosphere of the historic series. He assists the reader also by some analysis, not only of the points raised by the speakers, but also of their respective mental processes. The pamphlet would be an admirable supplement to any textbook in United States history. It contains engravings from photographs of Lincoln, Douglas, and Mr. White, all supposed to have been taken in 1858, the year of the debates, and a fascimile of Lincoln's acceptance of Douglas's suggestions of places, etc., for the series of discussions.

"Applied City Government," by Herman G. James, Ph.D. (Harper; 75 cents net), is better defined by its sub-title, "The Principles and Practice of City Charter-Making." It puts into small compass the advanced ideas of the present day upon such matters as commission government, city manager, recall, and direct legislation in cities. Yet it is not a radical book, as is shown by its suggestion of as high a per cent. of the voters as thirty-five in order to initiate legislation. It aims to discuss only subjects that should go into a city charter, and here again it is wise in limiting the number to those that must be dealt with in such an instrument. Besides the political provisions of a charter, it handles two topics, those of finances and franchises. At the end of each chapter, the matters therein considered are cast into the form of articles of a supposed charter, which should be a valuable feature of the book for charter-makers, who, as well as students, will be aided by the list of references to other books and to articles.

Although Melville M. Bigelow's "A Treatise on the Law of Estoppel, or of Incontestable Rights" has been out of print for several years, it has not ceased to be cited by counsel and courts, and the present edition, revised by James N. Carter (Little, Brown), will have a hearty reception from the bench and bar. Undoubtedly, that reception would be still heartier had the author been able personally to revise the treatise. Not all of its readers will agree with the assurance in the preface that "the editor of this edition has done all that could be expected of him to make it worthy of the favor with which the book has heretofore been received." On the contrary, the editor has failed to note many important cases on the subject of estoppel, such as Scollans vs. Rollins, in Massachusetts, and Piper vs. Hoard, and Knox vs. Eden Musée Am. Co., in New York, nor has a careful search discovered any reference to the extraordinary extension of estoppel by the recent Uniform Laws dealing with Warehouse Receipts, Bills of Lading, and Certificates of Stock. The latter omission is all the more surprising because Ewart on Estoppel contained searching criticisms of Bigelow's opinions on several points, and not a few of these criticisms have received legislative approval in the above mentioned statutes. Possibly both Mr. Bigelow and Mr. Carter have ignored Mr. Ewart's writings as well as the Uniform Laws. That supposition finds some support in a remark in the preface that "no suggestion has been made that the book needs reconstruction." It is true that Ewart on Estoppel does not contain a specific suggestion to that effect; but if the theory of that book is sound, many of Mr. Bigelow's statements need radical revision. There can be no doubt that the legal profession would have welcomed a reply from Mr. Bigelow to Mr. Ewart, as well as an expression of Mr. Bigelow's views concerning the changes wrought by the Uniform Laws in the common law rules of estoppel as formulated by him. Such reply and statement would have required a considerable enlargement of the treatise, and might have necessitated a reconstruction of certain chapters. Evidently the distinguished author was not disposed to expend the time and labor incident to such a revision, and, naturally, a youthful editor would not essay the task.

As a rule, leading cases upon estoppel are carefully digested and accurately stated. However, the author seems to have made a slip in referring to Young vs. Grote (4 Bing., 253) as a case arising between drawer and acceptor. The parties were the drawer of a check and his banker, and the decision has been explained by the Supreme Judicial Court of Massachusetts and by the British Privy Council as applicable only to parties sustaining the relationship of banker and depositor. The author is quite right in asserting that the case is not an authority for the doctrine that negligence on the part of the drawer of a bill or check, or of the maker of a note, in leaving a blank which has been so filled as to escape detection, will estop such party from showing that the paper has been altered.

While there can hardly be said to have been a crying need for a new Life of Webster, Frederic Austin Ogg's account of him in the latest addition to the American Crisis Biographies (Philadelphia: Jacobs; $1.25 net) is a commendable piece of work. It is comprehensive, well proportioned, and judicial. It acknowledges the statesman's weaknesses without dwelling upon them, and at the same time refrains from over-laudation. In its pages Webster moves as a man in the midst of events, neither dwarfing his time nor being dwarfed by it. Mr. Ogg is not afraid to express an opinion upon the course taken by the Massachusetts Senator at critical moments, but he does not seek for such occasions. On the Seventh of March speech, while noting that Webster's standing throughout the North was affected adversely by it, Mr. Ogg is bold enough to say: "The truth is that the course which Webster pursued in 1850, if considerably at variance with his course at earlier times, was dictated very much more largely by honest and patriotic motives than the critics of that day and since have been willing to admit." Concerning Webster's growing ambition for the Presidency, Mr. Ogg's repeated statements of the fact leave a reader wishing for more of the documentary evidence that in reference to other and not more important matters he supplies freely. The style, if not notable, is clear; it could often be crisper, to advantage. In the Bibliography, Eugene Pivary appears for Pivany.

In "A History of Connecticut, Its People and Institutions" (Putnam; $3.50 net) the Rev. George L. Clark, already known as the author of a life of Silas Deane, has made no attempt to supply the need that scholars have of a definitive history of Connecticut. The origin of its government, central and local, its relations with the mother country and with other colonies, the development of its political institutions, and of the conditions that made for the excessive individualism which passed under the name of liberty and freedom, and the peculiarly conservative character of its people that has sometimes been a bar to wholesome progress, are all foreign to his purpose. He has been well advised not to attempt the larger and more difficult task. He has written a history of life within the State, descriptive, not interpretative, and concerned with things that lie on the surface, and he has written it well. His book is clearly thought out, and presented with a charm of style and an appreciation of the humors of his forebears that make it thoroughly readable. The form of treatment adopted is topical, and the titles of the chapters range from education, literature, and art to finance, insurance, philanthropy, and agriculture. Political history is subordinated to social and institutional history, and, as a subject consecutively treated, stops with 1818. All the topics are handled in an interesting fashion and with laudable freedom from patriotic rhetoric. Allowing that history of this kind is worth writing, and we believe that it is, Mr. Clark's book deserves ample commendation.

The six lectures reproduced in "Church and State in the Middle Ages," the Ford Lectures for 1905, by Mr. A. L. Smith (Oxford University Press), are concerned with that highly critical period when the great duel of Empire and Papacy was being fought to a finish, and might equally well have been entitled "A Study of the Papal Registers of Innocent IV (1243-1254) in their Relation to England." Mr. Smith's command of the material enables him to rise above the conventional anti-Romanist attitude and to see what there was of value in the papal hold upon the imagination of the mediæval world. He lays down as one of his axioms that "the Papacy, taking it all in all, was the greatest potentiality for good that existed at the time, or perhaps has ever existed." Speaking of the gross superstitions that gathered about the service of the Mass, he says: "Certainly, it required a central oracle to keep things both uniform and sane." These quotations show his sympathy with the work of the Papacy in its heroic period, the age of Innocent III. In the two generations following, however, down to the beginning of the age of Boniface VIII, comes a transition, and of this the pontificate of the fourth Innocent is here presented as the type. What had been a beneficent tribunal, harmonizing differences, curbing excesses, moderating dangerous enthusiasms, now becomes an intolerable tyranny, laying upon men's consciences burdens they could not bear. Worst of all, the Papacy henceforth identifies itself with the world by becoming one among the temporal powers and sacrificing more and more its spiritual control to the interests of this secular sovereignty. One fact, unwelcome to most English writers, and for that reason often denied or obscured by them, is faced by Mr. Smith with entire frankness. He does not attempt to blink the acceptance in England of the full papal system—not indeed without protest; but similar protests can be shown in all countries, even in those usually supposed to be most loyal to the papal tradition. It is by this larger view of the resistance to Roman aggression that the situation in England during the whole pre-Reformation period is to be placed in its true perspective. For the general reader the last two lectures, on the Aims of Papal Policy and the Policy of Innocent IV, will probably be the most interesting as summing up the author's views on the whole question suggested by his title.

Dr. R. H. Charles, the leading English scholar on the Jewish Apocalypses, has in preparation a commentary on the New Testament Book of Revelation, to which his lectures delivered before the University of London may be regarded as preliminary. These lectures are published under the title "Studies in the Apocalypse" (Scribner; $2 net). The first two deal with the history of interpretation of this enigmatical book, especially the views of scholars in the past forty years, during which period more progress has been made in sane criticism of the Apocalypse than in all preceding centuries. The three remaining chapters are a fresh and important contribution to the subject. In discussing "The Hebraic Style of the Apocalypse" Dr. Charles argues against the view represented in this country by Professor Moulton, according to which the book was written in a vernacular Greek, its solecisms being merely the blunders common to uneducated persons of its period. Dr. Charles contends, on the contrary, that the linguistic character of the Apocalypse is absolutely unique, that the style is that of a man who had never mastered Greek idiomatically, even the vulgar Greek of his own day, and that the grammatical errors reveal that the author was thinking in Hebrew and adopting unconsciously Hebrew constructions. The argument is able, and in the course of it several corrections of the translations both of the authorized and revised versions are urged with force. The revisers, treating the Apocalypse as if it were a Greek book written by a Greek, have been led into some curious blunders. For example, they have followed the Hebraism of the author in the use of the singular ὄνομα instead of the plural, where the multiude of the lost is referred to, rendering "they whose name has not been written in the book of life," which, as Dr. Charles remarks, "is not English, any more than it was Greek." The whole chapter is of great interest and value, as is also the lecture on the construction and analysis of one of the important chapters of the Apocalypse. These preliminary lectures create expectation of an important contribution to New Testament exegesis when Dr. Charles's commentary appears.

NOTES FROM ABROAD.

A Paris book, published but a few weeks since, has among its pleasant pages some that seem now like prophecy. The subject is "German Universities in the Twentieth Century," and the chapters describe intelligent and systematic visits made to the twenty recognized universities by Prof. René Cruchet, of the French University faculty of Bordeaux, with particular regard to medicine. Coming events cast then no shadows over his sympathies as a scholar; yet he was struck continually by utterances which are little short of terrific, now that we understand. Professor Siegert guided him through the new hospitals of Cologne and discoursed thus in 1909:

Really, Monsieur, your newspapers do a colossal wrong to the Pacifist cause by their narrow jingoism, which forever sees, in purely scientific practices, some arm of war. . . .

There is one thing all of us Germans wish sincerely and deeply—it is a complete understanding with France. . . . We love France as much as we detest England. The English are a people selfish and mercantile and devoid of prejudices, friends to-day and enemies to-morrow, as their interest demands; and they are disquieted by our rapid rise at sea and wish our annihilation. . . . As to Italy—faithless and never sure as a friend—no one can count on her; and you, in your turn, may well fear some cruel morrow at her hands. On the contrary, Austria is a faithful ally and knows what our help is worth to her.

At the University of Kiel, one of the professors said:

Students of central and south Germany are coming to us more and more. Here, living in the midst of warships, they follow with interest the development of our navy—a development necessary to the glory of the Fatherland and the neutrality of Germany!

At Greifswald, the professor of French—a Frenchman—still opined:

I believe that, in France, we often misunderstand the real feeling of Germans towards us, just as they, too, understand us ill. . . . In any case, so far as I can judge from university circles, I can say I do not know a single professor for whom the possibility of war with France would not be considered a very great misfortune!

At this very time, a university writer of Göttingen declared that "the academic youth and the whole people of Germany—just as long as the present national feeling should exist—would thank" the Pro-Rector Dove (discoverer of the law of winds) for his words in 1870, in answer to the protest of European learned bodies against the siege of Paris:

Our University, which is proud to call itself German, and which has given to the war hundreds of its young men, does not see the difference there is in fighting half-savage African tribes or the mob that makes up the troops of the adventurer Garibaldi.

The French visitor, who had not the light of these last days to guide his judgment, remarks that "to cite such words thirty years after as an example, gives no high idea of present-day tolerance in certain German university circles."

At Heidelberg, after listening impatiently to the Frenchman's scientific explanation of the progress which he thought had been made in the artillery of his country, a chemist of the University could only answer rudely: "Your artillery—we saw what that was worth in 1870!" Even in those days of peace protestations, the French professor was struck.

Such examples—and they might be multiplied without end—are most instructive as showing the state of mind of Germans, for they look on the Frenchmen of 1900 or 1914 as the vanquished of 1870. . . . And what is most deplorable and sad is that even these South Germans who, *tête-à-tête*, have the air of saying they are friends of the French and irreconcilable enemies of the Prussians, are at bottom more and more taken with an ever greater Germany. . . . In 1870, they assured the world their "magnificent aim" was to combat for the final unity of Germany and the establishment of the German Fatherland. To-day they would pretend that only strong, working, industrious peoples, whose prosperity and population go on increasing together without ceasing, have the right to keep the road; they would say they cannot bear being stopped in their forward march by a noisy, corrupt, undisciplined nation corroded by decadence and invaded by rottenness, whose Byzantine insolence and weakness and anarchy swell daily and have to be chastised mercilessly for Humanity's good!

It is an eternal pity that the French professor's conclusions from such personal observations should have been lost on politicians amid his educational pages. "In presence of a Pacifism that assumes so aggressive a form and displays openly its absorbing brutality, we cannot help being seized by a certain suspicion. . . . At bottom, it is our final reduction to slavery they are dreaming of and preparing without stay or stop in the silence of their consciences!"

Alas! suspicion is now evidence of facts, and the Pacifism is universal War.

The Form of Intercession with Almighty God on behalf of the British naval and military forces now engaged in war incidentally recalls a curious historical fact. By authority of the Primate it is directed "to be used in all Churches and Chapels in England and Wales and in the Town of Berwick-on-Tweed." This recalls the lesson learned at school that this ancient borough, marking the boundary line between England and Scotland, belongs to neither. Claimed by the Scots as theirs, since it stands on their side of the river, it was, in 1333, annexed to England. After being captured and recaptured in a succession of desperate fights, it was ceded to England in 1482. Seventy years later, the quarrel for possession bursting forth again, it was finally settled that the town should be independent of both kingdoms. The nearest parallel to this unique position of aloofness is found in the city of Washington, D. C.

Music and Drama

RUSSIAN NATIONAL MUSIC.

A History of Russian Music. By M. Montagu-Nathan. New York: Charles Scribner's Sons.

The Russian Opera. By Rosa Newmarch. New York: E. P. Dutton & Co. $1.75 net.

The author of "A History of Russian Music" has a queer idea of the functions of an historian. Outside of Russia, until a few years ago, the history of Russian music meant the story of the activities of Rubinstein and Tchaikovsky, these two having been the only composers of that country whose works aroused a wide interest and general admiration in foreign parts. To-day, thanks to the Russian dancers and the wonderful art of Shallapin, the public of London, Paris, and some other cities is becoming acquainted with the stage works of Muscovite composers heretofore neglected. This is as it should be, and one is glad to welcome a volume devoted to them. It is convenient to have between the covers of an English book detailed information about Glinka, Dargomijsky, Seroff, Lvoff, Balakireff, Cui, Borodin, Moussorgsky, Rimsky-Korsakoff, Glazounoff, Liadoff, Liapounoff, Arensky, Taneieff, Rachmaninoff, Glière, Ippolitoff-Ivanoff, Scriabin, Gretchaninoff, Stravinsky, and others; but the judicious reader of Montagu-Nathan's volume is amazed to find that these men are the only ones regarded as worthy of discussion and praise. Rubinstein and Tchaikovsky are not treated as real Russian composers! They were guilty of the deadly crime of betraying in their works the influence of German and Italian composers, and of using their own melodies instead of working up borrowed Russian folksongs in the Russian way! Therefore they were "not Russian composers, but only Russians who composed," as one of the nationalists, César Cui, put it in speaking of Rubinstein.

On such unpatriotic composers no respectable chronicler of Russian musical happenings could be expected to waste his time. Montagu-Nathan, therefore, does not tell the story of their lives, or enumerate and describe their principal works in detail, as he does those of the other men mentioned; and, not content with this, he scornfully disposes of Rubinstein as merely a pianist and not really a composer. As for Tchaikovsky, who is treated somewhat more leniently, this "historian" refers his readers to the article on him in Grove's "Dictionary of Music and Musicians" for a list of biographic and critical records! Feeling, apparently, somewhat guilty of shirking his duty, he takes pains to explain (considerably at variance with facts) that these two men, once popular, are so no more. Apparently, if this author were writing a "History" of German music, he would dispose of Mozart, Gluck, Weber, Mendelssohn, and many others in brief and scornful paragraphs, because their compositions are no longer as popular as they used to be.

No Russian who desires to have his country rank among musical nations will feel grateful to an author who treats its greatest two musicians so disdainfully. Of the other two or three dozen men whom he eulogizes, only one, Rimsky-Korsakoff, is a genius; and he falls below Rubinstein and Tchaikovsky because he lacked their gift of creating ravishingly original melodies. Energetic and persistent efforts have been made in several countries (in ours by Safonoff, Schindler, and the Russian Symphony Orchestra) to arouse enthusiasm for the "genuine" Russian composers, but in vain. No doubt, these composers performed an interesting task in transplanting the wild flowers of Russian folk music into their cultivated operatic and symphonic gardens; but there are higher tasks for creative genius, and more difficult ones, than such transplanting. Montagu-Nathan refers to the works of Grieg as furnishing a parallel to those of the Russian nationalists; but Grieg, contrary to a prevalent notion, owes his fame and popularity to his own charming melodies. Those of his works into which he incorporated Norwegian folk-tunes are almost unknown to the public. In the days of Rubinstein and Tchaikovsky many a battle was fought between them and the nationalist consumers of folk-tunes. Rubinstein hit them hard when he referred to "these young Russian composers, who continue to confine themselves largely to popular and national themes, exposing thereby their poverty of invention, a lack which they attempt to conceal under the cloak of 'nationalism,' or by using the description of 'new school.'" For the father of the nationalist school, Glinka, Rubinstein nevertheless professed much admiration. Glinka, however, is not the chief idol of this school. That honor goes to Moussorgsky, to whom our historian devotes no fewer than four chapters, one of them being concerned with "Boris Godounoff." They are excellent chapters, not uncritical; indeed, the author frankly points out the inartistic character of "Boris Godounoff"—its lack of organic form, and its being made up largely of music borrowed from the composer's other works. After reading these frank concessions, one wonders why the author is so very severe on Rubinstein and Tchaikovsky for their real or alleged faults, and so very lenient with Moussorgsky for his.

Rosa Newmarch's book is more limited in scope than that of Montagu-Nathan, being concerned only with Russian operas; but of these it gives better analyses, while the lives of the composers are related in more entertaining fashion. Mrs. Newmarch is the leading English authority on Russian music, on which subject she contributed all the important articles to the new edition of Grove's monumental dictionary. She has also written a book on Tchaikovsky and translated the entrancing biography of that composer by his brother. It is needless to say that in her latest volume she devotes a chapter to Tchaikovsky's operas, and there is also one on Rubinstein's. It so happens that neither of these composers was at his best in his stage works, a fact which this author does not blink; yet as an historian she feels called upon to describe them, as well as those of the nationalists whose operas and ballets are just now being introduced in France, England, and America. While a genuine believer in the merits of the stage works by these writers, she declares that "at times the burden of nationality seems to hang heavy on their shoulders; the perpetual burning of incense to one ideal dulled the alertness of their artistic sensibilities."

Berezovsky's division of the history of Russian music into four periods is adopted by Mrs. Newmarch. She gives interesting glimpses of the early times when music was looked upon as one of the seven deadly sins; of the different attitudes of rulers towards this art; of the quarrels between the national composers and the cosmopolitan, who had the whip hand. To Glinka and his operas no fewer than forty-seven pages are devoted, while thirty-four are given to Moussorgsky and his "Boris Godounoff," an opera which has enjoyed a sensational success wherever it has been given with Shaliapin (usually spelled Chaliapin) in the title part. To that wonderful bass, who is in Russian opera what Caruso is in Italian, a number of pages are given in this volume, which also gives a glimpse of the present condition of opera in Russia, of recent French influences, and of the breaking away of the younger men from the fetters of nationalism.

HENRY T. FINCK.

"Gilbert, Sullivan, and D'Oyley Carte" is the title of a book recently published in London. The authors are François Cellier and Cunningham Bridgeman.

Among the soloists engaged for the Philadelphia Orchestra's season are six—Zimbalist, Harold Bauer, Fritz Kreisler, Carl Flesch, Thibaud, and Josef Hofmann—whose coming, now or hereafter, will depend on the war.

Quite apart from the war, this seems to be a dangerous time for great artists. First Nordica, then Plançon, and now Emil Fischer—strange that three of the brightest stars of the Metropolitan should have passed away in such rapid succession. Their disappearance emphasizes the present shortage, which may be made greater still by the Kaiser's Napoleonic ambitions.

There is to be, at the San Francisco Exposition, a music hall at which, among other things, a specially organized orchestra will play. Organ recitals by Lemare and other foreign players, as well as by Americans, are to be given. "It has been the experience at other expositions that these organ recitals are among the best patronized of all musical offerings."

The late Mme. Nordica set a good example in rarely giving a recital the programme of which did not include at least one song by an American composer. George Hamlin is another singer who has thus encouraged home talent. Among foreign singers who have done it, Mme. Gadski is conspicuous.

A choral novelty to be produced this season by the New York Oratorio Society is "Joan of

Arc" by Enrico Bossi. The other two works announced are "The Dream of Gerontius" and "The Messiah," which will be sung for the eighty-sixth and eighty-seventh times at the concerts of this society. Enrico Bossi is not unknown in this country, his "Intermezzi Goldoniani" having been played by the Boston Symphony Orchestra in 1906 and 1907. His principal choral work preceding the "Joan of Arc" was "Paradise Lost," produced in 1903. He was born in Italy in 1861.

There will be no teaching of voice placing or tone-production and that sort of thing at the Century Company's opera school; nor, one is glad to hear, will there be "opportunity for singing-teachers to influence the selection of principal rôles." According to Mr. Aborn, what will be provided is "actual operatic training. The students who are admitted will be turned over to those of our staff who train our professional singers. Mr. Jacques Coini, our director, will have general charge, to be assisted by six conductors and six stage directors. I think we shall be able to take care of about 100 students at once." These will be divided into groups, each group studying a different opera, which will take about three months' time. Then the operas will be produced at special matinées, with the full orchestra and chorus of the company. The audience will be invited. Mr. Aborn hopes that in this way four or five good operatic artists will be discovered each season, which will pay for all the trouble and expense.

French players have for some time had almost a monopoly of certain instruments in first-class orchestras in this country. Conductors have no difficulty in getting all the violinists they want; the woods are full of them. Skilled players of brass instruments also are not very hard to find, thanks, largely, to the training received in brass bands. But the players of wood-wind instruments are scarce, with the exception of the flutists. The clarinet, the bassoon, and the oboe are neglected. The French, who alone seem to take to the wood-wind instruments, therefore have an advantage over others. One reason why American students do not take up the oboe, clarinet, and bassoon is that there are no regular training schools for them here, as there are abroad. For this reason Karleton Hackett, the eminent Chicago critic, suggests that some wealthy individuals who are interested in the multiplication and improvement of American orchestras should found such a school. Till that is done it is well to remember that the principal players of woodwind (as of other instruments) in our large orchestras are nearly always willing to take pupils, many of them being, in fact, regularly connected with music schools. Undoubtedly the reason why the violin is so much more cultivated than the oboe is that the violin students hope to become soloists—Kreislers and Ysayes. Oboe players have no such prospects; but as they are otherwise favored it seems natural that they should multiply.

The "Real Lexikon der Musikinstrumente zugleich ein Polyglossar für das gesamte Instrumentengebiet," compiled by Curt Sachs and published by Julius Bard in Berlin, is the most comprehensive monograph on musical instruments ever issued. It describes and pictures not only all the diverse kinds now in use in Europe, but also those of the past ages and of half-civilized and barbarous peoples. It is a work of truly Teutonic erudition, and the condensed information supplied by the author about each instrument is followed by reference to other documents giving information on the same topic. As a supplement to Riemann's "Musik-Lexikon," which has room for articles on only the important instruments, Curt Sachs's "Real Lexikon" is indispensable in private or public libraries.

Five posthumous songs of Coleridge-Taylor, the Afro-English composer, have been published by the Augener Co. They are entitled "Tell, O Tell Me," "An Explanation," "Low Breathing Winds," "Life and Death," and "The Guest." The last-named is for baritone. The others are issued in two keys.

"THE PRODIGAL HUSBAND."

We have seen John Drew in many better plays than "The Prodigal Husband," which Charles Frohman presents at the Empire Theatre, but we do not recall ever having seen him better supported. For this reason and for the sake of the really admirable staging, if one can conquer an instinctive prejudice to an indifferent play, "The Prodigal Husband" is a delightful performance. The acting is finished throughout, and a particular tribute must be paid to Miss Helen Hayes Brown for a really notable interpretation of a child's part in the first act, and to the impersonation of the same part six years later, when the child has grown up, by Miss Jessie Glendinning. Mr. Drew, of course, is Mr. Drew, and it is the merest coincidence that his name for the occasion happened to be Michel Giroux. And he has need of every trick that the gentlemanly comedian keeps in his bag, for, truth to tell, "The Prodigal Husband" is a remarkably thin production. Its authors, Dario Niccodemi and Michael Morton, are gifted with a perfect genius for the obvious. This is restful to the extent that the unexpected is always disturbing, but it becomes monotonous to be able to foretell with exactitude what is to be the point of a line two minutes ahead of its delivery.

The plot is simple. Michel Giroux has separated from his wife for no very sufficient reasons, except that she is too good for human nature's daily food, and proceeds to drown his sorrows in dissipation. To him, returning home in the late hours of the morning, is introduced Simone, the little daughter of the *concierge*. Naturally, he adopts her, and in the second act we discover the child grown into a very personable young woman, filling the gap in his empty life. But ill-natured gossip, inspired by Michel's not too savory reputation, will not leave the idyllic relationship where it is. Michel, accordingly, decides that the best way of setting matters right will be to readjust the relationship to conform to the scandal. Simone, frightened by the prospect, sees clearly that the only thing to do is to fly to Michel's wife, whither she is followed by Michel himself, and in the last act we wait in confident expectation for the line, "Kiss your mother"—an expectation which the authors obligingly fulfil. The motive has been used before, and the only merit of the play is as a vehicle for the extremely clever acting of Mr. Drew and his associates.

S. W.

"A MODERN GIRL."

If "A Modern Girl," which opened last week at the Comedy Theatre, showed any sign of sincerity on the part of its authors, it might be taken seriously in spite of its many shortcomings. But in throwing together these scenes of a fashionable New York household Marion Fairfax and Ruth C. Mitchell have apparently yielded to the alleged popular clamor for daring exhibits. By comparison with what New York has grown accustomed to, this play is, to be sure, almost innocent. But the spirit behind it is of a piece with all the rest. Nor has it a compensating cleverness; there is much talk and little dialogue, though a smattering of smartness is not lacking.

The theme of the modern society girl is here placed in the old, old setting of an aristocratic family on the verge of financial difficulties. This device has, as every one knows, great possibilities. In the present instance it is used to sharpen the heroine's secret escapade with a brilliant young broker of no social standing, Harry Hamilsohn, from whom her father, unknown to her, has sought temporary relief. Beatrice Van Norden, having struck up a flirtation with this broker while riding in the park, goes to his house on a "dare" to exhibit her costume before attending a fancy-dress ball. That it is of the flimsiest only quickens her excitement. But she has been seen entering this house alone by her uncle. The result is that her father realizes the grip which Hamilsohn now has upon him, and there is a stormy scene, with the usual flourishing of a revolver. Fortunately, Hamilsohn has more character than is attributed to a rich Jew by the likes of the Van Nordens, and all ends well. So the play has after all a Christian moral.

Julius Steger, though a sound actor, has a guttural foreign accent which made him appear laughable in the part of Van Norden. Beatrice was taken by Violet Heming, and her sister Emily, a charming, simple woman acting as foil, by Alice John. Edward Nicander's impersonation of Bobbie Van Norden, the irresponsible college graduate supposed to be occupying a position in his father's firm, was thoroughly amusing, and Lee Baker was much at ease in the part of Hamilsohn. F.

"THE STORY OF THE ROSARY."

Old-fashioned melodrama is now the order at the Manhattan Opera House, where Walter Howard's "The Story of the Rosary" is playing to large audiences. Melodrama of this sort has much the same following among intelligent people that detective stories have in the world of fiction. Both types aim frankly to give relaxation, and both have acquired certain venerable traditions. In such melodrama the approach to reality is even less than that of the swashbuckler variety found in plays like "The Prisoner of Zenda." Villain and hero exist by fiat and are distinguished at a glance. It used to be that the villain was the first person to appear on the stage in evening dress and top hat. We are sorry to see that this tradition is of late not inviolable. The atmosphere is one of grave impossibility, but just because it is so gallant in its imaginings an audience with any stomach gladly accepts it for the moment as probable. And at least those in the top gallery experience something of the moral purge which was prescribed by the Greeks.

In essentials "The Story of the Rosary" measures up to the run of melodrama. A mythical enemy serves to bring forth a hero and a villain from the Red Dragoons of the British army, and a beautiful princess in distress sharpens their zest for virtue and evil,

respectively. The preventing of the princess from taking the last religious vows by a lover come to life in the nick of time, after a year of oblivion, furnishes the final thrill in this "exciting" play. F.

POOR VINTAGES.

Acting, perhaps, on the principle that it is well to get rid of the poorer vintages early in the proceedings and, we can only hope, reserving the mellower wines for later use, New York managers have opened the season by industriously staging a number of productions that seemed foredoomed to failure. Two such productions, after brief and most inglorious careers, were relegated to well-deserved oblivion last week—"Cordelia Blossom" and "The Bludgeon," the latter a drama by Paul Armstrong, which contained one good idea and a certain amount of good acting, but which was principally distinguished by its sheer inanity. A similar description, if we except the good idea and the good acting, applies to "Miss Daisy," announced as a "new play with music," which was presented at the Shubert Theatre last week by Philip Bartholomae. Lacking the zest of concerted movement which may do something to redeem even the flimsiest of musical comedies, it is not recommended by coherent plot, or bright lyrics, or lilting music. In addition, both dressing and lighting leave much to be desired. The run of "Miss Daisy" is not likely to be a prolonged one. S. W.

Art

FIGURE SCULPTURE IN ENGLAND.

An Account of Mediæval Figure Sculpture in England. With 855 photographs. By Edward S. Prior and Arthur Gardner. Pp. ix, 794, in quarto. Cambridge: At the University Press, New York: G. P. Putnam's Sons. $12 net.

This is a most painstaking and useful work in minute antiquarianism. The authors have organized an enormous amount of material, usually fragmentary, have ascertained definitely many local schools, the existence of which had only been surmised, and have presented in evidence more than eighty-five figures. Mechanically, the book is carefully made. The cuts are nearly always in proximity to their text, a great convenience in a necessarily bulky volume. The indexing is rather summary for what is essentially a book of reference. In a new edition a special index of religious iconography should be added. The book is easy to consult and hard to read, a compendium rather than a history. There is an excellent general essay establishing the classification. Afterwards the arrangement is topical—tympana, spandrels, bosses, corbels, gargoyles, fonts, effigies, etc.

On the whole, the authors vindicate the originality of the British product. At certain periods it has relations with the sculpture of Léon and Angoulême, of Flanders, and perhaps of the Rhine, but, broadly speaking, the style is indigenous. The most contestable classification is that of Pre-Conquest sculpture. Outside of England, the existence of a thriving seventh-century Anglian school, whose chief works are the Ruthwell and Bewcastle crosses, finds little credence. If it be true that scores of fragments attest such a style—it is supposed to be directly derivative from the Christian East—these fragments should be published. The few offered by our authors, by Mr. Lethaby, and other critics, seem, for the most part, to suggest a date not far from the beginning of the twelfth century. The few that seem very primitive, especially the Durham and Hexham fragments, are quite unlike the debatable crosses.

Our authors seem on surer ground when they hold that the Viking, half Celtic, tradition determined the character of Romanesque and early Gothic sculpture in England. This is, we believe, a new and certainly a suggestive theory.

We cannot follow the minuter divisions of twelfth- and thirteenth-century sculpture, as fixed by style, by the location of quarries, and more rarely by fabric records. In general, ignoring smaller distinctions, there are three Gothic styles: that of the South and Midlands, radiating from London, and best represented at Westminster Abbey; that of the North, centring at York, but most fully represented at Lincoln; and that of the West, exemplified at Exeter and Wells. So long as sculpture was a mason craft, and executed on the spot, these divisions held. But we have to do with a gradual ascendency of London, parallel with its growing preponderance in speech and politics, and with the transformation of the art into a shop croft, making stock figures for shipment. The cutters of the brown shell-stone, called Purbeck marble, from the early Gothic period, either lived at London or followed London styles. They drove a vigorous trade in funeral effigies, and ready-made capitals, columns, and figures which were sent from end to end of England. The sculptural ascendency of London, and therewith its extreme artistic decadence, was established in the fourteenth and fifteenth century in alabaster cutting. Many polyptych retables were exported to France, Spain, and Italy. In fact, only fragments have escaped the British iconoclasts, and but for the foreign examples we should hardly guess at the elaborate ensembles which issued from London and the offshoot shops at Nottingham. It is a debased art, but skilful gliding and polychromy may have done much to improve these stiff and staring figurines.

To form any just estimate of the artistic worth of early mediæval English sculpture is difficult because of the incompleteness of the material. During the turmoils of the Reformation, virtually all the interior sculpture of the churches was mutilated or destroyed, and as much of the exterior imagery as could readily be got at. Certain large figures dug up at York, and similar remains in place at Lincoln and Westminster suggest that a figure sculpture fairly comparable in quality to that of France must have existed. The numerous masks of the late twelfth and thirteenth centuries, which adorn corbel heads and labels, are often of fine quality. They are a specifically native form, and their mason carvers were often of high competence. It seems probable enough that we have the best Gothic sculpture of England only in such fragmentary traces. In the angels which appear first in spandrel decoration and later on the beamheads and corbels of wooden ceilings, we have again an English fashion pursued with much spirit and variety. Lincoln and Westminster afford the finest examples, but unless the cuts much misrepresent the facts, the finest spandrel angels at Westminster have been reworked in Italianate style.

While it is probable that the early Gothic sculpture of England was more important than the few remnants suggest, it can never have compared in merit with that of the Continent. The English no more could adapt a great sculptural scheme to a monument than they could raise a lofty vault or build a true apse. The schematic sense is absent, and with it the monumental sense. The coming of Gothic actually wrought a reverse development in England. Sculpture is steadily relegated to more insignificant positions. Where the French architect planned his vast portals with figured tympana and voussoirs, and regarded sculpture as the necessary adornment for his arcades, the English architect planned simple and unfigured doorways, and filled his fronts with blind arcades. Sculpture was most profuse in the minor spaces which a French builder would have left unfigured, in the spandrels of arcades, and the bosses of vaults. The Salisbury chapter-house arcades are among the most accomplished instances. Thus a crowded, ingenious, and miniature sculpture arose, akin at its best to the carved ivories; at its worst, to the alabaster carvings; at all points antipodal to the monumental sculpture which prevailed across the channel. It is thus not surprising that on the whole the most vigorous and inventive English sculpture is that of the wooden brackets, misericords, of choir seats. The British carver worked at his best where he could least be seen.

Let us note once more the strange absence of monumental and encyclopædic ensembles. It is as if a certain inertia in the sculptor was increased by the lack of plastic intellectuality of the British ecclesiastic. Wells is the only encyclopædic façade of note in England. On the Continent there are dozens of more comprehensive and impressive schemes. The famous Judgment Porch of Lincoln is about the only English attempt at a monumental-figured portal. It is charming, and just about worthy of a second-class parish church in the Ile de France. We can only conclude that the British genius has ever been unplastic. The authors of this valuable work admit the chronic pictorialism of all the more characteristic and sprightly figure sculpture of later Gothic times. They speak

of the misericords as "woodcuts in the round," and the term is entirely just.

One finishes this volume with the sense of having been detained in an atmosphere, not without occasional charm, but completely provincial. There is plenty of ingenuity and picturesqueness in English mediæval sculpture, but almost no mind, and consequently very little taste and seriousness. Instead, we have a kind of prettiness which the British critic likes to dignify by the name of intimacy. This is merely the usual condition of the graphic and plastic arts in a nation whose true bent has ever been literary. It is instructive, in this connection, to recall that the glories of Chaucer and the banalities of the alabaster carvers are contemporary. For a patient and thorough exploration of this confusingly various field gratitude is due the authors. Their book becomes immediately a standard source of reference, and will hardly in our time be superseded.

Finance

AS THE WAR GOES ON.

At the middle of last week, Wall Street, the wheat market, and business circles generally began all of a sudden to hear rumors that overtures for peace had been tentatively begun. What basis existed for the rumors, nobody could say; they were apparently the kind of conjecture, grown into assertion, with which the Stock Exchange is familiar. Perhaps the most interesting aspect of the reports was that all the stories had it that Germany, not France, was to be the author of the tentative negotiations.

This may have been an inference from the general feeling that a change, not favorable to the Germans, had occurred in the campaign in France. It may also have been assumed from the facts that the German army was last week further away than ever from its main objective, the destruction of the hostile army, that huge loss of life was going on without decisive results, and that meanwhile the economic state of things in Germany and Austria, with their foreign trade blockaded and all their able-bodied men apparently ordered under arms, must be deplorable. But these facts did not prove that Germany was likely now to sue for peace.

They may have meant, however, that some people in high place, friendly to all the combatants, had deemed the circumstances such as to warrant sounding them on the question. If so, not much can have been accomplished. The Kaiser's message to the President was merely a retort to the Belgian emissaries and an explanation about Louvain. The British Foreign Office hinted to our Ambassador (apparently in response to a guarded inquiry) that no terms of peace would be considered until Germany was decisively defeated.

All this may mean much or little; we may be slowly approaching some kind of peace negotiations, or we may, as the British Premier said a week ago at the Guildhall, merely be "watching the fluctuations of fortune, in the early stages of what is going to be a protracted struggle." Nevertheless, there has this past week been evident, in financial circles, a perceptibly more cheerful feeling. How far it was due to the fact that Paris did not fall, or to the absence of any further sweeping victories, or to the gradual adjustment of affairs to the new conditions, it would not be wholly easy to say. Last week's sharp decline in foreign exchange, from $5.06 in the pound sterling to $4.97½, had a reassuring influence which was by no means spoiled by the partial recovery later.

But this very movement of exchange towards normal figures was a result of a happy incident in our home and international finance, whereby the question was definitely settled, whether New York city would redeem its foreign obligations at maturity, or would fail to do so. The formal coöperation of all the city's banks, in an engagement to pay foreign holders of such obligations, in exchange bills or in exported gold, for such of the $80,000,000 notes on which Europe should demand redemption, put at rest all misgiving on that point. Three inferences were immediately drawn by experienced observers—one, that the foreign holders, knowing payment to be sure, would largely agree to extend their holdings at the higher interest rate now offered; another, that our international credit would be enormously enhanced; a third, that foreign exchange would presently be workable again.

Assurance that mutual obligations would be fairly met, coupled with the increasing ocean trade and supply of ships, gave promise of a return to sound conditions in the market for exchange. The home money market, in the larger sense, still has to face a series of complications, such as make reckoning on the future highly difficult. The financing of a cotton crop, nearly one-third of which at present sees no market, is one of these, but only one. How the supply of credit and capital for the ordinary purposes will be affected by these wholly abnormal requisitions, it is as yet impossible to say. How the interest rate, on business loans or on new securities, will be influenced by the prodigious borrowings of the European belligerents, is another problem of the most absolute obscurity.

All of these problems will be met, as the much more unusual and baffling problem of international exchange is now being solved. Financial London borrowed five weeks ago almost every one of the emergency contrivances invented by this country in the panics of 1893 and 1907. American ingenuity is already providing another set of precedents in emergency relief, and is likely to handle each separate difficulty by itself. It is possible that the real confusion and difficulty will come, not during prolongation of the war, but on return of peace.

We shall be called on then to readjust rather suddenly the dislocated machinery of exchange. The "emergency currencies" will be called in. Newly established trade connections will have to meet the test of competition with the old ones. Abroad, termination of the various moratoriums will show the extent to which credit has been actually shattered by the shock of war; here at New York, we shall be determining how far the intrinsic value of our outstanding securities has been altered, for better or worse, by the events which occurred while the Stock Exchange was closed.

BOOKS OF THE WEEK

ART TALKS WITH RANGER

By RALCEY HUSTED BELL

12*mo. Illustrated.* $1.50 *net.*

Henry W. Ranger has covered a wider range of subject matter and technique than any other painter in the history of art. He is the militant force in the centre of the intellectual art movement in America. In time he must take his place in the ranks of the greatest men in this profession. The Tonal School, of which he is the head, marks an epoch in American art similar to that of the Barbizon period in French art.

New York G. P. Putnam's Sons London

POLITICAL ECONOMY

By CHARLES GIDE

Professor of Social Economics in the Faculty of Law in the University of Paris.

This is an authorized translation from the third edition (1913) of Gide's *Cours d'Economie Politique.* Cloth. Royal octavo. xii + 762 pages. $3.00.

D. C. HEATH & CO., BOSTON, NEW YORK, CHICAGO

PARTY GOVERNMENT IN THE UNITED STATES OF AMERICA

By Prof. WILLIAM M. SLOANE

A history of American politics, an exposition of party political tendencies in practice. The evolution and development of the different parties are traced back to their beginnings. The trend of the United States Government from the Revolution to the Mexican trouble in 1914 is pointed out. $2.00 Net.

HARPER & BROTHERS

WAR *Tells what War is.*

Price $1.20 net.

DODD, MEAD & COMPANY, NEW YORK

IMPORTANT BOOKS FOR SEPTEMBER

A NEW PENNELL MASTERPIECE

OUR PHILADELPHIA

By ELIZABETH ROBINS PENNELL
ILLUSTRATED by JOSEPH PENNELL

REGULAR EDITION

With One Hundred and Five Illustrations from the Lithographs of Joseph Pennell. Quarto. In a box. $7.50 net. Postage extra.

AUTOGRAPH EDITION

Autographed by both Author and Artist. With Ten Lithographs by a new process which do not appear in the Regular Edition. Bound in Genuine English Linen Buckram, in the City Colors, Blue and Gold. In a Box, $18.00 net. Postage Extra. THIS EDITION STRICTLY LIMITED TO ADVANCE SUBSCRIBERS. AFTER PUBLICATION NO OTHER ORDERS WILL BE FILLED.

An intimate personal record in text and in picture of the lives of the famous author and artist in the city whose recent story will be to many an absolute surprise—a city with a brilliant history, great beauty, immense wealth. Mr. Pennell's one hundred and five illustrations, made especially for this volume, will be a revelation in their interest and as art inspired by the love of his native town—the greatest he has yet accomplished.

THE TRUE ULYSSES S. GRANT

By GENERAL CHARLES KING

24 Illustrations. Cr. 8vo. Buckram, $2.00 net. Half Levant, $5.00 net. Postage extra

This new volume in the well-known "True Biographies and Histories" series is the work of a writer peculiarly fitted to deal with Grant. General Charles King thoroughly understands the military genius of the great Union Commander, and gives the reader an insight into those campaigns that are used as models of tactics in the army colleges of Europe. But Grant, the man, and Grant, the President, are treated with the same regard for truth that characterizes the study of Grant, the General.

THE CELEBRATED MADAME CAMPAN

Lady-in-Waiting to Marie Antoinette and Confidante of Napoleon and His Sister

By VIOLETTE M. MONTAGU Illustrated. Octavo. Cloth, $3.75 net.

This book tells the story of the court at Versailles and the Revolution from Madame Campan's own memoirs, rearranged and edited by the present author, and follows this with the story of Napoleon and his family from contemporary memoirs and the correspondence of Madame Campan with her favorite pupil, Hortense de Beauharnais, the wife of Louis Bonaparte and the mother of Napoleon III.

Life of Napoleon

By MAJOR ARTHUR GRIFFITHS.

Illustrated with numerous reproductions from the portraits and paintings of De Larouche, Meissonier, Prudhon, and many others. Lg. 12mo. Cloth. $1.75 net.

Major Griffiths's new life of Napoleon, while being one of careful historical research, is written in a style so vivid and forceful, and presents certain aspects of Napoleon's life in such a new light, that it is strikingly unlike any other life of the "Little Emperor."

The Decline and Fall of Napoleon

By FIELD-MARSHAL VISCOUNT WOLSELEY, K.P.

With numerous illustrations and plans. 12mo. $1.25 net.

A new popular-priced edition of Field-Marshal Viscount Wolseley's graphic and analytical study of Napoleon. The original edition achieved a remarkable success and has been accepted widely as one of the most valuable contributions to Napoleonic literature.

Colonial Mansions of Maryland and Delaware

By JOHN MARTIN HAMMOND

With Sixty-five illustrations. Large Octavo. Handsomely bound in Cloth. Gilt Top. In a Box. $5.00 net. Carriage charges extra.

A LIMITED EDITION. Printed from type which has been distributed.

This volume is uniform in style and price with others in the Limited Edition Series—"Colonial Homes of Philadelphia and Its Neighborhood," "Manors of Virginia in Colonial Times," "Old Time Belles and Cavaliers," and "Historic Homes of New Jersey"—all of which are now out of print and at a premium.

Mr. Hammond has gathered his material, pictures, stories, and traditions, from personal visits and studies at first hand. Much of the literary matter has come from private papers and recollections of descendants.

The Mystery of the Oriental Rug

Including the Prayer Rug and Advice to Buyers

By DR. G. GRIFFIN LEWIS.

Frontispiece in color and 21 full-page plates. Octavo. Cloth. $1.50 net. Postage extra.

This charming volume is compact with information and no one should buy rugs without its aid. Those already possessing the author's "Practical Book of Oriental Rugs" should not fail to secure it as an interesting supplement.

A Woman in China

By MARY GAUNT.

Fully Illustrated. Octavo. Cloth, $3.75 net.

The author of "Alone in West Africa," which was probably the most successful travel book of 1912, has here written a book of thrilling interest. Unknown China lives in her pages of vivid description.

FICTION of UNUSUAL QUALITY

The Duke of Oblivion

By JOHN REED SCOTT

Frontispiece in color. $1.25 net. Postage extra.

"The unconventional in fiction" is what Mr. Scott stands for to-day to all who read for the enjoyment and thrill of the tale. His new adventure romance will stir the most jaded reader. A yachting party cruising in the Caribbean discover a mysterious island and a lost community whose customs, to say the least, are most unusual. Adventure follows adventure, thrill after thrill, fighting and heroic deeds sufficient to win the hearts of more obdurate maids than the lovely girls of this romance.

The Three Furlongers

By SHEILA KAYE-SMITH

Frontispiece. $1.25 net. Postage extra.

This heroic tale will place the author in the front rank of the new school of English novelists. It is as human and appealing as "Tess of the D'Urbervilles." Janet is own sister to the finest heroines of Thomas Hardy, and the story of her great love and self-sacrifice makes a novel of real power and high purpose.

Wild Mustard

By William Jasper Nicolls

12mo. Decorated cloth. $1.25 net. Postage extra.

A splendid anti-suffrage story, glittering with wit, bubbling over with humor, but withal an undercurrent of such clever satire that we of the unsatiric twentieth century rub our eyes.

The Ward of Tecumseh

By CRITTENDEN MARRIOTT.

Illustrated in color and black and white by Frank McKernan. $1.25 net. Postage extra.

The author of "Sally Castleton, Southerner" has here written a novel of the American wilderness that has the tang and flavor of a James Fenimore Cooper tale. It is intensely exciting—the heroine, a charming French girl, mysteriously disappears among the Indians, and one reads the story with the same eagerness that the hero feels in his attempt to find the lost girl.

Betty's Virginia Christmas

By MOLLY ELLIOT SEAWELL.

Illustrated in color, with page decorations, artistic cloth binding. $1.50 net. Postage extra.

A captivating picture of Southern life of ante-bellum days. Betty wins the reader on the first page and holds him to the last, while the story has the true Christmas spirit of dancing, merry-making, song, and sport.

Stories From the Operas

(Three Volumes In One)

By GLADYS DAVIDSON

15 Illus. Crown 8vo. Cloth, gilt, $1.50 net. Full levant, $2.50 net. Full levant, inlaid, $3.00 net.

Miss Davidson's popular stories of the operas now in one volume, including the stories of several new modern operas, with short biographies of the composers.

Extraordinarily Important New Books

A History of Russia

By V. O. KLUCHEVSKY, Late Professor of Russian History in the University of Moscow. Translated by C. J. HOGARTH.

3 8vo vols., $7.50.

This brilliant, masterly work is everywhere accepted as the most authoritative and comprehensive account of Russia's economic, political, and social history development up to the fifth, or modern, period of her history. It is admirably supplemented by Professor Mavor's great work, described in another column.

The Russian Opera

By ROSA NEWMARCH

Cloth, net $1.75.

"Mrs. Newmarch is the leading English authority on Russian music, on which subject she contributed all the important articles to the new edition of Grove's monumental dictionary. . . . She gives interesting glimpses of the early times when music was looked upon as one of the seven deadly sins; of the different attitudes of rulers towards this art; . . . and of the breaking away of the younger men from the fetters of nationalism."—HENRY T. FINCK.

Modern Germany

By J. ELLIS BARKER

Cloth, 8vo, net $3.00.

The new (4th) edition of this excellent study of the political and economic problems of Germany, of her policy and ambitions, and of the causes of her successes and failures, is practically a new work, since some 250 new pages replace about 100 in the earlier editions.

Germany and England

By Prof. J. A. CRAMB

Cloth, net $1.00.

Field-Marshal EARL ROBERTS writes: "I hope that every one who wishes to understand the present crisis will read this book; . . . nowhere else are the forces which led to the war so clearly set forth."

The German Enigma

By GEORGES BORDON

Cloth, net $1.25.

A Frenchman's search for the causes of race bitterness leads him to feel that France and Germany should normally be allied against the Slav. *Ready shortly.*

"ONE MIGHT READ EVERYTHING THAT IS AVAILABLE IN ENGLISH, WITHOUT FINDING ANYTHING SO ACCURATE, COMPREHENSIVE AND ILLUMINATING."

An Economic History of Russia

By **JAMES MAVOR, Ph.D.,** Professor of Political Economy in the University of Toronto. ***In two 8vo vols. Net, $10.***

Extracts from a two-page review in The Outlook, Sept. 9.

"Mr. Mavor, who is Professor of Political Economy in the University of Toronto, has made a careful and profound history of his subject; has availed himself of every accessible source of information, in the Russian language as well as in French, German and English; has had the assistance of able Russian advisers and collaborators, and has devoted more than seven years to his task. The result is a book which is a credit to Canadian scholarship, as well as a contribution of first-class importance to the world's knowledge of Russian affairs. He has called his great work 'An Economic History of Russia,' but its contents, which fill twelve hundred large octavo pages, more than make good the promise of its title. It *is* an economic history; but it is also a history of the whole Russian revolutionary movement, from the rebellion of the Cossack Rugachef, in 1773, to the end of the fight for the overthrow of the autocracy in 1907. Every phase of the long-continued struggle between the people of Russia and their rulers—the Decembrist conspiracy, the plots of Petrashevsky and Nechaiev, the movement 'to the people,' the campaign of the Terrorists, the era of colossal political strikes, the resort to the wager of battle, and the final overthrow of the revolutionists after the desperate barricade fighting in Moscow — every one of these great historical episodes is treated clearly, impartially, and almost exhaustively.

"One might read everything that is available in English . . . without finding anything so accurate, comprehensive and illuminating. . . .

"In view of the momentous struggle recently begun in Europe, and the part that Russia must inevitably play in it, Professor Mavor's book has importance, . . . but in any circumstances and under any conditions it is likely to stand for many years as the best economic and political history of the Russian Empire that is accessible to English readers."

SCIENTIFIC MANAGEMENT

By CLARENCE BERTRAND THOMPSON, LL.B., A.M., Instructor in Manufacturing in Harvard University.

8vo. Cloth. 876 pages, with charts and diagrams. $3.00

Much of the most significant writing about Scientific Management is difficult of access because scattered in the files of magazines and the proceedings of various societies. The purpose of this volume is to bring these articles together in the permanent form they deserve, so as to provide ready reference for managers, students of business, or libraries.

NOW READY
An Italian Reader of Nineteenth Century Literature
By THOMAS D. BERGEN, late Instructor in French and Spanish in the Cascadilla School, Ithaca, revised and completed by George B. Weston, Department of Romance Languages, Harvard University.
12mo. cloth, 236 pages, with notes and vocabulary, $1.00
This Italian Reader differs from others now offered for the use of beginners, in presenting only selections of modern Italian. It includes specimens of a wide range of thought and culture, extending all the way from the pithy proverbs of the Tuscan peasant to the stately prose of Villari and the exquisite verse of Carducci. Anecdote, fiction, biography, history, travel, natural history, art, and poetry—all are represented.
The book also contains a brief biographical notice of each author; and an unusually complete and workable vocabulary, especially designed to help the reader in the difficult task of acquiring an accurate pronunciation of the language.

ONE HUNDRED YEARS

Fivescore years ago our fathers saw brought forth on this continent a new monthly review, conceived in public spiritedness and dedicated to the new country, as a forum for the suitable discussion of political, religious, literary and artistic matters. Therefore, there will be a fitting celebration next year of the centennial of *The North American Review*—the one hundredth year of its uninterrupted publication.

The purpose of this announcement is to make known, thus far in advance, the general scope of the anniversary, its interest to every intelligent reading man and woman in the country. Nineteen Fifteen is to be a year-long observance of the one hundredth birthday of America's oldest magazine. Not one, but twelve anniversary numbers are to be issued. Their size and contents are already partly determined because of the uninterrupted flow of acceptances received from men and women of the first rank, the world over, who have written for *The Review* in the past, who will make specially fitting contributions to the numbers for 1915.

The details of these twelve special numbers will be made public from time to time. It is possible now to announce articles by over one hundred prominent Americans and over one hundred prominent foreigners. From among them have been taken the two lists of ten names each, printed below.

The North American Review

SCRIBNER FALL PUBLICATIONS

The American Natural History

A Foundation of Useful Knowledge of the Higher Animals of North America.

By WILLIAM T. HORNADAY, Sc.D.

Director of the New York Zoölogical Park, author of "Our Vanishing Wild Life," etc.

Entirely reset in Four Crown Octavo Volumes; with 16 full-page illustrations in colors, 67 full-page illustrations from original drawings and photographs, and nearly 300 text illustrations; and with numerous charts and maps.

Since the first edition of this standard work was published, in 1904, the conditions affecting the wild life of North America have changed greatly. In this revised and enlarged edition Dr. Hornaday has embodied all the scientific facts that have been accumulated by specialists in that interval, and these facts he has presented so that their significance will be apparent to the lay reader.

The set, in a box, $7.50 net; postage extra.

On Acting

By BRANDER MATTHEWS

The result of the author's observation is that there is no art the principles of which are so little understood (even by hardened playgoers) as that of acting. And he has tried to declare some of the elements of the art, illustrating by "apt anecdote and unhackneyed stories."

75 cents net; postage extra.

Plays by John Galsworthy

THIRD SERIES

Three Plays in One Volume

The Mob The Fugitive The Pigeon

$1.35 net; postage extra.

The above plays are published singly at 60 cents net each; postage extra.

The Poems of Edward Sanford Martin

One of the most delightful of our essayists and most representative of our men of letters, Mr. Martin is not less distinguished as a poet. In this complete collection is the varied and charming product of his muse in all her moods, grave and arch, serious and tender. No one has a lighter touch gracing more thoughtful substances whether in verse or prose, and Mr. Martin's characteristic qualities are here abundantly illustrated in "occasional" poems worthy of Dr. Holmes and ballads that suggest Thackeray.

$1.50 net; postage extra.

ANNOUNCEMENT

Ready in October

By

THEODORE ROOSEVELT

Through The Brazilian Wilderness

A complete account of Col. Roosevelt's South American trip. Profusely illustrated with photographs, maps, etc.

FICTION

A NEW NOVEL

By GEORGE W. CABLE

Author of "Old Creole Days," "The Grandissimes," etc.

Gideon's Band

A TALE OF THE MISSISSIPPI

A voyage up the Mississippi in one of the big river steamers, immortalized from another point of view by Mark Twain; a love story with a heroine who is the embodiment of Southern charm, and the atmosphere of perhaps the most picturesque period of our history.

$1.35 net; postage extra.

By JENNETTE LEE

The Woman in the Alcove

Jennette Lee here maintains the high standard of her literary achievement in a beautiful love story with a unique plot. It is the story of a dull domestic life which became glowingly romantic through a strange revelation of love.

$1.00 net; postage extra.

By RALPH D. PAINE

The Wall Between

A story of high honor upheld through sacrifice and in the face of danger. He has put into this story all the vigor and dash characteristic of all his earlier work.

$1.35 net; postage extra.

The Works of Edgar Allan Poe

Collected and Edited, with a Memoir, Critical Introductions, and Notes by E. C. Stedman and G. E. Woodberry. *With portraits and with many illustrations from photographs and from drawings by* Albert E. Sterner.

Ten Volumes. 12mo. The set, $15.00 net.

Pocket Edition in ten 16mo volumes with a frontispiece portrait in each volume. Sold singly or in sets, in flexible cloth binding, $1.00 net; in olive leather, $1.25 net per volume. The set, ten volumes, cloth, $10.00 net; in olive leather, $12.50 net.

Criticism

By W. C. BROWNELL

This suggestive essay is a systematic exposition and defence of criticism by one of the foremost American critics.

In the four short chapters of his book Mr. Brownell describes the field and function, equipment, criterion, and method of criticism. His discussion of equipment is peculiarly interesting in its repudiation, as insufficient, of a critic's isolated knowledge of his own subject however rich and detailed, and in its specific requirements of history, philosophy, and æsthetics as essential to the necessary general culture.

75 cents net; postage extra.

Modern Theology and the Preaching of the Gospel

By WILLIAM ADAMS BROWN, D.D.

Author of "Christian Theology in Outline," "The Essence of Christianity," etc.

In this book Professor Brown shows that modern theology is a good working theology, that it has a gospel vital and potent. *$1.25 net; postage extra.*

The Holy Land of Asia Minor

By Rev. FRANCIS E. CLARK, D.D., LL.D.

President of the United Society of Christian Endeavor

This book is a record of the personal experiences and impressions of Dr. Clark on his visit to the Seven Cities of Asia. He shows that while each of the seven churches had its own individuality, yet the seven epitomized "all churches in all ages." *Illustrated. $1.00 net; postage extra.*

The Beginnings of the Church

By ERNEST F. SCOTT, D.D.

Professor of New Testament Criticism in Queen's Theological College

In this volume, which contains the Ely Lectures delivered last year, Professor Scott combats the idea that "the purpose of Jesus was frustrated at the beginning and that the whole labor of the Christian ages rested on a misconception."

$1.25 net; postage extra.

CHARLES SCRIBNER'S SONS FIFTH AVENUE, NEW YORK

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 24, 1914.

Summary of the News

There has been little change in the general situation in Europe during the past week. In the western area of warfare a great battle has been in progress along the river Aisne which up to the time of writing has been productive of no definite result. In the eastern campaign the Russian armies continue to announce successes. We deal in greater detail elsewhere with the operations in these fields.

It appears to be definitely established that no further efforts to facilitate peace will be made by the United States for the present. An announcement was made from the White House on September 17 that the President had received from the German Chancellor a non-committal reply to his inquiry into the report that the Kaiser was willing to discuss terms of peace, and it was stated that there was nothing in the reply which put Germany in the attitude of making a request of the United States. In France, England, and Russia, it is evident that there is no inclination to make any move in the direction of peace until the results of the war shall be more decided. The position of the United States, therefore, is that it has gone definitely on record as willing, when any opportune moment shall come, to place itself at the service of the belligerents. In the meanwhile, the President, in an interview on Monday, deprecated inopportune suggestions at the present time which might later handicap this country in its efforts to be of service to humanity.

The President's reply on September 16 to the Belgian committee which presented to him a statement of the alleged atrocities committed by German soldiers in Belgium, and his reply to the Kaiser's telegram protesting against British and French "atrocities," were couched in almost identical terms. Suave and sympathetic, but taking it for granted that the recipients did not expect this country to take any action in the matter at the present time, these answers might well serve as models of diplomatic correspondence. The President's reply to President Poincaré was in similar terms.

The United States has protested to Turkey against the abrogation of the capitulations. Secretary Bryan last week cabled to Ambassador Morgenthau to inform the Government of the Porte that this Government did not recognize its right to abrogate the capitulations, and further that the Washington Government would reserve for the present discussion of the grounds on which it based its refusal to acquiesce in the action of Turkey, and also reserved the right to make further representations in the matter later on. Greece also has joined with the other Powers in protesting against the abrogation of the capitulations.

As a result of bombardment by the Germans last week, the beautiful Cathedral of Notre Dame at Rhelms is reported to be seriously damaged. A German official statement expresses regret for the bombardment, which, it says, was necessary because "Rheims was in the battle line." President Poincaré has issued a protest at the deed to the neutral Powers, in which it is denied that the destruction was inspired by any military reasons.

Italy still manages to maintain her neutrality, but public sentiment in favor of participation in the war appears to be growing and several riotous demonstrations have occurred. It is reported that half a million troops are now mobilized.

The Federal Reserve Board on Saturday of last week approved the bankers' plan for a $100,000,000 gold fund to meet American obligations to Europe.

The emergency revenue bill to raise $105,000,000, taxing beer, wines, gasolene, bankers, brokers, amusement proprietors, and commercial instruments, was introduced in the House on Monday. The bill comes up for debate in the House to-day (Thursday), and, it is expected, will be passed to-morrow.

By a vote of 27 to 22 the Rivers and Harbors bill was on Monday recommitted to the Commerce Committee of the Senate with instructions to the committee to cut the total of the appropriations from $53,000,000 to a sum not exceeding $20,000,000.

The rates on war risks for cargoes and vessels which will be charged by the Government for insurance on commerce between the United States and belligerent and non-belligerent ports during the European war were announced on September 18 by Director William C. Delancy, of the Bureau of War Insurance.

As a result of the recent application of the railways which was made after President Wilson had received a representative committee of railway presidents at the White House, the Interstate Commerce Commission on Saturday of last week decided to reopen the Eastern advance-rate cases. Hearings will be commenced at Washington on October 19.

Rear-Admiral Charles O. Badger, who has been appointed to the Naval General Board at Washington, was relieved of his command of the Atlantic fleet on September 17. He is succeeded by Rear-Admiral Frank F. Fletcher, who has been in command of the first division of the Atlantic fleet, and who commanded the landing parties at Vera Cruz.

Sir Lionel Carden, lately British Minister to Mexico, according to the report of an interview with him as he was leaving these shores on September 16, criticised the policy of the Administration in Mexico in what, if he was correctly reported, can only be described as very rude terms. The British Ambassador, Sir Cecil Spring-Rice, on the following day formally expressed his regret for the publication of the interview, which, he explained, was contrary to diplomatic usage and to the regulations of the British Government, and was therefore unauthorized. Sir Lionel Carden has denied by wireless that his statement contained criticism of the Administration, but no specific confirmation or denial can be obtained until he has had an opportunity of seeing the text of the interview.

The Senate passed additional legislation on September 18 further modifying the Federal Reserve act. The amendments passed were to sections 11 and 16; the first reading that "the Federal Reserve Board shall have power to permit member banks to carry in the Federal Reserve banks of their respective districts any portion of their reserves now required by section 19 of this act to be held in their own vaults," the second that "the Secretary of the Treasury is hereby authorized to devise and put into operation a system of clearances of national bank notes between the Treasury, the Federal Reserve banks, and the member banks, and for that purpose to designate Federal Reserve banks as agents of the United States."

The British Parliament was prorogued on September 18 until October 27. The King's speech was a brief assertion of the justice of the purpose for which Great Britain is fighting, and contained the statement that "we shall not lay down our arms until that purpose has been fully achieved." It is perhaps worth recording, as a remarkable incident in the history of the House of Commons, that as the House adjourned the singing of the national anthem was started by the Labor leader, Will Crooks, that English members called out "God save Ireland," and that Irish Nationalists replied with "God save England." Never before, probably, save as sarcasm, has that pious wish come from Nationalist lips.

On the same day on which Parliament was prorogued, the House of Commons passed the Home Rule bill and the Welsh Disestablishment bill, after their rejection by the House of Lords for the third time, and they received the signature of the King. At the same time, however, the King signed the bills recently introduced to suspend the operation of these acts until after the conclusion of the war.

The situation in Mexico continues to be satisfactory, and the announcement last week, coming on Independence Day, that the United States forces in Vera Cruz were to be withdrawn was received with enthusiasm in the capital. A national convention of military and political leaders is planned for October 1, when a Provisional President is to be chosen. It is understood in Washington that Gen. Carranza will resign as First Chief, and that Fernando Iglesias Calderon, leader of the Liberal party in Mexico, will be named Provisional President for the purpose of conducting a general election in which Carranza expects to be a candidate.

The deaths of the week include: Gen. Jacobus H. de la Rey, Major Wallis O. Clark, U. S. A., September 15; Col. William Reeve Hamilton, U. S. A., September 16; Mrs. Frank Leslie, September 18; Judge A. G. Olmstead, September 19; Robert Yelverton Tyrrell, September 21.

The Week

President Wilson's reply, both to the German Emperor and to the Belgian Commissioners, on the subject of alleged atrocities in the war, is in substance what it was in the nature of things bound to be, while in form it fulfils the standard of excellence which Mr. Wilson has accustomed us to expect in his official utterances. Even if there had been a representation from one side only, and if the press were not filled with statements of the most contradictory character upon almost every allegation involved, it would have been quite out of the question for the head of our Government to pass judgment upon charges made by one of two warring nations against another. But, while scrupulously avoiding any possible offence against the strictest requirements of neutrality, Mr. Wilson availed himself of the opportunity afforded by the appeal to point in impressive language to the part which, some day or other, will be played, in regard to the present transactions, by the opinion of mankind—organized and unorganized:

> Where wrongs have been committed, their consequences and the relative responsibility involved will be assessed. The nations of the world have fortunately by agreement made a plan for such a reckoning and settlement. What such a plan cannot compass the opinion of mankind, the final arbiter in all such matters, will supply.

Even in the din of the hundred-mile battle in France and the still more vastly extended conflict on the borders of Russia, this voice will make itself heard. It is a reminder that the day will come when the Hague Tribunal will have its turn; and that the Hague Tribunal is but a single manifestation of a power the strength of which, in the end, transcends that of armies.

It is most gratifying to hear that the Cathedral at Rheims may not, after all, prove to be a complete wreck. Over that news the whole world must rejoice, as it has been inexpressibly shocked and horrified by the thought that it might have lost a treasure of inestimable worth, utterly irreplaceable, the priceless heritage of all lovers of the beautiful. It is not yet time to fix the blame, nor can we yet know exactly how great the damage actually is. But if it should prove, as is alleged, that no less than fifty German shells entered that glorious structure, it will be hard indeed to acquit those responsible of deliberate and wanton vandalism. Certainly the official German statement that everything possible was done to avert the catastrophe is not borne out by other dispatches. A wanton destruction would fearfully injure the German cause, for it would be reprobated by the entire civilized world. The matter is, moreover, only made worse by such attempts to sneer it away as Mr. Ridder has made, by referring to acts of vandalism of our own in the Civil War. No just man condemns those outrages, or the water-cure torture in the Philippines in 1901-02, a whit less than he does wrongdoing by Turcos or Japanese or Belgians or any one else.

Ambassador Gerard's communication to the President, giving the substance of the remarks made to him by Chancellor von Bethmann-Hollweg, cannot be regarded as indicative of what the position of Germany would be towards any concrete proposal of peace conditions, or even towards any specific offer of mediation. To say that, as a first step towards such an offer, "the United States ought to get proposals of peace from the Allies" is but another way of saying that Germany does not propose to take the first step in the matter. Nor could any different answer possibly have been given at this stage of affairs. Neither side can be expected to propose, even upon the vaguest lines, a settlement of the conflict while it is in its present phase; for any basis that could be regarded by it as satisfactory must in the nature of things be held by its adversary to be out of the question so long as the situation in the field is what it now is. But to say this is not to say that the suggestions which have been put before the German Government, or similar suggestions which may be put before that of any of the Allied Powers, must prove fruitless in the end. Certainly, the fact that the Government at Washington is anxious to be of help in bringing the conflict to a close whenever it may become possible to obtain the assent of the belligerents to any form of mediation is one which it is of the highest importance to keep to the front. To push this disposition on our part to the point of senseless importunity would do harm instead of good; but we feel sure that President Wilson's judgment, and his sense of the fitness of things, can be trusted to prevent our being placed in such a position. On the other hand, he can be equally trusted to avail himself of any opening which may occur to be of service in hastening the close of this most terrible of wars.

The greatest enemy of Germany to-day is not France nor Russia, nor Japan nor England, but the public opinion of the United States. This we have on the unquestioned written authority of the "German-American Literary Defence Committee." According to this valuable organization, now appealing to the public for funds, it has carried on the fight on this, the fourth "front," in the "most unselfish way possible and in most complete activity," with results with which it is apparently satisfied. "The poison distributed by the Anglo-American press against us German-Americans" must be overcome by counter-efforts, the Committee insists. We trust, however, without the use of Prussic acid on their part. We are glad to report, in any case, that if this is war against the most dangerous enemy now facing Germany, it can be carried on at a considerably slighter financial sacrifice than the war against the European nations, for the Committee appeals for only $100 a week. This modest sum it may well raise, but neither that nor a very much larger amount would suffice to overcome the hostile American public opinion—which is hostile, however, only to the spirit of Prussian militarism. When the war is over, we undertake to say, no nation will be more concerned in preserving German civilization and German idealism in every field except the military than will the United States.

Much as the swift Prussian advance in 1870 had a negative effect in halting any thought of interference by Austria, so the qualified successes of Russia, in Galicia, are operating positively upon Rumania. The report that M. Diamondy, the Rumanian delegate to Italy, has declared in Rome that his country, "though neutral for the present, could not let slip this opportunity for realizing its national aims," receives a color of probability from accounts of popular sentiment at home. A great patriotic enthusiasm is there reported, and there is little doubt as to its motive. The "national aims" to which M. Diamondy must have referred, if he spoke as asserted, centre in the acquisition of Bukovina, in southern Galicia, whose inhabitants are in part Rumanian. The country of King Charles proved in the second Balkan War, in its virtual blackmail of Bulgaria, that its acquisitiveness is not likely to be limited by a sensitive fear lest it be accused of cynicism and self-interest. But the mission to Italy, to be sure, may concern nothing more than the curbing of Turkey. In any case, the lesson to be drawn from the present attitude of the Balkans—Bulgaria is now reported pro-Russian—is of the

strategic value of early victories in influencing wavering or lukewarm neighbors.

The excellent suggestion has been made by Miss Mabel Choate that on Sunday, October 4, the day set apart by the President for prayers for peace, collections in all the churches in the country should be devoted to the immediate use of the Red Cross in its work of humanity in the war-ravaged countries of Europe. It is sincerely to be hoped that the ministers of religion, of all creeds and sects, will pay heed to this most admirable suggestion and act upon it promptly and earnestly. Usually it is extremely difficult to centre upon a given benevolent purpose the attention of millions of people throughout the country, with sufficient effectiveness to bring about immediately a great material result. But such is not the case in this instance. The President's designation of the day will undoubtedly result in a general observance of it for the purpose he named. The thoughts of all our people will on that day be fixed upon the idea of America's peculiar duty and opportunity as a representative of humane endeavor in this time of fearful trial for the nations of Europe. Unless that sentiment is wholly insincere, there must be millions of men and women who will be glad to attest its genuineness by contributing from their means, great or small, towards works of mercy for which, however generous the response, the resources cannot begin to be as great as the need.

The accession of Great Britain and France to the ever-widening group of nations which have given their adhesion to the plan of submitting to investigation by a permanent international Commission any dispute which may arise between them and this country offers cause for profound satisfaction to President Wilson and Secretary Bryan. To get a method like this formulated in a definite treaty constitutes a gain far beyond that attaching to the concrete applications of it which may be expected to arise—though this gain is by no means one to be despised. The plan formulated is, in point of fact, but the crystallization of a policy the spirit of which has in practice governed nearly all of our dealings with foreign nations for the better part of a century. Yet if this plan had been in operation during that crisis which came to a climax with the destruction of the Maine, it is highly probable that there would have been no war with Spain; the interval allowed for investigation would probably have been so utilized as to effect a settlement of the Cuban trouble without armed intervention on our part. But over and above any specific cases of this nature in which these treaties may prove useful in the future, their mere existence must exercise a silent but steady pressure on the disposition of nations in general to take recourse to methods of discussion and delay when war seems imminent. It would be childish to imagine that any treaty understanding of this kind could, of itself, operate as a preventive of war in the face of mighty passions and desires such as are at the bottom of the present vast struggle; but to familiarize the mind with the possibilities of such methods is to reinforce in some measure the agencies which tend to stay the hand of rulers, and fix the responsibility for the awful issue of their decision.

If there has ever been a case of a great European Power having a diplomatic representative on this side the Atlantic so preposterously insolent to the United States as Sir Lionel Carden has been, we fail to recall the instance. The interview concerning Mexico which was published last week as coming from him may be repudiated; but it differs only in the unbridled offensiveness of its language from previous utterances with which he has been credited and which, so far as we know, have never been denied. A mere denial on the part of Sir Lionel Carden—unless it should take the shape of an assertion that the whole thing was a fabrication, and this it is hardly likely to do—will not by any means suffice to satisfy the requirements of the case. It is to be hoped that the British Ambassador at Washington will make it plain to the Foreign Office at London that the conduct of this evidently unfit representative of the British Government is deeply resented by the American people, whether or not our own Government at Washington may think best to make any representation on the subject.

It is reported that the protest of the British Consul at Rio Janeiro against the transfer of the steamship Robert Dollar from British to American registry has been withdrawn; and it is difficult to see where England had either practical interest or legal justification in preventing it. In the first place, the vessel had been American-owned for two years, carrying the British flag only to evade our harsh navigation laws; so that in equity it did not come under the British declaration against transfer of ship-ownership during war. Secondly, such transfer in no wise affected any belligerent nation hostile to England. But the protest shows how jealously suspicious England is of any potential precedent for the transfer of the Hamburg-American liners or the North German or Austrian Lloyd liners, giving millions of dollars to her enemies. The proposed shipping bill not merely authorized American registry of ships owned by Americans before the war, but of all bought during the war. England will evidently not sustain her objection to the first class of registrations. But the difficulties ahead of us if we attempt to begin the second are obvious; and they are emphasized by the refusal of the Brazilian Government to permit the Robert Dollar to leave port until the whole merits of the case are made plain.

The American army and navy officers who have insisted on promotion by selection and by aid of plucking boards in order that young men may reach high commands when still in their prime, will find nothing in the ages of the leading German generals to support their contentions. In the German army there is no fixed retirement for age applying to all officers, but there is rigid retirement at any time that an officer appears unfit for his position or fails to do well in his duties, or in any way is unable to measure up to the high physical and mental standards of the service. Let an officer be overslaughed in a marked way, and his resignation or application for retirement is tendered forthwith. Never was there, as a whole, more rigid selection—though not wholly uninfluenced by court favor; yet what do we find? Gen. von Emmich, the capturer of Liège, is sixty-six, and Gen. von Kluck is sixty-eight—the one two years and the other four above the compulsory American retiring age. Gen. von Hausen, who has just given up the command of the Saxon army, because of real or assumed illness, is sixty-eight; Gen. von Heeringen is sixty-four, and Gen. von Einem sixty-one. Gen. von Bülow is also sixty-eight, and Gen. von Moltke, upon whose shoulders rest the heaviest burdens, is sixty-six. Nearly all of these officers are campaigning in France for the second time, having been young ensigns or lieutenants in 1870. Gen. von Hindenburg, whose success on the Russian boundary has made him famous, is sixty-seven. On the English side, Kitchener is sixty-four, Smith-Dorrien fifty-six, Sir John French sixty-two, and Gen. Grierson, who died in France the other day, was fifty-five; while the three French generals, Pau, Joffre, and Gallieni, are all approaching seventy. Plainly, among the generals of this war the Osler theory does

not apply, nor the American military belief that you must have middle-aged men for the highest positions.

Not often is a campaign of filibustering in the Senate viewed with so friendly an eye by the people of the country, without distinction of party, as is that which has been waged against the pork-barrel—*alias* the River and Harbor—bill. From the way in which public opinion looks upon the matter, it ought to be plain to the Democratic leaders that their party will suffer severely in the Congressional campaign if it identifies itself with that idea of profligate expenditure with which River and Harbor bills built on the log-rolling plan are so conspicuously identified in the public mind. Of course, what gives the case such unusual point at the present time is the circumstance that at the very moment when the majority party seemed bent on forcing this expenditure through until compelled by the determined opposition of a few Senators to think of dropping it, that same majority party was engaged in constructing an emergency tax bill to meet the needs of the Treasury due to the cutting off of revenue by the war. The Democratic leaders had better lose no time in taking up a more desirable position than that of a party putting an unusual tax on the people and at the same time refusing to cut off expenditures that are not only unnecessary but in large part scandalous.

Because of the wholly unprecedented conditions which surrounded our export and import trade in August, the Government's report on the month's total results in the country's foreign commerce is of particular interest. There had, for instance, been very great curiosity as to whether our inward trade or our outward trade had suffered most severely by the varying phases of the war embargo. On that question depended largely this market's position in the matter of international exchange. The figures show that, notwithstanding an export of cereals never equalled in any previous August, the month's total export trade decreased $77,500,000 from 1913, while the decrease in imports was only $8,200,000. As a consequence, imports exceeded exports by $19,000,000, as against a $50,200,000 excess of exports over imports in August, 1913. Not in a generation has so considerable an excess of imports resulted during August.

This result cannot yet be accepted as a full and fair indication of the effect of war on our foreign trade. For one thing, the temporarily almost complete embargo on ocean service, in the first fortnight of August, hit our export business disastrously, because even the vessels in our ports were unable or unwilling to sail. But meantime, merchandise which had been shipped from abroad to this country before the war broke out, and which was on the water during those early weeks of complete uncertainty, continued to come in. Neither fear of capture nor inability to draw exchange against the cargoes could affect those deliveries. When the position in these regards had improved, towards the middle of the month, export business increased, as the weekly grain trade figures have already demonstrated, while the arrivals of imported merchandise correspondingly decreased, because they then reflected the chaotic conditions at the opening of August. But the greater part of the month was governed by the circumstances which cut down exports without greatly affecting imports. Our weekly grain exports in September have increased enormously, as compared both with August and with September of last year. On the other hand, however, our cotton exports, which last month were only $1,300,000, as against an average of $16,000,000 for August in the four preceding years, have been running, even this month, at a weekly total barely 10 per cent. of last year's figures.

"Remarkable" is none too strong a word for the series of inquiries conducted by the Federal Commission, on Industrial Relations, which are now to be embodied in a report to Congress. That report, it is safe to say, will constitute a work of unique value in the field of labor discussion. The issues involved have been especially clear-cut in the Western portion of the investigation, where it is plain that there is a gross lack of understanding by both employers and employees, especially the former, of the fundamental causes of industrial unrest. Another fact that stands out in the entire investigation is that all of the agencies devised and set in motion for bringing about justice in industrial disputes have in one place or another broken down. The report will doubtless deal with the causes of these failures, and will have some suggestions to offer for rendering them less likely; but its chief value will lie in the mass of information it will assemble for use by students and legislators.

It is just like Connecticut, which gave Roosevelt in 1912 only half as many votes as it gave Taft, to stick to the "obsolete" convention system. But how are we to explain the results of its Democratic State Convention? For the party's candidate for the Senate it chose Gov. Baldwin, and for a platform it selected such planks as one declaring for the short ballot, another favoring the direct primary, and others pledging the party, against the Governor's wishes, to submit a woman suffrage amendment to the State Constitution, and urging legislation "that will cure the free-pass evil and eliminate the professional lobbyist from legislative proceedings." A Progressive primary could hardly do more than this! Gov. Baldwin wins the Senatorial nomination at a fortunate moment. Had he been a candidate before the last Legislature, he might in the end have been elected; but as no party had a majority on joint ballot, six Progressives holding the balance of power, a deadlock would have been likely, as was the case in Illinois and elsewhere for some weeks. Now, with Senators chosen directly, his election is highly probable.

Illinois Democrats, who gave Champ Clark a majority of 140,000 over Woodrow Wilson in the Presidential primary of 1912, are the first to endorse Wilson for renomination. For the first time within the memory of living men, their State Convention had nothing to quarrel about. Indeed, the delegates to all three conventions of the Democrats, Republicans, and Progressives, which met at Springfield on the same day, might have assembled under the same roof, so far as the platforms go. All three declare for the extension of the merit system and for a corrupt practices act, even the scandal of the Lorimer election not having induced the Legislature to pass such a measure. The Republicans and the Progressives favor complete woman suffrage, and the Democratic platform includes the question as one of those with which a constitutional convention should deal in the near future. The most important matter before the conventions was that of the amendment of the State Constitution, a problem that has long been troubling the State. The Constitution contains the peculiar provision that only one article may be amended at a time, unless by a constitutional convention; as the advocates of various amendments can never agree upon which one shall be first submitted, the provision usually operates as a prohibition against amending the instrument at all. As a corollary to this confusion, the advocates of amendments differ upon the best way of getting rid of the obstacle to amendment, some desiring a constitutional convention, others preferring a change in the peculiar article defining the process of amendment.

THE WORK OF THE GERMAN "MACHINE."

At the end of the first week of mobilization the German Chief of Staff, Gen. von Moltke, announced to the country that not a hitch had occurred; not even a single inquiry for further instructions, or a complaint, had been received at General Staff headquarters. For seven days four millions of men had been turning soldiers, a peaceful nation was being transformed into one in arms, and not in the slightest detail had it appeared that anything had gone wrong. At the end of the second week the record was the same; the operation was complete. Millions of reserves had joined their commands, and long-planned organizations had sprung into being. Each man had received his orders, picked up his kit, and gone to the front. For, while mobilization was going on, concentration, the *Aufmarsch*, was taking place as well. At the end of two weeks the machine was complete, was massed on three frontiers, and to the west was ready for that forward stroke of which we now know. Whether that is to end in disaster or not, the fact remains that in all history there is nothing to surpass this triumph of human planning and organization. With all respect for Russian and French achievements along the same line, the palm must be awarded to the German thoroughness, for it made possible that triumphant march through Belgium and France which never stopped until it was seventeen miles from Paris.

Few Americans can appreciate the extent of the advance planning involved in this mobilization, or the labor expended to keep it up to date. The French went to war in their historic red-trousered uniforms; the Germans appeared in their gray khaki, the existence of which was hardly known abroad. Each soldier had new shoes, new underclothing, had received his written instructions what train to take, and what seat to occupy. Food for the journey was given to him, and when his train reached certain stations hot drinks were served to him. He had no thinking to do, only to read his order. Nowhere was there the slightest confusion, or a mix-up of any kind, and everywhere the most spontaneous enthusiasm and determination, due to the fact that, strange as it seems to us, the German nation feels that it has been sadly put upon; that war was not of its seeking, or in the slightest degree due to the Kaiser or his Ambassadors. But mobilization means far more than moving troops, for telephones, telegraphs, and railways were taken over by the military, and hundreds, perhaps thousands, of factories ceased work instantly on civilian contracts and began to labor exclusively for the General Staff, making biscuits, clothing, shoes, munitions, etc. Every pound of copper was seized at once and reserved for military purposes. For this, as for everything else purchased for the army, the Government is paying in cash.

More than that, on the sixth day of mobilization, August 7, while the process of calling out and concentrating was going on, and the army was thus being enormously expanded, Gen. von Emmich captured Liège with only three divisions, and those still at peace strength. For this we now have the official word of the Quartermaster-General of the German army, von Stein, who states that the reserves did not overtake the Hanover troops led by von Emmich before Liège fell. One of its forts succumbed after three shots from one of the new siege guns. The Germans insist that there was no delay at Liège whatever; that the time spent there was the regular and expected waiting for the mobilization and the concentration to be completed. The minute the mobilization period of fourteen days was over, the forward movement began, with its tremendous early successes.

And yet this incredibly efficient machine, whatever the final outcome, has failed to accomplish its purpose; it has neither taken Paris, nor surrounded the Allied armies with a ring of steel, nor held its ground in France. The policy of blood and iron has for the present been blocked; for the first time in 101 years a great German army has met with a real check. The supreme test of the greatest of machines is now before us. How will it stand up under defeat? Will the defects of its qualities lead to its undoing? It is a wonderful thing to have the heads of the machine do all the thinking and planning and to reduce the soldiers merely to pawns. But when the parts of such a machine begin to crack and break, sometimes it appears that the more perfect the machine the greater the damage. For one thing, the pawns are not apt to know what to do when their thinking is not done for them. The very fact that theirs has been a perfect machine has deprived them of the experience acquired in meeting unforeseen emergencies. It is more than questionable whether his training does not make the German soldier less versatile and adaptable than those of other nations. Again, the point of view of the officers that the men are merely pawns, and that their plans are to be carried out without regard to the blood spilt, may prove a great source of weakness, if not of undoing; it may appear that more was expected of the machine than could be accomplished by one which is, after all, composed of human elements. Physical exhaustion may prove to be the real explanation for the failure of the tidal wave to engulf Paris.

By this we do not mean to imply that this wonderful machine has already collapsed; he who thinks that, errs gravely. The thoroughness of the German General Staff must have provided for every contingency. The fortifications in Alsace-Lorraine and along the Rhine were built for defensive purposes; even the overweening self-confidence of the General Staff must have reckoned on a possible defeat, and made its plans accordingly. In East Prussia we have seen what a defensive-offensive can accomplish; two severe defeats are admitted by the Russians. No one can assert, moreover, with the facts thus far before us, that the German retreat in France was anything like a rout. Their army chiefs are now fighting for the preservation of the Empire, and under that stress the machine will still accomplish wonders—provided that the human element does not fail it. They must not carry their blood-and-iron policy too far, lest their machine collapse from over-strain and their resources be wantonly wasted. And they must not forget that the deciding factor may be the plight of those Germans, men, women, and children, not included within the scope of the military machine—those who suffer at home and may ere long face starvation.

MEXICO.

In more ways than one, the withdrawal of the American troops from Vera Cruz, now ordered by the President, will be the end of a notable chapter of history. What story the new chapter in Mexico's annals will tell remains matter open for conjecture—conjecture which must take its color as much from the temper of the observer as from the record that lies behind us. Some look forward with confidence, others with hope, still others with rooted distrust that anything good can come out of self-rule in a country that has so long a history of turbulence and revolution behind it. But, whatever the future may bring forth, some things stand clearly accomplished for the present—things that absolutely give the lie to predictions of failure and predictions of evil, which, not many months ago, were given out without hesitation or qualification, and found very wide acceptance.

First and foremost, Mr. Wilson's order stamps indelibly upon the whole course of the President and of our country, in this

extraordinary episode, the seal of absolute good faith. That his intentions, and ours, were true and upright, was never open to honest and intelligent doubt; and it is long since any doubt of them has been expressed in a responsible quarter. Yet between intention and fulfilment there is always a gap; and now that gap has been filled. That in the actual march of events to this happy end he has been favored by fortunate developments upon which he could not have counted with certainty, is true enough; he ran a great risk when he sent the troops to Mexico, and the outcome might easily have proved far different from what it has been. But the real saving factor in the case, whether aided by adventitious circumstances or not, was the rectitude of the President's purpose from first to last. If his sending of troops to Vera Cruz carried with it the danger of a needless war, his unceasing vigilance, the constant exertion of every resource of his mind to shape results towards a peaceful settlement, was the force that averted that calamity. Not for a moment did he admit the insistent and insidious plea—to which few men would have failed to succumb—that war was bound to come, and therefore the best plan was to push on with vigor; he trusted to the resources of diplomacy and persuasion, and to the countless possibilities that time might develop. He was prepared to appeal to the *ultima ratio* of nations; but it was really and truly as a *last* resort that he contemplated the abandonment of the resources of reason in favor of those of war.

But the chapter of history which the President's order has brought to a close did not begin with the landing of the troops at Vera Cruz. It had its beginning in the very first days of his Administration; and it is characterized, with a fidelity rarely to be found in a mere label, by the catchword "watchful waiting" which has so universally been used in referring to it. That policy has succeeded beyond the most hopeful expectations, we venture to say, of the President himself; certainly beyond those of the majority of his supporters in it. As for those who treated that policy with ridicule and contempt, it is worth while at this moment to say something more about their view than that events have falsified their judgment. This might be—indeed, in part it doubtless has been—the result of favoring chance; the only way to avoid the danger of judging falsely of the future is not to judge of the future at all. But the truth is that the critics of the President made two real mistakes in their weighing of his programme. In the first place, they seemed to think that by watchful waiting the President meant simply looking on while Carranza and Villa knocked Huerta out, and then letting the mess work itself out as it might; whereas they ought to have known that he was counting on the exercise, in a score of ways, of influence that would so shape affairs after Huerta's downfall as to satisfy the needs of a stable order in Mexico. And secondly, they failed to make allowance for the existence of factors in the situation that might furnish the means by which such a policy could be carried out.

Of these overlooked factors, two have played a signal part in bringing about the actual result. The first is the potent interposition of the South American mediators. The bringing in of their participation was a stroke of statesmanship whose efficacy in unravelling the Huerta-Carranza tangle is hardly more notable than is its value as a precedent in the future relations of our country with the republics to the south of us. And the second factor is to be found in the conduct of the Constitutionalist leaders themselves. Neither Carranza nor Villa has proved to be one-tenth so black as he had been painted. Carranza is neither a mass of trickery, nor, as was sometimes asserted, a mere figurehead and nonentity; Villa, whatever may have been the beginnings of his career, is something very different from the purely selfish and utterly ignorant cutthroat and robber that we were led to picture him. President Wilson has utilized the possibilities of aid from friendly Powers kindred in feeling and origin to Mexico, and he has utilized the possibilities of reason and good will that were to be found in the Constitutionalist leaders themselves. The easy way is to sweep aside all such possibilities, and hack one's way through to a solution; Mr. Wilson chose the more difficult but infinitely the better way. And he has his reward in a victory of peace and of sagacity which will ever inure to his own honor and his country's.

WHY IT IS SO WITH THE PROGRESSIVES.

The Maine election, with its meagre showing of Progressive strength, was not a surprise to the country, and Col. Roosevelt is reported as saying that it was not a surprise to him. Since that election, there has come the report of a conference between the Colonel and Mr. Perkins on the one hand and leaders of the Progressive party in Maryland on the other. The interesting feature of this report is to be found in a long extract which Mr. Roosevelt—as a simple method of stating his position in regard to fusion—read to the gentlemen in conference from a letter which he had recently written. It winds up with this statement of the existing situation:

> As things are now, it is worse than useless to support the few Republicans who announce that they are for me, but that they intend to remain in the Republican party, for this merely means that if elected they will strengthen the great mass of Republicans who not only intend to oppose me, which is unimportant, but to oppose all the things for which I stand, which is very important.

Now, as a matter of form, this is a stout enough assertion of party integrity. No alliance, it says, with the enemy; no surrender of the party's identity or its purposes. But when we look through the whole document for any sign of real vitality we find it wholly absent. There is much about the Colonel's "purposes," and about "everything I represent," and about "good government," and about "decent Republicans," and about "the worst policies and practices of the Bourbons two years ago"; but not a syllable that carries the impress of a splendid fight in a great and inspiring cause. This in itself would, of course, show nothing; the trouble is that what is lacking in this particular utterance has likewise been almost completely lacking in the Colonel's talk generally since his return from his travels. The difference between the ring of what he and, for that matter, Progressive spokesmen generally are saying now and the ring of that outburst of militant enthusiasm which marked the early days of the party is all the difference between a party which feels itself alive and growing and a party which hardly knows whether it is worth while to go on living or not. There is no "Onward, Christian Soldiers," there is no "New Nationalism," there is no "Social Justice"; there is little more than the cry against bossism and the tiresome repetition of the stereotyped epithet "reactionary." The party is barely two years old, but it seems to be suffering from a clearly marked case of premature senility.

Nor is the reason far to seek. The Progressive party came into being upon an insubstantial basis. It would not be correct to say that it was solely a one-man party—a personal following, and not a political organization at all. It is of course true that both its genesis and its ability to cut a large figure in the Presidential election were clearly due to the extraordinary hold of Col. Roosevelt upon a large fraction of the American people; but it is not this fact that we have in mind when we say that the party had an insubstantial basis. What we mean is that its principles were sentimental rather than rational, its policies vaguely and

hastily conceived, its aims shadowy, its pretensions unreal. It has not had the courage of its convictions, because its convictions are not made of the stuff that can endure the wear and tear of political realities. It does not stand by "The New Nationalism," because it had never thought out—nor its leader before it—what it meant by "The New Nationalism." It does not stand by "Social Justice," because the social justice for which it was ready to fight differed very little, when it came to be examined, from that which pretty much all of us were perfectly willing to promote, though perhaps we wished to go about it with less noise and with more deliberation. For that kind of social justice—be it good or bad—which involves anything like a fundamental change in the existing economic order it never even thought of fighting. In a word, it raised a tremendous racket over issues which were not substantial enough to create a party; and it mistook the hectic fervor of a camp-meeting revival for the advent of a new religion.

All this is pointedly illustrated in the history of two things—two closely related things, as it happens—which have figured very conspicuously in the Progressive crusade. The type of measure which Mr. Roosevelt's programme of "Social Justice" contemplates is that represented by Workmen's Compensation acts; so much so, that a very large part of what he has said on the subject relates expressly to the need of such acts. Now if one were to get one's impression of the prospects of such legislation from Mr. Roosevelt's speeches of a couple of years ago, one would inevitably believe, first, that the old parties were so reactionary or corrupt, and the power of capitalistic interests so supreme, that it was next to impossible to have any such measure enacted; and secondly, that if it were enacted, the judges were so fossilized, and Constitutions so impossible to amend, that unless we introduced the "recall of judicial decisions" the people's will, even if it prevailed in the Legislature, would be hopelessly nullified by the courts. Now, as a matter of fact, a Workmen's Compensation act was passed in this State, without any special difficulty, about four years ago; and the very moment it was declared a violation of the Constitution, steps were taken to amend that instrument so as to permit the enactment of the most liberal measure that the Legislature might choose to pass. And in the short time that has since elapsed, the amendment has been passed (as the Constitution requires) by two successive Legislatures, ratified by the people, and followed up by the enactment of the most liberal measure of the kind in the world. "Social Justice" is a fine mouth-filling phrase; but the things that the Progressives mean to cover by it are things that belong in the ordinary field of progress without a capital P; and the means by which they can be attained are in our hands without resort to any happy-thought inventions that fly in the face of the fundamental principles of our governmental system.

THE NEW HEARING ON RAILWAY RATES.

Responding to the petition of the Eastern railways—that the rate case decided at the end of last July be reopened for possible modification of the Interstate Commerce Commission's order of that date—the Commission on Saturday agreed to this reopening, and fixed October 19 for the initial hearing. The railways are asking for a larger increase in rates than was granted by the July order. Under the terms of that order the railways were allowed to make advances ranging from 5 per cent. down to 1½, instead of the general average of 5 per cent. which they had asked for.

Their request for reconsideration the railways now base chiefly on the ground that since the issuance of the July order, "facts and circumstances have arisen which, taken in connection with the facts already before your Commission, your petitioners believe will justify the relief." Those facts and circumstances are obviously the effect of the European war upon our industries. The law under which the rates were fixed provides for continuance of duly ordered rates "for such period of time, not exceeding two years, as shall be prescribed in the order of the Commission"; but it limits this provision by the words, "unless the same shall be suspended or modified or set aside by the Commission." This modification is now to be considered, in the light of the new situation caused by the foreign war.

Foremost among the conditions created by the war has been the complete derangement of the market for home and international capital. When refusing, last July, the full rate increase asked by the railways, the Commission thus referred to the argument of increased cost of capital:

> The principal danger suggested was that the carriers would encounter great difficulty in renewing their maturing short-term notes and other obligations unless investors were assured that the carriers' revenues would be increased immediately. Subsequent developments have shown that there was little foundation for any such view.

During the world-wide financial stringency prevailing in 1913 the railroads, in common with States, cities, and the industries, found it difficult to secure loans, however good the security, but with the growing ease in the money markets this difficulty has largely disappeared.

The petition of the railways last week now points to the war's "unparalleled destruction of wealth and dislocation of capital." It reminds the Commission that, with the certainty that "competition for capital will be keener and interest rates higher, for some years to come, than in any corresponding period within living memory," and with enormous sums of railway obligations maturing within that period, the emergency is for the railways extremely serious. This is the new question for consideration of which the case has been reopened.

There are two reasons why this particular phase of the situation vitally affects the railways, and through them the interests of the community at large. With borrowing power so unexpectedly and so violently curtailed, the normal recourse would be, to depend more largely than heretofore on current revenues for improvement of railway facilities. This is one fair argument for higher rates. Quite aside from that consideration, the prospect that the railways can renew, on possible terms, their maturing obligations, is bound to depend on the extent to which such loans are based on an enterprise whose surplus revenues are sufficient to inspire confidence. Under existing circumstances, we regard this second consideration as paramount. It affects the whole financial position of this country, whose dislocation, as a result of the European war, is at the moment engaging the most anxious emergency expedients of the banking community.

Our foreign exchange market stands at virtually prohibitive rates, because of the difficulty of financing our present maturing obligations to Europe without draining our banking reservoirs of gold. Our stock exchanges are kept closed because no one feels sure, in case of their being reopened, how large would be the consequent sale of American securities by European investors—a movement of liquidation which, if it were to be as large as some estimates suppose, would complicate infinitely the problem of adjusting the country's position on international exchange. In advance of any such liquidation, on a reopened Stock Exchange, the banks of the whole country are being called upon to draw on their gold reserves pro rata, in a concerted movement to meet our other foreign obligations and maintain our international credit.

That the achievement of this task, through inducing foreign investors to renew their loans to American corporations or to refrain from selling back the stocks and bonds they hold, would be greatly simplified if the question of earning power were cleared from obscurity, through some further advance in rates, it is hardly necessary to argue. We are perfectly well aware that the argument is dangerous, for the reason that it might be applied with even greater force to a sweeping increase of rates. But no one expects such action as that, and no one has asked for it. The question really hangs on the Commission's withholding, in its July order, of the full 5 per cent. increase applied for by the railways.

Two of the seven Commissioners dissented, on grounds which were carefully and vigorously set forth, from the decision of the majority of their colleagues. At best, the decision rested on certain presumptions whose correctness could be established only by experiment, and on certain suggestions of economies whose effectiveness could be tested only by time. But months of time and experiment, in doubtful and disputed questions, where the facts may eventually not bear out the Commissioners' contention, are precisely what cannot be awaited, in the present extraordinary juncture. And if they could, there would still remain the immense dislocation which has been brought upon the financial world by the European war—some of the urgent problems arising from which call for immediate solution.

HARVARD'S FRESHMAN DORMITORIES.

To our mind, no more interesting experiment has been undertaken in any Eastern university in recent years than the establishment of the freshman dormitories which go into service at Harvard when the College opens next week. It is, as our readers are aware, an effort to democratize Harvard, to mix more thoroughly the diverse elements which once a year are cast into that academic melting-pot. More than that, it introduces certain features of British undergraduate life into our college world, and will tend to emphasize the difference between Harvard College and Harvard University. It is by all odds President Lowell's most important undertaking, and, if successful, is certain to be imitated elsewhere. Already this group of noble buildings has set Harvard men to asking why the upper classmen should not have similarly attractive quarters instead of the run-down and in part hideously ugly dormitories that detract from the historic buildings in the "Yard" at Cambridge.

During the later years of Mr. Eliot's presidency Harvard was singularly indifferent to the housing of her students. A couple of modern but prison-like dormitories were built in an unfortunate situation, but for years the College neither modernized its old dormitories nor attempted to regulate the investments of private capital. It was held to be the affair of the capitalists if they put up more and more luxurious buildings on what soon became known as the "Gold Coast." The result was that Harvard not only got the name of being a costly college to attend, but of encouraging luxury and pandering to the sons of the idle rich. If this was wholly unjust, it is undeniable that these expensive private dormitories gravely emphasized the cleavage in the undergraduate body between those favored by the gods as to worldly possessions and social position and those who were not; and thus did grave injury to the College. The administration of Mr. Lowell, deeply impressed with the lack of a cohesive class-spirit, the continual breaking up of classes into cliques and groups, which scarcely knew one another, and were almost in the frame of mind to regard one another as enemies, found that it was not necessary for the College to sit by helpless and do nothing to counteract the evil tendency. Hence came the decision to put the entire freshman class on an equality as to living accommodations, and to see to it that groups from the big preparatory schools and large cities did not flock by themselves.

The group of nine buildings which is to house the freshmen is situated on the banks of the Charles River, near the bridge to Soldiers' Field. They are singularly successful architecturally, being the handsomest structures that have gone up at Harvard within the memory of man, and are an adaptation of the early Colonial style, from which Harvard, like Yale and others, should never have departed. The credit for their planning belongs to Shepley, Rutan, and Coolidge, the Boston architects. There are three divisions, Standish and Gore Halls and the Smith Halls, each consisting of three buildings, in the centre one of which are the commons and living-room. There is one great kitchen, from which the three commons are served, and the occupants are required to take their meals there; the board will be about $5 a week. What this departure alone will mean to thousands of men it would be hard to exaggerate; but there are multitudes of Harvard men who will recall with a shudder their plunge into college life by way of Memorial Hall, or unfriendly boarding places, and the hopeless loneliness of the early days, without friends or ties, and a bedroom in some cheap frame boarding house. After these new buildings are initiated it will no longer be possible to tell the old story of the Harvard professor who accosted a wistful freshman and asked if he were looking for some one. "Not I," was the apocryphal response; "I don't know anybody this side of the Rockies."

Still another interesting feature of the dormitories is that each suite, however cheap, has its bathroom—something long frowned on by Harvard as an effeminate luxury—and that all the rooms are furnished by the College. Rents range from $35 to $225, which will materially bring down the cost of the average freshman's bill of expense. The furnishing is uniform, but in excellent, simple taste, and the whole effect is such that most graduates who visit these halls will, we are sure, wish they might go to college all over again, not only because of the quiet of the groups, which ought speedily to have a genuine academic atmosphere, with their fine lawns, their flower-beds, and their new-planted ivy; but because of the opportunity to meet and know all sorts and conditions of men from all quarters of the United States, and daily to break bread with them.

Of course, so unusual an experiment has had its critics. For instance, some think the accommodations too uniform; some complain that it will be a hardship on the very poor boys, who will no longer be able to shrink into remote quarters and hide their poverty. The answer to this is that the poor boy may learn in the cheerful air of comradeship, which should prevail here, that poverty implies no disgrace, and is nothing to apologize for. To us the criticisms are hardly worth considering in comparison with the high aim, the democratic results, certain to be achieved, and the scholastic benefits to accrue. The only real objection we have heard is that the freshman class is going to overflow the new buildings at once, and that some unfortunates will have to go elsewhere. Defects and disappointments may develop, but to-day President Lowell and Harvard are heartily to be congratulated on the new departure; every one who hopes for real democracy in our colleges must join in wishing for its complete success. For the coming of true social democracy at Harvard may presage the day of a genuine intellectual democracy within its walls as well.

Chronicle of the War

The past week has been the least spectacular one since the war began, but it has probably seen more severe fighting and heavier losses than any other. Since September 13, when, as we saw last week, the German armies in the west stayed their retreat from the Marne, and took up a strong position along the Aisne River, there has been in progress a tremendous struggle, which is still, as we write, undecided. From Noyon, west of the River Oise, to Verdun is some 125 miles, and from Verdun southeast to Nancy is another fifty. To visualize a modern battle along such a line as this, where it would take an express train three hours to go from the extreme right wing to the extreme left, is utterly impossible. We can only see it as a series of individual battles, isolated yet coördinated, and this is exactly what the battle of the Aisne has resolved itself into.

On the whole, the course of events, if not the progress of the actual fighting, is in favor of the Allies. For them even a severe defeat, unless it involved, as is extremely unlikely, the cutting off of an army, would be by no means an irretrievable disaster. It would mean merely that they would retreat again, if necessary, as far back as their line on the Marne, where, doubtless, strong defences have already been prepared, and they would be in the same situation that they were in three weeks ago, when the long retreat from Belgium came to an end. For the Germans, on the other hand, defeat would mean the failure of their whole campaign in northern France. They would be driven back on the line of frontier fortifications between Maubeuge and Sedan. Their offensive movement would be definitely terminated, and the whole precious month, since the attack at Mons began on August 23, would have been wasted.

It is needless to reiterate what has already been emphasized in these columns—the importance of time to the German strategic plan; but it may be pointed out that, even apart from its ultimate result, this long-drawn-out battle on the Aisne is to the advantage of the Allies. If the Russian successes in Galicia have not been quite so overwhelming as dispatches from Petrograd ten days ago would have had us believe, they have been sufficiently great. The Austrian armies are still capable of offering a stern resistance at Przemysl, but it seems probable that only time is required for the Russians to complete the victory that was begun at Lemberg and continued at Krasnik and Tomaszow. Meanwhile the position in the west renders it out of the question for Germany to detach more troops for the relief of the situation in the east.

Still another point should be noted. Modern warfare, at least if we may judge by the course of events in the present war, is largely a matter of mathematics. In the end the greater battalions win. Germany, almost beyond any question, has now put into the field every man that she can command. France also has reached the limit of her resources, as has Servia, and, probably, Austria. There remain Great Britain and Russia. The latter is supposed to have at the moment a force approaching 2,000,000 men in the field, and can raise 3,000,000 more if required and if time allows. Great Britain has on the line of battle some 165,000 men, and should still have over 100,000 more regulars on whom she can draw, besides the territorial force, ninety battalions of which have volunteered for active service, and the new army recently raised, which is fast approaching the half-million, if it has not already reached that figure. These numbers are exclusive of the Indian and colonial troops, who are now on their way, and some of whom may have already reached the front. Clearly, the Allies will ultimately have more men to send to the shambles than will Germany.

Even in the actual fighting on the Aisne, however, the Allies have had by no means the worst of it. The German position on the low hills around Rheims is one of exceptional strength, and has been strongly intrenched. We know, too, that considerable reinforcements have been sent to the support of the army of Gen. von Kluck on the right wing. Yet against this wing the Allies seem to have gained at any rate some eight or ten miles since the battle began. The line of battle has been from Noyon, on the right of the Oise, to Craonne, north of the Aisne, thence to the hills north of Rheims, to Souain (the capture of which by the French was reported on Monday), and through the wooded Argonne to Montfaucon. Here the line bends around Verdun, on which the army of the Crown Prince was reported to have begun another attack on Monday, and follows a southeasterly direction to Nancy.

The principal interest has centred, as throughout the campaign, on the operations of the left wing of the Allies. Their superiority in numbers has enabled them to persist in a turning movement here which has constantly threatened the flank of von Kluck's army. We read of their having taken Lassigny, eight miles west of Noyon, where they must overlap the German right wing, and on Tuesday the London *Times* reported the appearance of fresh forces around Péronne, which is thirty miles northwest of Noyon and seventeen miles in the same direction from St. Quentin. The expression "fresh forces" is rather mysterious, and there has been, up to the time of writing, no official confirmation of the *Times* dispatch. Nevertheless, it is a natural supposition, in line with the general strategy of Gen. Joffre, as we have seen it, to assume the presence of a force of the Allies in the neighborhood of Péronne, which may either consist of fresh troops recently landed at Dieppe, or may be the same army of Paris which played so effective a part in the battle of the Marne. At all events, the danger to the German right wing is obvious.

On the German side, it is doubtless to counter this danger and to relieve the pressure on the right that the army of the Crown Prince has again desperately attacked Verdun. We learn, however, from the same dispatch from Berlin, that at this point there are eight French army corps, and if these numbers are correctly represented, there should be no danger of the line giving way. A similarly desperate attack was initiated on Tuesday against the Allied centre, following the heavy bombardment of Rheims, and from Berlin came the official announcement of the capture of strong hilly positions at Craonne and of the village of Bétheny, three miles to the north of Rheims. Evidently the Germans are renewing their attempts of last week to pierce the Allies' centre, but there seems no reason to expect that this attempt will be more successful than previous efforts.

Lack of trustworthy information makes it difficult to tell exactly what has happened in the eastern campaign. Much of our information comes by way of Rome, a source which has constantly proved itself untrustworthy; accounts from Petrograd have a tendency to exaggerate the extent of Russian victories; Berlin confines itself principally to reporting German successes in East Prussia and Poland; Vienna, when it speaks at all, is usually content to issue sweeping denials of everything that has come from Petrograd and to assert the invincibility of Austrian armies. Comparing these accounts, it is possible only to sum up the situation in a general way. As we suggested last week, it seems probable that Russian attention has been almost wholly concentrated on Austria, and that the excursion into East Prussia was intended as little more than a feint to lighten the pressure on the Allies in the west by compelling a certain diversion of German troops to meet the raid. This object has been accomplished, although at severe cost. It is probable that the Russians have now been entirely cleared out of East Prussia, for dispatches received as early as Friday of last week from Petrograd and Berlin agreed on this point, the former stating that the army of Gen. Rennenkampf had frustrated the attempt to outflank him and had fallen back on the fortresses on the Russian side of the border, the latter declaring that the German advance had penetrated to Grodno.

In Galicia the retreating Austrian armies, though badly shattered, have nevertheless succeeded in joining forces and, as we write, appear to be offering battle on the left bank of the San River, on a line between Przemysl and Jaroslau. Dispatches from Petrograd on Tuesday declared that the latter position had already been taken. Behind these places, and extending to Krakau, which has been prepared for resistance, is a strong line of fortifications. The Russians, therefore, have a heavy task in front of them before they can take the road to Berlin by way of Breslau. Much, of course, depends upon the condition and morale of the Austrian armies, but the fact that these were able to extricate themselves from the extremely perilous position in which they were after the defeats at Lemberg and Tomaszow, would seem to indicate that they have rallied, and in a strong position resting on Przemysl should be able to offer a stubborn resistance. The Russians, however, undoubtedly outnumber them, and presumably have sufficient forces to be able with safety to leave Przemysl, with its garrison of 60,000, invested in their rear. In this connection, it should be noted that the Servian army, probably consisting of some 200,000 men, which is now said to be threatening Sarajevo, is performing a service of extreme value to its Russian allies. For the operations in Bosnia, which is a Slav and presumably hostile country, it is probable that not less than half a million Austrian troops are detained.

The British official war bureau announced on Tuesday that the armored cruisers Aboukir, Hogue, and Cressy had been sunk by submarines in the North Sea. Apparently not more than 700 men out of the 2,200 composing the crews were saved.

Foreign Correspondence

THE WAR IN RELATION TO THE CHURCHES AND THE SCHOOLS—UNEMPLOYMENT AND THE BOYCOTT OF GERMAN MANUFACTURES.

LONDON, September 10.

One day last week the Earl of Jersey, as High Steward of Banbury, was to have unveiled the "completed" Banbury Cross. The ceremony was abandoned "in consequence of the war." But why should the war, with all its dislocation of government and trade, have prevented a simple celebration of this kind? The explanation presumably may be found in the fact that the present Banbury Cross was erected in 1859 to commemorate the marriage in the previous year of the Princess Royal with the Crown Prince of Germany—the marriage, that is to say, of the parents of the present Kaiser! No wonder the Earl of Jersey decided to evade the problem of speech-making on such an occasion.

There has been no other so piquant instance of the upsetting of prospective arrangements. But programmes of all kinds of meetings have been revised or cancelled. The Church Congress, due for October, has been called off, as have been the autumnal sessions of the Congregational and Baptist Unions respectively and the quinquennial Assembly of the various Methodist Churches. The decision to cancel these meetings was reached early last month, when it was believed that the Government's use of the railways would prevent the transportation of delegates. The regular passenger service has now been so far resumed that there would be no difficulty on that score. But the decision is still recognized as necessary, for the two reasons that many members are too busy at home, with relief committee work, etc., to be able to attend, and that in similar circumstances adequate local hospitality could not possibly be procured.

By their zealous approval of England's intervention, the religious papers have kindled a fire that is blazing more fiercely than they intended. Some of the younger clergy have caught the flame, and are asking why, if this is a holy war, they should not themselves enlist. This martial ardor seems to burn most fervently in Scotland, where it is seriously proposed that a number of ministers not over forty years of age should form a battalion. In England, similar sentiments have found expression in a correspondence in the *Guardian*, where a country rector suggests that, if a clergyman takes up arms and is killed on the field, he is only obeying the words of his Master: "Greater love hath no man than this, that a man lay down his life for his friends."

The Archbishop of Canterbury, however, is not convinced by such arguments. He declares plainly that, in his judgment, "the position of an actual combatant in our army is incompatible with the position of one who has sought and received Holy Orders." The clergy, he says, have a calling of a quite specific kind, and "those who have been ordained to the ministry of Word and Sacrament ought, even in time of actual warfare, to regard that ministry, whether at home or in the field, as their special contribution to the country's service."

Many well-known ministers will be serving at the front as chaplains, probably including the Bishop of London, who is chaplain of the Rifle Brigade. The acceptance of a chaplaincy in time of peace carries with it the duty of serving in the same capacity in time of war under penalty of being court-martialled, no matter how strong the claims of a man's home parish may be.

A great many school buildings in various parts of the country have been commandeered as barracks and military hospitals, with no little consequent disturbance of the educational routine. Besides this, no less than 1,000 able-bodied teachers in the public elementary schools have gone to the front or joined battalions for home defence. This is in addition to the large number of masters in secondary schools who are now on active service. In these conditions the Board of Education will be compelled to relax the rigidity of its regulations.

It is proposed that in some instances two schools shall use the same building, one in the morning and the other in the afternoon, and that the school staffs shall be pooled. In any case, the orthodox time-table will have to be made more elastic. In his patriotic ardor, the head-master of the venerable foundation of Merchant Taylors School is suggesting some quite novel modifications of the curriculum. One would like to know what J. R. Green, with his dislike of "drum and trumpet history," would have said of the proposal that senior boys should be taught elementary tactics and strategy, and junior boys naval and military history. According to the same scheme, some of the time out of school is to be allotted to ambulance work, drill, shooting, scoutcraft, trench-making, and the like. If the war only continues long enough, we may expect by and by to see the most advanced pedagogical theory of twentieth-century England approximating to the unique standard of ancient Sparta.

The arrival of fresh supplies of paper-making material from Scandinavia has enabled some of the daily papers to give their readers a page or two more than the scanty allowance to which they have been reduced by the war. Advertisements, too, are slowly picking up. But one hears of several weeklies and monthlies whose publication is "suspended," as the euphemism goes. A really hard case is that of the *Liberal Monthly*, which, after eight years' steady labor, has acquired a regular circulation of 250,000. But its entire *raison d'être* is Liberal party propaganda. As all party conflict is now stilled, the Liberal Publication Department had no option but to suspend the issue of this monthly for the time. Whether it will collect all its quarter of a million readers again when it resumes, may be doubted. The *Liberal Magazine*—which, although a party publication, is mainly useful as a record of current events, for present and future reference—is still to be published.

Cool reflection is modifying some of the enthusiasm with which the "trade war" with Germany was started. The original proposal for an immediate boycott of all articles of German manufacture produced an indignant outcry from British wholesale and retail traders, who had already bought German goods to the value of millions of pounds, and were faced with the prospect of having these wares left on their hands. The attack on "the pipeline of British gold to Germany" has also met an unexpected obstacle, the discovery of which would be of special interest to Norman Angell. For several days the papers were giving particulars of manufacturing concerns in England whose shares were largely owned by German capitalists. These, too, should be boycotted, for if you bought any of their products you were putting money into the pockets of the enemy.

Presently it occurred to some one that the success of this campaign would increase the evil of unemployment at home, against which it is especially necessary to guard. One petroleum company, mainly owned in Germa- employs in its British works 3,000 persons. A German tube company similarly employs 1,750, and a German electric lamp compa- 1,500. These conditions are the direct result of recent legislation which compelled German owners of patents, in default of forfeiting their patent rights, to manufacture the patented article in this country. This law was passed for the express purpose of enabling British workers to derive employment from British purchases of the article in question.

H. W. H.

THE INTERVENTION OF JAPAN—HER GRIEVANCES AGAINST GERMANY—NO RETENTION OF TSING-TAU.

TOKIO, August 28.

No sooner had the international rupture occurred in Europe than Japan began to contemplate the possibility of being asked to take a hand, should Great Britain be involved. That Japan was bound by the terms of the Anglo-Japanese Alliance to participate, if required, there was no manner of doubt in the public mind, but whether to await the request was the question.

There were, and are, many Japanese who long to "get even" with Germany, but there was much speculation as to waiting for an invitation to initiate operations in that direction. Suspense was more or less relieved when a note came from the British Government on August 4 asking what Japan could do in the way of safeguarding British shipping in the Far East. An Imperial council was called and the reply at once went back to London that Japan could not guarantee the safety of British shipping so long as the presence of Germany at Tsing-tau existed to menace it.

Japan would undertake the responsibility only on condition that she be allowed to remove the German occupation of that part of China. In this suggestion the British authorities acquiesced, on condition that the place be subsequently returned to China and the integrity of that republic be in no way threatened. I may add that all here set down I have received from the highest Japanese authority.

On receipt of consent to the condition from Great Britain, Japan sent her ultimatum to Germany, demanding the evacuation of Tsing-tau, the disarming of the warships there, and the handing over of the territory to Japan for ultimate reversion to China. As communications with Europe were very uncertain, Japan gave seven days for an answer. From the first it was very widely believed that Germany would treat the ultimatum with silent contempt, which she did.

The time limit for a reply was set at twelve o'clock of August 24. The moments preceding the firing of the noon gun in Tokio on that day were charged with the utmost anxiety. Newspaper men and others crowded the allotted waiting-rooms of the Foreign Office, waiting for the report of the gun and the

news from the Foreign Minister as to whether Germany had sent a reply.

As the sound of the gun reverberated over the city a messenger immediately appeared and handed to the journalists a piece of paper with this inscription: "No reply!" At once thousands of newsboys and men, with their "extras" already printed, swarmed over the city streets. The Cabinet Council, then in session, continued until 2:30 P. M., when the German Ambassador was handed his passports and war was declared.

No news of naval or military movements is permitted to be published at present; but it is supposed that as soon as the declaration of war was issued, if not before, the Japanese fleet was in readiness for necessary activity off Tsing-tau. Whether there is to be the landing of an army at once seems uncertain, as there are reports of a joint action of troops representing Russian, British, and French from the land side.

Though the Germans at Tsing-tau have been making great preparations for a state of siege, it is not expected that the place can long hold out against an attack by Japan. There are said to be no more than 3,000 soldiers, including a small force of cavalry, at Tsing-tau, with three aeroplanes and a few guns. In the harbor there are four small gunboats and an Austrian cruiser, but most of the guns were removed from the boats to arm the big North German liners that have been equipped for destroying British shipping.

A peculiar aspect of the situation is that a large proportion of the fighting personnel at Tsing-tau consists of Germans who, until called away a few weeks ago, lived in Japan, where many of their families still are. The Japanese Government, however, has issued instructions that all German subjects within the Empire are to receive the same protection and courtesy as heretofore, and the newspapers are happily backing up the official advice with apparent sincerity.

There is no doubt that the war with Germany is immensely popular with all classes of the Japanese population; and for several reasons. Although there is a widespread feeling of gratitude among the Japanese for all that Germany has done for their country in the way of training in law, medicine, science, and war, there is yet a still more insistent conviction that most of Japan's troubles during the last few years have been the outcome of German influence in Europe and America.

It was the Kaiser who started the cry of the "yellow peril," and Germans have acted consistently with that slogan in most of their relations with Japan. The Japanese blame the Germans for a good deal of the anti-Japanese movement in the United States. They hold Germany in even greater resentment for her attitude to Japan in East Asia. On Germany is laid the responsibility for the Russo-Japanese war, which has brought so much suffering and loss to Japan.

The Japanese say that Germany was at the bottom of the scheme to force Japan's evacuation of Port Arthur after the war with China, France and Russia playing but a minor part. This is proved by the memoirs of the late Count Hayashi, of which, it will be remembered, the Imperial Government prohibited the publication, but which somehow got abroad. In those documents Count Hayashi states frankly that when the three Ministers came to him with the demand to evacuate Port Arthur, the French and Russian Ministers were content to make the request that the place be handed back to China, but that the German Minister acted quite differently, speaking in an objectionable manner, threatening Japan with war, and assuring her that she could never face Russia, France, and Germany combined. Herein was an insult the Japanese have never forgotten.

Not only so, but in addition to the expense and suffering of the Russo-Japanese war, which was the outcome of Germany's attitude at that time, the German mailed fist in Europe has compelled Japan to undergo endless expense in naval and military expansion. Indeed, it may safely be said, as I am assured by the best Japanese authority, that the nation holds Germany responsible for all the millions wasted on naval and military armaments in Europe, America, and Japan during the past ten years. This is certainly the belief of the Japanese Peace party; and it is affirmed that China's extravagant expenditure is also due to German influence.

After Germany succeeded in ousting Japan from Port Arthur, on the score of insuring the integrity of China, within three years she went in herself and took Tsing-tau, thus creating a deadly hatred of all white people among the Chinese and giving rise to the Boxer rebellion. That the Germans were the objectives in that uprising is seen, the Japanese say, in the fact that the first person they made a point of killing was Herr von Ketteler, the German Minister in Peking.

While these causes go far to make the war with Germany an affair in which all Japanese will assist with all their might, the Imperial Government is careful to insist that it has no desire to take revenge for Germany's ill-treatment, but is prosecuting the present war simply and solely in accordance with the conditions of the Anglo-Japanese Alliance.

Japan's attempt to take Tsing-tau from Germany is regarded with much suspicion in certain quarters, a suspicion that Japan feels and resents keenly. A leading Japanese authority, who may be taken as speaking for his Government, assures me that Japan has not the least desire to retain Tsing-tau. The only reason, he says, for its retention would be as a naval or military base; but, while it is invaluable as such to Germany, it being her only base in East Asia, it has no such value to Japan, which has much better bases in Port Arthur and in Korea. Therefore, its retention by Japan would be a wholly unnecessary and tactless action.

It would be especially tactless at a time when China is cut off from loan sources in Europe and will have no money to pay her soldiers, making probable a revolt which would react unfavorably on Japan, involving as it would the interference of other nations and giving rise to fresh international complications, for which Japan has no desire.

As Japan, in her usual prompt way, has already fired the first shot of the war, and will follow up her plans with ceaseless assiduity, the forts at Tsing-tau cannot hold out long, and the end will soon be reached.

The bombardment of Kiao-chau was commenced on August 24. But the Germans have strewed the whole region with mines, using, it is said, as many as 10,000, and naval approach is very difficult. The Japanese are dragging the waters for mines, but the operation is regarded as extremely hazardous. Three squadrons are in operation, with two vice-admirals and two rear-admirals to each squadron.

DR. J. INGRAM BRYAN.

Emerson's Savings Bank

("This Book is my Savings Bank."
—"Emerson's Journals,"* III, 246.)

By BLISS PERRY.

THE DISPERSED MEDITATIONS OF A MAN OF THE RAREST POETIC AND PHILOSOPHIC TEMPER.

I.

The phrase used by Emerson to describe his life-long persistence in keeping a diary is characteristically modest. His mental habits, like his physical endowments, necessitated thrift; a rigid economy and investment of his resources. The college notebooks of the boy of seventeen, and the last jottings of the practiced rhetorician, whose memory for words had begun pathetically to lapse, are alike dominated by the impulse to conserve for future need. At the beginning of his academic training he sets down in his Journal a list of poetical phrases "for use." He composes paragraphs "in the manner of Chateaubriand," loving for a while, like Stevenson, to play the sedulous ape. He quotes resonant passages from Edward Everett; constructs boyish discourses on the Drama, on Reason, on Benevolence; endeavors to analyze himself and his associates; but all this is chiefly the elaborate exercise of an ambitious boy, a rhetorician by inheritance and training, who feels himself destined to sway his contemporaries through public speech.

As he grows older, and enters upon and then terminates his brief career as a minister, the character of the writing changes a little. There are fewer of the futile exercises in mere composition—like a golfer's preliminary swings at an imaginary ball. The experiences which he records are sometimes grimly real, though they are still set down "for use." As the years go by, there is an increasing tendency to record mere mood—in the manner of Amiel—but there is also a rich deposit of local and provincial fact: racy sayings of Concord folk, shrewd judgments upon contemporaries, accounts of walks with Hawthorne, Ellery Channing, and Thoreau, and of conversations with "Margaret" and Alcott. More significant still are the deliberately garnered thoughts of Emerson himself, gleaned from saunterings in the upland pastures or from the wind-blown eddies upon Walden Pond. They are the dispersed meditations of a man of the rarest poetic and philosophic temper, who was not always capable of complete functioning either as poet or philosopher. He knew this well enough, and it was one reason for the careful gathering of every possible material—wood heaped for a bonfire that might one day blaze.

The multitudinous manuscript volumes of the Journals were carefully indexed as to topics, by Emerson's own hand. It was a

*_Journals of Ralph Waldo Emerson._ With annotations. Edited by Edward Waldo Emerson and Waldo Emerson Forbes. Boston: Houghton Mifflin Co. Ten vols. $1.75 net per volume.

kind of perpetual balancing of his bank-books. From them he drew the substance of his public lectures, and these became in turn—somewhat stripped of anecdote and other platform adornments—the Essays as we know them. Sometimes, too, the first rough draft of a poem—like "Each and All," "The Two Rivers," "Days"—appears in the Journal, although such efforts were more commonly inscribed in a separate verse-book, to await elaboration. The manuscript volumes occasionally contain prosaic accounts of expenses, income from lecturing, charitable contributions, and miscellaneous almanac information which have not been reproduced by the editors. But they have had nothing to conceal, and the ten stout volumes which now complete their labors are essential to a full realization of Emerson's character. More completely than he could have imagined, his diaries have thus become his Bank. His patient thrift is justified.

II.

The quality of the writing, from first to last, is one of sustained excellence. Like Emerson's penmanship, it varied but little during his long career of authorship, and even when his sentences were intended for no eye but his own, he wrought them carefully and felicitously. Perhaps it would be more accurate to say that he composed habitually not for the eye but for the ear. The oral impulse was strong in this descendant of eloquent sires, the admiring auditor of Everett and Webster, the unwearied searcher and practitioner of the mysteries of the spoken word. Yet even in his college days, which fell in our brazen age of Oratory, there was singularly little buncombe in the young Emerson's style. He was captivated by the extravagant declamation of some of his Southern classmates, and forty years afterwards used to recite specimens of it for the amusement of his children, but his own ear remained unspoiled. Like his master, Montaigne, he was always talking on paper as to the first man he met, but it was the talk of an observer, a quester, a poet—not the orotund banalities of the "spellbinder." There is no doubt a certain oral diffuseness upon many pages of the Journals. Some of his spiritual experiences were overwritten. These Solitaries and Recluses, imprisoned in their temperament, as Emerson said of himself, will still be talking! But Emerson's Journal is less repetitious than Thoreau's, and it never grows really garrulous. The rhapsodical passages of Nature-description have that perfection of "tone" which Emerson thought more essential to poetry than the presence of fine lines, and the more introspective pages are often marked by a startling incisiveness and spiritual passion. The great words of the Phi Beta Kappa Oration and of the Divinity School Address vibrate in the Journal long before they thrilled the ear of the actual hearers. In the crises of his professional life no less than in these crucial public utterances the Journals prove that Emerson crossed his real bridges long before he came to the overt act of crossing. Hence the tranquillity with which he notes the acceptance of his resignation by the Second Church, and the "averted faces" at the Harvard commencement of 1838. The actual event presented itself to him as a twice-told tale: the precedent spiritual drama is written in the Journals. Familiarity with Emerson's published writings thus heightens one's sense of the freshness and reality of his private diary. The editors have done wisely to reprint here the first draft of many a well-known passage of the Essays, believing the unelaborated words to be no less golden, and perceiving that the cadences have "that other harmony" of unpremeditated talk.

Selections from the multifarious topics touched upon by an alert and brooding mind during a long lifetime must of necessity be arbitrary. Perhaps the student of Emerson is first arrested by the presence, in the earlier volumes of the Journals, of the word "sin." That word, and the aspect of evil which it denotes, can scarcely be discovered in the Essays. But the young Emerson finds—or has been trained to suspect—"a huge and disproportionate abundance of *evil* on earth" (I, 246). "Love has an empire in the world, but Fear has an empire also" (I, 295). In a long and fascinating passage of self-assessment (I, 367), he proposes to devote his nights and days "to the service of God and the War against Sin." The call to the Second Church came just as he had become aware of his love for Ellen Tucker: "This happiness awakens in me a certain awe: I know my imperfections: I know my ill-deserts; and the beauty of God makes me feel my own sinfulness the more. . . . Will God forgive me my sins, and aid me to deserve this gift of his mercy?" (II, 261).

A new stage in Emerson's development is marked by his ingenious endeavor to reconcile the acquired vocabulary of Transcendentalism—which proclaimed the supremacy of the "Reason" over the "Understanding"—with the traditional vocabulary of his forebears. "Jesus Christ was a minister of the pure Reason. The beatitudes of the Sermon on the Mount are all utterances of the mind contemning the phenomenal world. . . . The Understanding can make nothing of it. 'Tis all nonsense. The Reason affirms its absolute verity. . . . St. Paul marks the distinction by the terms natural man and spiritual man. When Novalis says 'It is the instinct of the Understanding to counteract the Reason,' he only translates into a scientific formula the sentence of St. Paul, 'The carnal mind is enmity against God'" (III, 237).

When Emerson wrote that passage he had already abandoned the ministry, and within a year, in 1834, he was confiding to his diary: "If I were called upon to charge a young minister, I would say, 'Beware of Tradition'" (III, 420), and a few pages later: "The Teacher that I look for . . . will not occupy himself by laboriously reanimating a historical religion, but in bringing men to God by showing them that He is, not was, and speaks, not spoke" (III, 434). Four years afterward, those words became the dynamite of the Divinity School Address.

Traces of Emerson's revolt against historical Christianity are clear enough throughout the Journals. Sometimes they take the form of rebellion against "official goodness" and the restraints of the ancestral profession. Again, it is the moral constitution of man which seems to the prophet to be weakened by reliance upon dogma: "Christ's great Defeat is hitherto the highest fact we have, . . . but we demand Victory" (VI, 189). The final volume gives a whimsical and delightfully boyish turn to this life-long restlessness against compulsion: "The Bible wears black cloth. It comes with a certain official claim against which the mind revolts. The book has its own nobilities—might well be charming, if it was left simply on its merits, as the others; but this 'you must'—'it is your duty,' repels. 'Tis like the introduction of martial law into Concord. If you should dot our farms with picket lines, and I could not go or come across lots without a pass, I should resist, or else emigrate. If Concord were as beautiful as Paradise, it would be detestable at once" (X, 101).

Yet the note of loyalty to the representatives of the old order, like Mary Moody Emerson and Dr. Ripley, is eloquently sounded upon many a page, and the virtues of this disappearing type are seen to be rooted in their "unpainted churches, strict platforms, and sad offices." This recalcitrant son of the Puritans remained a Puritan in every fibre of the body and of the memory; it was only his questing mind which went voyaging towards new worlds. As with Hawthorne, Longfellow, Whittier, and Lowell, accomplished antiquarians all, his passionate attachment to the older New England survived every change of creed and of philosophy.

III.

This fidelity to the spirit of the soil gives the Journals their extraordinary interest as a local document. Judge Sewall's Diary is equally veracious in reporting certain aspects of the New England temperament, but Emerson's capacity for detachment, as well as his experiences in European and Western travel, give his pictures of the everyday life a perspective such as Sewall could not compass. The "cold gentleness" of New England women in church; "the iron-grey deacon and the wearisome prayer rich with the diction of ages"; what perfect phrases are these! With what delight, too, did this fastidious scholar record the savory sayings of his unlettered neighbors! There are relatively few entries dealing with the more intimate life of his own household, although the editors have preserved the poignant sentences written after the deaths of his brothers Edward and Charles and of his son Waldo. But of objective depiction of the villagers of Concord there is no lack, and the humor and tartness of the portrai-

ture will surprise many readers who know Emerson only through his poems and essays. Thoreau's Journal, it is true, gives us more meticulous fact about Concord; more exact measurements of acreage and weather, more fauna and flora; but even Thoreau does not surpass Emerson in conveying the very aspect of the hour and the place. Thoreau himself, and Alcott and Ellery Channing, are sketched in many moods and attitudes. Alcott is by turns an Olympian, a "tedious archangel," a "pail without bottom," until we reach the climax in Emerson's plaintive "I do not want any more such persons to exist." Such is the Journal's tardy revenge upon one of the notable devastators of the day.

National figures, likewise, cross from time to time the decorous local stage. Edward Everett and Daniel Webster, Garrison, John Brown, and Lincoln are viewed with eyes only less "portrait-eating, portrait-painting" than Carlyle's. During each of his three visits to Europe, Emerson had met on intimate footing some of the most distinguished personages of his day. He knew a man when he saw him, and he employed inflexible standards of moral measurement. The whole story of Webster's dominance in New England, and of his tragic alienation from his constituents after 1850, may be gathered from the successive descriptions of him in the Journals. At first we read of his "awful charms," for Emerson had heard him deliver the famous eulogy upon Adams and Jefferson. After the reply to Hayne, Webster becomes to Emerson a synonym of "the beauty and dignity of principles." The first word of dispraise is in 1835, when Webster seems to be concealing his opinion of slavery. In 1841: "I saw Webster on the street; but he was changed since I saw him last—black as a thunder-cloud, and careworn. . . . The canker-worms have crawled to the topmost bough of the wild elm, and swing down from that." Early in 1843 Emerson is still capable of exact, passionless description of the colossus; but later in that year he notes: "Daniel Webster is a great man with a small ambition"—the verdict which Hawthorne had already uttered in "The Great Stone Face." After the speech of March 7, 1850, Webster seemed to Emerson a mere traitor to Liberty: "Every drop of his blood has eyes that look downward." As for the Fugitive Slave Law, enacted through Webster's influence, Emerson enters this oath in his Journal (VIII, 236): "I will not obey it, by God." Looking across the hazy water from Plymouth to Marshfield on the day of Webster's death in 1852, he mourns the passing of the "completest man" since Napoleon, yet this did not alter the terms of his terrific indictment of the dead statesman in his New York speech of 1854.

In fact, the eighth and ninth volumes of the Journals, covering the critical national period of 1849 to 1863, reveal an Emerson startled out of his preoccupation with his own thoughts and alive to every issue of citizenship. He was indeed the perfect villager in his natural response to every claim of wont and neighborhood, but in the dark days he learned to feel nationally when other men were still arguing in the terms of their own section. To read his Journals now, when his views have been tested by the event, is to perceive the clearness and soundness of his tone upon the great public questions. His frequent lecturing trips to the Mississippi and beyond, journeys whose discomforts and humors were duly set down in his diary, helped him, no doubt, to think continentally.

It is impossible here to make more than an allusion to one of the most delightful aspects of the Journals, namely, their judgments upon books and authors. They reinforce the impression conveyed by the Essays as to the range and inconsecutiveness of Emerson's reading. That he should ever have held himself faithfully to the task of reading Goethe straight through in the original German is an amazing proof of his respect for Carlyle's opinion. He knew the "complete works" of few writers except Montaigne, Shakespeare, and Plutarch. He preferred, as everybody has surmised and as the Journals now demonstrate, to saunter and angle in one author after another, and to say his own say about fragments: confessing good luck with Rabelais to-day and poor luck to-morrow, as a fisherman does with his favorite stream. Emerson's judgments of literary art—as of all the arts of expression except oratory—were often fallible enough. "The poor Pickwick stuff" was not for him; neither was Jane Austen nor Hawthorne. Shelley "is never a poet." Yet he catches the odor of Alfred Tennyson's "musky verses" by 1838; and he was early and always faithful to Wordsworth, though he shared Jeffrey's astounding incomprehension of the finest lines in the "Ode to Duty." More significant, however, than the oddness or the justice of any single verdict of this inveterate skimmer of books is the perfect candor and sense of security with which he deposits his opinion in the Bank.

IV.

Many readers of the Journals, no doubt, will not concern themselves primarily with the phases of Emerson's development, with his judgments upon men and books and public events, or with his daguerreotypes of the daily life of Concord. They will seek, rather, an escape from the daily life—whether it be Emerson's or their own—into those regions of ecstasy of which the Poems and the Essays long ago gave glimpses. Such readers will not be disappointed. All the old magic is here. The day-long reverie in a sunny hollow of the woods at Mt. Auburn (III, 270), when the man of thirty-one, then without a profession, "heeded no more what minute or hour our Massachusetts clocks might indicate" and "saw only the noble earth on which I was born," is scarcely to be matched save in a few passages of Sénancour and Amiel and in a few lines of Andrew Marvell. The morning meditation in the newly furnished house in Concord (IV, 335) is the Emersonian reply to one of the ultimate questions: "I said when I awoke, After some more sleepings and wakings I shall lie on this mattress sick; then, dead; and through my gay entry they will carry these bones. Where shall I be then? I lifted my head and beheld the spotless orange light of the morning beaming up from the dark hills into the wide universe." The mysteries of the night are in this invocation to the Earth Spirit (VI, 347): "Earth Spirit, living, a black river like that swarthy stream which rushes through the human body is thy nature, demoniacal, warm, fruitful, sad, nocturnal." Yet the day-time magic is the more characteristic of the man: "The sky is the daily bread of the eyes. . . . No crowding: boundless, cheerful, and strong." "The sum of life ought to be valuable when the fractions and particles are so sweet." Or, finally, take this enchanting affirmation, written, apparently, after reading Balzac's story (VI, 273): "*Le Peau d'Ane.* You *can* two things at a time; and when you have got your pockets full of chestnuts, and say I have lost my half-hour, behold you have got something besides, for the tops of the Silver Mountains of the White Island loomed up whilst you stood under the tree, and glittered for an instant; therefore there is no *peau de chagrin.*"

V.

For those who do not care for these enchantments of Merlin, but who welcome fresh material for the valuation of an historical and literary personage, it remains to be said that the Journals offer a new basis for the critical assessment of our most distinguished man of letters. The requisite biographical, physiological, and psychological data are here. The temperamental inconsistencies, so often hinted at in the Essays, are set down in plain figures in this bank account. Its analysis of the author's body and mind and environment proceeds steadily from youth to age. Emerson makes open confession of the impossibility of his achieving a philosophical reconciliation of the oppositions which he perceives. The Journals, like the Essays, are full of paradoxes, but they furnish more keys of fact wherewith to unlock their parables. The volumes will prove to be the natural corrective of partial and distorted views of Emerson. The main outlines of his towering personality are, it is true, unaffected by the revelations of his private diary. He remains the austere, benignant figure so familiar to his countrymen: a radiant, serene vision against the morning or the evening sky. Some of the angles are curiously sharpened, as one looks at him through the Journals, but the figure as a whole is softened; it becomes richer and more human; the granite and the cloud are suffused with life. The next generation of readers will utilize the Journals for a new criticism of Emerson.

Books and Men

ABOUT OSCAR WILDE.

Stuart Mason is the compiler of a "Bibliography of Oscar Wilde" (London: T. Werner Laurie, Ltd.). It would almost be correct to say that Mr. Mason is the author of the book, for a bibliography so inclusive, so well illustrated with quotations, facsimiles, and pictures, has in it something of the nature of creative work. How accurate it is as a bibliography could only be determined after long study (the book has over six hundred pages) by some one who was at once an expert in the dreary science of bibliography and an authority on Wilde's writings—on what are sometimes sappily called "Oscariana."

Mr. Robert Ross, who furnishes the introduction, refers to "this astonishing and ingenious compilation"—language not too strong—and says that while he cannot pretend to have read the book through, he has turned over the proofs for ten minutes and thereby learned more about Wilde's writings than Wilde himself ever knew.

"To those versed in the science of bibliography," writes Mr. Ross, "Mr. Stuart Mason's labors require no praise or commendation from me. But I want to assure those, such as myself, who are entirely ignorant of enthusiasm for fourteenth editions or of the æsthetic excitement over a misprint of twenty years ago, that there is an enormous amount of diverting reading under these heavy-looking headings, and that Mr. Stuart Mason's book is not nearly so dull as it looks."

This is true enough, though it was unnecessary to say that the book looks dull. After the reader has once proceeded beyond the word "bibliography" on the cover, the pages vary in interest. At their worst they usually contain something readable; at their best they are highly entertaining. The caricatures, facsimiles, letters, verses, and parodies are genuine additions to the volume. The arrangement seems to me to be a mistake. It is, first, periodical publications in alphabetical order; secondly, works issued in book form, chronologically by the first editions; thirdly, biographies, studies, criticisms, etc. A straight chronological arrangement of all Wilde's own writings, followed by the books and articles about him, would have been easier to consult and more interesting. But here I am venturing too much into technical criticism.

In a discussion of it as a literary work, it may be noted that the general idea of the book is admirable, and that it furnishes a model for bibliographies of authors. For the use of a collector, and for mere purposes of reference to verify dates, and the like, the plain catalogue or check-list is enough. In bibliographies of such wildly delightful subjects as sanitary engineering and municipal ownership of gas plants (and a shoal of such things are printed every year), brevity would seem to be a virtue. Professional bookmen of all kinds, librarians, writers on technical subjects, and others, have been a little mad on the subject of bibliography. The word has a mouth-filling and learned sound, the compilation of a bibliography calls for a deal of meticulous puttering—as much in the useless as in the useful work—and the thing appeals immensely to the owlish. To make the bibliography of an author a pleasing and human book is not original with Mr. Mason, of course, but he has done it well and, it is to be hoped, has helped to set the style. The "enthusiasm for fourteenth editions" and the record of twenty-year-old misprints are both here, for those who can get up "æsthetic excitement" over them. So, also, are many more vital matters.

To turn from this particular book and to consider the fast flowing stream of books about Oscar Wilde is enough to arouse a wonder how long it will be before the fad dies out. How long will it be before the extravagant homage ceases, and Wilde takes the place—the minor place—in literature, to which a few of his writings entitle him? The excess of condemnation, the wholesale taboo, not only upon the name of the man, but upon all his writings, even the most innocent (like "The Happy Prince"), which followed his imprisonment, may have been absurd, but it was no more absurd than the present attempt of his worshippers to exalt him to the skies.

On one occasion, in his verse, Oscar Wilde forgot himself for a few hours, and wrote in apparent sincerity. That was when he composed "Ave Imperatrix"—a poem of especial significance to-day, with its noble opening stanzas:

Set in this stormy Northern sea,
Queen of these restless fields of Tide,
England! what shall men say of thee
Before whose feet the worlds divide?

The earth, a brittle globe of glass,
Lies in the hollow of thy hand,
And through its heart of crystal pass,
Like shadows in a twilight land,

The spears of crimson-suited war,
The long white-crested waves of fight,
And all the deadly fires which are
The torches of the lords of Night.

Such stanzas, and the sonorous one a little further on—

The fleet-foot Marri scout, who comes
To tell how he hath heard afar
The measured roll of English drums
Beat at the gates of Kandahar—

make one regret that a man who possessed such power should have chosen to dabble with things like the wordy and conscious "Sphinx," and still other verses of the "faint lilies" variety. Yet the "Sphinx" is printed and reprinted, Wilde's devotees acclaim it, and it is, apparently, known to hundreds who never read "Ave Imperatrix!"

In speaking of Oscar Wilde's poetry it is unfair to deny that one of his conscious efforts is also, in certain places, grim and great. This, of course, is the "Ballad of Reading Gaol," an extraordinary *tour de force*, somewhat marred by its unnecessary length.

As he composed one or two fine poems, so he wrote one amusing short story, "Lord Arthur Savile's Crime," and one brilliant play, "The Importance of Being Earnest." The European furore about "Salomé" leaves me, unluckily perhaps, unimpressed. But "The Importance of Being Earnest," with its rapid fire of epigram and paradox, too rapid for any audience wholly to grasp, is a delicious thing—the one nonsense play for grown-ups in the history of the English drama. It is an "Alice in Wonderland" amongst plays.

There are two pieces of modern prose, curiously alike as to rhythm, and written by two men as dissimilar as any that ever lived. The first is this:

Art finds her own perfection within, and not outside of, herself. She is not to be judged by any external standard of resemblance. She is a veil, rather than a mirror. She has flowers that no forests know of, birds that no woodland possesses. She makes and unmakes many worlds, and can draw the moon from heaven with a scarlet thread. Hers are the "forms more real than living man," and hers the great archetypes of which things that have existence are but unfinished copies. . . . She can work miracles at her will, and when she calls monsters from the deep they come. She can bid the almond tree blossom in winter and send the snow upon the ripe cornfield. At her word the frost lays its silver finger on the burning mouth of June, and the winged lions creep out from the hollows of the Lydian hills. The dryads peer from the thickets as she passes by, and the brown fauns smile strangely at her when she comes near them. She has hawk-faced gods that worship her, and the centaurs gallop at her side.

The other is this:

The true historian will bring the past before our eyes as if it were the present. He will make us see as living men the hard-faced archers of Agincourt, and the war-worn spearmen who followed Alexander down beyond the rim of the known world. We shall hear grate on the coast of Britain the keels of the Low-Dutch sea-thieves whose children's children were to inherit unknown continents. . . . Beyond the dim centuries we shall see the banners float above armed hosts. . . . Dead poets shall sing to us of the deeds of men of might and the love and the beauty of women. We shall see the dancing girls of Memphis. The scent of the flowers in the hanging gardens of Babylon will be heavy to our senses. We shall sit at feast with the kings of Nineveh when they drink from Ivory and gold. . . . For us the war-horns of King Olaf shall wail across the flood, and the harps sound high at festivals in forgotten halls. The frowning strongholds of the barons of old shall rise before us, and the white palace-castles from whose windows Syrian princes once looked across the blue Ægean. . . . We shall see the terrible horsemen of Timur the Lame ride over the roofs of the world; we shall hear the drums beat as the armies of Gustavus and Frederick and Napoleon drive forward to victory.

The first is from "The Decay of Lying" by Oscar Wilde; the second from "History as Literature" by Theodore Roosevelt.

EDMUND LESTER PEARSON.

News for Bibliophiles

THE LEIPZIG BOOK EXHIBITION.

The United States is practically the only civilized nation still not officially represented at the great International Book Exhibition at Leipzig, which, though formally opened on May 6, was not really ready until quite recently. The English Government took action rather late, but has erected a handsome national building in the Tudor style; and there may be seen interesting exhibits of the university presses, chief English publishers and bookbinders, a strictly English collection of Shakespeare, many fine illustrated books, including a copy printed on vellum of the famous Kelmscott Press Chaucer, and a small exhibit to show the historical development of English printing. But the English libraries and bibliophile societies are not represented at all in this building, which thus gives the general setting for the English part of the Group Bibliophily.

By far the most interesting building in the whole exhibition is the large concrete Halle der Kultur, showing the progress of civilization, Eastern as well as Western, from the earliest crude scratchings on the walls of prehistoric caves to the latest productions in the most modern style. The number of admirably arranged groups and exhibits in this building is indeed legion, and they include ancient illuminated manuscripts, silhouettes, prints, caricatures, periodicals, etc.—much besides mere books. Here, too, is an interesting exhibit of Byron—manuscripts of "Childe Harold" and the "Waltz," and many editions of "Childe Harold," all lent by Mr. John Murray, the grandson of Byron's publisher, supplemented by a large number of early editions and translations (from my own collection). Among these is also a copy of the extremely rare facsimile made for Goethe just before he reluctantly returned the original manuscript of the dedication to him of Byron's "Sardanapalus." One small room of this building is devoted to fine specimens of modern books, and here America is represented by the famous Riverside Press folio Montaigne, the Merrymount Press Ordinary and Canon of the Mass, and the Pierpont Morgan Catalogue of Paintings, three volumes, handsomely bound in green morocco. This Morgan Catalogue was, however, printed in London at the Chiswick Press. The others, lent also by Mr. Morgan, are shown in the Group Bibliophily, where the German Emperor exhibits his copy of the Catalogue.

The very large building of the Publishers, Printers, and Bookbinders contains also the library exhibits, which are more interesting than extensive. Chief among these in space occupied, and no doubt also in general interest, is the excellent collective exhibit of the American Library Association, got together by a committee, under Dr. Hill, of the Brooklyn Public Library, and placed in position by Dr. Koch, the well-known Dante scholar and librarian of the University of Michigan. The exhibit certainly gives a strikingly clear idea of the outward form and general organization and management of our chief public libraries and library systems, including even the travelling libraries on wagons; and it contains also a number of library publications, notably those of the Library of Congress; but, unfortunately, those two great landmarks of bibliography in America, the famous Index-Catalogue of the Library of the Surgeon-General's Office, United States Army, and the Index Medicus, are both very conspicuous by their absence.

Thus the only general American exhibit in the whole exposition is that in the Group Bibliophily, situated in the centre of the large building just mentioned. The group fills the following four rooms:

(1.) Private library of the German Emperor, including interesting exhibits of the libraries of Kings Friedrich Wilhelm II and IV and Queen Louise.

(2.) Musical collection of W. Wolffheim and P. Hirsch, unusually complete, especially in its early literature.

(3.) Library of Frau Ida Schoeller, mostly early German illustrated books, shown in appropriate old bookcases in a tasteful room (later to be incorporated in her house in Düren).

(4.) General exhibit in a room fitted up as a sort of ideal library for a private bibliophile.

(5.) A passage-way, containing mainly the valuable catalogues of important private collections and also the publications of bibliophile societies.

The American and English books are shown of course in these last two sections (4 and 5), in four special cases.

It is, of course, impossible to mention each book in both collections, but a sufficient number of concrete examples may serve to give some idea of the whole:

ENGLAND.

The place of honor in the chief English bookcase is occupied by the "Trinity College Apocalypse," worthily representing the Roxburghe Club, the oldest and most select of all book-clubs, ever since it was founded as a result of the enthusiasm aroused by the record-price brought by the first edition of the Decameron at the Duke of Roxburghe auction in 1812. The handsome folio Apocalypse is flanked on one side by the auction-catalogue, with a photograph of this very Decameron (now in the John Rylands Library, Manchester), and on the other by the first edition of Dibdin's inevitable "Bibliomania," 1809, accompanied by the catalogue of the 1817 sale of that ecstatic dilettante's own library. Baskerville's Catullus, Bodoni's "Castle of Otranto" (printed for Edwards of London), are shown next, and are followed by "Lady Willoughby's Diary," 1844, with which Whittingham's Chiswick Press reintroduced Old English type. The Doves Press Faust, famous in Germany, comes next; and then a copy of Scott's translation of Goethe's "Goetz von Berlichingen," 1799, with the very rare original title-page reading "*William* Scott"—which thus explains the reference by William Taylor, of Norwich, that seemed to Scott himself inexplicable, and hence aroused his ire. Here are also a unique (?) perfect copy of the anonymous "Tales of Terror," London, 1801, with all three of the blood-curdling colored illustrations; an undescribed little brochure, "History of Dr. Faustus" (prose narrative, Leicester, without date—end of eighteenth century?); Ouvry's private reprint (1867, twenty-five copies) of the earliest English "Eulenspiegel," of which no perfect copy is known; Fletcher's "English Book Collectors" (on Japanese vellum). Several characteristic English bindings are shown, including specimens by Roger Payne, Bedford, H. Faulkner, and Riviere; and then (from my collection) a couple of French bindings, *e. g.*, one for Girardot de Préfond, with his bookplate, and one by Thompson, of Paris.

In addition to the Roxburghe Club (seven volumes, lent by Mr. John Murray), the Bannatyne Club (catalogue of Scott's library at Abbotsford, 1838); Philobiblon Society (Unpublished Letters from Coleridge to Estlin, 1884, fifty copies); Sette of Odd Volumes (Parker, "How to Write a Play," 1813); Bibliographical Society of Lancashire (reprints of Caxton's undated Comm. Lament. s. Compass. Beate Marie, and DeMorgan's "Essay of the Description of Books"—since reprinted less accurately!), and the Bibliographical Society, all represent England. Mr. T. J. Wise, that insatiable bibliographical bibliophile, who has alone done more valuable work than many a society, exhibits his recent Bibliography of George Borrow. And then there are really valuable catalogues of important private collections, *e. g.*, Grenville (1842, Vol. I, privately printed); Huth Bequest (fifty treasures selected after his death—both these now in the British Museum); Earl of Crawford (four thick folios); C. Fairfax Murray (Breydenbach, early German and French books, mostly illustrated), and H. Y. Thompson's Illustrations from his sixteen Early English Manuscripts.

As stated above, these English books are intended to supplement, but not to repeat, what is shown in the English National Building.

AMERICA.

Similarly, the American place of honor is given to the Grolier Club's standard corpus of Whistler's Etchings; flanked by Mansfield's Catalogue of Whistler's Etchings and Dry-Points (Caxton Club, Chicago), and two Whistler volumes printed at the Merrymount Press, Boston. The centre of the case is worthily occupied by a fine copy of Benjamin Franklin's masterpiece as printer, the famous "Cato Major on Old Age," Philadelphia, 1744 (mine—recently acquired for $2!!). It is surrounded by other Franklin books, including one of the *six* large-paper copies of Renouard's beautiful edition (1795-96) of his "Way to Wealth," etc., in English and French, which is notable as containing reprints of now lost editions of Franklin's Bagatelles, printed at his private press in Passy. The first edition of Longfellow's "Hiawatha" (1855) illustrates the get-up of many American classics, but is somewhat inferior in this respect to Jones's "Historical Sketch of Tomo-Chi-Chi" (Albany, 1868), which stands next. This handsome bookcase contains also the Grolier Club's editions of Milton's "Areopagitica" and Carlyle's "Two Note Books," and the translation-volume of its standard edition of Richard de Bury's "Philobiblon" (the text and commentary volumes are in the Club's main exhibit), accompanied by Dowden's copy of the first English version, 1832 (by J. B. Inglis). Two famous German books (from my collection) are also shown here: The "Nürnberger Trichter" ("Poetischer Trichter," Nürnberg, 1647-48, by Harsdörfer), and the first German translation of Dedekind's Groblanus, 1551.

A large case (in the passageway adjoining part of the German Emperor's library) contains a large number of interesting books, including a set of the famous Pierpont Morgan catalogues (one on vellum!), all the chief publications of the Grolier Club (thirty volumes, including the valuable bibliographies), the best publications of the Caxton Club, and

Philobiblon Club (Philadelphia); Odd Volumes (Boston—Nichols on Isaiah Thomas, 1912, loaned by Mr. D. B. Updike), and the sole book of the short-lived New York "Odd Sticks" (reprint of Dibdin's Bibliomania, 1864), as well as most of the important publications of the extinct Historical Printing Club of Brooklyn (fifty-four numbers, loaned by the New York Public Library, which now sells the remainders!), and a set of the Bibliographical Society of America and its predecessor, the Bibliographical Society of Chicago. American private collections are represented by a few really valuable catalogues, *e. g.*, Church-Huntington Library (very rarest Americana and Engl. Lit., elaborately described by G. W. Cole), Hoe manuscripts (both lent by Mr. Seymour de Ricci, Paris), Gen. Hawkins's collection at Providence (first books from earliest presses, described by A. W. Pollard), Henry Walters (mainly Italian incunabula), G. A. Plimpton (early arithmetic), and W. A. White, list of his Early English literature, mainly Elizabethan.

In closing these notes, I may call attention to the fact that almost all of the above books are of real value to scholars and bibliographers, apart from their mere appearance. All in all, these exhibits are probably as nearly adequate and satisfactory as could be expected under the circumstances.

Correspondence

GERMAN SCHOLARS AND "TRUTH ABOUT GERMANY."

TO THE EDITOR OF THE NATION:

SIR: Americans leaving Germany during the second fortnight of August received as a farewell gift a substantial pamphlet entitled "Truth about Germany: Facts about the War." This publication seems worth bringing to the notice of other Americans, especially of American scholars, not because of its actual contents, but because of the relation between its contents and the profession and character of several of the persons with whose endorsement it was issued. The pamphlet was prepared by a board of editors which included Dr. Drechsler, director of the *Amerika-Institut;* Count Reventlow, Professor Dr. Francke, several professional authors, members of the Reichstag, and others; and it was issued with the sanction of an "honorary committee" comprising, besides many figures of the highest distinction in German public life and in finance, such eminent scholars as Harnack, Kühnemann, Lamprecht, von Schmoller, Wilamowitz-Moellendorf, and Wilhelm Wundt. The document was manifestly designed, not for historians or publicists, but for the enlightenment of the many educated Americans who had hitherto known little of European politics and diplomacy; and the impressive list of great *savants* attached to the pamphlet was evidently intended to give weight to the opinions expressed and to inspire confidence in its statements of fact. Of what sort, then, were the statements of fact, to gain credence for which these scholars lent their names and their scientific credit? I give a few out of many examples; italics are mine:

I. On the responsibility for the murder at Serajevo:

This assassination is the real cause of the present European war. Austria-Hungary *was able to prove* to a shuddering world a few days after the murder that it had been prepared and planned systematically, yea, *that the Servian Government had been responsible for the plan* [p. 16].

II. On the contents of the Austrian note to Servia and the nature of the Servian reply:

Austria-Hungary addressed to the Servian Government a number of demands which aimed at nothing but the suppression of the anti-Austrian propaganda. Servia was on the point of accepting the demand, when there arrived a dispatch from St. Petersburg, and Servia mobilized. Then Austria had to act. Thus arose the Austro-Servian war [p. 16].

III. On the violation of the neutrality of Belgium:

Great Britain *asked that Germany should allow French and Belgian troops to form on Belgian territory for a march against our frontier* [p. 19]. . . . *England and France were resolved not to respect the neutrality of Belgium.* . . . [They] did not give up their plan of attacking Germany through Belgium [p. 44].

IV. On the attitude of the British Government during the crisis preceding the war:

England aims at being mistress of the Old World in order to occupy either an equal, or a menacing, position towards the New World. *For this purpose she has encouraged this war.*

Every American recipient of the pamphlet who subsequently took the trouble to examine the entire published evidence in the case must have speedily discovered the statements of specific historical fact in the passages cited to be either direct falsehoods or *suggestiones falsi;* to readers of the *Nation* it can hardly be necessary to give the proof of this. But it should be added that the publication in question is marked by a yet more singular *suppressio veri;* it contains no hint of what are perhaps the two most decisive of the "facts about the war." These, since they seem to have been less emphasized in America than they deserve to be, should perhaps be indicated specifically.

It is a fact undisclosed in the pamphlet that on July 30, and again in a modified form on July 31, the Russian Government communicated to the German Government an undertaking to "stop all military preparations" (or "to maintain a waiting attitude") if Austria would consent to "stay the march of her troops on Servian territory and, recognizing that the Austro-Servian conflict has assumed the character of a question of general European interest, to admit that the Great Powers may examine the satisfaction which Servia can accord to the Austro-Hungarian Government without injury to her rights as a sovereign state and to her independence."

It is a fact equally undisclosed in this repository of information about the causes of the war, that on the morning of July 31 Sir Edward Grey declared to the German Ambassador in London that "if Germany could get any reasonable proposal put forward which made it clear that Germany and Austria were striving to preserve European peace, and that Russia and France would be unreasonable if they rejected it," he would "support it at St. Petersburg and Paris, and go the length of saying that if Russia and France would not accept it his Majesty's Government would have nothing more to do with the consequences." The most illuminating "truth about Germany" is that, on the same day, with these two pledges before it, the Government at Berlin sent to Russia and to France *ultimata* which were certain, and therefore were manifestly designed, to render war within twenty-four hours inevitable.

Thus is contemporary history written in Germany for Americans, under the patronage of eminent German historians, economists, philosophers, and philologists. Put forth by irresponsible journalists, or even by a Government press bureau, such a publication would not be surprising. Put forth in the name of a committee including several of the greatest scholars in Germany, it is an astonishing and, because astonishing, a singularly revealing document. Even in men of science there is, perhaps, something pardonable in a perversion of judgment by patriotic sentiment. But it is not pardonable in men professionally dedicated to the ascertainment and promulgation of truth that they should lend the authority of their names and their professional standing to an attempt to give currency to untrue accounts of matters of fact, in relation to an issue about which all mankind is deeply concerned. We have learned much from German scholars about historical "objectivity" and the niceties of historical criticism; what we receive, when we look for an application of these principles to contemporary events, is a clumsy compilation of fictions, irrelevancies, and vulgar appeals to what are apparently conceived to be American prejudices.

This is not the place for an examination into the conditions in the intellectual life and academic organization of Germany which have made possible this scandalous episode in the history of the scholar's profession; but the incident has in it too much of instruction and warning for Americans of the same profession, to be allowed to pass without notice. In connection with other circumstances it seems, for one thing, to show that the professional class, in the country where it has played the greatest part, has signally failed, at the most critical moment in German history, to perform its proper function—the function of detached criticism, of cool consideration, of insisting that facts, and all the relevant facts, be known and faced. It appears to be shouting with the rest for a wholly avoidable war of which, in nearly all non-German eyes, the moral indefensibility seems exceeded only by its fatal unwisdom from a purely national point of view.

ARTHUR O. LOVEJOY.

THE POLISH QUESTION OF TO-DAY.

TO THE EDITOR OF THE NATION:

SIR: Will you permit me, as a Pole, to lay before the impartial judgment of the American public the situation of my fellow-countrymen in the light of the Czar's recent ukase promising the Poles, in case they shall be loyal, religious freedom and the free use of their own language? In writing these lines, I do not attempt to express my own opinion on the issue, nor will I attempt to write Polish history. I should like, however, to lay before your readers facts known not only to every intelligent Pole, but to anybody who has ever been in Poland and has seen actual conditions in that unfortunate country.

The crookedness and perverseness of a few Russian scoundrels, who are guiding a weak-

minded ruler, have subjected Europe to the rage and fury and desolation of war and deprived millions of women and children of their supporters. Archbishop Rozdestvenski, formerly a member of the second Duma and leader of the Russian Black-Hundreds, at present head of the Russian Orthodox Churches in the United States, predicted, a year ago, in his official paper, the *Russian Orthodox American Messenger*, that in a short time the Russian flag would be hoisted upon the Austrian Carpathian mountains and that Austria would meet the same fate that Turkey met after the Balkan war. Now, a year after these predictions, Russia has started war, and in Poland, and there is being enacted a drama unique in the history of nations.

To-day 700,000 young Poles are murdering one another, fighting for the cause of Russian grafters, or, rather, because the unspeakable Russian wants it. In 1793 a harlot woman, by the name of Catherine, after murdering her husband, caused the destruction and subjection of Poland as an independent nation. Since that time Poles have risen three times against Russian barbarism, but Polish mutinies, riots, and revolutionary outbreaks have always been suppressed in blood and fire by hordes of Russian barbarians, just emerging from a condition of semi-savagery.

Can anybody in this country, which is the bulwark of freedom and the refuge of oppressed peoples, understand how Poles, who love liberty better than life—Poles who had a republican form of government in the eighteenth century, who built universities in the fifteenth century, whose union with Lithuania and Ruthenia, in 1569, was the first voluntary confederation of independent states in Europe, and whose sons, Kosciuszko and Pulaski, fought at the side of George Washington for American independence—have been for more than a century the prey of a bloodthirsty foe?

Under Russian government we Poles are deprived of our physical freedom, of our freedom of conscience, of our freedom to move from one place to another. Many tens of thousands of Poles have been and are now working in chains in Siberian mines under the most revolting and inhuman conditions, digging gold for a crooked Russian Government, and their only crime was that they belonged to some educational alliance or other organization not permitted by Russian satraps. The Russian Government keeps us Poles in constant poverty, and hundreds of thousands of Polish girls from the age of twelve years have been equipped by the Russian police with yellow tickets and sent on the streets as licensed prostitutes, while our boys have no chance to get education, either in public schools or privately, and any attempts to educate children in private houses are punished with long terms of imprisonment.

To enumerate all the crimes Russian officialdom has committed against Poles is impossible. To those, however, who would like to read about Russian cruelties, prosecution, and oppression, I commend the book ("Memories") of the Russian Prince Kropotkin. At the time of the war between Russia and Japan, while the Poles were gone to fight Russia's battles, their country was almost prostrated by the stoppage of productive labor and trade, and thousands of Poles literally starved to death. The year 1863 was the most terrible year for the Poles. More than 100,000 of them, the best of the nation, perished on the scaffold or were sent to Siberia, all their possessions were confiscated, women and children were put to death by starvation or were forced to lead a life of shame. Can all these crimes, committed against them, be obliterated in the minds of Poles?

Now, can anybody assert that the three and one-half millions of Poles in the German Empire shared the same lot as their 12,000,000 brothers under the Russian Government? Have not Poles in Germany been just as successful in trade and industry and agriculture as the Germans themselves? All the trouble that Poles in Prussia ever had, has been brought upon them by agent-provocateurs, sent from Warsaw. I wish only to recall the criminal agitation conducted in Posen by the Russian agents for many years—agents who finally landed in jail, but succeeded in troubling the minds of peaceful citizens. Of course it was a tremendous mistake, even a crime, for the Prussian Government to force through the so-called Polish Expropriation law. But this law has not been put into effect, and will never be.

As to the conditions of the Poles in Austria, there is no necessity to prove that the Poles are the real and exclusive masters of this part of Poland, which is inhabited by Poles. The entire Government of Galicia is in the hands of Poles, beginning from the Governor and ending at the lowest office messengers. More than twenty Poles have been in the last ten years members of the Austrian Cabinets. I will only quote the names of Count Badeni, Prime Minister; Count Goluchowski, for many years Minister of Foreign Affairs; Zalewski, Minister of Finance; Bilinski, Minister of Finance of the Dual Empire; Count Dzieduszycki, Professor Glombinski, Professor Dr. Rittner, Korytowski, Morawski, Abrahomowicz, Jedziejowicz, etc., all members of the Austrian Government, and there have been many hundreds of Poles holding high governmental positions in Vienna. What liberty Poles enjoy in Austria is evidenced by the fact that Galician Poles have succeeded in the last few years in building up cadres of a small Polish national army.

There are now in Galicia four different organizations of Polish sharp-shooters, recognized by the Austrian Government as legal military organizations, and these organizations embrace all able-bodied Poles in Galicia who are not serving in the Austrian regular army.

As to the attitude of the Poles in Russia, I may be permitted to quote a proclamation, issued in March, 1909, by the Central Committee of Polish Labor Organizations, in Warsaw:

For the first time in a century the common interest of the Powers, which have dismembered Poland, will dissolve. At this time we shall not permit the fate and future of our country to be decided without a voice. We don't want to be serfs and we shall be able to safeguard our interests, the interests of the Polish people, during the approaching events. The Russian Government did not succeed in breaking down our rebellious spirit, in killing our desire for liberty, and in forcing us to renounce all hope of a better future. The Russians have in us unconcilable enemies, prepared to fight to the last drop of blood.

We are preparing for this fight now.

The Polish monthly paper, *Przedswit*, recommended the publications dealing with military instructions, and the labor journal, *Robotnik*, published in Warsaw, printed particular advices to its readers how to collect exact information about the situation of the Russian army forces, and instructed Polish laborers as to what they should do while being put into the Russian army, etc.

All these proclamations and articles have been accepted by the Polish nation, and even those Poles who have been looking for an understanding with Russia had no answer to give to the proclamations of the Polish people.

More than one prominent Austrian, German, and Russian writer has in the last years declared openly that an independent Poland could not in any way menace Austrian, German, and Russian national interests and aims. The Russian Prince, Uchtomski, and Professor Soboiwski and others have sympathized with the struggle of the Poles for national existence.

To-day the German and Austrian armies have joined to erect an independent Poland.

ALEXANDER SZARSKI.

New York, September 15.

A REPLY TO VERNON LEE.

TO THE EDITOR OF THE NATION:

SIR: Vernon Lee's letter, in your last issue, is particularly grateful to those of us who have long seen in the sensitive critic an accomplished publicist as well. It is also a satisfaction to see the hectic Mr. H. G. Wells properly brought to book. With his suggestion that, while maintaining an official neutrality, we should aid the Allies by starving Germany out, there will be no sympathy here. It is not our American way.

Yet it is well that thinkers of Vernon Lee's type should understand the nature of our neutrality. Our judgment as a nation approves neutrality, but we maintain it despite our hearts, which are with the Allies. In about the only good poetry evoked by the war Percy MacKaye writes—

> How shall we keep an armed neutrality
> With our own souls? Our souls belie our lips,
> That seek to hold our passions in eclipse
> And hide the wound of our sharp sympathy.

That is the attitude of nine Americans out of ten. In deed we will be loyal to the neutrality that judgment dictates, but our sympathies are our own. The sentiment is deeply rooted as an instinct among our people generally, and is held as keenly by our *intellectuels*, for the following sufficient reasons:

We believe Germany could have prevented the world war, and should have so done. We believe that she not merely let things drift, but actually precipitated war by issuing ultimatums to Russia and France at the moment when the Servian trouble was in hopeful process of diplomatic adjustment. We note that Germany, departing from her honorable precedent of 1870, began war by breaking faith with Belgium, and since has prosecuted hostilities with a ruthless barbarism repugnant to civilization.

These are entirely disinterested reasons for America's desiring the defeat of Germany. They are powerfully reinforced by a motive of policy. It is the sober conviction of most of us that for the United States to live peaceably in the same world with a dominant Germany would be impossible.

So much should be said lest our European friends confuse the official utterances which our judgment approves with our intimate feelings as men and women.

Of Mr. Wells's eulogy of Russia as a great liberal force, Vernon Lee makes good sport, and legitimately. Yet it seems to me almost as unwise to raise issues of absolute national value, always an abstract appraisal, at the moment of a death-and-life alignment. It is enough for me that at this moment Russia is the indispensable bulwark of Western civ-

ilization. What she may do in the future I do not know. I do know that but for her France would be prostrate, England imperilled, Belgium an annex to Prussia. Here is ground enough for enduring gratitude to Russia. There may or may not be a Slavic peril at some future time—personally I do not anticipate it—but meanwhile the world faces a very urgent Prussian peril which must be dealt with. One peril at a time is a very good rule.

When Vernon Lee describes Prussian militarism as so much cleverly invented mythology, she surely abuses the wit that has made her famous. Indeed, her own freely expressed hope that southern Germany might gain as against Prussia is a virtual acceptance of the reality that lies behind the alleged myth. Few Americans who have lived in Prussia doubt that Prussian militarism is a fact of portentous order. For more than two centuries has been preparing the rigid, arrogant, one-sidedly efficient temper that brooks no difference of thinking and envisages the world solely in military terms. If Vernon Lee still suspects that Prussian militarism is merely a sophistical form of words, let her descend from the seclusion of Shooters Hill and interview the refugees from Aershot and Louvain.

Prussianism is the cause of the war, and the cause of its worst inhumanities. Accordingly, Prussia must pay the penalty. Should the war stop short of her abasement, the whole sacrifice will have been in vain. To crush Prussia is to aid Germany. The liberal, intelligent, and kindly Brunswickers, Hanoverians, Saxons, Silesians, Württembergers, Bavarians, who are falling by thousands, are victims not of the Allies' arms, but of Prussian ascendency. It is indeed well that we should hold clearly in mind the distinction between Deutschland, which is likely to be regenerated through defeat, and the maleficent kingdom which has made Europe a shambles, and is itself marked for extinction.

In this matter I am sure that I speak for thousands of Americans who know their Europe and know their history. Such is our neutrality—confessedly a somewhat grim variety. On the main issue that we will not starve Germany out while pretending friendship, I am heartily with Vernon Lee. If the time came to make an issue with Germany, the first move would not be the locking of our granaries, but the opening of our recruiting offices.

FRANK JEWETT MATHER, Jr.

Princeton, New Jersey, September 24.

THE GIFT OF PROPHECY.

TO THE EDITOR OF THE NATION:

SIR: The gift of prophecy is often ascribed to great men, and to none with more propriety than to Goethe. "Unser tiefsinniger Dichter," as he is still admiringly called in Germany, undoubtedly had in view the present Kaiser when he wrote the following lines in his immortal drama of "Faust":

> Weh! Weh! die schöne Welt!
> Du hast sie zerstört mit mächtiger Faust;
> Ein Halbgott hat sie geschlagen.

One notices that the prudent poet wrote "with *mighty* fist," not "with *mailed* fist," for fear of prosecution for *lèse majesté*. It is remarkable that this striking prophecy has escaped the New York *Staats-Zeitung*.

AN OLD LEIPZIG STUDENT.

New York, September 19.

Literature

A TENACIOUS CREED.

Buddhist China. By Reginald Fleming Johnston. New York: E. P. Dutton. Illustrated. $5 net.

A reader familiar with the literature on China published since the Opium War notices an endeavor within recent years to interpret the spiritual side of Chinese life with tolerance for all forms of religious expression. The contrast to the attitude assumed by writers fifty years ago is significant. The old view that morality and good citizenship were impossible unless allied with the definite formulas of Christianity has been so far abandoned as at least to concede to the China of the past a considerable culture and happiness attained without any knowledge of the creeds of Christendom. Mr. Johnston, a student of Buddhism, who recognizes its present as well as its past hold upon the people of China, goes further than this. He is desirous of convincing his countrymen that "even if Buddhism collapses as a religious system, it may still continue to wield an immense though perhaps impalpable influence over Chinese thought. Indeed, it may actually regain some of the influence which it has been gradually losing over cultivated minds when it shakes itself free from the worthless superstitions with which the need of satisfying the crude religious instincts of an ignorant populace has forced it into more or less grudging alliance." Not only has Buddhism in the past been the chief inspiration of artistic and imaginative efforts in China, it has been a source of comfort to its adherents and a safeguard to the state; nor is it advisable to assume that, "even as a religion in the ordinary sense of the word, Buddhism has run its course."

All this differs *toto cœlo* from what we used to read in books written a generation ago. Whatever may be thought by adherents of the old missionary policy of unyielding opposition to everything "heathen," this change in the posture of Christian writers has the advantage of introducing our half of the civilized world to less prejudiced views of the condition of a country which, despite the attacks of other faiths, has held consistently to Buddhism as the religion of its common people. Like Christianity in the West, Buddhism was adapted as well as adopted by a race foreign to the land of its origin, and though its followers all regard the canon as their ultimate authority, its interpretations have accorded more and more as time elapsed with the spirit and temper of the Chinese mind. It is often said, indeed, that the complexities of Mahayana Buddhism have carried the Chinese so far from the teachings of Sakyamuni as to have resulted in a new creed. The same charge is brought against Christianity to-day; it is actually true of neither. Buddha, like Confucius, was discreetly silent upon many questions because he thought that their solution had no necessary relation to the great problems of life and a hereafter. The accepted doctrines of Buddhism that stagger the Western mind are those denying the existence of a personal deity, the soul, and a continuing individuality after death; but the author finds that even here the disagreement is mainly one of metaphysics, the Buddhist view of the ego being not unlike that of a good many thinkers in Europe; for, he adds, "there is a close association between the Buddhist idea of a personality liberated from the phenomenal ego and the belief of Western mystics and others in a transcendental self freed from the limitations of temporal individuality."

Here, then, are two points suggesting possibilities of an interaction between the two great creeds, at which the stern propagandists of Christianity in the East would have recoiled half a century ago; what may result from them time alone will show. The first of these is the development in terms of Chinese thought of some of those metaphysical questions which Buddha left unanswered. If Buddha discouraged their discussion they have not been disregarded by Mahayana Buddology, for not only has Amitabha become God, but Buddha is mystically associated with him "through being his earthly embodiment, or rather reflex." Personal merit, the only and sufficient means taught by Buddha for securing salvation, is now subordinated to the necessity of faith, for "the Chinese commentators do not hesitate to assert that no amount of virtue will insure a rebirth in the Western Paradise if unaccompanied by invocations of the name of Amitabha." A personal deity, a saviour, heaven and hell and justification by faith have been accepted by the adherents of a religion which began by denying them all. As to the second point: while Buddha himself began by rejecting all soul theories, because the inexorable law of retribution was incompatible with the idea of an individual soul, out of the fine distinction drawn between the impermanent ego and the transcendental self has arisen a belief in the continuing identity of a man's soul that is confidently maintained by the vast majority of Buddhists in northern Asia. A creed that has wandered so far from the precepts of its founder is capable of wandering further, even to absorbing the fundamentals of Christianity, while yet calling itself Buddhism.

But whatever may become of Buddhism in the future it has been in the past a supreme influence in Chinese standards of life as well as in literature and art. Mr. Johnston, whose studies during a long residence in China entitle him to consideration as an authority, esteems it a force too deeply seated ever to be wholly eradicated, and he does not seem to wish it to be otherwise:

Those of China's foreign friends who long to see not only the political regeneration of this great country, but also a brilliant revival of creative activity in arts and letters, can hardly fail to take a keen and sympathetic interest in the fortunes of that wonderful creed, or system of creeds, which for at least fifteen centuries has exerted so pow-

erful an influence—artistic and philosophic no less than religious and ethical—over the heart and mind of China.

These are the reflections of a man who approaches his subject in no controversial spirit, but who recognizes an elemental character in Buddhism—jejune though it may be in its modern estate—deeply ingrained in the soul of a people. As we began by saying, the author's point of view is the most significant though by no means the only remarkable feature of his book. More than half of it is devoted to a description of Chiu-hua and Pu-to, two of the holy places of the cult in China. They are each sacred to a Bodhisat associated with the idea of Amida's mercy, but here, as in other religions, dedication to a particular saint does not preclude the worship of all the deities in the pantheon at his temple. Of Ti-tsang, the Sanskrit Kshitigarbha, patron divinity of the former place, it is related that he has vowed to devote æons of time to rescue humanity from punishment and bring all living beings safe to the heaven of Buddhahood. He is the Japanese Jizo, only less famous in northern Buddhism than Kuan-yin, patron of Pu-to Island, whose female form, though only a matter, apparently, of a few centuries, has made the name familiar over the world as the Chinese Goddess of Mercy. Both these sacred spots have been completely devastated in quite recent times, revealing to the visitor that sad paucity of ancient monuments so characteristic of storm-ridden China despite her great antiquity, but their sanctity remains. There is much to reward the student of Buddhism in the numerous monasteries clustered about these two sites, and Mr. Johnston's account of them furnishes abundant material for an understanding not only of local observances, but of the broader subject of comparative religion.

The wanderings or transfer of a deity from one race group to another are sufficiently familiar to students of religion everywhere, but few divinities appear to have travelled so far afield as the popular Kuan-yin. There is reason to suppose (though Mr. Johnston does not make much of the evidence) that the original "Looking-down God" was transferred from the mountain region of southern Arabia, the primitive Semitic deity of Mopla sailors which they brought first to Ceylon and later to the Far East. From Ceylon his worship passed into India and was merged in Indian Buddhism under the title of Avalokitesvara, the "Lord who looks down" in mercy upon mankind, one of a triad ruling the Western Paradise and acting as saviours of the world. There seem to have been two cults associated with his Bodhisat, one coming to China through Tibet and the other probably brought by sea, whereby comes its association with ships and the ocean and Kuan-yin's sanctuary on the island of Pu-to. The womanhood of Kuan-yin may date from the seventh century, but it does not appear to have been universally recognized before the Sung period, from which time, as the embodiment of divine mercy to erring mortals and as bestower of children to the barren, she has assumed the first place in the affections of the people of China and Japan. As to the worship accorded to images by Buddhists, the author declines to believe that the Chinese are any more idolatrous than the mass of Roman Catholics:

> It is only the most ignorant of Buddhists, as it is only the most ignorant of Christians, who regard the images before which they kneel in prayer or adoration as the real and ultimate objects of their pious devotion. To the enlightened Buddhist, as to the enlightened Catholic, the image or sacred picture is merely a symbol of divinity.

Education, then, and a return to the high standards of Buddhism in its prime would seem to be Mr. Johnston's cure for a demoralized China—not the propagation of the creed which goes forth to destroy. It may be so, but Buddhism has fallen so far from its former high estate that upon the evidence of those who know the country best, as Christians and for its own good,

> Would we not shatter it to bits—and then
> Re-mould it nearer to the Heart's Desire?

CURRENT FICTION.

Perch of the Devil. By Gertrude Atherton. New York: Frederick A. Stokes Co.

"Perch of the Devil" was the original and colorful name of Butte, Montana. Its adoption by a son of Butte as the name of the mine where much of the action of this story takes place gives the title double fitness. The leading young man, Gregory Compton, is the tall, lean, dark, silent, indomitable gentleman whom, like some other heroes, one meets somewhat more frequently in fiction than in truth. For her beauty, he has married Ida, an ultra-American maiden, with a mouth full of chewing gum and double negatives, and an inherently vulgar mind, but a great soul. Her sudden conversion into a person of elegant speech and manners does not violate the canons of romance. Ida presently moves into the best circles abroad, and becomes an object of pursuit by persons of rank. Meantime, Gregory has become involved with a lady to the manner born, his wife's most intimate friend, and wife of his most intimate friend.

Mrs. Atherton keeps insisting upon the fact that Ora is a lady, and, accepting Mrs. Atherton's ruling that to be a lady does not imply anything as to mind or morals, we may as well admit her ladyship as deny it. Otherwise she is a selfish neurasthenic who does her best to play the devil with the lives of Gregory and Ida, and almost succeeds. Involved with this story of the familiar triangle are the fortunes of Gregory's mine, and his successful defence of it against the open or subtle tactics of Amalgamated Copper. Gregory becomes immensely rich, and, finally escaping the evils of the perfect lady, Ora, finds unexpected happiness with the now refined but not denatured Ida. The most interesting and genuine motive in the story is the discovery by that cold and calculating beauty that she has a real passion for her husband, and that in some mysterious and changeless way they have come to belong to each other.

The House. A Novel. By Henry Bordeaux. Translated by Louise Seymour Houghton. New York: Duffield & Co.

This account of the simple, laborious, high-idealed life of the provinces is precisely what it purports to be: history of a family and a home. There are few vicissitudes and fewer incidents; the author's art is expended upon portraiture of the father, a conscientious physician; the mother, and the six brothers and sisters of the narrator. The result is a certain lack of color, especially as the point of view is personal and subjective. The reader will be confirmed in a conjecture that Mr. Bordeaux lacks ability to construct a plot by the similarity of the central action to that of Ibsen's "An Enemy of the People"—the physician condemning the water mains of a neighboring resort, and suffering the public displeasure in consequence. But this is only a ripple in the slow full stream of the story. Its deliberateness, its realism in the best sense of the word, antagonistic to passion and extravagance, its attempt to depict in its sober strength the peasant and bourgeois earnestness, give it at first glance the effect of a mere exposition of French country life. But it is surcharged with a poetry that rounds it with narrative effect. When the home ends with the death of the father and the passage into various avenues of the children, we feel—though the teller is but eighteen—that the book has lost its protagonist.

The Charmed Life of Miss Austin. By Samuel Merwin. New York: The Century Co.

Edith Austin is by no means an uncommon type in fiction. A more adventuresome girl, with a better capacity for getting in and out of serious troubles, could not well be imagined. American girls are proverbially dissatisfied under restraint, and Edith is no exception to the rule. Travelling in the Far East with her uncle and aunt, she contrives to elude them—their chaperonage being anything but strict—and, of course, gets into all sorts of trouble, generally serious, which puts her "charmed life" to the severest tests. Beginning with a visit to the Chinese district of Shanghai at night, unattended, whence she is rescued by a young Frenchman, but not until she has been forced to act as second in a prize fight between him and a drunken sailor, champion of the fleet, for her possession, she passes through adventure after adventure, in which she falls in love many times, upsets well-planned *coups*, and confounds dishonest politicians, pirates, thieves, and rascally merchants. She leads her relatives a hard chase in their efforts to extricate her from her difficulties, but they always arrive too late, for the inevitable young man has turned up. After each rescue, however, she falls out of love as easily as she fell in. One is inclined to sympathize with her uncle's deep and fer-

vent "Thank God" when he receives word that she is married to her latest rescuer.

The Bird-Store Man: An Old-Fashioned Story. By Norman Duncan. New York: Fleming H. Revell Co.

Norman Duncan has left Labrador and the big woods for the nonce, to give us a quaint little idyl of city life. To the sub-title we may be allowed to take exception. Thomas Twitter, the Bird-Store Man, is frankly Dickensian, with his chorus of canaries—reminiscent of the way in which Nature is so often made to act as chorus to the great Victorian's characters in their moments of stress or exaltation. But the Bird-Store Man, the Little Girl, and the dog Alexander form a triangle as novel as it is refreshing. And while the Bird-Store Man and the Little Girl have figured in fiction before under aliases, there is nothing old-fashioned about Alexander, who, having come to the rescue of his family in its extremity, finally "loses his job" in the most approved modern style. Tom Twitter's Academy for the Higher Education of Canines claims a place among the institutions of higher learning, if only for the culmination of its curriculum in the "college yell" on "graduation day." The story is slightly sketched, but the minor characters do their little parts on time, and, having done them, vanish as they should. An altogether delightful hour's reading, and not without suggestions of the more serious sort which he who runs may read.

A BENEFICENT LOBBYIST.

The Life-Work of Edward A. Moseley. By James Morgan. New York: The Macmillan Co. $2 net.

This work is the record of an ordinary man who did extraordinary things. In his birth, education, native wit, and contact with life he resembled hundreds of thousands of other Americans. But a happy conjunction of circumstances and a zealous spirit enabled him to put a mark on our economic policies that will never be effaced. Perseverance did for him what far more brilliant qualities have failed to do for others.

Moseley was the first secretary of the Interstate Commerce Commission. At the start there were five Commissioners, and an effort was made to obtain one of the appointments for him. Geographical conditions precluded this, but President Cleveland believed that the secretaryship would be an important post, and asked Moseley to accept it.

The Commission has undergone a great change in the last twenty-seven years, but its assured position of to-day is in no small measure the result of the efforts of its original members. No path of duty had been blazed for it in 1887. The law creating it was an experiment in a new field of Federal activity, and it was yet to be tested by experience and interpreted by the courts. Its methods of procedure remained to be devised. The Commissioners were strangers to one another. Their executive officer, the secretary, was unknown to them; they had taken him on President Cleveland's faith; and it is admitted that he had no special experience and no natural aptitude. In such circumstances, licking the Commission into shape was a difficult task. Yet it was performed in a way that enables us to trace the intellectual parentage of the present body back to the original appointees.

Moseley's most distinctive work was as a humanitarian. From the start he was an indefatigable worker for the safety of railway employees. The Federal Government, in adopting the Interstate Commerce law, had asserted its power to regulate commerce between the States, but not the instrumentalities of that commerce, the cars in which it was carried. In 1888 the Legislature of Massachusetts memorialized Congress on the subject, but without waiting for Congress to act, Moseley, with the sanction of the Commission, called upon the railways to report the number of persons killed and injured in coupling cars.

The first mention of the subject in the annual reports of the Interstate Commerce Commission was in 1889, but the Commissioners confessed that they were not prepared to recommend a national law because the difficulties of formulating and enforcing a statute of this kind seemed to them great, if not insurmountable. The secretary, however, went on with his work of collating the casualty reports from the railways, the totals of which constituted a staggering argument, and he employed every available means of driving the argument home. The obstacle to success was the expense. There were 1,200,000 freight cars, and very few of them had automatic couplers and airbrakes. The cry went up that it would cost the railways $100,000,000 to comply with such a law as was demanded.

Moseley knew no rest. He supplied the committee's reports in both the Senate and the House, the material for speeches of Senators and Representatives, as well as that for the messages of President Harrison, who three times commended the measure to Congress. He marshalled the forces of railway labor for the first time in Washington, and skilfully "pulled the wires leading to the seats of influence at either end of the Capitol." He brought such influence to bear on both national conventions in 1892 as to cause the subject to be mentioned in the platforms of the Republican and Democratic parties. In short, "he steered and pushed the bill with all the adroitness and efficiency and with more than the ardor of an experienced lobbyist." His efforts were rewarded in 1893.

He was equally incessant in seeing that the Safety Appliance law was complied with. The first test case was in the courts of the State of Utah, and the employee was the loser. Moseley adopted a course unknown to our system of jurisprudence. He urged Mr. Knox, the Attorney-General, to intervene and file a brief on behalf of the Government in a case between private parties, and when Mr. Knox agreed, he went to work preparing photographs and making a model of cars with automatic coupling devices, to say nothing of compiling statistics, all of which were presented to the court, with the result that the employee obtained a favorable verdict.

The Employers' Liability act was another measure to which Moseley devoted himself body and soul. Still others were the act requiring railways to report all collisions and accidents, with their causes and surrounding circumstances; the act compelling the establishment of the block signal system; the act to regulate the hours of labor on railways, and the Arbitration law of 1898, commonly known as the Erdman Act. It was he also who, in 1894, urged upon the leaders of the brotherhoods of railway employees the necessity of having a "good man" at Washington "to push things."

Moseley's career was identified with so many transforming policies that it is of necessity a matter of interest to students of our industrial development. If it were asked who of all those connected with it from the start has best typified the Interstate Commerce Commission, it would probably be safe to answer, Edward A. Moseley.

A GUIDEBOOK OF JAPAN.

Terry's Japanese Empire. Including Korea and Manchuria: A Guidebook for Travellers. By T. Philip Terry. Boston: Houghton Mifflin Co. $5.

This, the second of the Terry Guidebooks, deserves a warm welcome, for it is a marvel of condensed information such as the tourist demands and appreciates. Nearly 300 pages of general introductory matter precede the 800 pages of the actual itinerary; and the whole treatment reveals close acquaintance with travel conditions in Japan and with the best authorities on special subjects. The preliminary hints are well chosen and judicious. More ambitious than anything of the kind yet published, the Guidebook includes Korea and Formosa and has a serviceable chapter on Manchuria.

A few blunders crop out here and there. On page 133 occurs the term *Yoshiwaras*, but there is only one Yoshiwara, as the paragraphs on pages 221-3 indicate, the other "red-light" localities found in outlying parts of the city being known as *yujoba*. Indeed, the two passages contain evident discrepancies. Although the book is so up-to-date as to mention the eruption of Sakura-jima in January of the present year, yet it does not take notice of the complete destruction just three years ago of the Yoshiwara, nor the strong efforts that were thereupon made to abolish the institution.

Educational details need some revision. The Imperial University at Tokyo took the name Teikoku Daigaku in 1886, not in "1897, to distinguish it from the sister institution at Kyoto." Its present name, Tokyo Teikoku Daigaku, dates from 1897. There is no statement, in the description of Sendai, that this northern city is the home of three colleges of the Tohuku University—Science, Medicine, and Engineering. And in the de-

scription of Fukuoka, there is a failure to note that this city of Kyushu, where a College of Medicine was founded some years ago and attached temporarily to the University of Kyoto, is now the home of two colleges of the fourth, or Kyushu, Imperial University.

Dates in the Bibliography and elsewhere should also be revised. "The Mikado's Empire," by Griffis, should have "12th edition, 1913," in place of 1899, and Mitford's "Tales of Old Japan," "1910" in place of 1893. Capt. Brinkley did not assume control of the *Japan Mail*, which has done such excellent service for the Empire, till 1881—not 1885 (as stated at p. clx).

In the description of the native horses (p. xc) we are told that "in certain districts (N. Japan) mares only are used for beasts of burden, while in others (Tokyo, Yokohama, etc.) one rarely sees anything but stallions." This requires explanation: there are horse (stallion) and mare provinces, as those know from awkward experiences who have lived near the dividing line. Again, it is stated at page 135 that "Yedo was changed to Tokei (then Tokio and later Tokyo)." But these three forms are merely ways of transcribing the same character. Tokei represents an old-fashioned pronunciation, appearing on Government publications until the 'eighties; while Tokio, a Roman variant of Tokyo, is still in general use.

In the historical part of the introductory matter, the account of Xavier's wonderful career in Japan, based on Griffis, and with a strong anti-Roman Catholic bias, might be rewritten with attention to later and better authorities. The heading, Early Tokugawa Time (1573-1603), prefaced to paragraphs dealing with Nobunaga and Hideyoshi, is misleading. These two dictators, neither of them Shoguns, had nothing to do with the wonderful centralizing system which we associate with the Tokugawa rulers. The period is essentially pre-Tokugawa. In the Korea section there is too outspoken a bias against Russia, sarcastically termed "holy, peace-loving" (p. 712). While Japan must be credited with excellent administrative work in the Hermit Kingdom, yet her record there is by no means stainless; and we look for reticence and strict impartiality in a guidebook.

THE GAP BETWEEN FROUDE AND GARDINER FILLED.

A History of England from the Defeat of the Armada to the Death of Elizabeth. Vol. I. By Edward P. Cheney. New York: Longmans, Green & Co. $3.50 net.

Professor Cheney says in his preface: "The task of this book is twofold, first to give a narrative of the events of English history during the last fifteen years of the reign of Elizabeth; secondly, to give a description of the form of government and society in England at the same time." He is too modest to say that it will fill the gap which has long existed between the histories of Froude and Gardiner. Yet this is essentially what it does, and it does it successfully so far as we can judge by the first volume. In workmanship it naturally resembles Gardiner rather than Froude. Professor Cheney has a wide and sound acquaintance with all the printed sources, and he has also made good use of manuscript records. England on the eve of the settlement of America is a field in which he has ploughed and harrowed thoroughly—as one might guess from his dedication "To the students past and present in my Saturday seminar in English History." He shows no prejudices, no attempt at dramatic writing, and no effort to establish novel theses. He refrains from telling over again interesting matters which are already easily accessible in other books, in order that he may have more space for the less known but equally interesting and important facts and figures which he has gathered from the Calendars, the Acts of the Privy Council, and other sources. His style is sober but not dull; it often has much of the dignity of the Elizabethan writers in whom he has steeped himself and from whom he gives many picturesque and humorous brief quotations. It is to be hoped that the second volume will contain an index of the whole work which shall be worthy of the author's accuracy in regard to detail.

The subjects which Professor Cheney chooses to treat in the first volume he groups into four parts: (1) Royal Administration; (2) Military Affairs, 1588-1595; (3) Exploration and Commerce; (4) Violence upon the Sea. Of these the first and the last are of greatest interest and value to students. The last gives a striking impression of the great number of "tureble pirats" even on the seas adjoining England. Piracies were practiced on Englishmen, sometimes even with the connivance of the very authorities whose duty it was to suppress them. In addition to these, of course, were the legally recognized reprisals on foreigners to make good English losses, and the constant and very irritating English practice of seizing from ships of neutrals anything going towards Spain which could possibly be considered as contraband of war. To all this violence off the coasts of Europe is to be added that which was constantly practiced by English sailors against Spanish and Portuguese off South America and in the East Indies. Well might the Governor of Zante write of the English: "I myself am firmly convinced that there is not a sailor of that nation but is a pirate."

In Part I, Professor Cheney gives an excellent account of Elizabeth herself in her later years, her household, her ministers, the usages at her court, and the administration of justice in her courts of law. He inclines to a less harsh opinion of the "Star-Chamber proceedings" than tradition and common belief have assigned to them, showing that they were neither more secret nor more arbitrary than the other courts of equity; the penalties inflicted, however, were somewhat more whimsical and humiliating: a cozening lawyer was required to confess his fault and wear a paper on his hat declaring his offence as he walked past the law courts in Westminster Hall; others were made to ride in public with faces towards the horse's tail; and an unfortunate false accuser, "after long punishment, lost both his ears on the pillory, was slit in the nose, branded on the forehead, and condemned to further imprisonment for life." It is characteristic of Professor Cheney's collection of statistical data to note that more than thirty thousand cases came before the Star Chamber during the reign of Elizabeth. They included all sorts of charges. The three most common were riot, forgery, and libel. For this was a libellous age, as might be suggested by Falstaff's threat, "An have I not ballads made on you all and sung to filthy tunes, let a cup of sack be my poison," or by the somewhat inconsistent intention which Sir John Harrington set down in his diary:

> I will write a damnable storie and put it in goodlie verse about Lorde A. He hath done me some ill turnes. God keepe us from lyinge and slander worke.

Notes

The Century Company announces for publication to-morrow "The Old World and the New," by Edward Alsworth Ross.

The following volumes are included in Frederick A. Stokes Company's October list: "The Man of Iron," by Richard Dehan; "Through Siberia," by Fridtjof Nansen; "Chats on Old Copper and Brass" (Collectors' series); "The Sport of Collecting," Sir Martin Conway; "The Women of Egypt," by Elizabeth Cooper; "German Masters of Art," by Mrs. C. Dickinson; "A Woman in the Sahara," by Helen C. Gordon; "Seven Champions of Christendom," by F. J. H. Darton; "The Kewpie Kutouts," by Rose O'Neill. In the Library of Irish Literature the same house announces: "Thomas Davis," "Wild Sports of the West," "Legends of Saints and Sinners," "Humours of Irish Life," "Irish Orators and Oratory," "The Book of Irish Poetry."

A partial list of the autumn publications of the Yale University Press includes, in poetry: "The Song of Roland," translated into verse by Leonard Bacon; "Mother of Men, Old Yale," by Brian Hooker; "Poems," by Brian Hooker; "The English Poems of Henry King, D.D., sometime Bishop of Chichester," edited by Lawrence Mason. English literature: "The East I Know," a translation of Paul Claudel's "La Connaissance de l'Est" made by Mr. and Mrs. William Rose Benét; "Some Textual Difficulties in Shakespeare," by Charles D. Stewart; "Essays on Milton," by Elbert N. S. Thompson. History: "The Department of State of the United States: Its History and Functions," by Gaillard Hunt; "Cicero of Arpinum," a political and literary biography, by E. G. Sihler; "Memorials of Eminent Yale Men," a biographical study of student life and university influences during the eighteenth and nineteenth centuries, by Anson Phelps Stokes. Science: "The Problem of Volcanism," by Joseph P. Iddings; "Science and Religion: the Rational and the Superrational," by C. J. Keyser; "Water Conservation by Storage," by F. H. Newell; "Problems of American Geology" (Dana commemorative lectures delivered on the Silliman Founda-

tion); "Conservation of Water by Storage," by George F. Swain. Public affairs: "Concerning Justice," by Lucilius A. Emery; "Municipal Citizenship," by George McAneny; "Trade Morals, their Origin, Growth, and Province," by Edward D. Page; "Yale Readings in Insurance," edited by the late Lester W. Zartman, Ph.D., revised with additions by William H. Price, Ph.D.

Macmillan's autumn list, in addition to the volumes announced last week, includes, in religion: "Social Redemption," by Walter Rauschenbusch; "The Christian Life in the Modern World," by Francis G. Peabody; "Live and Learn," by Washington Gladden; "The Gospel of Jesus and the Problems of Democracy," by Henry C. Vedder; "Modern Religious Movements in India," by J. N. Farquhar; "The Development of the Christian Religion," by Shailer Mathews; "Vital Elements of Preaching," by Arthur S. Hoyt; "Social Christianity in the Orient," by John E. Clough; "The Bible and the Religion of the Spirit," by F. C. Porter; "The Rise of Modern Religious Ideas," by Arthur C. McGiffert; "Paul's Doctrine of Redemption," by Henry Beach Carré; "The Man of Nazareth," by Frederick L. Anderson. Medicine: "Infection and Resistance," by Hans Zinsser; "The Cancer Problem," by William Seaman; "Operations of Surgery," by W. H. A. Jacobson, new edition, revised by R. P. Rowlands and Philip Turner; "Diseases of the Arteries and Angina Pectoris," by Thomas Clifford Allbutt; "Tuberculosis of the Bones and Joints in Children," by John Fraser; "Essays on the Surgery of the Temporal Bone," by Charles A. Ballance; "A Short Manual of Diseases of the Nervous System," by Edwin Bramwell; "Radiography, X-Ray Therapeutics, and Radium Therapy," by Robert Knox; "Tuberculosis and Consumption," by A. J. Jex Blake; "Pasteur, and After Pasteur," by Stephen Paget; "Medical Entomology," by William B. Herms.

For colleges, teachers, and schools Macmillan publishes the following: "Forms of Prose Composition," by Frank W. Scott; "College Life—Its Conditions and Problems," by Maurice Garland Fulton; "English Composition for College Women," by Elizabeth Moore and others; "Handbook of Exposition," by R. A. Jelliffe; "Aspects of Modern Drama," by Frank Wadleigh Chandler; "Representative English Comedies," Vol. III, the Contemporaries of Shakespeare, Fletcher, and others, edited by Charles Mills Gayley; "A History of England and Greater Britain," by Arthur Lyon Cross; "Readings in Political Philosophy," by Francis W. Coker; "Introduction to the Science of Ethics," by Theodore de Laguna; "Principles of Secondary Education," edited by Paul Monroe; "State and County Educational Reorganization," "State and County School Administration," by Elwood P. Cubberley; "Problems of Child Welfare," by George B. Mangold; "Economics of Efficiency," by Norris A. Brisco; "International Trade and Foreign Exchange," by Henry Gunnison Brown; "Food Products," by Henry C. Sherman; "College Physiography," by Ralph S. Tarr; "An Introduction to the Study of Fossils," by Henry W. Shimer; "The Germ Cell Cycle of Animals," by Robert W. Hegner; "Geometry of Four Dimensions," by Henry Parker Manning; "Handbook of Practice for Teachers," by Charles A. McMurray; "Child Discipline," by William Chandler Bagley; "Handbook of Vocational Education," by Joseph F. Taylor; "Lessons in Appreciation," by F. H. Haywood; "A Fundamental Study in the Pedagogy of Arithmetic," by Henry Budd Howell; "A Method of Teaching Primary Reading," by B. L. C. McMurray; "Ancient Civilization," by Roscoe Lewis Ashley; "American Literature for Secondary Schools," by William B. Cairns; "Farm Crops," "Farm Animals," by George F. Warren; "Soils," by Franklin Stewart Harris.

Dr. Clare Howard has achieved the distinction of a readable dissertation in her "English Travellers of the Renaissance" (Lane; $2.50 net). Those were days when anybody who was or who aspired to be anybody travelled, for travel afforded the only effective means of studying modern languages, history, and institutions. To the young courtier the Continent offered the chance of sharp discipline amid men and cities, and a glimpse of a humaner civilization than that of his island home. Though there were some, like Ascham, who questioned not without reason the benefit of promiscuous travel in view of the many risks to manners, morals, and religion—the "Italianate Englishman" passed into a proverb—there grew up an enthusiastic literature in praise of travel. Appropriately enough, these manuals of instruction have their beginning in the fatherland of Baedeker, but unlike his indispensable volumes, they attempt not to describe the things which the traveller will see, but in a spirit of didacticism, which is the peculiar possession of no one age, they address themselves to the task of arousing in the traveller's mind a lively appreciation of his high calling, his duty to himself and to the State. The gist of these books, without prolixity and vain repetition, Dr. Howard sets before the reader, with copious illustrations from the lives of real travellers. She clearly traces the gradual relaxation of the old ideal of erudition, the Tudor traveller's primary concern, in the seventeenth-century courtier who preferred to learn his dancing, fencing, and riding the great horse at one of the French "academies," and the still further degeneration in the fashionable gentleman and his Grand Tour after the days of Charles II.

That Napoleon was fortunate to escape from Russia with any troops at all is the conclusion to which Lieut.-Col. R. G. Burton's analysis of the causes of his failure leads a reader of "Napoleon's Invasion of Russia," the latest volume in the Special Campaign series (Macmillan; $1.60 net). Nor was this due primarily to the Russian winter, as most historians will have it, influenced, no doubt, by a commendable affection for poetic justice. Napoleon had the winter to face because he lingered in Moscow, uncertain of his next move. He had surmounted great obstacles in order to gain the ancient capital, only to find that Russia still eluded him. Yet if he made mistakes in details in his operations, no skill less than his could have extricated the army from the trap into which he had thrown it. He was aided also by mistakes on the part of his enemies. In a word, he had undertaken an impossible task, which nothing but his genius could have made appear possible. The invasion and the retreat are traced by the author with care, but without much imagination. Six maps and plans accompany the volume.

The timeliness of Theodore Clarke Smith's "The Wars Between England and America" (Holt; Home University Library; 50 cents) is sadly shattered by a convulsion that has put the centenary of peace quite out of men's minds. Yet this is true in a narrow sense only. The interest of the period from the Peace of Paris in 1763 to the Treaty of Ghent in 1815 is perennial. And it is the history of this period, political and diplomatic and not merely military, as his title would suggest, that Professor Smith gives us in one of the most interesting volumes of the rapidly growing series of which it is one of the newest additions. The distinction and charm of the book are its following of the developments at Westminster along with those in the colonies or States, so that one sees, as one ought to see but seldom has been permitted, both sides of the shield, not now and then merely, but continually. The influence of George III on the current of American affairs has long been taught to schoolchildren, perhaps overtaught, but the effect of Whig and Tory politics is not so familiar. Professor Smith sets us above the contending countries, and bids us view the game on both sides at once. Any one who fears that this must make the guide less of an American should read his account. As an instance of the author's impartiality as well as range of knowledge of his subject, we may cite his quiet noting of the not generally remembered fact that the burning of Washington in 1814 was an act of retaliation, if an extravagant one, and not the unprovoked barbarity it is usually represented as being. "The Growth of Europe," by Grenville A. J. Cole, is not political, but geographical and geological. It traces the comparatively recent changes that have made the surface features of Europe what they are. These changes consist less in the wearing away of rocks and the deposit of continental waste than in upheaval and depression. The volume is a bit technical for the ordinary reader, whose interests are usually consulted with more care in this series. "Sex," by Patrick Geddes and J. Arthur Thomson, joint authors of "The Evolution of Sex," is a sensible handling of what is in our time a most mishandled subject. The authors are at once scientific and human, showing thorough appreciation of the need of delicacy in approaching the matters of which they treat, but, on the other hand, not taking refuge from plain speaking in the mysteries of physiological and psychological terminology. The range of the little volume is such as to include a consideration of woman's place in society, which is performed with an admirable combination of historical and scientific knowledge, absence of dogmatism, and sound judgment.

"Chaucer and His Times," another of this series, by Grace E. Hadow, would be more accurately named "Chaucer and His Influence." It is a careful study of the work of the poet, with due recognition of his limitations as well as his gifts. In successive chapters on his treatment of his sources, his character-drawing, his humor, and his descriptive power, we review the traits that have given him his place in English literature. The book is the work of a scholar, and pleases by its nice discriminations and power of analysis; at the same time, it is anything but pedantic, as is particularly evident in its opening chapter on Chaucer's Life and Times, in which the uncertainties of chronology and other biographical data are not allowed to carry us afield. Of a very different tone is A. Clutton-Brock's "William Morris: His

Work and Influence," which is a defence rather than an impartial account. The author is seldom able to state a fact in his hero's life without comment. When he has an adverse criticism to make, he is apt to qualify it away or to end by presenting it as a virtue. Morris must be accepted as a prophet who was superior to most prophets because he was not content to preach, but worked also. He saw exactly what was the matter with the world, and did his best to make everybody see it. The volume has a tendency to discursiveness, which is especially out of place in this series, but is well informed, and marked by a crispness of style that is occasionally epigrammatic, as: "Some men rebel against society because they are unhappy; but Tolstoy and Morris put away their happiness to rebel," and: "Not knowing precisely what they wanted to do, they [Morris and his friends] naturally determined to start a magazine."

Elizabeth Washburn's "Colour of the East" (Stokes: $1.25) is a sheaf of Oriental sketches that have found their way into American periodicals during the last two years, and are now assembled in a volume with an effective cover. Her attitude towards the peoples of the East appears to be one of benevolent attention, but we fail to catch the note of sympathy and understanding which is necessary to bring the reader into real contact with them. The impressionist in travel-literature acquires the trick of carrying you through a filmy cream of tropical sunset to the drab ooze of the morass, or to "a topaz-tinted, fire-edged group of ice-clad crags, detached and hanging in mid-air"; yet on reaching these highly ornamented places the heart of man craves companionship. Miss Washburn submits occasional samples of native life. At the Shway Dagon in Rangoon, the supreme test for a descriptive artist in Asia, we see "round girls in little coats of rose and cherry-red, shrill in high key and hang chains of jasmine buds about the thick gold neck of Buddha. Naked babies at their side crouch on fat brown knees and lisp in little whispers, while their round eyes follow fearfully the shrinking outline of a pariah dog creeping to an unwatched altar." At Singapore the author stayed long enough to rent a house and study the ways of an old Javanese k'bun, or gardener, promising material for the artist that no one has thus far exploited; but the visitor is too aloof from the natives of that other world of the East—the devious paths they keep and pass and turn again—to interpret them in a manner altogether satisfactory and convincing. Many of these papers are deftly done, but the cumulative effect of a considerable succession of them is cloying. They were more valid as literature in their magazine setting.

As the title indicates, "Psychopathology of Everyday Life," by Sigmund Freud, translated by A. A. Brill (Macmillan; $3.50 net), embodies an attempt to apply to familiar experiences the principles of explanation developed in connection with the author's method of so-called "psycho-analysis," and in this attempt, as one might expect, Dr. Freud displays unusual skill and ingenuity. So far as he emphasizes the close relation between normal and abnormal mental states he does good service; but his general mode of thought, as indicated in his earlier works, is here again exemplified. Being by nature a special pleader, he is willing to go to unwarranted lengths in his efforts to bring the facts of observation into line with his theories, his tendency to look for erotic influences constantly warps his judgment; and although his insight is penetrating, and his hypotheses highly ingenious, these latter cannot be convincing to the psychologist who looks at all the facts and at all possible modes of interpretation, and who makes the attainment of truth his sole aim. In fact, were our author better versed in the work of contemporary psychologists he would realize that not a few of the observations which he thinks original with himself are in truth commonplaces to the thorough student of this subject; as, for instance, where he naïvely remarks (p. 149), "The tendency to forget the disagreeable seems to me quite general." This fundamental fact he treats quite incidentally, and fails to observe that it in itself suffices to explain an enormous proportion of the cases which he laboriously interprets in terms of his quasi-Herbartian conception of repression.

To prove that Bacon wrote "Shakespeare" is, using the methods generally employed, to prove of necessity that he wrote pretty much everything else that belongs to the period, say, from 1569 to 1626. Not a few of the sumptuous volumes that treat these high matters are borne along triumphantly on this horn of the dilemma. Among them "Edmund Spenser and the Impersonations of Francis Bacon" (London: Constable; 16s. net), by Edward George Harman, C.B., is simply one more impressive piece of erudition misapplied. Just as we have grown familiar with the distinction between Shakspere the player and "Shakespeare" the pseudonym, we are here introduced to a dichotomy of the "poets' poet" into Spenser, the Irish official and settler, and "Spenser," one of the many impersonations of the myriad-minded author of the "Essays." The mass of solemn assertion and flimsy "parallels" on the basis of which, beginning at the age of seven or eight with the translations in Van der Noodt's "Theatre," Bacon is put forward as the author not only of Spenser, and, of course, Shakespeare, but also of such a gallimaufry as the chief works of Sidney and Gascoigne, parts of the Harvey-Nashe controversy, bits of Daniel and of Raleigh, of "Tarletons Newes out of Purgatorie," and Robert Laneham's famous letter, has scarcely the saving grace of ingenuity. Mr. Harman does not deal in ciphers; his sole criterion is his literary tact, the delicacy of which may be judged from the following examples: "The only difference (not an essential one) which I can perceive between Spenser and Shakespeare is that the former ransacks books more obviously for his examples and writes in the trammels of an elaborately rhymed stanza, whereas the latter draws his material more directly from life, through a maturer self-knowledge, and is less hampered by difficulties of form."

Major-Gen. Greely's "Hand-book of Alaska," first published in 1909, appears in a new edition (Scribner). A prefatory chapter has been added, devoted chiefly to material development during the past five years, but the author regards it as inadvisable to attempt a thorough revision of the book until Congress shall have taken some definite and decisive action with reference to the handling of transportation and coal deposits.

Science

DOMESTIC SCIENCE AND GARDENING.

Experimental Domestic Science. By R. Henry Jones. Philadelphia: J. B. Lippincott Co.

The Principles of Cooking. By Emma Conley. New York: American Book Co. 52 cents.

The Kitchen Garden and the Cook. By Cecilia Maria Pearse. New York: E. P. Dutton & Co. $1.50 net.

Pot-Pourri Mixed by Two. By C. W. Earle and Ethel Case. New York: E. P. Dutton & Co. $2.50 net.

The Gardener's Pocket Manual. By F. F. Rockwell. New York: McBride, Nast & Co. 75 cents net.

Epicures and all other persons who recognize the importance of a good digestion will rejoice to know that so able a chemist as R. Henry Jones has joined the ranks of those who believe that science can be directly and adequately taught in the kitchen, and that domestic subjects form a wide field for scientific and utilitarian experiment. His book on experimental domestic science is intended primarily for girls' schools, but appeals also to housewives who use their brains. Happy the husband whose wife has mastered and practically applies the lessons of this little book, either personally or in guiding her cook! He will feel better, sleep better, do better work, and, in general, enjoy the pleasures of life more than others less fortunate. Mistakes in cooking and eating habits are made in most families. How to avoid them is told by Mr. Jones in lucid language, even where technicalities are unavoidable. He does not merely give rules for the different culinary processes, but impresses them on the learner's memory by giving the reasons therefor, with the aid of experiments which are fully described.

Here are two examples of the questions which are asked and answered: "Which method of cooking fish have you found less wasteful: boiling or frying?" "What is the object of the fat in frying fish or potato? How would you find out whether it is more economical to use a little fat or immerse in fat?" The philosophy and importance of basting are explained in a way no pupil is likely to forget; and how much more tender and juicy our roasts would be if basting were more generally indulged in! But it is on the subject of steaming that the author has the most important message to deliver. He maintains that nobody knows what the finest flavors of foods—particularly potatoes, cabbages, and other vegetables—are until after tasting the steamed varieties. Steaming makes it almost impossible to overcook food, and it preserves the valuable mineral salts which are usually lost in boiling. Cheap steam cookers are now on the market, and there is no possible argument against steaming, except that it takes a little more time than plain boiling.

Among other topics discussed is vegetarian-

ism. Only a few pages are devoted to it, but the conclusions arrived at are the last word on the subject and the most rational; it is the best brief consideration of this mooted question we know. Equally satisfactory is the treatment of the vexed question as to the nutritive values of different kinds of bread. Here, again, the author shows that it is unscientific to dogmatize. Circumstances alter cases, and what is best for one person is not so for another. We cannot too urgently recommend a perusal of page 137, where the arguments for and against white bread are summed up. Culinary and dietetic questions do not, however, take up all of Mr. Jones's space. Some of his chapters discuss such topics as ventilation, water, soap, laundry work, frost and sunshine, etc., and the last pages consider some popular everyday misnomers as well as domestic fallacies.

Emma Conley's "Principles of Cooking" is another excellent little book intended for schools. It is not merely a cookbook, but attempts to present the principles underlying all cooking. The author rightly maintains that if an intelligent study is made of these principles and their application, "preparing foods will no longer be a work of uncertainty, but an interesting scientific and comparatively easy process, and the preparing of nutritious, wholesome, and balanced meals will be a pleasure." Why cooking is taught in schools is explained; a list is given of the utensils for general use and those for the individual work table. Twenty rules for dishwashing precede a description of the parts of a stove or range; fire and fire-making are discussed, and in speaking of the temperature of the oven, the writer is obliged to confess the surprising fact—a hint to manufacturers!—that no oven thermometer that is even fairly accurate is on the market as yet! After these important—but usually neglected—preliminaries the different classes of foods are considered, with the best ways of cooking and serving them. Beverages are not overlooked, and the final sections discuss school lunches and the teaching of cooking in rural schools.

About eleven American families in every dozen do their own domestic work without the aid of servants. What proportion of them also raise their own vegetables is perhaps not known, but it must be very large. To such families "The Kitchen Garden and the Cook," by Cecilia Maria Pearse, makes a special appeal. Though written in England, it is quite as useful in this country, making climatic allowance here and there in the cultural directions, which, it is well to bear in mind, differ also for our own States. Though English, this book is by no means insular. Judging by the attention given to corn, one might fancy it was written on this side of the ocean. Considerable space is given to Italian dishes; and when one finds a dozen pages devoted to artichokes, one cannot but think of France, too; but the author treats of both the Jerusalem and the French (globe) artichoke, and in the recipes mixes them somewhat awkwardly; for these vegetables have no more in common than potatoes and endive. Young carrots and lentils receive more attention—and deservedly so—than they usually do in American books. Asparagus, which we monotonously see nearly always prepared in the same way, yields itself, as these pages show, to a variety of culinary manipulation; and the same may be said of several other featured vegetables. The author emphasizes the superiority of wrinkled peas over the smooth kinds which, though earlier and hardier, are distinctly inferior in tenderness and flavor. In her directions for cooking green peas she betrays her nationality in advising the addition of a sprig of mint, and blunders, furthermore, in advising the cook to "put them into a saucepan of boiling water." French cooks, in order to retain the flavor of the peas themselves and preserve the mineral salts, eschew the mint and use as little water as possible; cooking them, in fact, often on lettuce leaves.

Another English book for vegetable eaters is "Pot-Pourri Mixed by Two." The contents are as odd as the title. Mrs. Theresa Earle wrote a book called "Pot-Pourri from a Surrey Garden." Miss Ethel Case saw this, and was determined by it to give a diet without meat a trial in the hope of improving her health. She succeeded surprisingly. The two women also had a common interest in gardening, and this led to their planning a volume in which Miss Case was to give an account of her work in her garden, while Mrs. Earle's contributions were to consist of letters concerning things that interested her when they were separated. These include accounts of a walking tour in Germany; a trip to Italy, and one to Kashmir. Camping in the Himalayas she found wonderful: "the glory and beauty of it are quite beyond description." Among the wild flowers she found many that are carefully cultivated in European gardens, including acres of the orange wallflowers so much liked in England. Miss Case, in her articles on gardening, laments, among other things, that at flower shows prizes are so often given for size. Sweet peas are bigger now, but not so fragrant, while in the case of Brussels sprouts and celery the small old kinds are infinitely more delicious to eat than the "improved" varieties now almost universally sold in our markets. She gives a number of tempting vegetable dishes, and places much emphasis on the fact, unknown to most cooks, that "good vegetarian cooking cannot be done in iron pots." What you want is crockery.

Mr. Rockwell's "Gardener's Pocket Manual" gives in less than ninety pages a great deal of condensed information. It is intended to serve as a reminder, suggester, and general "pocket memory" for those actively engaged in gardening. It can be carried in the pocket and will save many a trip to the library to hunt up information regarding planting, pruning, spraying, hotbeds, handling the soil, fertilizers, insects and diseases, weeds, irrigation, and a hundred other things. It is a useful book, by an expert.

HENRY T. FINCK.

Drama and Music

"THE ELDER SON."

"The Elder Son," which William A. Brady presents at the Playhouse, adds another to the growing list of importations which have been a feature of the present theatrical season. This is a French play, by Lucienne Nepoly, adapted by Frederick Fenn, and played by a competent English company. We are not familiar with the French original and cannot, therefore, say whether the piece has lost in symmetry by its translation to an English setting, but from its uneven quality we should guess that it has suffered in the process. At the same time it would have profited in parts by even more radical changes than must have been made, since one character, in particular, George Burdon, remains in essentials a French youth violently translated to an English atmosphere.

The plot is plausible and promising—the difficulties that are likely to arise in a heterogeneous family that is made up of "my children, your children, and our children." Charles Willoughby, a widower with a son and a daughter, has married, eight years before the play opens, Mary Burdon, a widow with two boys, and the result of their own marriage is a little girl. The elder of Mrs. Willoughby's sons, Richard Burdon, disapproving of his mother's marriage and revering the memory of his father (who, we are given to understand, was not quite the admirable person that filial piety believes him to have been), has avoided the spectacle of his mother's *secondes noces* by absenting himself in China, and the play opens when he returns for a visit to the old home of the Burdons now occupied by the Willoughby family. Everybody, including his younger brother, George, has been perfectly happy, but Richard, who has all the cocksure priggishness of youth, finds things not at all to his liking, and manages to set the two families by the ears. To arrive at this situation, where the dramatic interest really begins, has taken the whole of the first act and part of the second, and even the excellent acting of the company as a whole barely makes this long preamble tolerable. In the second act, however, is developed a crucial and intensely dramatic situation, which goes far to redeem the whole play. That is where the mother and the two sons are together and fall to exchanging reminiscences of the father, whom Richard has idolized. The spirit of the dead man pervades the scene, so much so that on the entry of Charles Willoughby his wife, as it were in a trance, addresses him as "George." Jealousy of the dead, long smouldering, leaps up, and Willoughby, in a powerful scene, frankly confesses it. This is real drama, a perfectly human situation, developed with admirable art and excellently managed. The crisis is precipitated, the families are definitely divided into two camps, and an effective curtain is the forlorn figure of poor little Betty, the child of the second marriage, on the stage alone. The question propounded is, Where is her place? and the natural solution of the play is through her.

Nothing but an ignoble craving for the unexpected and a desire to surprise the audience into a cheap laugh can explain the conclusion, particularly as the third act opens legitimately by developing a theme already suggested—the proneness of arrogant youth, as

exemplified by Richard, to assume that the maternal are the only emotions that may with propriety be experienced by the person who has enjoyed the privilege of bringing it into the world. The conclusion manufactured by the author, or the adapter, reveals no touch of humor which may conceivably make step-families kin; instead, it simply turns an interesting play into rather cheap farce. The children of the two families, busily engaged in quarrelling, conceal themselves—for no apparent reason—behind furniture in time to watch Willoughby stealthily approach his wife's door. Mrs. Willoughby comes out, and it transpires that they have been making an elaborate pretence of an estrangement as the only means of pacifying their children. Anything more absurdly inconsistent with what has gone before can scarcely be imagined. The play is well acted—although on the night on which we saw it some of the characters were noticeably not word perfect—and the delicacy and restraint of Miss Cynthia Brooke, an English actress of established reputation, in the part of Mary Willoughby, is a genuinely clever performance. S. W.

"THE BEAUTIFUL ADVENTURE."

The stage, having this season removed from the red-light district, is still preoccupied with matters of sex, and it is a question whether the present refinement is not more pernicious than the old way. The very crudity of last season's exhibits was bound to produce nausea, whereas the respectable settings of certain sex-plays now performing offer an attractiveness to excesses which is dangerous. In a word, a Frenchified stage is the last thing which an American audience is prepared to accept with equanimity. In place of the French method of viewing suggestive situations with a measure of intellectual stimulation, an American audience appears to experience an exultation of the snickering sort.

We do not say that "The Beautiful Adventure" puts the strongest emphasis on the suggestive. The broad outlines of the theme do not belie the title, and at times they even brought to mind the adaptability of the story to a lovely dramatic poem. André is in love with his cousin, Hélène, who is living at the home of André's father, a Count. But owing to the intrigue of the Countess, who wishes to make a brilliant match for her niece, the two have been kept apart, their letters intercepted, and a full-grown misunderstanding has been created. After having received no direct word from André for two years, Hélène has consented to a conventional marriage with the rich Valentine, a pleasant, matter-of-fact fellow. The bride is in her gown, the guests have arrived, and the ceremony is to begin, when in comes André, back from his diplomatic post at Vienna, and finds Hélène for a moment alone. Of course, the misunderstanding is soon removed, and the two are reconciled. A precipitate flight ensues, in which André takes Hélène to her own little cottage in Périgord. Arrived there, she finds her grandmother (delightfully played by the aged Mrs. Whiffen) awaiting her, and, through a misunderstanding plausibly contrived, mistaking André for the groom. We need not explain in detail how naturally the two, in spite of their efforts, are forced into the most compromising of situations. The facts are revealed the next day when the Count and Countess and Valentine appear on the scene.

The chief difficulty in such a play for an American audience is the mixing of types. The play, according to our wont, should be a tragedy or at least a serious drama. And indeed one-half of it is so acted, but in putting the remainder in a relief of high comedy the author gives offence by juxtaposing the sacred and the trivial and thus rendering the "beautiful adventure" a bit of naughtiness which excites curiosity rather than deeper sentiment. It is a return to Restoration comedy, from which we had supposed that England and America had long ago escaped.

As played by Ann Murdock, Hélène is an ingenue with a capacity for deep feeling, which is somewhat impaired, however, by the lack of variety in Miss Murdock's voice and a little affectation. Otherwise, she indicated the possibilities of the rôle, and at times was charming. Charles Cherry's André was not wholly convincing, though his conception, save in two or three instances, had the required seriousness. A word should be said for the talent of Ernest Lawford, whose impersonation of Valentine, judged as a bit of detached comedy, was excellent. Let the most precise of men be put to the inconvenience of an eleventh-hour jilting, and the possibilities for humor speak for themselves. F.

"WHAT IS LOVE?"

One brisk act emerges from the rather faltering three-act comedy now playing at Maxine Elliott's Theatre. In more skilful hands than George Scarborough's the subject of this piece might have been worked into a play as light and airy as "A Scrap of Paper," which indeed the second act somewhat resembles. "What Is Love?" asks Lucy Gordon as wistfully as the propounder of "Who is Silvia? What is she?" And those who before were so eager to help her to pick between her two suitors and to smooth out her "slight" trouble retire blustering and stammering, each one a fool in his characteristic way. Here the play rose to some of its manifest opportunities and showed gayety and sparkle. But the final act, despite several good situations, sorely dragged, just as the first act was slow and repetitious, and in addition silly.

The cast was in the main well picked. Alice Brady, as Lucy, combined prettiness and daintiness with a wistfulness which only lacked depth. But the play is unfair to her in making the test of love depend upon the quality of a kiss, which in the case of true love is said to produce the effect of "apple toddy." This feature, which is in accord with the present-day clamor for sensation, might easily have been replaced by something capable of giving the play dignity as well as prettiness. Jerome Patrick as the jilted fiancé was excellent, and Charles Balsar barely missed the requisites of his part as the boyish lover. Theodore Friebus gave a good exhibition of a brother supposedly matter-of-fact but having underlying sentiment. F.

"PRETTY MRS. SMITH."

This production, in which Miss Fritzi Scheff is starred at the Casino, narrowly misses being a very remarkable event. If it were a musical comedy instead of, in the more recent refined fashion, a "comedy with music," and if the plot did not fizzle out altogether in the last act, it would be that *rara avis*, a musical comedy with a plot. As it is, simply for sake of the construction, it is almost worth taking seriously, despite the fact that there is nothing particularly original (as how could there be with the usual galaxy of authors, producers, lyricists, and composers?) in theme, lyrics, or music. But there is a plot that hangs together, at any rate until the last act; the words and lyrics are not meaningless, but bear some relation to the general theme, and the principal characters do something to assist in the development of whatever story there is to tell. It is doubtless, as long and bitter experience shows, a mere snatching at straws, but when we see a musical comedy, or a comedy with music, that has these elementary dramatic qualities, and see them appreciated by an audience, we persist in wondering whether it is possible that one day some combination of librettist, composer, and producer may appear to follow, even *longo intervallo*, Gilbert, Sullivan, and D'Oyley Carte.

Those responsible for "Pretty Mrs. Smith" must not be confounded with the people of this absurd dream, but the production is thoroughly amusing and enjoyable. Miss Fritzi Scheff, as the lady in question, is her usual piquant self, and is quite capable of managing the three husbands with whom an unwonted concatenation of circumstances has embarrassed her, and Miss Charlotte Greenwood is a comedienne of rare talent and refreshingly original methods. The rest of the cast is exceedingly competent, and the production is excellent. S. W.

"THE DRAGON'S CLAW."

It was not to be supposed that the stage would remain unaffected by the war. Before the war is over we shall no doubt see a sickening amount of theatric carnage. But in so far as it has prompted a revival of frank melodrama, its influence is not without some advantage. The latest piece of the sort is "The Dragon's Claw" at the New Amsterdam, which sets forth with a brave flourish the story of the Boxer attack upon the legations at Peking. Were our minds not filled these days with the big happenings in Europe, the stage fight put up by the small company in the British compound would be laughable enough. But over these childish sorties and momentary privations hangs that graver European picture and serves to conceal manifest weaknesses.

The play contains, of course, a love story and a smiling villain and a certain amount of comedy, but sadly lacks incident and surprises. Greater care in construction might have transformed this bit of history into a thrilling play, for it has rare possibilities. Yet out of such experiments there will come, we feel almost certain, one substantial war play, which is all that is to be expected. The principal parts in "The Dragon's Claw" are taken by Charles D. Waldron, Gladys Hanson, and Frederic de Belleville. F.

Loudon Charlton gives the comforting assurance that the Flonzaley Quartet is all right and will begin its American tour sooner than expected. The Kneisels have been rehearsing at Blue Hill, Me., with a pupil of Mr. Kneisel, Samuel Gardner, in place of Mr. Letz, who is serving in the German army.

As an accompaniment to the present European war, nothing could be conceived more appropriate than the music of the "futurists" who not long ago gave two concerts in London. Concerts is not what they called them,

their descriptive name for the entertainments being "noise spirals." The "orchestra" consisted of twenty-three "noise tuners," subdivided into nine separate classes, called buzzers, exploders, thunderers, whistlers, murmurers, gurglers, rattlers, crackers, and roarers. Some of these instruments are worked by electricity, there being a number of electric buttons which, when pressed, emit all sorts of picturesque noises. One of the pieces played was called "The Awakening of a Great City." First came the breaking of dawn, followed by a realistic reproduction of the numerous kinds of noises heard about the time when shutters are opened and the sidewalks swept. The roar of the increasing traffic is heard, with the strident sound of the motor-horn. The factory whistle adds its shrill sound, and we hear also the bell calling the workmen to their tasks. Another piece played was called "A Meeting of Motor-Cars and Aeroplanes." Two Italian cities had been visited by the "futurist orchestra" before London's turn came. In Milan, the band was received "with unbounded enthusiasm"; whereas at Genoa it "aroused a spirit of the bitterest hostility, culminating in a battle worthy of an Irish political meeting of the olden times." The inventor of this new "art of noises," as he calls it, is Luigi Russolo. Perhaps he is only a humorist poking fun at Schönberg, Ornstein & Co.

During the worst part of the French Revolution, when sixty or seventy persons were guillotined per day, no fewer than twenty-three theatres were open every night in Paris. From this fact the London *Musical News* argues that musical artists are not likely to suffer to a very appreciable extent, as history has proved again and again that, in times of stress and anxiety, the public seeks momentary forgetfulness in entertainments. This optimistic view is not sustained by the announcement that during the first three weeks of the war the receipts of the Moody Manners Opera Company diminished steadily, on which account the season has been cut short, while the Quinlan Opera Company has cancelled its tour of the provinces entirely. In London, the Albert Hall Sunday concerts are to go on, as will the Promenade concerts by the Queen's Hall Orchestra. The second concert of the Promenade series was to have been devoted to Wagner, but a French and Russian programme was substituted. This attempt to boycott German music met with greatest disapproval, in consequence of which the management announced that the original scheme of these concerts, as set forth in the prospectus, would be adhered to, with the exception that living German composers and artists are to be excluded. Regarding the Albert Hall Sunday concerts, Landon Ronald announced that only British artists will be engaged, not because of so-called patriotic motives, but in order to give native musicians a chance to support themselves and families.

"William Tell," which has been revived this week at the Century Opera House, is Rossini's masterwork—an opera as melodious as any he ever wrote, and, at the same time, more dramatic than its predecessors. It shows that, if he had not preferred to idle away the remaining thirty-nine years of his life, he might have anticipated some of the later developments in operatic style. Rossini was far from being a mere writer of tunes; he had it in him to do for Italian opera what Verdi, after him, did for it. Indeed, for his time, he was a good deal of a reformer. He refused to write for male sopranos and contraltos; he insisted on composing his own embroideries instead of leaving them to the singers; he was the first Italian to write arias for the bass voice; he paid much more attention to the orchestral score—particularly in "William Tell"—than the other Italians had done; and for this same opera he composed an overture which, to this day, is exceeded in popularity only by Wagner's "Tannhäuser" overture.

Under the title "Bayreuth 1914" Friedrich Wild publishes the twentieth volume of his guide to the Wagner Festivals. It is a sumptuous book of 464 pages, with forty-eight portraits of artists, accompanied by brief biographic sketches. In addition to useful information for musical pilgrims, this guide has provided in each issue several articles by experts on various episodes in Wagner's life and on his works. The volume for 1914 has one which explains Meyerbeer's attitude towards Wagner in Paris. There are two articles on the Nibelung's Ring, one on the "Flying Dutchman," and three on "Parsifal," one of these being entitled "'Parsifal': An Attempt at a Union of the Christian Religions." Another is devoted to the "Parsifal" scenery in general, while the third explains the technique of the Grail miracle. The guide is printed in English and French editions as well as in German.

Art

ENGLISH CHURCH ARCHITECTURE.

An Introduction to English Church Architecture, from the Eleventh to the Sixteenth Century. By Francis Bond. New York: Oxford University Press. Two volumes. With 1,400 illustrations. $14.

Mr. Bond is an indefatigable student of English mediæval architecture and ecclesiastical art, and an industrious writer on these subjects. His "Gothic Architecture in England," which appeared in 1905, is a standard work, generally recognized as the fullest and best of one-volume treatises on the subject. His "Westminster Abbey" and "Cathedrals of England and Wales" are well known, and he has also written extensively on the furniture and accessories of English churches. To these he has added within the past year, as the crowning result of his many years of study in this field, the present elaborate and sumptuously published work. It is a monumental study, occupying 960 pages; or, deducting the space devoted to the numerous admirable illustrations, the equivalent of 400 pages of text, or nearly 200,000 words. It is thus much more than a mere "introduction"; it is, within its own field, the most elaborate and complete treatise on English church architecture that has yet appeared. The qualification "within its own field" is necessary, however, because the author, for reasons of his own, has limited the scope of his discussion in a somewhat singular fashion, as will be presently explained.

English church architecture is a subject of perennial interest, not to the architect alone, but also to the historian, the antiquary, the ecclesiologist, the clergyman, and the still more numerous "average reader." England is extraordinarily rich in fine mediæval churches, especially in parish churches of the fifteenth and sixteenth centuries; and while her cathedrals are fewer than those of France, they are in their way fully as interesting, and her abbey-churches form a large and impressive class of edifices scattered through the kingdom. These churches, large and small—parish churches, abbeys, and cathedrals—exhibit an intensely national phase of the architecture we call Gothic. In spite of the tremendous influence of the Norman conquest and of French monks and priests previous to the Hundred Years' War, it early swung away from its French exemplars, ignored the French striving after loftiness and lightness of supports, and created new models, devices, forms, and constructions of its own, no less logical than the French, but controlled by a logic of form and decorative effect rather than of structural economy. It is thus fundamental divergence from the French ideals of structural logic that has misled even so intelligent a writer as Professor Moore to insist with much reiteration that the English mediæval builders ignored logic and produced no "true" Gothic architecture. Yet the English multiple-ribbed vault was the product of a perfectly logical extension of the structural device of vault-ribs exhibited in the simpler French quadripartite vaults; the superb hammer-beam "open-timber" roofs of English churches and halls are as logical structurally as the flying buttresses of Chartres or Amiens; and the chapter-houses of York, Wells, Salisbury, and Westminster are perfect embodiments of the same principles of structural design which produced Notre Dame or Rheims.

This aspect of his subject, as a whole, Mr. Bond ignores. For its discussion, the reader is referred to the author's "Gothic Architecture in England." The author's approach to his subject is not from the side of construction nor of historical style-evolution, but of ecclesiology. Mr. Bond, though an honorary member of the Royal Institute of British Architects, is not a practicing architect, but an architectural *savant*, an *érudit*, as the French would say, whose knowledge of and interest in architecture have sprung from precedent antiquarian and ecclesiological enthusiasms. The author's primary interest, in this treatise, is not to show how, out of various sources, influences, and conditions, English church architecture as a whole developed its plans, structural methods, and characteristic forms; but rather to explain how certain types were developed to meet particular ecclesiological requirements, and how, in this process, each constituent element of church design was handled. The differences between the requirements of the secular and the monastic clergy, between the different orders of monks, between various forms of church organization and government—these are the considerations with which he starts his investigation. Thus Chapter II deals

with these among other topics: Lay Use of the Nave; Number and Position of Altars; Relics, Shrines, and Pilgrims; Processional Ritual; Chantry Chapels, etc. Nowhere is the historic evolution of the English types of church plan taken up in the broad and comprehensive fashion in which, for instance, it is handled in Sir Gilbert Scott's "English Church Architecture," or in which Viollet-le-Duc discusses the evolution of French church plans in his "Dictionnaire Raisonné." To this important topic Mr. Bond gives only four pages at the very end of the book. The planning of monastic and parish churches is treated in Chapters III and IV from the purely ecclesiological point of view. The subsequent ten chapters are devoted to architectural details: vaulting, abutments, walls, arches, piers, lighting, bay-design, clerestory, protection from rain, towers and spires. The treatment of these subjects is generally excellent, and more interesting to non-clerical readers than the detailed, learned, and lengthy discussion, in the earlier chapters, of the planning for procession-paths, feretories, north-and-south alignment of chapel-altars, and like topics.

These earlier chapters display a remarkable extent and patience of research, and are, of course, of great interest to scholarly ecclesiologists; but other readers will generally skip the greater part of these 278 pages for the more strictly architectural portions following. The discussion of English vaulting is full and detailed, and is accompanied by a really extraordinary series of illustrations, comprising both photographic views of unusual excellence and diagrams. The chapters on tracery, on the abutment system, and on towers and spires are also admirably done, and that section of the chapter on Protection from Rain devoted to the timber ceilings is also worthy of special mention. The two volumes constitute a most valuable storehouse of information on the subjects which they discuss.

The deficiencies which prevent complete satisfaction in the perusal of this notable work lie implicit in its plan. Upon the plea of having already in other volumes treated of the history of Gothic architecture in England and discussed the great cathedrals which it produced, Mr. Bond entirely omits both these subjects from the new work and refers the reader to the two books mentioned at the beginning of this review. Not only is this unfair to the reader to whom those books may not be immediately accessible, but the entire omission of any broad historical conspectus of English church architecture as a whole is in itself a grave mistake, fundamentally impairing the completeness of the discussion even of the topics most elaborately treated, and disconcerting to the student who wishes something more than details.

The omission from this work of any study of the cathedrals, both secular and monastic, is even less defensible than the preference of the ecclesiological to the historical method. A few of the cathedrals are, it is true, casually mentioned here and there, but always in connection with some detail which one or another happens to illustrate. In such a treatise one would expect to find at least a list of the secular and of the monastic cathedrals, and some explanation of how it happened that in England abbey-cathedrals were numerous, while in France bishops and abbots were arrayed against each other in bitter hostility; but—unless tucked away into some corner as an *obiter dictum* which has escaped the reviewer's eye—this significant topic is ignored. And in spite of the author's interest in monastic matters, one looks in vain for descriptions, with plans and views, of any even of the great abbeys (St. Alban's, Waltham, Tewkesbury, etc.), as a whole. The author's love of details prevents his giving the larger, unifying aspects of his subject. Details he treats fully, minutely, *con amore*, with a fulness of knowledge and a wealth of erudition derived evidently, not merely from books, but also from personal study of the buildings themselves. The amount of information he conveys is prodigious, its value incontestable. But of such general subjects as figure-sculpture, carving, decorative design, iconography, choir-screens, and choir-stalls, he gives us no systematic account. Mention of these occurs only in the course of the discussion of particular details of design. The English chapter-houses are hardly mentioned in the text, and do not appear in the Table of Contents, yet they are the most distinctively English products of the Gothic period, absolutely original and absolutely logical in design and detail. Neither does Mr. Bond discuss the cloister, although one would imagine it deserved an important place in even an "Introduction" to English church architecture. For all these matters Mr. Bond expects his readers to turn to his earlier books.

The text is preceded by two glossaries, of which the second, devoted to French terms used in the text, is regrettably full of errors of spelling and definition. Copious indexes at the end of the second volume make easy the looking up of any desired topic. Too much praise can hardly be bestowed upon the illustrations; they are abundant, well selected, and admirably reproduced and printed. The presentation on the same page of plans drawn to different scales is a minor defect.

Almost simultaneously appeared in 1907 the Rev. H. W. Macklin's "The Brasses of England" and Herbert Druitt's "Costumes on Brasses," the former surveying from an antiquarian and historical point of view the broad subject of English monumental brasses, of which nearly four thousand, inlaid in church floors and elsewhere, have survived the ravages of time, puritanism, and the restorers; the other giving the results of an exhaustive study of several centuries of changes in civil, military, and clerical clothes, traceable in these monuments. An inexpensive compilation which combines the essential features of the information in the two works, together with results of more recent research, is now published in "Ancient Memorial Brasses" (Oxford University Press; 3s. 6d. net). The author is Edward T. Beaumont, member of the Oxford Architectural and Historical Society. The book should be useful to designers, those particularly who need to know European costume; students of English literature and history, to whom the brasses offer a rich mine of documents; churchmen, who will find in it data which may or may not confirm present practices in vestment and ceremonial; antiquaries and genealogists, to whom the inscriptions thus preserved are hardly less important than the parish registers. The author very properly hopes that an effect of the publication will be to increase a public disposition to "abstain from treading on, or in any way damaging, these quaint 'cullen plates,' for they have become valuable heirlooms."

Finance

REOPENING OF THE STOCK EXCHANGES.

To be confronted with a problem surrounded with very grave possibilities; where action in the matter would at once open the door to dangerous results, and yet where action, sooner or later, must be taken; all this without any clear precedent in financial history to suggest beforehand what the immediate consequences of such action would be—this is the interesting position in which the stock exchanges stand.

Not only in New York, but in the great financial centres of Europe, pressure to reopen the stock exchanges—which have now been closed seven weeks—is being quietly but strongly applied. In New York, the Exchange authorities have to meet, not only the discontent of their own membership, whose livelihood has been cut off and who are growing restive, but also the investing community, which claims the right to a market on which to invest its savings or to sell its holdings when it needs to raise the money. Yet, equally at New York, at London, and on the European Continent, stock exchange governors shrink from taking the step.

To clear the question up, it will be worth while to set forth just what dangers would surround reopening, and then to see how far they are real or unreal. The hazards of that action may be thus summarized: First, resumption of official trading would give opportunity for European liquidation of American securities, on any scale suggested by the fears or necessities of the foreign investors, who hold American securities running in amount into hundreds of millions of dollars. Secondly, as a consequence, a great increase in our immediate European indebtedness might ensue, with a heavy outflow of gold to meet it. Thirdly, prices of stocks might be forced so low as to compel wholesale closing out of collateral loans at banks, thus jeopardizing the credit of Wall Street brokers and operators, and breaking prices still further. Fourthly, bond prices might decline so far (in response partly to necessities of foreign holders, and partly to the impending European war loans, which may bear high rates of interest) as to affect rather

awkwardly the balance sheets of institutions holding such bonds as assets.

What is to be said in answer to these arguments? There are offsetting considerations which have at least some force—the question is, how much? One is, that prices on July 30, when the Stock Exchange shut down, not only represented enormous foreign liquidation, based on expectation of the very things that happened later, but were the prices of world-wide panic. No relief measures had been introduced; no Lombard Street banker, loaded with German obligations against which no remittances were possible, yet against which his own notes were outstanding in the London money market, knew or imagined that the British Government would declare a moratorium; but in default of such relief, it was a question of individual solvency. But the situation now, in those regards, differs as widely from July 30 as our market's situation in November, 1907, with foreign gold rushing in and the banks on their feet again, differed from that of the Stock Exchange panic day, October 24.

Another consideration which must be recognized is that wherever, in August or in the present month, trading in stocks and bonds has been conducted for cash on an "outside market," the declines from the July 30 prices have been inconsiderable. Even at London and on the Continent, such trading has elicited prices with no greater declines than might have occurred after a harvest failure or an oppressive act of legislation. This is exactly what happened when the New York Stock Exchange closed for ten days in the panic of 1873. When that market reopened—relief measures having in the meantime been applied—official prices were only a point or two below those of the panic day, and they recovered moderately afterward. It is true that, in the "outside trading" of the seven past weeks, there was no opportunity for European bankers to "unload" their holdings of American securities. It is also true that, in 1873, Europe was in a position to buy heavily in the New York market. But the question would still remain, Why, if very much lower values are an eventual certainty, should any one have paid such prices as have actually been established on the curb since the European war broke out?

These considerations do not dispose of all the dangerous possibilities. Europe might sell heavily, even with actual panic ended and with home investors willing to buy at current prices. On the other hand, it may be argued that, with its own home industrial companies largely paralyzed by war, the foreign investors have a motive for buying rather than selling our securities. That is a possibility; the New York city loan subscription will throw some light upon it.

The most impressive argument of all is that the Stock Exchange must reopen some time. Is there reason to believe that the potential dangers now surrounding the resumption of business would be less three weeks from to-day, or three months from to-day, than they would be this week? Would the prospect of heavy European liquidation disappear if the war were actually to end? It is not altogether easy to get an affirmative answer to these inquiries. If there were positive ground for saying that, at a given date, the hazards would disappear, few people would object to fixing that date, even though distant, for the Stock Exchange reopening. No one has yet suggested any workable plan for averting possible foreign liquidation. But meantime, the one fact which experience teaches is that, at junctures of this sort, apprehensions invariably run beyond what turns out, later on, to have been the truth of the situation.

GENERAL CHEMISTRY

Principles and Application. By LYMAN C. NEWELL
Professor of Chemistry in Boston University.

This new book excels in directness and simplicity of presentation, in the novel grouping and arrangement of subject matter, and in the compact and luminous treatment of theory. It devotes unusual space to the chemistry of everyday life and the industries. Part I—Descriptive Text. Part II—Experiments. Complete, 580 pages, $1.20.

D. C. HEATH & CO., BOSTON, NEW YORK, CHICAGO

High Tariffs and Militarism

are strikingly discussed in **The Whole Truth About the Tariff,** by G. L. Boleu. This, the only complete and the only late tariff book, seems to prove its author's claim that there is no need for adequate knowledge of this ever live issue to be confined to a few specialists. The new tariff of 1913, embodying the greatest changes ever made in our tariff laws, will have extra proof from Europe's war. This book states the economic intricacies in our chance to add trade, 317 pp. 5½x7½, 75c. postpaid. Phoenix Pub. Co., Battle Creek, Mich. "His discussion of all the problems is masterful," said the Pittsburg Gazette of the author's standard book on labor.

WHERE TO GET RELIABLE WAR NEWS

THE

ARMY AND NAVY JOURNAL

is the ONLY paper in the United States whose reports of the European war are strictly professional, stripped of all sensational, unconfirmed rumors and other misleading matter, thus enabling its readers to follow intelligently the progress of events from week to week.

"The present position of the Journal," a correspondent writes, "is unique and commanding. Owing to the President's order to Army and Navy officers it is the sole source—for a nation of 110 millions—of informing discussion as to military and naval operations in the European war."

A NEW POPULAR AND TIMELY EDITION OF

The LIFE and TIMES of CAVOUR

By William Roscoe Thayer

CRITICAL ESTIMATES

HON. ANDREW D. WHITE.

"It seems to me one of the really great American books, which cannot fail to aid strongly in promoting a better political life in this country. The matter, the style, the fulness of knowledge of the subject, and the way of using it, all seem to me to be admirable."

COUNTESS EVELYN MARTINENGO CESARESCO, *the English biographer of Cavour.*

"Your book is a great achievement and will last. You have raised a monument more durable than stone."

PROFESSOR HERBERT FISHER, *Oxford University.*

"I read your Cavour with admiration for its knowledge, spirit and force."

A New York man actively concerned with some of the largest financial interests in that city recently told, in a letter to William R. Thayer, the following interesting incident connected with Mr. Thayer's latest book, "The Life and Times of Cavour":

"In the meeting of a railroad board the other day, the chairman had some difficulty in bringing the meeting to order because three of the members were so absorbed in comparing notes on your 'Cavour,' which they had all read. How often do you suppose the wheels of business in New York are blocked by discussion of that sort? Not often, I fancy!"

From one of the foremost American men of letters and literary critics.

"Your book has absorbed me as nothing else has done for a long time, and its construction and penetration seem to me masterly. The language also is vivid and masterly. . . . Perhaps what impressed me most in it was its maturity. I mean by this that it showed plainly its long gestation. The quotations of letters in the first chapter, for instance, are made with full prevision of what the last chapter is to be."

EX-PRES. THEODORE ROOSEVELT, *in an article in the Outlook and in his address as President of the American Historical Association, referred to* "The Life and Times of Cavour" *as* "One of the chief products of American historical scholarship."

EX-PRES. W. H. TAFT *wrote*:

"I take the opportunity to say to you how much I enjoyed your history of Cavour. He seems to me to be one of the three or four men in history. . . . Your history is one of the books I would like to read again. I love history but I have read nothing that has given me greater pleasure."

From an article by GEORGE M. TREVELYAN *in the Atlantic Monthly.*

"His standard of scholarship is as high as any in any university in the world, but his book is of the open air, of the great world of politics and affairs and people. I will institute no comparisons, but I will illustrate my meaning by saying that Mr. Thayer's 'Cavour' is of the same class and type as Mr. Rhodes's great work."

NOTE. This is the initial volume of the new Riverside Popular Biographies Series which we have in preparation. Full information sent on request. 2 vols. With frontispieces. Price of the original edition $7.50 net. Price of this edition $3.00 net.

THE OBERLEHRER

A Study of Factors in the Development of the Modern Schoolmaster in Germany

By WILLIAM SETCHEL LEARNED, Ph.D., of the Carnegie Foundation for the Advancement of Teaching.

8vo. Cloth. 150 pages. $1.25

Any one who desires to see the teaching of American youth placed on an unquestioned professional basis, will follow the evolution of the secondary school teacher in Germany with admiration as well as interest. The place of one whose aim it is to "see life steadily and see it whole," to interpret thereby achievements in each new field of art, science and religion, and to inspire the new generation with his vision, must always be the most significant and worthy of most study.

NEW AND FORTHCOMING BOOKS

The Evolution of Early Christianity. By SHIRLEY JACKSON CASE.
The beginnings of the Christian movement are here studied from a wholly new point of view. By examining the actual religious situation in which the Christians of the first century lived, the author is able to shed fresh light on many parts of the New Testament. 390 *pages, 12mo, cloth;* $2.25, *postage extra* (*weight* 1 *lb.* 11 *oz.*).

Water Reptiles of the Past and Present. By SAMUEL WENDELL WILLISTON.
A comprehensive volume of great scientific importance, by the author of *American Permian Vertebrates,* which has become a recognized authority in its field. The book discusses in sixteen chapters the classification and skeleton of reptiles, their age, the adaptation of land reptiles to life in the water, and the various orders 256 *pages, royal 8vo, cloth;* $3.00, *postage extra.*

The Lincoln and Douglas Debates. (Publications of the Chicago Historical Society.) By HORACE WHITE.
This account of the famous debates is notable because the writer accompanied Mr. Lincoln on his tour of Illinois and reported the speeches Mr. White's later experience as editor of the *Chicago Tribune* and of the *New York Evening Post* peculiarly qualifies him for setting forth adequately the character and effects of the debates.
With 4 plates. 32 pages, 8vo, paper; 25 *cents, postpaid* 29 *cents.*

William James and Henri Bergson. By HORACE M. KALLEN.
A striking presentation of the relation between the philosophies of William James and Henri Bergson, by Dr. Kallen. The book is particularly significant as coming from a former student and intimate friend of Professor James.
264 *pages, 12mo, cloth;* $1.50, *postage extra.*

The University of Chicago Science Series

This new series enables the investigator to present the results of his special researches, not only to a wider public but to his scientific colleagues, in a form more attractive and accessible than is possible through scattered contributions in technical journals.

THE FOLLOWING VOLUMES ARE ALREADY IN PRESS:

The Evolution of Sex in Plants. By JOHN MERLE COULTER, Head of the Department of Botany in the University of Chicago. *16mo, cloth;* $1.00, *postage extra.*

The Origin of the Earth. By THOMAS C. CHAMBERLIN, Head of the Department of Geology in the University of Chicago. *16mo, cloth;* $1.00, *postage extra.*

Publications in Religious Education

Problems of Boyhood. Studies in Ethics for Boys of High School Age. By FRANKLIN W. JOHNSON.
This book, prepared by the laboratory method, is the result of the wide and successful experience of the principal of the University of Chicago High School. His book is the first in the field to start with a recognition of the boy's point of view.
160 *pages, 12mo, cloth;* $1.00, *postage extra* (*weight* 1 *lb* 1 *oz.*)

THESE VOLUMES ARE NOW IN PRESS:

The Sunday-School Building and Its Equipment. By HERBERT F. EVANS.
With the modern reorganization of the curriculum of the Sunday school there has come an urgent demand for adequate housing of the school; and the author in this book answers the question as to how buildings should be constructed for Sunday-school use, and how old buildings may be remodeled at moderate expense. It is the most recent practical discussion of Sunday-school architecture.
16mo, cloth; 75 *cents, postage extra.*

Graded Social Service for the Sunday School. By WILLIAM N. HUTCHINS.
A highly suggestive discussion of the question as to what may be done in the Sunday school to convert its social teaching from theory into practice. As the outcome of a wide study of present activities the author presents a varied program of possibilities, from which teachers and workers may select according to the conditions in their own schools. *16mo, cloth;* 75 *cents, postage extra.*

The Weather and Climate of Chicago. (Publications of the Geographic Society of Chicago.) By HENRY J. COX and JOHN H. ARMINGTON, of the United States Weather Bureau.
The importance of this book is indicated by the fact that it is issued under the auspices of the Geographic Society of Chicago, and has been prepared by two of the best known weather experts in the country.
396 *pages, 8vo, cloth;* $3.00, *postage extra* (*weight* 3 *lbs.* 1 *oz.*).

Unpopular Government in the United States. By ALBERT M. KALES, Professor of Law in Northwestern University.
An especially timely book, presenting with great clearness and cogency some of the political needs of the country, particularly the necessity of the short ballot. The author discusses various expedients for restoring the American ideal of democracy. The book has already attracted wide attention and discussion. 270 *pages, 12mo, cloth;* $1.50, *postage extra* (*weight* 1 *lb.* 8 *oz*).

A Laboratory Manual of Letters

By THOMAS H. BRIGGS, Teachers College, Columbia University

12mo, cloth, 94 pages, 25 cents.

"A Laboratory Manual of Letters" presents for critical study fifty letters actually written by high-school boys and girls in a number of commonly recurring circumstances. After an introductory essay on what constitutes a good letter, there follow laboratory questions on the material presented.

The book meets a real demand in the teaching of high-school composition. It is the outgrowth of the author's own teaching experience; and has been prepared in the belief that letter writing is seldom taught with due attention to individuality and adaptability, that letters presented in texts used by high-school pupils are almost without exception those written from the adult point of view; consequently they are inappropriate and unstimulating models for young people; and that it is more difficult and more effective for pupils to discover and pass judgment on vices and virtues in a real printed letter than on those in an artificial exercise.

ECONOMIC PRIZES

ELEVENTH YEAR

In order to arouse an interest in the study of topics relating to commerce and industry, and to stimulate those who have a college training to consider the problems of a business career, a committee composed of

Professor J. Laurence Laughlin, University of Chicago, Chairman
Professor J. B. Clark, Columbia University
Professor Henry C. Adams, University of Michigan
Horace White, Esq., New York City, and
Professor Edwin F. Gay, Harvard University

has been enabled, through the generosity of Messrs. Hart, Schaffner & Marx, of Chicago, to offer in 1915 four prizes for the best studies in the economic field.

In addition to the subjects printed below, a list of available subjects may be had by addressing the undersigned. Attention is expressly called to the rule that a competitor is not confined to topics proposed in the announcements of this committee, but any other subject chosen must first be approved by it.

1. A Local Study of the Immigration Problem.
2. A Study of the Protocol in the Needle-Trade Industry.
3. The Economic Validity of the Single Tax.
4. Price Maintenance.
5. Reciprocity and Retaliation in Foreign Trade.
6. Ship Subsidies by Indirection.
7. The Development of Trade with Latin America.

Class B includes only those who, at the time the papers are sent in, are undergraduates of any American college. Class A includes any other Americans without restriction; the possession of a degree is not required of any contestant in this class, nor is any age limit set.

A First Prize of One Thousand Dollars, and A Second Prize of Five Hundred Dollars

are offered to contestants in Class A.

A First Prize of Three Hundred Dollars, and A Second Prize of Two Hundred Dollars

are offered to contestants in Class B. The committee reserves to itself the right to award the two prizes of $1,000 and $500 of Class A to undergraduates in Class B, if the merits of the papers demand it. The committee also reserves the privilege of dividing the prizes offered, if justice can be best obtained thereby. The winner of a prize shall not receive the amount designated until he has prepared his manuscript for the printer to the satisfaction of the committee.

The ownership of the copyright of successful studies will vest in the donors, and it is expected that, without precluding the use of these papers as theses for higher degrees, they will cause them to be issued in some permanent form.

Competitors are advised that the studies should be thorough, expressed in good English, and although not limited as to length, they should not be needlessly expanded. They should be inscribed with an assumed name, the class in which they are presented, and accompanied by a sealed envelope giving the real name and address of the competitor. No paper is eligible which shall have been printed or published in a form to disclose the identity of the author before the award shall have been made. If the competitor is in CLASS B, the sealed envelope should contain the name of the institution in which he is studying. The papers should be sent on or before June 1, 1915, to

NEW YORK, THURSDAY, OCTOBER 1, 1914.

Summary of the News

In the western field of operations the battle of the Aisne has continued and there has been little change in the situation during the past week. In the east the Russians have made further gains in Galicia, and in East Prussia and Poland there have been advance and retreat, with no decisive gain for either side. We deal elsewhere with these events.

The position of Italy continues to be the subject of agitated comment in the foreign press. There is no doubt that among at any rate a large section of the population there is a decided sentiment in favor of entering the war on the side of the Allies. On the other hand, a considerable number of the more sober-minded of the people of Italy have, at all events until recently, supported the Government in its efforts to preserve neutrality. The Government has undoubtedly made a strong effort to prevent the country from being forced into war by popular clamor and to avoid the invidious appearance of taking a part only in order that Italy may have a share of the spoils should the Allies prove victorious. So far as that goes, if there shall be a division of plunder, Italy's neutrality alone will probably be considered sufficient to entitle her to repossession of the Italian territory occupied by Austria, and it is possible that the Government may be able to preserve its present attitude; but there is no doubt as to the cause that lies near to the hearts of the Italian people, and it looks as if only a small pretext would be needed to make them take up arms in its behalf.

That pretext may not impossibly be afforded by complications in the Albanian situation. Unaided, certainly, by happy chance or, apparently, by natural adaptability, Prince William of Wied, we may presume, has definitely laid aside the Mpretship of Albania. At any rate, the Albanian Senate has elected Prince Burhan-Eddin, a son of the ex-Sultan Abdul Hamid, to the vacant throne of that turbulent country, thereby flying in the face of the Powers. Simultaneously Essad Pasha, with twelve thousand troops, has prepared to march on Durazzo to overthrow the interregnum. Here is a situation which might afford Italy an opportunity to intervene in Albania "to protect her interests," and intervention by Italy would most probably mean a declaration of war on the part of Austria.

The ultimate fate of many of the oversea possessions of the contending Powers will naturally be settled not in those possessions themselves, but on the battlefields of Europe and in the North Sea. Meanwhile, however, the colonies of Germany are gradually being appropriated by her enemies, and already territory amounting to more than half the size of the German Empire in Europe has been lost. In addition to the seizures of German colonies already made, it was announced last week that a South African Union defence force on September 19 occupied Luderitzbucht, in German Southwest Africa, and that a French gunboat on September 21 took possession of Coco Beach, in Kamarun, the German colony in Western Equatorial Africa. On Monday official announcement was made that Duala, the official seat of the Government of Kamarun, had surrendered to a British force. It was stated last week that Gen. Botha, the Premier of the South African Union, would personally command the force that is being organized for offensive purposes in German Southwest Africa.

The War Revenue bill, comment on which will be found elsewhere, was passed by the House on Saturday of last week by a vote of 234 to 135. Only one Republican voted for the bill, and eleven Democrats voted against it.

The Trade Commission bill was signed by the President on September 26. As previously announced by the President, the members of the Commission will not be appointed until the session of Congress in December.

The Senate substitute for the Rivers and Harbors bill, limiting the amount of appropriation to $20,000,000, was agreed to by the Rivers and Harbors Committee on Monday.

According to dispatches from Washington, the President has let it be known that he has no intention of dropping the bill providing for the Government ownership of shipping at this session of Congress unless he can be convinced that new circumstances have arisen to make the postponement of action at this time necessary.

By order of Secretary Daniels, the Marconi wireless station at Siasconset, Mass., was closed at noon on September 25. This action was taken in consequence of the failure of the company to give assurances that it would comply with the regulations of the naval censorship.

In an interview with President J. F. Welborn, of the Colorado Fuel and Iron Company, on Wednesday of last week President Wilson made it clear that he insisted upon a three years' truce in the strike situation in Colorado as laid down in his original plan for a solution of the difficulty. Objection has been raised by the mine operators to some of the details of the plan suggested, and these objections were formulated in a letter, published on Monday, which has been addressed to the President by the presidents or chairmen of forty-eight Colorado mine companies. Further comment on this matter will be found in our editorial columns.

By a considerable majority in the election on September 23 the State of Virginia declared in favor of prohibition.

As we write, the returns from the primaries held in New York State on Monday are not absolutely complete, but organization candidates appear in each case to have won and the following nominations are indicated with fair certainty: For Governor—Gov. Martin H. Glynn (Democrat), Charles S. Whitman (Republican), Frederick M. Davenport (Progressive). For United States Senator—Ambassador James W. Gerard (Democrat), James W. Wadsworth, jr. (Republican), Bainbridge Colby (Progressive; unopposed).

According to figures cabled by Sir Edward Grey to the British Embassy in Washington, 387 German merchant vessels have been seized since the beginning of the war, having a total tonnage of 1,140,000. Eighty-six British vessels have been lost, the tonnage of which amounts to 229,000.

After the hopefulness which has been felt by the Administration concerning the Mexican situation, the breach between Villa and Carranza, which came to a head on September 22, is the more disappointing. The differences between the two leaders were summarized in a statement given out by Gen. Carranza on September 26. Villa, he declared, demanded that the general conference, which was to have been summoned on October 1, should pledge itself to reëstablish the national and state civil régimes within thirty days after the conference concluded its discussions; that no present army officer should be eligible as a candidate for any elective office; that the Federal State Legislature should be convoked immediately, and that the electoral college should be chosen for the election of a permanent President. To these demands Gen. Carranza replied that only the conference itself was able to take up these questions.

The first clash in the new revolution proclaimed by the State of Sonora took place at Santa Barbara, on September 25, when Carranzista forces under Gen. Benjamin Hill were routed by the troops of Gov. Maytorena, and, finding themselves outnumbered, retreated in the direction of Santa Cruz. On Friday of last week Brig.-Gen. Funston, commanding the American forces at Vera Cruz, was ordered to postpone the evacuation for ten days, the official explanation being given that the order was caused by a delay in the adjustment of many details incident to the transfer of funds and the custom house.

The gist of the quarrel between the Constitutionalist leaders is that Villa demands the total elimination of Carranza, and officials of the Administration express the hope that an agreement may be reached on this basis. Efforts have been made to arrange for a conference of representatives of Villa and Carranza. The latter has signified his willingness not to become a candidate for the Presidency or Vice-Presidency if Villa will do the same, and on Monday Consular Agent Carothers made a report to the Administration containing assurances from Villa that he would not be a candidate for either office. The attitude determined on by the Administration is one of strict neutrality as between the two factions; the embargo on the importation of arms will not be restored, and it is stated that the order for the evacuation of Vera Cruz will stand, except for the delay necessitated by the change in the situation.

The deaths of the week include: Ex-Representative William S. Knox, September 22; Dr. John McGraw Woodbury, September 24; Dr. John Lanson Adams, Right Rev. Franklin S. Spalding, Sir James P. Whitney, September 25; Hugo Reisinger, Col. Franklin J. Moses, David M. Levett, September 26; ex-Representative John M. Wever, September 27; Richard W. Sears, Prof. William K. Gillett, September 28.

The Week

The Administration's somewhat hopeful view of the break between Villa and Carranza is based on a belief that, while their distrust of each other has been long smouldering, they are by no means yet irreconcilable. The immediate rupture was apparently caused by a difference over the basis of representation in the approaching Constitutionalist Convention. It is Villa's conviction that Carranza was attempting to pack the meeting with his adherents; while Carranza seemingly looks with suspicion upon the field commander's desire to apportion seats according to units of 1,000 soldiers. But if both men are fundamentally sincere, adjustment of such a disagreement should be possible. If both hold to the principles for which they fought side by side through bloody and discouraging months, there can be no genuine reason for their turning upon each other. And for the present, there is no proved ground for believing either a traitor to the cause. The danger is that a factitious misunderstanding will lead to fighting and permanent bitterness. In any event, President Wilson can only continue his policy of watchful and hopeful waiting. The Mexicans must be left to adjust matters among themselves, and they must understand by this time that a renewal of their bickerings will simply defer American recognition of the provisional Government. Surely, too, there are responsible elements in Mexico that will make their influence felt towards a settlement.

The narrowness of the Democratic Senate majority increases the hope that the emergency revenue bill to raise $105,000,000 may be amended in the upper chamber. A long delay is surely before it. As it passed the House Friday, eleven Democrats lined up with the solid Republican opposition; a defection of half so many votes in the Senate would defeat the measure, and defeat must be guarded against by making the bill more nearly satisfactory. In its present shape it is a mixture of good and bad, the objectionable items being mainly those in which it exceeds the scope of the Spanish War measure. For all the silliness of the Republican attempt to read into the emergency a condemnation of the Underwood tariff, the broader Republican contention that economical government would have saved the country from the special taxes commands respect. There is much insincere party manœuvring on such an issue, and it will be recalled that Mr. Underwood and other Democrats made party capital by opposing the Republican Spanish War tax. But the Democrats need a severe lesson in economy, as their predecessors did before them. They should be eager to make the measure, already freed from its two most preposterous proposals, as inoffensive as possible.

By linking together the Philippine and Porto Rico bills, and bringing in special rules for their consideration, the House approaches in a businesslike way an essential part of its programme. To the Porto Rico bill not the slightest opposition has been advanced, while the opponents of the Philippine measure have yielded their ground by evading the question. The Japanese bogey, that served so well the interests of those who preached a larger navy and the fortification of the Canal, is brought forth for this last service to the Republican forces. Certain Senators ask if it would be prudent to force a debate on our relations with Japan at a time of general sensitiveness in international affairs; but they fail to explain why it will be necessary to bring Japan into the matter at all. To this measure the Filipinos have ardently looked forward for six months, and the insular Administration has already paved the way for its liberal provisions. A public interest in the bill will be helpful in stimulating certain even of the Democratic members of Congress, who would be glad to see the House partially carry out the party platform, but who will have less concern in pushing it through the Senate. Congress has accomplished so much during the past week, in making law the Rivers and Harbors bill, the General Leasing bill, and the Massachusetts-Connecticut Boundary bill, in reaching a conference report on the Clayton Anti-Trust bill, and in passing the War Tax bill through the House, that it has the less excuse for delaying the two new measures.

Senator Shafroth's name gives force to the opposition to the Alaska Coal Leasing bill; but adherents of the measure, which was drafted under Secretary Lane's supervision and bears the approval of the Administration and of Alaskans, have successfully resisted his attacks. Its intent is to prevent monopoly of coal lands, and yet allow for their development by offering leases under strict limitations; thus ending a condition by which the people of the Territory, with their huge fields excluded from entry, now pay $18 per ton for British Columbia coal. Senator Shafroth's main objection is that the leasing system constitutes a moral violation of the compact between the States, putting those in which there are public lands, and which may therefore have to accept the system, in a position of inferiority. But this hardly applies to a Territory; while since a Supreme Court decision of 1840 the right of Congress to lease public land in the States has never been denied, and has repeatedly been exercised. The opening of Alaska coal lands to indiscriminate entry in 1901, again, produced so many abuses that leasing seems the only practicable method of obtaining fair development. The proposal to regulate prices by a certain amount of Government mining is obviously objectionable. Another contention of the opponents of the bill is that leasing is unfair to the Territorial treasury. This contention is unsound, even in the abstract; and as the proceeds from coal lands are to go for the construction of the Alaskan railways, and not to the national Government, it falls entirely to the ground. The bill is a necessary part of the Administration's programme to further mining, land, and water-power development, while promoting general conservation, and should be passed.

It is not hard to account for the dissatisfaction which has led Postmaster-General Burleson to propose to the Senate Post Office Committee a scheme to save $20,000,000 annually by turning the rural free delivery over to contractors. The immense growth of the R. F. D. since 1896 has given it 40,000 routes, with an army of carriers that is a definite factor in Congressional politics. The salaries of these carriers have been raised eight times in fourteen years, and stood in 1913 at $1,100 per annum. A careful consideration of the conditions of the service convinced the Postmaster-General that such a figure was then adequate, especially as an enormous number of applications were regularly received for employment at the prevailing rate. Nevertheless, the maximum salary was raised again this summer to $1,200. It was freely charged in Congress that this was largely in consequence of the activities of a lobby, supported by the *R. F. D. News*. At the same time, the Postmaster-General was left to remedy a state of things under which some carriers of 20,000 pieces of mail monthly received no more than some who carried 3,000. The whole subject evidently needs close looking into. The Department now pays $53,000,000 for a service which annually returns less than $10,000,000. If Mr. Burleson can show that

$26,000,000 of the Government expense is waste which could be avoided under the contract system, there will naturally be a strong demand that that remedy be speedily adopted.

Secretary McAdoo has conducted the Government's side of the "emergency expedients," since the war began, with promptness and judgment. His attitude towards certain unsound suggestions—notably that which would have had the Treasury issue currency against the whole cotton crop—was entirely statesmanlike, and was very useful in stopping the progress of a number of inflation schemes before they had been pushed long enough to be dangerous. It is these very creditable actions which cause the greater regret for the recklessness with which the Secretary has more recently been hurling at various banks and groups of banks charges of extortion and deliberate misuse of the emergency facilities. Blunders are made by banks in matters of this sort, and, in special cases, the cause may be selfishness as well as excessive fright; but nothing could be simpler, for a firm executive officer, than in a quiet and dignified way to apply direct personal pressure to such institutions, and insist on the abandonment of such policies. The alternative of rushing into print with hasty accusations, imputing evil motives and threatening condign punishment, is not only highly undignified, but is certain to land the accuser in the kind of position in which the Secretary found himself last Monday, when he had to withdraw a charge of extortion, publicly made against certain New York institutions, with the explanation that the man (unconnected with the banks in question) who had given the incriminating information had admitted that he was mistaken. No such incidents ought to be allowed to happen, and nothing of the sort would happen if the Treasury abandoned in these matters the practice of snap judgment and premature publicity.

To the great problem of disarmament—absolute or relative, in the near future or the remote—which is bound to engage the attention of the world when the terrific struggle ends, Hamilton Holt contributes a suggestion well worthy of study. His article appears in the current number of the *Independent*, under the title, "How to Disarm: A Practical Proposal." The argument is based on the history of federal unions, and especially of the United States; the proposal itself is that of the formation of a "League of Peace," founded on the following five principles:

(1.) The nations of the League shall mutually agree to respect the territory and sovereignty of each other.

(2.) All questions that cannot be settled by diplomacy shall be arbitrated.

(3.) The nations of the League shall provide a periodical assembly to make all rules to become law unless vetoed by a nation within a stated period.

(4.) The nations shall disarm to the point where the combined forces of the League shall be a certain per cent. higher than those of the most heavily armed nation or alliance outside the League. Detailed rules for this pro rata disarmament shall be formulated by the Assembly.

(5.) Any member of the League shall have the right to withdraw on due notice, or may be expelled by the unanimous vote of the others.

That the world should go on, after the appalling experiences which it is now undergoing, upon the old basis of mere blind competition in preparedness for general destruction, is a prospect to which no thinking mind can reconcile itself. When the bloodshed and devastation come to an end, the best thought in every nation must be centred upon the possibilities of remedy. And it is not improbable that it will be along some such lines as those which have been indicated by Mr. Holt that the remedy will be sought.

There is one feature of the war situation upon which we believe it is safe to say that opinion throughout the world is unanimous. Briton and German, belligerent and neutral, militarist and pacifist—all must agree that the present attitude of the Boers in South Africa is a magnificent vindication of the good policy—we say nothing of the righteousness—of the broad-minded and humane course adopted by the Liberal Government in England towards the people of the vanquished South African Republics. The British Imperialists were aghast at the folly of such treatment of men who were not only fresh from the carrying on of a war that had strained the resources of the Empire, but had been life-long enemies of British power and British influence; they could not find words strong enough to characterize conduct whose pusillanimity they regarded as matched only by its peril and its ineptitude. And now all the world finds that magnanimity and far-sighted humanity have achieved what no amount of rigor or force could possibly have accomplished; that respect for the rights of men and for the principles of free government has converted into an element of strength what would have been a source of danger in this time of trial. No more impressive lesson of the potency of right and justice has ever been given than is furnished by the loyalty to the British Empire now being shown by the brave and sturdy people who, so short a time ago, were its bitterest and most determined enemies.

There is a passage in Dr. Eliot's fine letter in the New York *Times* which is liable to misinterpretation. Dr. Eliot quotes Goethe's remark that he was longing for the day when the national spirit in Germany should be "ready to rise in all its might, when the day of glory dawns," apparently as proof that even the greatest of Germans thirsted for military glory. As a matter of fact, Goethe has often enough been reproached by his countrymen with indifference on this very point. He has thus defended himself, in a well-known passage in "Eckermann's Conversations with Goethe," against the charge of not having taken part in the War of Liberation: "How could I take up arms without being impelled thereto by hatred? And how could I hate at my age? . . . War is foreign to me, and I am without military ambition." And in pointing out to Eckermann why he could not ever write martial poetry, as Theodor Körner had done, Goethe said, in a still loftier strain:

> I have never written love songs except when I loved; how, then, could I have written songs of hatred without hating? Between ourselves, I never hated the French, although I thanked God when we were rid of them. How could I, to whom the question of culture and barbarism alone is all-important, hate a nation which is among the most cultured of the world, and to which I owe so great part of my own culture? National hatred is indeed a peculiar thing. It is always found more pronounced and violent where civilization is lowest; but there is a stage of culture where it vanishes altogether, where one stands, so to say, above all nations, and feels the happiness and the sorrows of a neighboring people as much as if they were a part of one's own.

No one knows better than Dr. Eliot how vast was the horizon over which Goethe's vision swept, in the course of his long life, and that the subject of his nation's greatness, like so many other subjects, presented different aspects to him at different times. Dr. Eliot must therefore recognize in Goethe one of the world's tranquil masters to whom all nations will turn to lead them once more in the path of civilization, after the "glories" of the present war shall have ceased to trouble us.

Among services of this war to letters, we must not forget the fresh material it should offer Henry James in the satirizing of ex-

patriate Americans. The resources of spleen demonstrated by some luxurious souls given their first taste of hardship—spleen vented upon the President, Ambassadors, and Consuls, relief conmittees, railway, steamship, bank, and hotel officers—are most extraordinary. One woman, convinced up to August, 1914, that the universe was primarily ordained for American millionalres, has risen in London to heights of sarcasm "about what she asserted was the beautiful treatment accorded to her by Ambassador Gerard, Major Ryan, and others in Berlin, and by Minister Van Dyke at The Hague." While a prominent financial writer abuses our Government for not sending army transports in fleets, returning scores curse the fate that humiliates them with second-class passage. Why did not Europe, facing a life-and-death struggle, stop everything to coddle her guests to safety? Why did not transportation agencies show a clock-work efficiency in dealing with so easily foreseen a crisis? Fortunately, the shield has its obverse in a majority of travelling Americans who are uncomplaining and considerate, and in Americans resident abroad who are lending every energy to succor the wounded and distressed. Such persons, together with the Government officials who have wrought so bravely in the emergency, can only echo Horace to the malcontent: *Cur me querelis exanimas tuis?*

The primaries in New York State on Monday furnished no surprises. In all parties the organization won, as expected. Any other result would have been truly surprising. Experience with the direct primary is more and more showing that the skilled practitioners can use that political tool as successfully as any other. As a rule, we must count upon the carrying of the primaries by the men who organize for the purpose of carrying them. This simply means that, in politics as everywhere else, close attention and discipline and work day in and day out will get the better of scattered and disunited efforts. Cool-headed advocates of the direct primary recognized all this from the beginning. The disappointment is only for those who dreamed that, somehow, the direct primary would be a device to give us automatically high-grade and independent candidates, and to defeat the bosses and smash the machines. But the truth is that you can't smash the machine simply by more machinery. A given piece of machinery is better than another; and the really sound argument for the direct primary is that it is a great improvement over the old system. This means only that it can be used with greater ease and effect, if the determination to use it exists. But short of some great and exciting issue, some outrage of boss nomination, this weapon will not be seized upon eagerly by the rank and file of the party, and the consequence is that the leaders will generally have their way. They had it on Monday in New York.

The Philadelphia *Ledger*, a thick-and-thin protectionist newspaper, and the leading daily in that citadel of protectionism, is fighting vigorously against Penrose. This is a pleasing development when one recalls the long history of the old Pennsylvania Republican machine. What made the continuous rule of the Camerons, and Quay, and Penrose possible was that, with extremely few exceptions, even the best of Philadelphia Republicans drew the line, in their resistance to it, at the point where their action might in any way imperil the sacred edifice of protection. The *Ledger* itself does, indeed, insist that protection is not practically involved in Penrose's election, or the reverse; thus it devotes a leading editorial to proving, by a survey of the prospective vacancies in the Senate, "that it would be practically impossible, unless there is a Republican tidal wave in 1916 and 1918, to overcome the Democratic majority in the United States before 1920," and that therefore "the future of the protective system" is not "in any way contingent upon the defeat of Senator Penrose." But that is not the good old Pennsylvania way of thinking about protection. In season and out of season, with danger near or remote, with expectations reasonable or unreasonable, the one supreme duty was to stand by protection and to knock free trade in the head. How are you going to have a tidal wave if you don't work for it? And what is a little thing like Penrose's corrupt organization in comparison with winning a victory for protection? That was the old-time Pennsylvania way of thinking, and it is encouraging to see evidences that it is being outgrown.

The report upon the timber barons of the United States and their immense holdings which the Bureau of Corporations has just published reveals a condition that must seem very serious to all friends of equitable national development. We have within our own borders estates which the most opulent Mexican landholders would regard with respect; they were in some cases acquired unfairly, if not illegally; and they are in many cases administered without regard for the common good. Briefly, the report shows that "1,694 timber owners hold in fee over one-twentieth of the land area of the United States"—105,600,000 acres, or an area two and one-half times the size of New England. Sixteen owners hold 47,800,000 acres; three railways have enough to give fifteen acres to every adult male in the nine Western States where their holdings lie; while in the Upper Peninsula of Michigan 45 per cent. of the land is held by 32, and in Florida one-third of the entire State by 52 timber owners. The cause of all this is lavish land grants and loose, ill-enforced land laws. Lands that in the early days of the Republic were granted in expectation of quick redistribution to small holders are still intact. Of 82,500,000 acres granted to three Western railways in the 'sixties, the roads still retained 40 per cent. in 1910. These figures should give the country a new interest in Government suits like that instituted last year to recover millions of acres from the Southern Pacific Company, the Southern Oregon Company, and others. They should also stimulate the belated movement to revise the public-land laws.

A round million dollars will be paid by Chicago this year for the elections it will hold. As the offices to be filled number 153, the cost of filling each office will be over $6,500. This sum strikes some citizens as disproportionate. An Alderman receives $3,000 a year; ought it to cost more than twice that to select him? A State legislator is paid $2,000. The officials whose salaries come nearest to equalling what it costs to elect them are the Municipal Court judges, who receive $6,000 a year. There is, however, no necessary relation between the salary of an office and the expense connected with the election by which it is filled; the cost of elections is merely part of the price we pay for self-government. But voters in Chicago seem to have a real grievance in the cost of their elections. For one thing, in every period of six years there are five years in which there are at least two elections a year and a primary for each. The sixth year has only one election and its corresponding primary, but this is offset by an occasional year that brings three elections. This is surely too many voting-days, but not only or even mainly because of the expense they involve. The real objection to so many elections is that they ask of the voter more than he will grant, which means government by professional politicians. The expense of unnecessary elections can, however, legitimately be used as a strong popular argument against them.

SLAVERY AND MILITARISM.

The praises of militarism, still sounded in certain quarters, are strangely like the laudations of negro slavery which were heard in this country on the eve of the Civil War which was to abolish it forever. In both cases, that is to say, what was at first apologized for as temporary evil is held up later as the highest good. We know that it was so with slavery. Washington and Jefferson groaned over it and were ashamed of it. But Toombs and Davis exalted it as the ideal form of human society. The late Professor von Holst, in a telling monograph, brought together a striking body of quotations from Southern writers and statesmen, setting forth the successive changes in the way of viewing slavery. From being thought of as a reproach and a crime, it came to be ecstatically described as the divinely ordained means of bringing society and government to perfection.

This is an old story, as respects slavery. But is it not being repeated to-day in the defence and glorification of militarism? The parallel can hardly fail to be noted by one who attends to the new ways of looking at militarism. In the beginning, nobody had a word to say for it except as a matter of dire necessity. Compulsory service for two or three years by every youth physically fit; the immense money sacrifices that were involved; the crushing burdens of taxation that resulted; the constant imperilling of peace that went with the rest—all these things were originally represented as a duty laid upon citizens, but a confessedly grievous duty. It was hard to be borne, and everybody hoped that the time would come when it might be got rid of altogether. But little by little the point of view changed. The time came when the nation in arms was declared to be the model of modern civilization. Nothing like the life of a soldier for mental, moral, and spiritual discipline, it was said. Nothing so uplifting as the completest possible preparation for war; nothing so glorious as war itself. The consummate flower of civilization was *das Volk in Waffen.*

We have not exaggerated the language used by the enthusiastic champions of militarism. And we do not refer to the fanatics for armaments and for war—men like Bernhardi, whose writings have injured the German cause more than two hostile army corps could have done. Ideas like his have permeated all classes. They are adopted—or, at least, uttered under the stress of war—by clergymen and university professors of moral philosophy. There is no need to mention names. Nor do we assert that the cult of militarism is confined to Germany. The thing has become a terrible obsession lying upon all Europe. One can perhaps see its growth, and the reasons for it, more clearly in the German Empire than elsewhere, but the spirit of militarism has shown itself everywhere. And our present point is that it has distorted the vision and confused the judgment of men just as slavery did. Sober men, educated men, finally embrace the evil which they at first thought frightful.

This process of subtle change, by which men came to look upon evil and say to it, Be thou my good, is not so absolutely unintelligible as it might seem. In the instance of slavery, the historian and the moralist have shown us how it came about. Even good citizens were insensibly caught in a moral mesh. They could not see where self-interest and greed had blinded them to immutable truths. And a fair and calm study of the rise and spread of militarism in Europe would reveal distinct causes definitely at work to produce the state of affairs which is now distressing the world. The phenomenon is in part the old one of a plausible argument being worked to death. Because Stein and Bismarck drilled and organized, thereby succeeding, everybody must be given over to a passion for drilling and military organization. That this should have finally resulted in the elevation of the soldier above all his fellows, and the apotheosis of war, is a fearful thing, no doubt, but one can understand it. So could one understand the domination of slavery in this country. But that did not lessen the hatred of it which our truest-souled patriots felt. Nor will clear-eyed men to-day be less resolute in hoping and working for the destruction of the noxious growths of militarism simply because they perceive in what soil it is rooted.

One long and bloody war made an end of slavery. May we faintly trust the larger hope that another will rid the world of the curse of militarism? We cannot at present see far into the maze. How the great good desired can come out of the awful evil now pressing down upon the heart of all mankind, no man will undertake to say. But it may be that in the high designs of Providence this murderous war is to make men shudder hereafter at the very thought of war, and to loathe those who prepare for it and praise it; in such a way that militarism may expire on the battlefield as slavery did. Such a result would make the torrents of blood now being shed seem not altogether in vain. Hopes like these may well be in the minds of those who at President Wilson's bidding will next Sunday pray for peace.

THE SUBMARINE VICTORY.

If ever pride went before a fall it was Mr. Winston Churchill's. On September 11, in a speech in London, speaking of the German policy of conquering the British fleet by attrition, he boasted that the "attrition has been on their side and not on ours. The losses they have suffered have greatly exceeded ours." Since then four valuable British cruisers have been lost, perhaps without the slightest cost to the Germans, three by the submarine attack in the North Sea, and one in a fifteen minutes' engagement in the harbor of Zanzibar; and the boot is now on the other leg. The growing uneasiness of the British public over the inability of their fleet to get at the Germans Mr. Churchill has tried to meet by saying contemptuously that, if necessary, the "rats" would be "dug out of their holes." To this language of the hustings the Germans have made their answer, and Mr. Churchill will be further embarrassed by the fact that two stray German ships have sunk twenty big British merchantmen in Indian and South American waters, just after he had announced that they had only taken twelve merchantmen all told.

This debit balance may be upset by later news. Moreover, the loss to the British navy of seven cruisers since the beginning of the war is in itself trifling to a fleet which has about 120 to call upon, in addition to all the auxiliary cruisers, converted merchantmen, it has at its disposition. The German submarines must needs repeat their terrible victory many times before there is sufficient attrition to make a serious numerical showing. With the psychological factor, however, the situation is different. There can be no doubt that the German achievement will not only increase the unhappiness of the British public, but that it will enormously increase the strain upon the blockading British fleet. While the exact situation of the lost vessels is unknown, they were plainly not far distant from the Dutch coast; but that these German under-water boats have shown amazing daring and gone long distances from home is apparent. It is now officially admitted that it was a submarine and not a mine which sank the Pathfinder, September 5, on the east coast of Scotland, roughly 400 miles from the nearest German harbor. The Germans assert that they laid mines through submarines at the outbreak of the war at the very mouth of the Thames; it is beyond dispute that they deposited some quite near the east coast of England. A letter from a German sailor just published tells of a long voy-

age to England for reconnaissance purposes, and of passing unseen under a British squadron off Scotland.

That this is not impossible appears from the fact that a submarine built at Kiel in 1908 is known to have had an ordinary range of action of 1,000 miles, coupled with the ability to make nine knots under water for a period of three consecutive hours. Since then improved vessels have been built—Germany has thirty-nine submarines built or building—indeed, it has been stated that the newest British submarines have a cruising radius of 2,000 miles, with an above-water speed of twenty-one knots and a submerged speed of not less than fifteen. The French submarine Mariotte has a radius of 2,200 miles at ten knots. One of the ninety-six English submarines built or building has already accounted for one small German cruiser, the Hela, and others took some slight part in the battle off Heligoland. But no submarine feat in naval history is comparable to this disposal in twenty minutes of three great cruisers. What anxiety, what nervous strain this will cause in Jellicoe's fleet no one can overestimate; but those of our officers who were with Sampson in the weary vigil off Santiago can well understand. Rear-Admiral Mahan, writing in the *Academy*, says that the heavy British blockaders must remain out of sight by day, and shift their positions every night, as the only possible safeguard against attack; and he rightly anticipated this latest news by saying that "in this war we may look for fairly decisive tests of the actual value of these new means of warfare; for the opponents are skilled, enterprising, and trained, which was not the case with the Russians in the naval war of ten years ago."

The nerves of Jellicoe's crews may be further tried by aircraft. Berlin insists that no Zeppelin has been injured or lost; Sir John French reports that not a single one has been sighted by the British troops. If they are being saved for some spectacular raid, might it not be for an effort to fly over the decks of the great British battleships quite as much as the coast of England? With the advent of winter the Zeppelins will become almost useless; this fact must steadily be before the British commander as the autumn wears away. But the submarine must remain the fleet's greatest danger. If there is luck, it may be smashed by a gun, as one of the German boats was recently sunk; if conditions are favorable to the attacker, the best of ships may go down like a stone, for some of these boats can fire eight torpedoes at a time. Altogether, if German daring succeeds further, Sir Percy Scott, who so recently announced the retirement of the battleship by reason of the submarine, may find his prophecy verified far sooner than he could possibly have expected. It is interesting in this connection to note that another British officer, Brig.-Gen. G. F. Stone, declares that submarines are preferable to heavy guns for purposes of coast defence.

SUPERSTITIONS OF COMMERCE.

The development of German industry and commerce during the past few decades has been no less impressive than that of her military power. In both the Kaiser has borne a notable and highly influential part. But, strange to say, the attribution to him of an almost god-like power and efficiency is very much more marked in relation to the advancement which Germany has made in her economic activities than in the domain of war. The Kaiser, says Mr. Carnegie, "has built up a great foreign commerce and a marvellous internal business." The special correspondent in Germany of one of the New York newspapers, speaking of the futility of all talk of a downfall of the Hohenzollerns as a possible consequence of the present war, writes as follows:

> Germans of every class have a worshipful admiration for the Kaiser. He is the greatest business man they have ever known. He has built German prosperity. It is to his leadership they owe that commanding position they have until this war occupied in the commercial world. He has not only encouraged mercantile and manufacturing enterprises, but he has almost created their over-seas trade. The marvellous development of commercial chemistry—in which field Germany stands easily foremost—is solely due to his initiative, and almost to his direct command.

That these statements represent the feeling and opinion prevalent throughout a large part of the German population, and especially in the high circles of finance and industry and commerce, we have no doubt. And that there is a certain degree of foundation for the feeling, we would not dispute. But in the main it is a striking instance of a phenomenon by no means rare in the history of commercial opinion—the tendency to cherish superstitious instead of rational views concerning the causes of material prosperity.

With the founding of the German Empire in 1871, the people of Germany entered upon a new era in their history—an era in which the ambitions and the energies of the nation were directed in a vastly augmented measure towards material advancement. The extraordinary thoroughness which had long been recognized as preëminent in their scientific work was sure in this modern day to tell with overwhelming effect in the development of their manufacturing industries, if once it was directed towards that end. As a manufacturing country Germany, at the time of the foundation of the Empire, was in its infancy. With a large and growing population, with the tradition of universal education two generations old, and with this great domain of human enterprise almost a virgin field before it, there needs no recourse to the hypothesis of a superman to explain what happened. The time had come for just such a development as we have seen, and the development followed. A very similar thing has happened in our own country; the causes underlying the enormous industrial growth of the United States in the past thirty years, though different from those operating in the case of Germany, are like them not only in being perfectly natural, but in the one particular which is essential to them both. A vast opportunity was open to a great, energetic, and enterprising people; and the time had come for them to take hold of it. There was no more reason why Germany should remain indefinitely a minor factor in the enterprises of modern industry than there was that the United States should. In the case of Germany this expansion has been in large part—though by no means completely—coincident in time with the reign of William II; and while it is not to be denied that he has exercised a considerable influence in stimulating it, the idea that it would not have been essentially of the same nature if he had simply stood by and looked on, is not worthy of a moment's consideration.

Even in the matter of rapidity of growth, a certain amount of illusion is prevalent among those who stand agape at the Kaiser's miracle. Thus if we look at the trade statistics in the latest volume of the Statesman's Year-Book we find that in the eight years 1905 to 1913 Germany's exports grew from £292,000,000 to £495,000,000, while those of the United Kingdom rose from £330,000,000 to £525,000,000. But it would be absurd to belittle in any aspect the achievements of Germany in manufactures, commerce, or finance; all that we are saying is that they are the achievements of a nation of 65,000,000 people equipped with the most efficient educational system the world has ever known, and highly endowed in ability, diligence, thoroughness, and thrift. To ascribe what they have done, except in an altogether subordinate degree, to the interposition of a divinely gifted ruler, is to adopt, but with far less excuse, the attitude

of the Japanese commanders who piously attributed their victories to the virtue of the Mikado. "With far less excuse," we say, because, of course, Nogi and Togo knew perfectly well that it was only in some symbolic or mystical sense that they owed their victories to the Mikado's excellence. The extravagance and obfuscation of the idea is more like that which underlay the protectionist superstition in this country, when millions of otherwise intelligent Americans really seemed to think that had it not been for the tariff this great nation, with opportunities unparalleled in the history of civilization, would have been a poverty-stricken people grubbing along on pauper-labor wages. Or, to go a little farther back in history, it is on a par with that state of mind —now so difficult to realize, but which it required the genius of Adam Smith to dispel —when the whole mercantile world was obsessed with the idea that the great object of national commercial policy was to get, and to keep away from other nations, all the gold that it was possible for a country to lay hold of.

THE COLORADO PROBLEM.

The letter addressed to President Wilson by J. F. Welborn, president of the Colorado Fuel and Iron Company, made the prospect for a speedy return to normal conditions in the mining region of that State less promising than had been hoped. Some days later, a communication was presented to the President on behalf of forty-eight other Colorado coal-mining companies, taking essentially the same position as that expressed by Mr. Welborn, and going into fuller details as to the reasons for it. The first impulse of many, doubtless, will be to condemn out of hand the attitude assumed by the companies. But the case is one calling for calm and earnest consideration, and not for the passing of hasty and sweeping judgment. Let us endeavor to see, then, what the essential points in the situation are, and what may yet be done to bring about not, indeed, an ideal settlement, but a working solution, of the difficulty.

First and foremost, it must be recalled that the plan worked out by the Federal Commissioners, and submitted to both sides by President Wilson, was put forward not as a definitive, but as a "tentative" proposal. While, therefore, it was generally hoped, and indeed urged—as it was by the *Nation*—that both sides should accept the proposal, the making of objections to particular features of it, coupled with the expression of a desire to discuss the question, cannot be regarded as fatal. This is what the operators have done. Secondly, it is stated that the President does not consider the question closed, that he is working for further negotiations, and that he still looks for a favorable settlement. In a matter of this kind, so much is possible as a result of face-to-face discussion, with the public interest represented by a man of Mr. Wilson's clearness of mind and strength of purpose, that we can but regard the outlook as hopeful so long as the President does not himself give up the effort.

As for the points in the proposed *modus vivendi* to which the operators object, the essence of them is easily stated. They object to the requirement that *all* miners who have not been found guilty of violations of law shall be reëmployed; and this for three separate and distinct reasons. First, that many men who have not been so found guilty are nevertheless well known to have been guilty of fomenting and committing violence, and that their hostility to the men who continued peacefully at work will make their working alongside these latter in the mines a constant source of friction and of danger. On this head, the letter of the forty-eight companies particularizes as follows:

> In six of the counties of the State 332 of the strikers, including officers of the United Mine Workers of America, are under indictment for murder and 137 for other felonies. None of them have been tried, therefore none have been found guilty, and much time may elapse before they are tried.

Secondly, that the requirement is incompatible with retaining the men who have stood by their employers throughout the time of trouble, and such desertion of faithful workmen would be disgraceful and against public policy. And thirdly, that the requirement in any case ignores the practical limitation of the opportunities for employment, especially at this time of diminished demand.

In addition to these broad considerations, relating to fundamental questions, the operators object to certain other points upon which we feel that they would have been better advised to show a more conciliatory spirit. These relate to functions of the proposed permanent Grievance Commission. They object to the proposal that mines shall not be closed down more than six days without permission of the Commission, on the ground that this would make the working of the mines dependent on the will of the Commission instead of on the conditions of business; but is not this rather a theoretical than a practical objection, when the Commission is to be composed of one representative of the operators, one of the miners, and a third impartial person? In like manner, the objection that the assessing of penalties by the Commission must be inequitable, because unenforceable upon the workmen while enforceable upon the companies, seems to us not to allow for the resources of common-sense and a just purpose on the part of the Commission. And the objection to the payment of half the expenses of the Commission by the miners seems to us hardly of sufficient importance to be put forward as a difficulty.

What we find regrettable in the letters of the operators, however, is not so much the substance of them as the failure to indicate such hearty and sincere desire to bring about a settlement as would comport with a realization of the serious nature of the situation. With their unwillingness to sacrifice the rights of non-union miners we are in the most hearty sympathy; all the more, therefore, do we regret the stressing of objections of a less vital nature. Nothing is plainer than that, if a settlement is to be reached, both sides must concede something. We believe that President Wilson is quite open to conviction, and ready to make any modification of the original proposal for which sufficient reason can be assigned; and we should feel it to be particularly fortunate if the operators shall succeed in impressing upon him the necessity of making any change which is necessary in the interest of the upholding of the rights of workmen who refuse to submit to trade-union despotism. And for that very reason we hope that the operators will show the most reasonable and the most liberal possible spirit, consistent with the maintenance of those rights. The manifestation of an obstinate disposition—any conduct which shall have even the appearance of indifference to the public sentiment so strongly desirous of bringing the long struggle to a close—would not only be deplorable from the standpoint of the public, but would prove in the end even more so from the standpoint of the operators themselves.

ATLANTIC COASTAL WATERWAYS.

In his welcome to the Atlantic Deeper Waterways Convention, Mayor Mitchel, of New York, protested against the "unwise economy" of certain cuts in the Rivers and Harbors bill. For seven years the Association has labored for the improvement of inland navigation routes, its special purpose being to obtain a continuous inner way for ships along the Atlantic and Gulf coasts from Galveston to Boston. The undertaking is as huge as it is generally worthy. By rea-

son of the expense involved, it must wait many years for realization; its accomplishment depends on steady progress, which is now interrupted. Against a drastic economy the Association cannot protest, nor against the almost sweeping condemnation of the original bill because of the abuses in some of its parts. There was little time for discrimination, and good provisions had to suffer with bad. The Mayor objected to the dropping of the items for a 35-foot channel in the East River, and for removing the dangerous reefs which prevent full access to the Brooklyn, Queens, and East Manhattan waterfronts. The Association will feel more keenly the postponement of Government acquisition of the Chesapeake and Delaware Canal for conversion into a ship canal. For the time being, the members must put their main hope in the future.

Yet what has been done in the last few years in obtaining Government support and enlisting public interest in a safe and standard inland waterway from Maine to Florida, connecting with the Great Lakes and the Mississippi, is highly encouraging. Last year found the Association in possession of reports by United States army engineers upon every section of the enterprise. Some were condemned, but the principal ones were supported on both commercial and humanitarian grounds. Gen. Bixby endorsed the Chesapeake and Delaware link as worthy of immediate improvement to a depth of twelve feet, at a cost of $8,000,000, in addition to the purchase price of $2,500,000. This direct connection of Philadelphia with Baltimore and Annapolis would open an old route —a relic of 1829, so limited in width and depth as to be almost unused by modern vessels, and owned by a corporation whose tolls approximate the charges by rail—to a traffic almost comparable with that of the Panama Canal. With the construction of another link from the Delaware to the Raritan and New York Bay, approved by the army engineers and by Woodrow Wilson when Governor of New Jersey, New York would have a channel to Newport News by a route far shorter and less dangerous than formerly, and serving in a new way Philadelphia, Wilmington, and a score of other cities south to Norfolk. This Delaware-Raritan Canal would cost $20,000,000. Finally, the army engineers approved a seven-foot passage from Beaufort, N. C., to the St. John's River, inside Cape Lookout, Cape Fear, and the dangerous shoals beyond, at an estimated cost of $14,400,000. Not only coastal cities, but people along rivers like the Connecticut, Hudson, Potomac, James, and Savannah, should understand the potential benefits of these waterways.

The amount of traffic predicted for them is not a more forcible argument than the loss of life resulting from the passage of barges and other coastal vessels upon the high seas. In ten years (1900-1910) the disasters to such ships are stated to have numbered 5,700, with a loss of 2,200 lives and of $40,000,000 in property. The urgency and the assured profit of some of the proposals are seen in the attention paid to them by non-Federal agencies. With every reason why the Government should build the Cape Cod Canal, it has been constructed by a private company under two State boards. It will yearly handle 12,000,000 tons of coal alone, and is expected to develop a huge barge traffic. The State has laid plans to build still another link in the intracoastal route, that from Narrangansett Bay to Taunton, and possibly to Boston Harbor. New Jersey is considering a similar work. While such enterprise is to be encouraged, the field is properly the national Government's, which has already spent $700,000,000 upon our rivers and harbors. And the two considerations of the extent of Atlantic coastal commerce —more than three-fourths of the whole country's—and its dangerousness, lend support to the contention that Congressional appropriations have discriminated against the Eastern littoral. Congressman Hampton Moore states that Maryland and New Jersey have together received but $17,000,000, while the comparatively new States of Oregon and Washington, with far less commerce, have had $33,000,000.

The Atlantic Association and the bodies working for a solution of the Mississippi flood problem have aims so practical and worthy that they should be active in opposing projects of another sort—those which have for years viciously drained the Treasury. Theirs are not the only sound projects, but they are the most powerful of the internal improvement organizations. One of their aims should be to repress the unworthy schemes which cling to the commendable ones—schemes for improving little rivers of the East and Middle West. Another should be to have instituted a responsible and permanent agency for carrying on rivers and harbors work in a scientific manner. Temporarily, it has been entrusted to the army engineers. If it were given over to some adequate commission, as has been frequently proposed, there would never again be any necessity to cut the appropriations to an absolute minimum to prevent unjustifiable waste.

Chronicle of the War

A fresh enemy, more deadly probably than bullets or shrapnel or even than the Krupp siege guns of which we have heard so much, has appeared to menace all the armies of Europe impartially. Disease is the inevitable concomitant of every war. In the Boer War, it is said that 55,000 British troops were attacked by enteric or dysentery, and in our own Spanish War the figures of those who were disabled by disease have been put as high as 60,000. In the present war the appearance of disease has been postponed longer than could reasonably have been expected. Three weeks from the beginning of a campaign is the usual time allowed for this enemy of armies in the field to make itself felt, and the fact that it has not assumed serious proportions until recently is a high tribute to the efficient organization of the sanitary, medical, and commissariat arrangements of the various armies.

Of the Germans this was expected, for meticulous attention to the minutest details of campaigning is their particular province—and in spite of this it is to be remembered that when Metz surrendered in 1870 half of the besiegers were on the sick list—but the British have obviously taken to heart the lessons of the Boer War in this as in so many other respects, for we hear on all sides of the remarkable efficiency of their commissariat and sanitary corps, and the French and Russians cannot be far behind them. The most serious outbreak of disease is reported to be among the Austrian troops, where it is said that Asiatic cholera has appeared, and for the defeated forces of the Dual Monarchy this may well prove a subtle form of revenge, since the Russian troops, going over the ground vacated by the enemy and taking prisoners, will find it difficult to escape infection. In the west dysentery and enteric are the two enemies, but other infectious diseases, such as measles, may appear, as smallpox, the danger of which is now happily minimized by vaccination, did in the Franco-Prussian War.

More than ever, then, we see that war is a matter of endurance. The fittest will survive, and calculating that the average of resistance to disease will be pretty much the same in the armies of all the combatants, the problem still resolves itself, as we pointed out last week, into a matter of battalions, in which the ultimate superiority must rest with the Allies. Meanwhile, we learn that feverish efforts have been put forth to provide against the spread of disease. Large quantities of quick lime—grewsome intelligence—have been sent to the front for use on battlefields, and extraordinary precautions are being taken to insure that the drinking water is not got from contaminated sources. This latter precaution will be difficult to enforce, as the rivers in northern France must by now have been thoroughly contaminated, and in addition, as experience in the Boer War showed, it is next to impossible to induce a dry-throated Tommy Atkins to refrain from slaking his thirst wherever opportunity offers.

The battle of the Aisne, now approaching the end of its third week, may be likened to a wrestling match, in which two combatants, well matched in strength and skill,

stand poised on the mat for seconds at a time, apparently at rest, only the taut muscles indicating the terrific strain under which each is laboring. The relative positions of the two armies differ but little from what they were when we wrote last week, yet the fighting that has taken place since September 12, when the retreating Germans turned at the Aisne and a general engagement commenced, has been more severe than any other thus far.

The fighting during the past week has resolved itself into a race between the left flanks of the opposing armies, the French and British pressing their efforts to turn the German right wing and envelop the army of Gen. von Kluck, and the Germans on their own centre and left making desperate attempts to penetrate the line between Verdun and Toul. The success of either of these movements would give temporary victory to the army that accomplished it, and the result of the battle of the Aisne, unless there should occur a total and unexpected change in the whole situation, will be determined by whichever movement is first completed.

Should the Germans succeed in breaking through the Verdun-Toul line of fortifications, they would accomplish a twofold object. First, Verdun would be isolated and could be reduced at leisure, as was Maubeuge, and heavy reinforcements would have to be rushed to the support of the French line on the Meuse, thereby lessening the pressure on the German right wing and frustrating the turning movement to which the Allies have devoted more than two weeks of constant effort and have sacrificed an enormous number of troops. Secondly, a new and shorter line of communications would be opened to the German armies by way of the eastern frontier; the lines through Belgium could be abandoned, and the troops, probably not less than 300,000, that have been guarding them, would be released for the more immediate business in France. These considerations account for the desperate and persistent nature of the attacks on this barrier. The army of the Crown Prince narrowly escaped disaster there at the battle of the Marne, and only extricated itself by a hurried retreat from Ste. Menehould to Montfaucon. In this second attempt the Germans have had a certain amount of success, the Bavarians having succeeded in occupying St. Mihiel, on the east bank of the Meuse, and thus cutting the railway along the river to Verdun. French reinforcements, however, were rushed up, and the German advance has been checked.

On the other hand, should the turning movement of the Allies succeed, the whole of the German campaign in France would break down. Only a hasty retreat could save the army of Gen. von Kluck, and with it that of Gen. von Bülow, from annihilation or surrender. With these armies it would be necessary for the entire line to fall back. The essential features of the battle of the Marne would be repeated, and the German invaders would be compelled to retire on the line of the Belgian frontier, which, according to reports, has already been fortified in anticipation of this emergency. The pressure on Verdun would naturally be automatically relieved.

The net result of the week's fighting has been small. The official announcement from Paris on Tuesday gives a clear idea of the line occupied by the Allies and also indicates that some ground that had been gained a week previously has since been lost. Lassigny, which, as we recorded last week, was occupied by the Allies, has now been reoccupied by the Germans, and the Allies must have been driven back a short distance on their extreme left, as we read that their line now, instead of starting in the neighborhood of Péronne, starts some ten miles to the northeast, between Albert and Combles. In the desperate fighting, then, which was reported on Friday of last week as having taken place between Tergnier and St. Quentin, when we heard that the Germans had been heavily reinforced, we may assume that the Allies were forced back a short distance. On the other hand, near the centre, between Verdun and Rheims, the progress which was reported on Friday must have been continued, for we read that the French line runs to the north of Souain, where German troops were reported to be early last week. The whole line, as given in the French official dispatch on Tuesday, runs from west to east: Albert and Combles, Roye, Lassigny, the region of Soissons, Berry-au-Bac, north of Souain, through the heights of the Meuse, the region of St. Mihiel, Apremont, Pont-a-Mousson.

In the eastern campaign the Russian armies have made considerable progress. The easy capture of Jaroslav, which we recorded last week, would seem to indicate some demoralization among the Austrian forces. It is a strong fortress, fully equipped, standing astride the River San, with three forts in a four-mile line on the right bank and sixteen forts in a five-mile line on the left bank. Following the occupation of this place, the efforts of the Russians were directed to the capture of Khyroff, twenty miles south of Przemysl, which is the key to the railway communication with the fortress. Khyroff was reported taken on Saturday, and Przemysl is doubtless now isolated. The line due east from Jaroslav to Cracow, on which the Austrians are retreating, and which has been put in a state of defence, is some 120 miles. On the way are the fortified places of Rzeszow and Tarnow. At both places we may expect stands to be made, although the former has already been repeatedly taken by dispatches from Petrograd, and Russian forces have been reported at Debica, which is betwen the two and nearer to Tarnow. These forces, however, are probably only skirmishing Cossacks. Russian troops are also reported to have crossed the Carpathians and to be in occupation of Uzsok.

In East Prussia and Poland the situation appears to have changed in favor of the Russians. Accounts have been, as usual, conflicting, and even the Russian reports have been contradictory, as when a victory over the German forces in Suwalki was announced immediately after the statement had been made that they had evacuated South Poland. Apparently, however, the German advance on Warsaw, which in any case was probably only a feint to relieve the pressure on their Austrian allies, has been definitely checked. At Drusskeniki, the northernmost point of the German invasion, the attempt to cross the Niemen was repulsed with heavy loss, and near Kalisch, the most southerly point, the Germans also appear to have suffered heavy loss. As we write, the battle along this line is still in progress, the Germans bombarding the fortress of Ossowiecz, which they are reported to have failed to take in an attack by infantry.

Foreign Correspondence

A CRITICAL MOMENT—THE COST OF THE WAR—TERMS OF PEACE—A REMARKABLE FORECAST.

By SIR HENRY LUCY.

WESTMINSTER, September 19.

When Arnold Forster, in succession First Lord of the Admiralty and Secretary of State for War in Mr. Balfour's Administration, lay a-dying he penned for the edification of his former chief a lengthy memorandum on the army policy of his successor at the War Office. It was dated March 12, 1909, at which time Mr. Haldane, under a storm of party and professional criticism, was doggedly elaborating his great scheme of army reform. Writing of the reserve force in process of building up, Mr. Forster said:

The greater number are boys notoriously unfit for the army or who, being under standard, remain in the reserve until they have added on the necessary inches. Such is the real composition of this force. But no figures and no words that I can use will give you a conception what the force as I have seen it really is. The idea of pitting these children against the trained troops of a European army is as foolish as it is wicked.

Remembering that this unsparing critic was the representative of a Government which after nineteen years' (with brief interval) enjoyment of office was responsible for the dangerous plight in which the British army found itself when it landed in South Africa, there is a grim unconscious humor about the passage. That by the way. What brings pride to the heart of all Englishmen is the reflection that these "children," having in accordance with Mr. Haldane's scheme benefited by five years' training, finding themselves pitted against the trained troops of the most formidable European army, acquitted themselves in a manner that has extorted the admiration alike of friend and foe.

Since war began there has been no more desperate fighting than that faced by the little British army at the opening of the German attack which necessitated a memorable retreat by the Allies. When Gen. French took up his position at Mons he held the assurance from French headquarters that he was confronted by little more than one, or at most two, of the enemy's army corps. These were considerable odds. He was prepared to face them. Soon he learned that at least three German corps were moving on his position. Simultaneously came news that the French army on his right, upon whose assistance in the pending battle he had been taught to count, was retiring under pressure of the enemy's fierce sustained attack.

Thus overwhelmed and unsupported, the end seemed inevitable. It is easy to read between the lines of Gen. French's historic dispatch that he scarcely dared to hope. "If," he wrote, "complete annihilation was to be averted, a retirement must be attempted." It was not only attempted, but in face of what looked insuperable difficulties was accomplished, and a few days later the "children" of Arnold Forster's fevered fancy were driving the Germans back to their own frontier. In the glowing record of the British army the battle of Mons will ever hold a prominent place. But, as Wellington when talking about Waterloo confessed to the inquisitive Mr. Creevey, "It was a damned near thing."

The Revenue and Expenditure Return just issued from the Treasury shows that the war is costing this country five millions a week. Of course, our expenditure is a trifle compared with that of France and Russia, whose armies in the field are counted by the million men. Nor does it equal that of Belgium, which, in addition to weekly expenses drawing upon revenue, has suffered immense loss of capital in the way of ravaged town and country. Putting the amount at the extreme minimum average of five millions a week expended by England, France, Russia, and Belgium, here is a little bill of eighty millions a lunar month steadily running up to be in due time liquidated by Germany. Of course, such responsibility is incurred by the vanquished. Germany herself asserted the principle when as the price of her withdrawal from Paris in the war of 1870 she imposed upon France a money fine calculated to bring financial ruin on the top of subjection by force of arms. We have seen the principle reaffirmed and enforced within the last few weeks, when the invaders, counting confidently on a conquering march to Paris, drew heavy tributes from conquered Brussels and shattered Liège.

Germany will have to pay something more precious even than money as the cost of unresistingly bending its neck to the yoke of the military caste. Six years ago this very month, there was published an interview which the writer, a Frenchman, had had with one whom he described as "a high German personage." Looked back upon at this interval of time the article testifies to the remarkable perspicacity of the anonymous "personage." He stated that the General Staff calculated that five years must elapse before by diligent preparation Germany would be in a position to beat France on land, and England on the sea. As things turned out, they, by way of making quite sure, added another year before embarking on the enterprise. Among other particulars that with curious exactness forecasted events of the last seven weeks, the "personage" reckoned upon a blockade of the North Sea by the British fleet, invasion of East Germany by Russia, and the landing in France of an expeditionary British force of 120,000 men. He even named Sir John French as the general commanding.

Like the Kaiser on setting out from Berlin, he did not doubt that a smashing blow would be dealt to France in time for the German army to concentrate their forces in East Prussia and drive back the Russians. But, a businesslike man, he recognized the possibility of things miscarrying. It is here where in existing circumstances he becomes exceptionally interesting. He admitted that if the war lasted more than six months Germany would be ruined, and be forced to submit to the terms of the Allied forces. These, he reckoned, involved the restoration to France of Metz and Lorraine, with a war indemnity of a hundred millions and two German colonies; a war indemnity of 150 millions to Russia, a levy in whose provision Austria would share, and the surrender to England of German East Africa and Southwest Africa, half a dozen battleships, and a dozen cruisers. These seem generous terms from the German point of view.

Like the Chancellor of the Exchequer and the leader of the Opposition in the House of Commons, Lord Rosebery has two sons enlisted for the war. Lord Dalmeny, as newspaper paragraphs report, is at the front on the staff of Gen. French, and has more than once had bestowed upon him the distinction of bringing home dispatches from the front. Mr. Neil Primrose, M.P., has since the reserve forces were mobilized been encamped with the Bucks Yeomanry. Under yesterday's date he writes to me, "We are daily expecting command to start for the front." Among other Ministers and ex-Ministers who have gone on active service is the Marquis of Salisbury, who has for more than a month been serving with a regiment of Territorials to whom has been entrusted the important service of fortifying a certain port on the east coast, which is recognized as offering an attractive landing for a possible invading force. Time was when observation was made that "motley is our only wear." To-day it is khaki. The other day the Bishop of London, to the pained amazement of that pacific soul, the Bishop of Llandaff, looked down from the Peers' Gallery of the House of Commons clad in the uniform of the London Rifles, with whom he has for some weeks been in camp.

PUBLIC OPINION IN ITALY—THE SOCIALIST ATTITUDE—THE BOGEY OF PAN-SLAVISM.

FLORENCE, September 8.

Two things appear generally agreed on here, and seem largely borne out by reports of persons coming from France as well as by published official documents: that France had no desire for war to the extent that the country at large had abandoned its desire for *revanche;* and that Germany did not foresee England's offensive. The first is given as part explanation of France's defensive weakness, and the latter as conclusive evidence that the war will be long and bitter.

The one uncertain element, affecting even the duration of the conflict, is France's ability —military and moral—to hold out. The opinion seems general that if the republic can steady her national nerves even at the loss of Paris, and hold the country and the army substantially together for three months or even less, the chances of Teutonic success are meagre. But as to France's power to resist so long against adverses, opinions are greatly divided. The dark uncertainty lies in the possibility of France being swiftly and hopelessly crushed despite her concentration of resources and the transfer, now accomplished, of her capital. Could England, in such an event, effectively help her, or could she rely on Russia? If further German penetration is as swift and irresistible as it has been, it does not seem as if even England's maritime supremacy could save France from being compelled to sue for peace at almost any price. And if such an event were to happen, is there anything to prevent Germany, as some ask, from making terms with Russia?

There are those who see in the tardiness of the Czar's army to concentrate its supreme effort on the campaign in Eastern Prussia a failure to strike where she could be of most service to France. It is maintained against this that Russia had to strike hardest where lay the most formidable danger for her—against Austria—and her success in Galicia, bought at heavy cost, would seem to be proof of her sincerity.

But it is to England, or rather to English grit and tenacity, that public opinion here looks for final success against the common enemy. It is an inspiring example of how much a nation's historical past and reputation count in the most critical of times, in the judgment of men who may have to decide the fate of their own country in the general alignment of the nations for or against Germany. England's great past in the fight for civil liberty is to-day the unvoiced but clearly felt assurance that she is fighting, irrespective of the great material benefits that may accrue to her, for the freedom of Europe from military tyranny.

As to the pan-Slavic danger as a justification for Germany's aggressions, Italians, despite the arguments adduced by Professor Münsterberg in America and other apologists here, have never given much weight to it. At all events the force of the German arguments on this score has been practically shattered by the meeting recently held between some Italian Socialists and a representative of the Socialist party of Germany.

It will be recalled that Continental Socialists are affiliated with, or are "citizens" of, the International Socialist party, an organization pledged to peace and the vigilant opposition to appropriations for military purposes. There is no question that the Socialist members of the Reichstag voted in favor of the German war appropriations, although it is asserted that they declined to attend a meeting of all party leaders called by the Kaiser before the commencement of hostilities. Italian Socialists have maintained that the action of the German Socialist Deputies "read them out" of the International Socialist party, and have, with much force, distinguished such conduct from that of the Belgian and French Socialists, who, in lending their aid to war measures, were defending what have been considered bulwarks of peace, such as the formal agreement of the neutrality of Belgium.

In order to meet the situation, the Socialist party, both in Germany and Austria, offered to send representatives to Italy to justify or explain their conduct. The Italians put two conditions to their coming, first, that minutes of the proposed meeting should be kept, and secondly, that the question of Italy's neutrality should not be discussed. Apparently, the Austrians thought it best to remain at home under the circumstances, but the Germans sent as their spokesmen Dr. Albert Suedekum, Socialist member of the Reichstag from Nuremberg.

At the meeting which took place in Rome Dr. Suedekum relied largely on the arguments made by his Parliamentary colleague, Deputy Haase, at the time the war appropriations were voted. But Herr Haase's speech had already been printed in full in the Italian press and its arguments discounted. The answer of the Italian Socialists was substantially that German hegemony represented to-day and in this conflict a greater danger than czarism and pan-Slavism; that the fact was that "czarism" was fighting side by side with France, the leader and the most advanced of the members of the International Socialist party. "The German flag to-day," said the Italian spokesman, "stands for the *Deutsche über alles*," and this is a negation of International Socialism. "As we see it," he added, "Socialist civilization stands in opposition to war, but is to-day forced to oppose not civilization but regression, such as the forcible violation of Belgian neutrality without a protest from German Socialism." Irrespective of this, however, the "pan-Slavism" of some of the Balkan states need not be taken too se-

riously. What some of them might do in case they waxed strong at the cost of the destruction of the Austro-Hungarian Empire through Russian successes, might not be at all in the spirit of pan-Slavic unity, but rather of a warlike attitude of independence from Russian control. GINO C. SPERANZA.

THE CONCLAVE—THE ELECTION OF POPE BENEDICT XV AND A REVIEW OF HIS CAREER—THE SPIRIT OF RAMPOLLA.

ROME, September 5.

The extraordinary importance of the Conclave of 1914 must have been perceived even by the most casual observer of modern history. The present war, which, whatever its outcome, is big with consequences and changes for all the states of Europe whether belligerent or not, and of which the repercussions will be felt, in some cases violently, all over the world, touches the nearest and most vital interests of the Roman Papacy.

The conditions in which Conclaves are held, so far as procedure is concerned—I mean the shutting of the Cardinals in a certain precinct of the Vatican, methods of balloting, and so forth—are so well known that it is useless to enter into them here. A common notion, however, that their Eminences are quite shut off from the outside world, is erroneous. They may receive letters and telegrams, which are first opened and read by the Marshal of the Conclave, and may even have visitors in the presence of the same officer. It only remains to add in this connection that the Constitution of Pius X, *De Electione Romani Pontificis*, which bears the date of December 25, 1904, made little difference in the procedure of election except the denial of all right of veto on the part of whatsoever person or power extraneous to the Conclave. In fact, the Bull *Commissum Nobis* of January 20, 1904, had already inflicted the major excommunication on any person in a Conclave who should merely report a desire or recommendation of outside parties, whether sovereigns, chiefs of state, or private individuals.

It has been one of the consequences of the reactionary policy of Pius X that there were in the Sacred College, before the late election, two opposite parties with a clearly defined issue, and with the inevitable compromise, or "moderate," party in between. One party, captained by the retiring Secretary of State, Merry del Val, and by Cardinal De Lai, represented the extreme reactionary tendency that prevailed in the reign of the late Pope. Other electors on this side were Sévin, Archbishop of Lyons; Dubillard, Archbishop of Chambéry; Billot, a French Jesuit living in Rome, and Cardinal O'Connell, of Boston, who, however, did not arrive in time for the Conclave. The liberal party, whose candidate was Cardinal Maffi, the learned and enlightened Archbishop of Pisa, renowned among churchmen for his skill in the natural sciences, owned as its most vigorous exponent in the Conclave Cardinal Ferrari, Archbishop of Milan, and counted among its members Cardinals Agliardi and Cassetta, of the Curia; Della Chiesa, Archbishop of Bologna; Amette, Archbishop of Paris, and Bourne, Archbishop of Westminster. The most prominent members of the central, or moderate, party were Gotti, Prefect of the Propaganda; Serafini, Bishop of Spoleto, and the two resident Cardinals Ferrata and Pompili. Since of these Gotti on account of his great age, Serafini from being member of a religious order, the Benedictine, and Pompili by reason of his comparative youth and inexperience, were made less eligible, Ferrata, a man of wide diplomatic experience and mature judgment, was regarded as the most probable candidate of this group.

Side by side with this partition on ecclesiastical questions, and sometimes crossing it, was the division on political lines, now strongly accentuated by the European war. In the Conclave of 1903, also, when politics were much less fiercely agitated than now, there was the Franco-Spanish group, led by Cardinals Mathieu and Vives y Tuto, and the Austro-German faction, directed by Cardinals Kopp and Puzyna, the latter being the bearer of the Austrian Emperor's veto against Rampolla, who was the hostile party's candidate. Rampolla's defeat, however, was not solely due to this veto, as is commonly supposed, but also to personal and political opposition which he had aroused among his Italian colleagues, and which made his election doubtful in any case.

But this time the Conclave, liberated from all interference, has at least partially vindicated the partisans and policies of Rampolla, although the four intransigent French prelates already mentioned probably voted against the successful candidate, and to this extent against the national cause. For Cardinal Della Chiesa, the newly elected Pope, served a complete apprenticeship under Leo XIII's famous Secretary. He was born in Genoa in 1854, of a noble and distinguished Genoese family. Shortly after his reception to the priesthood in 1878, he was admitted to the office of Mgr. Mariano Rampolla del Tindaro, then Secretary for Extraordinary Ecclesiastical Affairs. When Rampolla was made Papal Nuncio at Madrid, he took Della Chiesa with him as secretary to the Nunziatura. And finally, when, in 1887, Rampolla was elevated to the purple and appointed Secretary of State by Leo XIII, Della Chiesa was likewise recalled from Madrid and placed in this Secretariat, first in a subordinate position, from which he was steadily promoted through various grades to the post of Sostituto, or Assistant Secretary.

This important position he kept for four years after the accession of Pius X, until upon the death of Cardinal Svampa, Archbishop of Bologna, he was appointed to that see in December, 1907. There is no question that this appointment was made to remove Mgr. Della Chiesa from Rome and from an office where the presence of a disciple and friend of Cardinal Rampolla was displeasing to Merry del Val and his obscurantist entourage. The cardinalate regularly goes along with the archdiocese of Bologna, but Archbishop Della Chiesa, still on account of his loyalty to his friend and master, was not received to the Sacred College until last May, in the first Consistory that was held after Rampolla's death in December, 1913. So long as Rampolla lived, he was inevitably a candidate for the Papacy, and if Della Chiesa were Cardinal, could count upon his active support. No fears were entertained that the reserved and aristocratic Genoese might himself be a dangerous competitor, and indeed no other case is recorded of a Pope elected four months after being made Cardinal. It is true that a few persons who happened to predict his election are now triumphantly crying "I told you so." But, as every one knows, there are few Italian Cardinals that some "well-informed" speculator on the outcome of a Conclave does not enumerate among his favorite candidates. The fact is that Della Chiesa's election was a surprise to all. If the choice should not light upon Maffi, who was known to be strongly opposed, it was generally considered that the chances favored Ferrata, who seems indeed to have had a strong following. But that the haughty and indomitable spirit of Rampolla should thus, as it were, triumph from the grave, was quite unlooked for.

Of course, but little will be known in detail of what happened in the Conclave until Pope Benedict XV allows the seal of silence to be broken. It seems, however, that Maffi had a decided lead over all competitors in the first few ballots, until it was certain that the opposition to him was too strong to be overcome. Thereupon his followers—always according to the uncertain information now available—concentrated their efforts upon Mgr. Della Chiesa, also a member of the Left, though not of its extreme section. The opposition, on the other hand, almost as violent against the new candidate as against Maffi, united their forces in favor of Serafini, a member of the Centre. But it would seem that Ferrata, himself a strong moderate candidate, threw his support decisively to the side of the Archbishop of Bologna, a report that derives some confirmation from his choice as Secretary of State. How much international politics had to do with the result it is impossible to say now. But the French, Spanish, and English Cardinals must have rejoiced in the selection of a Pope who, though he will undoubtedly be cautious in every policy he initiates or continues, may be expected in some measure to follow the Francophile tradition of Rampolla. In fact, the resumption of diplomatic relations between France and the Holy See is a consummation soon and almost certainly to be looked for, and will afford a criterion by which to estimate the abilities and tendencies of Benedict XV.

In the meantime, it is perhaps not in vain to speculate on what may reasonably be expected from a continuance, after an interruption of eleven years, of Rampolla's work by the mind and character he had so large a part in forming. Rampolla, though this was far from being the most important element in his political programme, is perhaps best known to the world as the uncompromising assertor of the Pope's right to the temporal power. But it is to be noted, in the first place, that the temporal principle is, in present conditions, almost a necessity of international politics; and in the second place, that, according to the few that were admitted to his intimacy in the last years of his life, Rampolla's opinions were considerably modified in consequence of the attitude of detachment he could assume after his retirement from the Secretariat of State. However this may be, it is certain that he was far from being a bigot in matters of pure religion, and that he disapproved of obscurantist anti-modernism. Therefore no slavish imitation of Rampolla's policies, some of which he himself would probably not follow now, or would materially modify, need be expected of Pope Benedict. Though he will certainly not renounce the Papal claim to the temporal power, it is hoped and believed that he will not pursue an anti-Italian policy. And although no one has ever cast a doubt upon his orthodoxy, he seems at least to be too fine and experienced a diplomatist to promote heedless and bigoted persecution. H. E.

Changed Temper of England

By L. P. JACKS.

THE CONTRAST OF ENGLAND'S ATTITUDE NOW WITH THAT REVEALED DURING THE BOER WAR.

OXFORD, September 15.

"The next world, whatever it may be like, can hardly be more different from this than the England of to-day is different from the England of two months ago. We are all living in another state of existence. The thread of continuity has been broken and nothing is the same as it was. The very buildings yonder—Magdalen Tower, for instance—are changed; for now I think of it as *menaced* by German shells and it wears quite a different look in consequence. And most wonderful of all is the way the past seems to live again. Alfred the Great and Edward III and Drake and Nelson and Pitt have all come to life again. I can almost fancy that the Barons who shook their fists in the face of King John at Runnymede are walking about among the people in the street."

This was said in conversation the other day by a well-known Oxford humanist, and allowing for the touch of exaggeration it may serve to indicate the extraordinary change which has come over the mind and temper of Englishmen during the last few weeks. No further back than last July the national life was in a state of extreme confusion. We were quarrelling among ourselves—aimlessly for the most part. We were breathing an atmosphere of mutual distrust and suspicion. To-day we are a united people with our loins girt up for a great enterprise. We have a difficulty in recognizing our world, or ourselves as the same persons who used to live in it. It is one proof of an incredible want of imagination in the philosophic chauvinists who have driven Germany into this conflict that they never foresaw the change which the shock of war would produce in England. They noted our unwarlike apathy; they knew that we hated war and longed for an assurance of peace; they saw us engaged in our national shopkeeping and our sports and apparently caring for nothing else; they were fully informed about our internal quarrels and rightly concluded that we were all at sixes and sevens; they had been told, and rightly told, by the experts of their Intelligence Department that the whole of our financial and business classes dreaded a quarrel with Germany, and that the Liberal party and the Government were entirely pacific. The unrest among the natives of India, the enormous difficulties of our administration in all parts of the world, the growing independence of our colonies—all this they had at their finger-ends. The picture of England given by Treitschke, the arch priest of German chauvinism, who hated and despised the English, is not altogether false. As a picture of the nation in times when no danger threatens the State, it does little more than slightly exaggerate the aimless, petty, sordid, unpatriotic elements of English life in its daily humdrum selfishness.

But what these wiseacres did not foresee was that under the shock of war all this would vanish as if by magic. They thought that, as we were divided in peace, we should be divided in war; that our pacificism would hamper our preparations and weaken our fighting arm; that we should go on thinking of nothing but our shops and our skins; that our middle class would never suffer any interference with their five o'clock teas; that Ireland would stab us in the back—as she has so often seemed ready to do; that India would seize the opportunity to revolt; that the ties with the colonies would snap under the strain. An intelligent child might have exposed these illusions. It required the "rigor and vigor" of the German intellect to overlook the certainty that, as Mr. Price Collier long ago warned them, England at war would not be the same country as England at peace. And so indeed it has turned out. Within a week of the declaration of war every labor dispute in the country was settled. Paid agitators rushed to the colors. Militant suffragism sank like a stone in the waters. The Ulster Volunteers, raised for civil war, offered their services to the Government. The Irish Catholics are enlisting in the King's forces. India, instead of revolting, sends us 70,000 of her finest troops: and seven hundred native princes spontaneously offer their wealth, their soldiers, and their persons. As to Canada and Australia, I need not describe what they have done. The poorest of the West Indies gives a cargo of sugar for the troops; and from the desolate Falkland Islands comes £3,000 for the relief of distress.

When war was declared there was no panic; but there was some bewilderment. The Government probably knew what was coming, but John Bull, who must never be confused with the Government, had been waked too suddenly from his afternoon nap and couldn't quite take it in. Of course, everybody was talking about the war and trying to get from his neighbor some light on the meaning of it all. Silly people rushed to the grocers' shops and laid in stores of provisions, and I heard of one old gentleman who ordered a new lock for his front door. But business and sport seemed to go on much the same as usual, and the outward aspect of things was not greatly changed. On August 10 I walked three miles to get an evening paper, and on turning to the column of "stop-press news" I found it filled with the reports of cricket matches! Plainly, John Bull was not going to be hurried; he would finish his game of bowls even though the Armada was in sight. There was something alarming in this "fat-headed complacency," and people who felt the gravity of the situation wondered and publicly asked how long it was going to last. It did not last very long. I think it was the news of the massacre and sack of Louvain that brought us to the first great turning point. Instantly a wave of wrath such as I have never seen in England swept over the land. For the first time we clearly saw what we were fighting with and what we were fighting for. Only one thing more was needed to turn us from a nation of shopkeepers into a nation in arms. It has been said by one who has studied the military history of England that the fighting spirit of the nation is roused more by disasters than by victories. In this case there has been no disaster so far, but it was avoided only by a hair's breadth. The story of the four days' battle of Mons—a desperate rear-guard action fought against odds of three to one—in which the army lost one-fifth of its men and was only saved from annihilation by superb generalship, was precisely the kind of news to put John Bull on his mettle.

Since then there has been no more talk about "fat-headed complacency." There have been no more complaints about the slackness of recruiting. On the very morning when the official report of the battle was published the workers in a large brewery not far from where I am writing laid down their tools and walked in a body to the recruiting office; and to-day I see them in a neighboring field learning their steps—big, heavy-faced, beer-fed, awkward-jointed Britons. "A clumsy lot, sir," said a bystander who was watching them. "Not one of them could jump over a straw. But mark my words; when those chaps have been licked into shape it'll take a lot of Germans to shift 'em." It is the same all over England. Birmingham, the most "shopkeeping" of our cities, has sent 30,000 recruits in a fortnight and has raised a local corps in addition. When the universities assemble next month half the undergraduates will have gone to the front, and of those who remain most will be under military training: many of us will have empty classrooms. We write long letters to our boys on their ranches in the Argentine or their farms in Canada telling them all about the war, and *next morning* we get a telegram from Liverpool, "I am come home: have a bed ready for me to-night." Last week I met three sons of the present Prime Minister; all three were in khaki. This morning the mail is delivered late by a young gentleman from a neighboring country house. "The village postman has enlisted: and I'm going in a few days."

I imagine there must be many of your readers whose memories will supply a parallel to much of this from the time of your Civil War. I wonder if the crisis brought that consciousness of a sudden leap from one world into another which people in England are now remarking. In many respects the conditions must be the same. The sense of solidarity under the stress of common danger and the call of common duty, the sense in which so much that is finest in a nation's life has its origin, must then have been present with you as it is with us. You will readily understand the mood of exaltation, the emotional stirring, the feeling of the greatness of life that comes to every citizen in times like these. "These are

wonderful times: after all, I am glad I have lived to see them," is a remark I have heard from a dozen different people, both men and women, during the last few days. But I think that with you the preparation for what was coming was longer and more gradual. Moreover, your temperament is less stolid than ours and much quicker to respond to changed conditions. You require less shaking to wake you up. With us there was a thick crust to be broken through and deep-seated mental habits to be abandoned before we could realize what had happened to us. And when the realization did come it came like a thunderbolt. The two shocks I have mentioned, following in quick succession—the shock of horror from Louvain, the shock of peril from Mons—brought us to our senses.

As to the righteousness of our cause, thinking men are content to await the verdict of history. Naturally, we believe in it, and that with a fervor and unanimity which are both surprising and impressive. But no Englishman writing on the subject now can escape the disabilities of a special pleader. It is, however, very remarkable that many pacificists who were recently denouncing war with Germany as "a crime against civilization" now admit that our participation in the conflict is both just and inevitable. The fact is that their eyes have been opened. Nor is their case peculiar in that respect. Until the other day the educated classes of England knew little or nothing of the propaganda which has been going on in Germany with ever-increasing vigor for the last twenty years. If by chance they heard of it they treated the matter with contempt as the mere vaporings of jingoism. Not one in a thousand had ever heard of Treitschke or Bernhardi. It is only *since* the war that Bernhardi's work, "Germany and the Next War" (published in 1911), has been made accessible. That the book is no freak of an irresponsible individual, but a serious statement of public policy, is sufficiently proved by the fact that the German conduct of the present war, in its initiation, method, and strategy, has exactly followed the programme of Bernhardi, though happily it has not so far fulfilled his predictions. Under ordinary circumstances it would have been an act of folly on the part of any German writer to "give away" the plan. But I suppose Bernhardi anticipated that the English would not be sufficiently wide-awake to pay much attention to the matter. If so, he was right. None the less, the book has served one purpose the writer did not anticipate. Now that we have it in our hands we see clearly enough that we are fighting against a *diabolism* that threatens the whole of civilization; the nation has become *one* in that conviction, and we are calmly waiting for history to confirm the verdict. At the same time we know very well that diabolism of this kind—or indeed of any kind—does not represent the true spirit of Germany. Germany may have temporarily fallen under its spell, but the obsession is too immoral in its inner nature to be anything more than a passing phase of the national mind. When its power is broken, the nation in which it originated will be the chief gainer and will condemn it utterly.

We mean to win through. But no sensible man among us is under any delusion as to the magnitude of the task. We know the high valor of the Germans, the enormous power of their military organization, and the ability with which their plans are laid and carried out. But we have our own sources of strength, and they are of a kind that give us more confidence the more we reflect on them. It is a healthy and a hopeful sign that our public men are not boasting, and that the populace is quiet. The tone of the press is measured; and in recording the doings of our forces at the front under-statement rather than exaggeration is the rule. There are none of the odious outbursts of public feeling that marked some of the phases of the Boer War—signs that the nation was *not* wholly convinced of the righteousness of its cause. There is, of course, as there must be in every war, an element of hatred at work; but it is directed almost exclusively against the system of Prussian militarism, and not against the German people. During the Boer War I was one of those who did not feel happy about England. But now it is altogether different. I have a deep conviction that we shall emerge from the crisis with something to the credit of our character as a nation.

Books and Men

EDWIN DROOD AGAIN.

A fatality has pursued the amateur novelists who have written continuations of Dickens's "The Mystery of Edwin Drood." Four writers have tried it, and their failures have been complete and rather ignominious. A humorist once confessed, in a newspaper rhyme, that he owned a pen which once had belonged to Thackeray. When he tried to write with it, however, not only did no inspiration come, but the pen sputtered and scratched, and actually refused to form words. It had recognized, he thought, a donkey, trying to imitate its master.

No expert novelist has ever tried to finish "Edwin Drood," in spite of the widespread notion that Wilkie Collins engaged in such an attempt. Scores of solutions have been offered, in the form of essays and articles, and two or three plays (one of them by Comyns Carr) enjoyed brief runs. The volumes bringing the story to an end are four, according to Mr. J. Cuming Walters, author of the interesting book, "The Complete Mystery of Edwin Drood." Mr. Walters was the prosecuting attorney in the mock trial held in London last January, when he failed to convict Jasper of murder in the first degree for killing Drood.

The first continuation appeared the very year of Dickens's death—1870. It was by "Orpheus C. Kerr" (Richard H. Newell), and is said to be mainly burlesque and parody. The second and the third are also American productions. I have read, or have tried to read, both of them. Henry Morford's "John Jasper's Secret" was published in *Frank Leslie's Newspaper* and in *The Chimney Corner*, 1871-1872. Morford went to England with his wife, lived in Rochester and London to study the scenes of the novel, and made a conscientious effort to prepare himself for the work. To my mind it is the most readable, or the least unreadable, of the three I have seen. "An offensive fraud," writes Mr. Walters, "was, however, associated with it. No name was originally placed on the title-page, but the insidious announcement was made that the real authors were Charles Dickens's eldest son and Wilkie Collins. The lying rumor has been hard to overtake, and is still occasionally revived in spite of Collins's prompt repudiation, and Messrs. Chapman & Hall's explicit declaration in a letter to the *Times*. . . ."

The book was republished, within about a dozen years, bearing the imprint of a New York publisher, and unblushingly professing on its title-page to be by Charles Dickens "the Younger" and Wilkie Collins. How very respectable the operations of a burglar or a highwayman look in comparison with this kind of cheat! Many persons are convinced that "Edwin Drood" was really completed by Wilkie Collins and by Dickens's son; the book is sometimes so entered in catalogues.

The third continuation was the famous "Spirit Pen" volume. In this country, at any rate, the existence of such a book is known to hundreds who have read neither it nor the genuine novel by Dickens. "The Mystery of Edwin Drood Complete. Part the Second, By the Spirit Pen of Charles Dickens, through a Medium," came from Brattleboro, Vermont, in 1875. It is one of the many painful disclosures that spirit pens are usually not only less gifted than physical ones, but are frequently not even able to write anything approaching commonsense. It must require great physical endurance to wade through the mass of bosh in the "Spirit Pen" continuation of "Edwin Drood."

The fourth, and apparently the last, continuation was by an English woman, Mrs. Richard Newton. She wrote (in 1878) under the pen-name of "Gillan Vase," and called her book "A Great Mystery Solved: being a Sequel to 'The Mystery of Edwin Drood.'" This is now republished, with no important change of title, by McBride, Nast & Co. ($1.50 net). It is edited by Shirley Byron Jerons, who contributes a summary of the original novel. Only the author's pseudonym appears in the book.

Of "Gillan Vase's" original work Mr. Walters writes that it has many merits and also conspicuous defects. In the first place, he says, it is far too long. "What Dickens intended to conclude in six more numbers ought not to have been concluded by another author in three volumes of over three

hundred pages each, and containing in all forty chapters."

The editor and publishers of the new edition have been of the same mind, for one volume of about three hundred pages, and twenty-three chapters, suffices for them.

A second objection of Mr. Walters is that several new characters are introduced and allotted important parts, "as if Dickens had not a sufficiency of persons already for his purpose." Here again, the new edition agrees with Mr. Walters's comments:

> Gillan Vase's . . . luxuriant imagination led her not only to follow up the destinies of the characters which we owe in their inception to Dickens, but also to create several others. As rather detracting from the value of a sequel in which it seemed desirable that only known Dickensian characters should appear, these new ones have been eliminated.

So declares the editor's note.

In regard to Mr. Walters's third objection—that recorded against the irritating attempt to mimic Dickens's style—nothing can be done, and the new edition presumably appears in mueh the manner of the first.

It may be patriotism whieh impels Mr. Walters to find the "Gillan Vase" continuation "the best of a poor series." It may be the same noble motive which makes me prefer Henry Morford's. Or it may simply be that, having read "Gillan Vase's" book last, the irritation of it is fresher in my mind. Her version of the story is that Jasper had failed in his attempt to murder Drood. The latter escapes from the tomb, and hurries to London, where he finally appears, in the deep disguise of blue spectacles, seeking employment from Mr. Grewgious, the one man who knew him best. Grewgious, by the way, has little to do, but wanders in and out of the story with the ineonsequential manner of the Lawyer in Jerome K. Jerome's "Stage Land." John Jasper is still hounding Miss Rosa Bud, and at last springs overboard with her in his arms. She is saved, of course, by Edwin Drood—still in blue spectacles. Jasper eommits suicide in prison, and the book ends in a series of marriages —possible and impossible. The mysterious Datchery leads throughout the story a career dark and furtive. In the end he has discovered nothing of importance, for all his spying, and he turns out to be nobody in partieular. All his disguise was superfluous. Canon Crisparkle marries Helena Landless—perhaps as a reward for being invariably called "Revd. Septimus," or "Revd. Sir."

The book is relieved, here and there, by so complete an absence of any feeling for the ridiculous, that the reader can get more or less innocent amusement out of these passages. An example of this element oeurs in Edwin's narrative of his escape from the tomb—how he was led on and on, supported by the Hand of Providence, to London; how his faltering footsteps, still guided by the same all-powerful influence, finally led him to a street and to a house, and how when at last he raised his dim eyes to the window he saw therein the blessed inscription: "Lodgings for a Single Gentleman."

EDMUND LESTER PEARSON.

News for Bibliophiles

PATER'S QUOTATIONS.

There are few things more unpleasantly pedantic than the scholar's enthusiasm for checking up and exposing the misquotations and incorrect references in an author, and it is not at all in this spirit that I wish to call attention to a remarkable characteristic that runs through the writings of Walter Pater and that can be related, not uninstructively, to the fundamental elements of his temperament and manner of composition. I mean his use and misuse of citations from various authors. I do not refer to passages that are confessedly centos of phrases—the discourse of Marcus Aurelius in the twelfth chapter of "Marius," for example, or the record of conversations between Gaston de Latour and Montaigne, skilfully patched together from the "Essays," or the great essay on Leonardo da Vinci, in which the facts in Vasari's Life have been assimilated and combined into a new and higher synthesis. I mean the separation of passages joined in the original, the junction of passages far distant in the original, unnoted omissions, and, in some cases, mistranslations. This does not imply dishonest or careless work; it is intentional, yet with no thought of deception, being closely related as a literary device to Pater's whole manner of composition. The remarkable thing is that it occurs so persistently that in hardly a single translated passage can one depend upon the accuracy of the translation. In some cases, as in one or two sentences in the essay on Sir Thomas Browne, quotations even from English authors have been slightly altered in being woven into the tissue of Pater's discourse. But it is in translation that this method is most apparent.

Pater was thoroughly familiar with French literature, and it was in the endeavor to verify one of his references thereto that I stumbled upon the phenomenon of which I am writing. From his French quotations it can best be illustrated. Note, first, however, the passage from Heine's "Gods in Exile," quoted at the beginning of the essay on Pico della Mirandola in "The Renaissance." The notion of the pagan gods who, after the fall of their religion, went wandering about the earth, is of frequent occurrence in Pater. Whether he was first attracted to the theme by Heine or by a passage in Gautier's "Musée du Louvre," to which he refers elsewhere, I do not know. The paragraph from Heine is translated with much grace, but an important clause is omitted, with no indication of the omission. (See Heine's "Sämtliche Werke," ed. Elster, VI, 78.) Pater translates (p. 32): "They had to take flight again, and seek entertainment in remote hiding-places, when those iconoclastic zealots, the black brood of monks, broke down all the temples." The first half of the temporal clause is omitted: "Als der wahre Herr der Welt sein Kreuzbanner auf die Himmelsburg pflanze"—a clause out of harmony with the humanistic neo-paganism of the essay.

The opening essay of this same volume, "The Renaissance," contains passages of considerable length from "Amis et Amile" and "Aucasin et Nicolette." The original of the former story may be found in Moland's "Nouvelles françoises en prose du xlie Siècle." To Pater's first quotation from the story there is no corresponding passage in the French; it is a summary of about two pages, though put in direct quotation in seven lines (p. 10). There follow nearly five pages translated with peculiar sweetness and perfect fidelity save for the unrecorded omission of several clauses of a didactic nature. Thus, to Pater's translation of the angel's reply to Amis, "Thou art the comrade of the heavenly citizens," must be added, "Tu es ensegu Job et Thobie per patience." Again, when Amile, weeping, says, "Shall I not keep faith with him who was faithful to me even unto death?" the original continues, "Abraham fu salvez per foi; et li saint vainquerent les reaumes per foi. Et Dex dit en l'Avangile: 'Ce que vos volez que li home vos facent et vos lor faites cele meismes chose' "—all of which is omitted, for art is not didactic. After the healing of Amis we are told that "cil renderent graces à Notre Seirnor à grant joie, et distrent: 'Benoit soit Dex, li pères Nostre Seignor Jhesucrit, qui salve ces qui ont esperance en lui,' " which is omitted, possibly, as too deliberately edifying. The narrative style is also improved; one sentence is left out because the substance of it is repeated farther on; another is changed from direct to indirect discourse; a third is shifted from the beginning to the middle of a paragraph. The conclusion of the story, to which Pater returns at the end of his essay, contains several lines intercalated from an earlier paragraph; and several lines are omitted—all with no indication of the liberties taken with the text.

The short and lovely excerpt from "Aucasin et Nicolette" has been even more tampered with. I have used Sucher's edition in verifying the references. In Pater's second paragraph (p. 21) his version reads: "She thought of the Count Garins of Beaucaire, who mortally hated her, *and, to be rid of her, might at any moment cause her to be burnt or drowned.*" For the words that I have italicized the original has, "Si se pensa qu'ele ne remanroit plus ilec; que s'ele estoit acusee, et li quens Garins le savoit, il le feroit de male mort morir." Not a word about burning or drowning! When Nicolette escapes by her window Pater tells how she "let herself slip down quite softly into the garden, *and passed straight across it, to reach the town.*" There is no equivalent for "quite softly" in the original, and the words in italics have been substituted for more than two quite different lines that need not be quoted. In the description of Nicolette, Pater characteristically omits "le nes haut et bien assis," as, I suppose, beneath the level of art. I am reminded of the article on the lack of poems in praise of the nose which appeared in the *Nation* some years ago, and which called forth a considerable anthology (or shall I call it nosegay?) of such verses.

The comparison of Nicolette's red lips to "cérisse ne rose el tens d'esté" does not appear in Pater, and needless prudery caused the omission of: "Et avoit les nameletes dure, qui li sousievoient sa vestëure, ausi con ce fuissent deux nois gauges, et estoit grallie par mi les flancs qu'en vos dex mains le peüsciés enclorre." We scent Victorianism also in the omission of "et ses gambes" from the sentence: "the daisies . . . looked dark against her feet." On the other hand, the phrase, "holding her skirt high behind and before," and the description of the moon, "which shone quietly in the sky," have no warrant from the original. And there are other minor changes. A more remarkable, because more nearly dishonest, misquotation occurs a few pages further on, where Pater refers to the most famous passage in the

tale, Aucasin's expression of preference for hell, where the goodly scholars and fine horsemen and courteous ladies with their lovers are to be found. In this list Pater puts "the men of fashion," and in a note discusses the meaning of *parage*, with the evident implication that this is the word that he is rendering from the French. Now, this word does not occur anywhere near the lines which Pater is translating.

The essay on Du Bellay contains several extracts from the "Deffense et Illustration de la langue Françoyse." These are typical of Pater's manipulation of citations. Passages are tacked together that in the original are far apart; in two cases words are added; in one case sixteen lines in the middle of a paragraph are omitted, and in another case a clause is left out—all without remark. The two passages from Mme. de Staël's "De l'Allemagne" (Part II, chapter vi) in the essay on Winckelmann are correctly quoted.

So much for "The Renaissance." Pater's next volume, "Marius," does not well illustrate the peculiarity with which we are concerned. The version of Apuleius's "Cupid and Psyche" is quite faithful, save for a few omissions, and is perhaps nearer to the style of the original than Mr. Paul Elmer More is inclined to believe.

The famous essay on Style in the volume of "Appreciations" contains a good many passages from Flaubert's correspondence. I have to thank my friend Dr. A. Coleman, of the University of Chicago, an accomplished Flaubertist, for aid in running down these extracts in the edition Conard. The result of verifying them is really astonishing. Pater pieces together sentences, and even clauses, that, in the French, are many pages apart. Moreover, he says that several of them are addressed to "Madame X." (*i. e.*, Louise Colet) that are in reality addressed to other correspondents. Take this, for example: "'You talk,' he writes, odd, trying lover, to Madame X." (p. 32). The passage quoted is in part from a letter to his friend Du Camp, while the first two sentences I have been unable to locate at all; I am nearly certain they are in no letter to Madame X. But it will be well to consider the passages in order. The first and longest (pp. 28-9) is made up, according to the indication given by Pater's dashes, of four extracts, all from letters to Louise Colet. As a matter of fact, it is composed of six excerpts. The first paragraph is from a letter to Louise Colet (*Correspondance* I, 238-9); the first two sentences of paragraph two are from a letter to Alfred Le Poittevin (*ibid.*, p. 159); the rest of that paragraph from another letter to the same man (*ibid.*, p. 157); of the third paragraph, the first two sentences are from a letter to Louise Colet (*ibid.*, pp. 240-1), with the omission of about a dozen words; the rest of the paragraph to Le Poittevin (*ibid.*, p. 173), again with unindicated omissions; the last paragraph to Louise Colet (*ibid.*, p. 244). The short extract quoted by Pater on page 30 is from the same letter as the last, with the omission of part of a sentence in which Flaubert refers to his love for "Madame X."—an allusion perhaps not "objective" enough to do credit to the master, Flaubert, or to satisfy the disciple, Pater. The paragraph at the top of page 33 is an astonishing amalgam. The original of the first two sentences is found on page 292, of the next sentence on page 278, of the next two sentences on pages 213-14, of the first volume of the *Correspondance*—all addressed to Louise Colet. Then the last sentence is from a very early letter to Ernest Chevalier (*ibid.*, p. 39). Finally, the second quotation on page 33 is from a letter to Louise Colet (*ibid.*, pp. 290-1), with the omission of part of a sentence.

The second edition of "Appreciations" included Pater's review of Feuillet's "La Morte." This is one of Pater's least important pieces, and is made up largely of translated passages. Throughout these excerpts there are constant omissions, now of two lines, then a long sentence, then a paragraph, a clause, two sentences, etc. It would be needlessly tedious to give exact references. Note, however, in the last paragraph of the passage on page 229, Pater's phrase, "Then, after an interval." This is not in the original, and takes the place of two entire pages of theological discussion. So, also, on page 239, last paragraph of quotation, Pater omits Feuillet's description of the symptoms of Aliette's death. In both places, as in the case of the other omissions, Pater's manipulation of his material is a gain in art.

The description of Corsica, quoted from "Colomba" in the lecture on Mérimée in the "Miscellaneous Studies," is a good example of this selective method of quotation. To analyze it completely would take undue space, but any one interested in the matter may turn to the end of chapter iii of "Colomba" and compare it with Pater's version (p. 23). It will be seen that he has culled sentences here and there from the last two paragraphs, pruning and arranging as it pleased him. Briefly, it may be said that the first sentence is from the penultimate paragraph; then down to the word "nest" the cento is made up of passages from the last paragraph; and from thence to the end of the quotation Pater returns to the next to the last paragraph. And he gains the effect that he is after, as any one may see who compares the two descriptions.

My patience did not extend to the point of running down all the passages from Pascal in the essay on that writer. It is significant, however, that in the only passage that I verified (Pater here quotes the original French) two excerpts far removed in the "Lettres" are joined together.

I have already said that the chapter Suspended Judgment in "Gaston de Latour," in which Pater makes use of various thoughts in Montaigne's "Essays," is to be collated with the discourse of Aurelius in "Marius." It would be of interest to track these choice bits to their source, but for that I have not had time. In the unfinished last chapter of "Gaston" there is, however, an interesting reference to Brantôme. As usual, Pater "doctors" his quotation. He quotes from Brantôme that the Queen went to bed on the Eve of Saint Bartholomew, "having no knowledge of the matter" (p. 133), but leaves out the next quaint clause: "ny mesme senty le moindre vent du monde." Again for Brantôme's "Je te supplie et te requiers de luy vouloir pardonner" Pater puts simply, "O God, be pitiful!" (See Brantôme, "Œuvres" II, 530.)

In his excellent book, "The Masters of Modern French Criticism," Professor Babbitt has related Walter Pater and Anatole France closely in attitude towards life and art and in quality of workmanship. It is worth noting that a remark in M. France's preface to his "Vie de Jeanne d'Arc" serves partially to explain the manipulation of quotations of which I have given so many instances. He says that in no case will he give the exact words of his authorities, but will use the substance only. Direct quotation results in an unpleasant confusion of styles that makes a book well-nigh unreadable. "And I want to be read," says M. France. So, also, Pater has passed his material through the alembic of his imagination till it has become always an essential portion of his entire theme, in no case a crude break in the continuity of his discourse. But has the critic a right to do this? The function of style, says Pater himself in the lecture on Raphael, is selective, is the assertion of one's self in a transcript of the data presented. And so, when we find him transposing, omitting, rearranging, mis-ascribing, and in a few cases even apparently substituting his own for somebody else's ideas, there is needed but a generous interpretation of what Pater conceived to be the function of criticism, namely, that it has in it something of the creative art. "How does the work appeal to you?" the critic asks himself. "This is how it appeals to me," Pater replies, cutting down *longueurs* meanwhile, removing didacticism and over-frankness of expression, rearranging so as to produce a finer effect. One might push this explanation further and make it serve as a defence of Pater's absolute misinterpretation of the facts of history in his languid picture of a Lacedaemon of æsthetes and of an early Christianity with taste and opportunity for ritual as elaborate as that of the later stages of the Oxford Movement. This has been fully dealt with in Mr. More's essay in "The Drift of Romanticism," an essay stern, yet, I think, just.

Correspondence

AMERICA'S ATTITUDE TOWARDS GERMANY.

To the Editor of The Nation:

Sir: As a reader of the *Nation* for over forty years, I have come to entertain so high a regard for its fairness and ability in presenting and discussing the issues of the day that it pains me to see it depart from that course, even if only once. Thus in your last issue, speaking of "the actual steps in the formation of public opinion in this country concerning the war," you say: "In the beginning there was no anti-German prejudice whatever."

In this you are wrong. The prejudice manifested itself from the beginning, that is to say, from the delivery of the Austrian ultimatum to Servia. If you are in a position to consult the files of the Chicago *Abendpost*, you will find there bitter complaints of the hostile tone and attitude to Germany of the American English press right from the start, and from my own reading I know these complaints to have been well founded. One paper, I remember, went so far as to charge, without producing any proof whatever, that the absence of the Kaiser from Berlin at the time of the controversy between Austria and Servia was intentional and merely a "blind" on his part, and that it was part of a prearranged plan.

There is nothing new in this. History repeats itself. The same prejudice cropped out in 1870 at the outbreak of and during the French-German War. In those days, the Germans in this country were universally called "Dutch," and it was not until the German victory that our American cousins began

to have some respect for the German nation and ceased applying to them the contemptuous epithet. PHILIP STEIN.

Chicago, August 29.

THE GERMAN PEOPLE'S PART.

TO THE EDITOR OF THE NATION:

SIR: In the last number of the *Nation* to reach me there is a letter which expresses warm approval of your conception of two Germanys, the Kaiser's and, shall we say, Bebel's. May I quote three extracts and ask you to print them in fairness to the other side.

The first is from a letter by a German, "by blood, by intellectual affinity, and by sensibility," as he says. "For the constitution and actions of that state [the German] the German nation, and no one else, is responsible. That is why we are at war, not with the Kaiser, but with the German nation." "We can measure, in our small circle, the difference in spirit between the Germany of our grandparents and the Germany of our cousins and their children, and we can estimate the causes." "It is chiefly due to the persistent indoctrination among the most docile, the most long-suffering, and the most over-educated people in Europe of a false, wicked, and arrogant theory of human society and government, which has obscured for this generation . . . the great and immortal tradition of German idealism and tolerance."—Alfred Eckhard Zimmern.

The second is from a letter by Valentine Chirol: "Mr. MacDonald still, apparently, lays to his soul the flattering unction that a distinction can be drawn between Prussian militarism and German democracy. That is a terribly dangerous delusion, and I venture to speak on this point with some authority, as one who has had an intimate knowledge of Germany since the war of 1870, and who has watched for many years the steady poisoning of the wells of German public opinion against England, even in the days of Bismarck, though he was actuated solely by his detestation of British Liberal institutions and his dread of 'British influences' at court, and of 'the Englishwoman' who was afterwards the Empress Frederick."

The third is from a letter by Frederic Harrison: "The whole German military and *civil order* are responsible for this poisoning of the moral sense of the nation. We know that *nine-tenths of the German people* accept their leadership and adopt their infernal code that 'might is right!'" HENRY WINSLOW.

London, September 14.

SHAKESPEARE ON WAR.

TO THE EDITOR OF THE NATION:

SIR: In this time of England's heroic struggle many will doubtless be interested to turn to the picture of a similar national uprising, though with a different antagonist, in Shakespeare's "King Henry the Fifth." Never, unless, perhaps, in the Persians of Æschylus, has patriotism been clothed in more splendid poetry.

One passage (Act III, scene 6) has a special significance as showing the moral tone, if not of a great King and heroic soldier, at least of the world's greatest dramatist, especially cherished in Germany: "We give express charge, that, in our march through the country, there be nothing compelled from the villages, nothing taken but paid for; none of the French upbraided, or abused in disdainful language; for when lenity and cruelty play for a kingdom, the gentler gamester is the soonest winner." GAMALIEL BRADFORD.

Wellesley Hills, Mass., September 25.

MAINE FIGURES TRANSPOSED.

TO THE EDITOR OF THE NATION:

SIR: Permit me to call your attention to an error in fact in your issue of September 17. It occurs in the article entitled "Maine Heard From," on p. 339 of that issue. The rectification of this error does not at all vitiate your conclusions in that article, with which I entirely agree; in fact, it strengthens them. In comparing the recent State election with that of 1912 you state that the Democratic figures were 71,000 in 1912 and 62,000 in 1914, a loss of 9,000; while the opposition figures were 68,000 in 1912 and 76,000 in 1914, a gain of 8,000.

You have transposed the 1912 figures. The Democrats received the 68,000 and the opposition the 71,000 in that year, for Maine went Republican in September, 1912. Thus the loss for the Democrats and the gain for their opponents in the two years is 6,000 and 5,000 respectively, instead of 9,000 and 8,000 as stated in your article. The evidence, therefore, on that basis, of any reaction against the Democratic party is reduced 33 1-3 per cent. A. H. WESTON.

Readfield, Me., September 21.

ROBERT FRANCIS HARPER.

TO THE EDITOR OF THE NATION:

SIR: Prof. Robert Francis Harper, who died in London on August 6, was born in New Concord, O., in 1864. He received his collegiate education at Denison and Muskingum Colleges and at the University of Chicago. His own tastes and the influence of his brother, Prof. William Rainey Harper, led him to take up the study of Semitic philology, and he spent the years 1884-86 at work upon this subject in the Universities of Berlin and Leipzig. After attaining the degree of doctor of philosophy in Leipzig he returned to this country to become instructor in the Semitic languages at Yale. From Yale he was called to the reëstablished University of Chicago, being made professor of the Semitic languages there in 1892, and, with his brother and the other distinguished Semitic scholars whom that institution attached to its faculty, he took an active part in the development of that renewed interest in Semitic and Biblical studies which spread from Chicago as a centre over the whole country.

In 1888-89 he served as Assyriologist on the expedition supported by the Babylonian Exploration Fund of the University of Pennsylvania, and the knowledge which he thus gained of field work he was able at a later date to supplement as director of the school in Jerusalem, as director of the expedition to Babylonia, of the Oriental Exploration Fund, and as curator of the Babylonian section of the Haskell Oriental Museum.

He was editor of the *American Journal of Semitic Languages*, and associate editor of the *American Journal of Theology*, and for several years of the *Biblical World*. Among his published works are "Assyrian Literature," 1901, and "Assyrian and Babylonian Letters," 1902. To the general public he is probably best known by his admirable translation of the "Code of Hammurabi" (1904), and to Semitic scholars by his "Assyrian and Babylonian Letters Belonging to the Kouyunjik Collection of the British Museum." He began publishing the letters of this collection in 1892, and Part I of the series containing them was the first work to bear the imprint of the University of Chicago Press. Since that time he had devoted all of his leisure from teaching to this work, and he was engaged upon it at the time of his death. Thirteen volumes have already appeared, and Part XIV is ready for the press. Probably four or five more volumes would cover the remaining letters in the collection. It is earnestly hoped that it will be found possible to bring these out, together with an Index, so as to bring to completion the great work to which Professor Harper gave so many years of his life. F. F. ABBOTT.

Princeton University, September 1.

VARIOUS ABUSES OF WORDS.

TO THE EDITOR OF THE NATION:

SIR: Apropos of Mr. Edmund Lester Pearson's recent essay on "Remedial Legislation for Words," it seems to me that volumes might be written on the dearth among us of proper feeling for words, and—to use a word that has itself been overworked by many classes of people, ranging from the art critic to the advertising expert of a department store—their "values."

The wide-spread misuse of common words by people who ought to know better, general poor taste in their choice, illiterate pronunciations, and bad syntax are due chiefly to habit or fashion, and to inertia. It is, perhaps, only in the remoter provinces that our learned lawyers now refer, as one actually did in a speech to a jury, to the "Seezar" of Russia. Not every rural editor is like the one who compared something which held out well, something which seemed practically inexhaustible, to "the Widow Crucible's oil." Very few town oracles, even, can match that one—a physician in good standing and a pillar of the church—who gave his *ipse dixit* on the capacity of the Filipinos for self-government. Said he, "They are not a progressive people. They seem not to have advanced greatly from where they were when St. Paul indited his great Epistle to them."

We have, for the most part, learned to pronounce "dessert" so that, instead of calling up visions of sands and simooms, it suggests rather such things as belong to oases. "*Address*," however, is almost universal, at least here in the Middle West. And it has been but a few months since I saw and heard the citizens of the metropolis of one of our greatest States pointing with pride to their new "Municipal" Building—primary accent on the first syllable, secondary accent on the penultimate.

Of less common words persistently misused, a particularly long-suffering one is *internecine*. I think the better writers avoid it, for those who use it at all—chiefly journalists—seem almost universally to employ it to describe civil or internal strife. To them, an internecine struggle need not be deadly or even bitter, if only it be factional. They apply the word equally to a revolution and to a quarrel in a church choir. The prefix *inter* misleads them, and they do not consult a dictionary.

There are some common uses and combinations of words that are not incorrect, but only silly. An example of a combination which is both is "I hope he does," when one really means "I hope he will." The brand of culture that says, when giving an introduction, "Mrs. Blank, meet Mrs. White," is the same that, upon committing some slight breach of the social amenities, exclaims, "Excuse *me!*" It is of the same class as those novels in which the hero has the reprehensible habit of "swearing softly to himself," and the heroine, under stress of strong emotion, speaks with "a queer little catch in her voice."

The most overburdened drudge of a word just at present is "efficiency." It is not a word, either that naturally belongs in the class of drudges. It is a good, gilt-edged word, and aristocratic, as we of America are supposed to rate aristocracy. It is the essence of pragmatism, not to say commercialism. Being a gilt-edged word, it is not a golden word—not poetic or beautiful by sound or association. Such as it is, it is the word of the hour, and stands for that to which we Americans are reputed to say our prayers. It does represent an ideal, even if it is not an idealist's word, and there is no better thing to strive for than efficiency—in the best things. But it is the more reprehensible to overdo so good a word. There are people of sensitive nerves, no doubt, who in the last few months have duly vowed a vow never, never under any circumstances, to be efficient in anything. At the present rate of use, however, we shall soon have to find a new word for the idea it represents, because the word itself will be done to death, and its own efficiency a thing of the past. ELIZABETH WADDELL.

Ash Grove, Mo., September 9.

ELIMINATING THE UNESSENTIAL.

TO THE EDITOR OF THE NATION:

SIR: According to a recently published book, those futurists who have devoted themselves to the reform of literature propose to elminate the unessential in language. The planks in their platform are six. I quote them from Mr. A. J. Eddy's "Cubism and Post-Impressionists," supplying illustration prepared by myself according to his rules.

I. "Use only the *infinite form* of the verb, because only the infinite mood gives the sense of the *continuity of life.*" Applying this principle to Tennyson's famous line, one gets: "To break, to break, to break, on thy cold gray stones, O sea!"

II. "Abolish the use of the *adjective,* so that the noun *standing alone* may speak for itself with all its force"; as in this happy modification of Byron's well-known verse: "Roll on, thou ocean, roll!"

III. "Abolish the *adverb,* which is a *superfluous refinement,* a fastidious hampering of human expression"; as is clearly indicated when we change Lincoln's "We here highly resolve that these dead shall not have died in vain," to "Resolved, that these dead shall not have died."

IV. "New *punctuation;* . . . . a living style . . . creates itself without the use of absurd commas and periods. To accentuate certain movements and indicate their directions, certain mathematical and unusual signs will be used." Gilding Lincoln again: "Fourscore and seven years ago ← our fathers brought forth upon this continent a new nation conceived in liberty and dedicated to the proposition that all men are created equal now ⟶ we are engaged in a great civil war!" Or again:

"Cannon to right of them ☞
Cannon to left of them ☜
Cannon behind them 🔫
Volley'd ****** and thunder'd ∿∿∿"

V. "Abolish the 'I' from literature, that is to say, *psychology;* replace the 'I,' the ego, by the *matter,* the essence of which must be appreciated by intuitions." To illustrate: "When Pilate saw that he could prevail nothing, water was taken and hands were washed saying, that which speaks is innocent of the blood of this just person; let that essence or matter which hears see to it." By consulting Matthew xxvii, one may see how wonderfully the elimination of the personal pronoun intensifies and clarifies literature.

VI. "Revolution in *typographical* appearance . . . employ on the same page three or four inks of different colors, and twenty different characters, if necessary; for example, italics to express rapid sensations; capitals for violent, etc., etc." How poetry gains by this device! Cleopatra speaks as follows in Shakespeare's famous play—small caps mean sharp commands, large caps a cry or shriek, diamond type a whisper, very large caps a climax, black letter a pleasing reminiscence—italics indicate "rapid sensations" and sensibility generally; the printer (who is a standpatter) will not allow us the red, purple, and blue ink that might suggest still more effectively the sensuality, aspiration, and other perfervid emotions of the text:

GIVE ME my robe, PUT ON my crown; I have
Immortal longings in me. Now no more
The juice of Egypt's grape shall moist this lip.
YARE, YARE, good Iras; QUICK. *Methinks I hear*
Antony call; I see him rouse himself
To praise my noble act. . . . HUSBAND I COME!
Now to that name my courage prove my title!
I am FIRE and AIR; my other elements
I give to baser life; so; have you DONE?
COME THEN, *and take the last warmth of my lips.*
FAREWELL, KIND CHARMIAN, IRAS long farewell.

Now all this is simply and solely the logical development of journalism; the exquisite result of the pressure of exaggeration upon words. And how stupid of the journalists to lag so far behind their programme! They have debauched the adverb and the adjective, it is true, but they have not yet had the courage to throw the battered bodies overboard. They have snubbed the good old punctuation marks, but still meanly depend upon them in a pinch. Two colors and several types have appeared in their pages, but with what crudity. A yellow article full of scarlet lies dripping with purple sentimentalism, and with a black motive at the bottom of it, is printed in 8 point, with only a scattering of italics, or a black and red headline, to indicate its vivid and emotional mendacity.

A high-school psychologist knows that it takes a stronger and then a stronger stimulus to keep up excitement in a jaded nerve. Either the journalists and the advertisement writers must give up their struggle to divert us from dull truth, or devise a more compelling diction. HENRY SEIDEL CANBY.

Yale University, August 21.

Literature

MR. GOSSE'S CRITICISM.

Collected Essays of Edmund Gosse. Five volumes. New York: Charles Scribner's Sons. $7.50 net.

Some time ago we had occasion in these columns (*Nation,* March 27, 1913) to review Mr. Gosse's latest and in some respects best collection of essays, his "Portraits and Sketches," and this volume has now come to us with four others, printed in uniform and attractive style. As we turn the pages of these successive series it is a pleasure to note the growth in charm and precision from the earliest (the "Seventeenth Century Studies," of 1883) to the later work, and to distinguish the persistent elements of strength and weakness in Mr. Gosse's criticism. The first series of essays was an attempt to do in a systematic way "for the rank and file of seventeenth-century literature what modern criticism has done, on a much larger scale, for Shakespeare, Milton, and Dryden." It was, to a certain extent, pioneer work. Among the authors chosen for study, Crashaw and Cowley had not then been issued in the admirable and cheap library of the Cambridge English Classics, nor had the "Matchless Orinda" appeared in Mr. Saintsbury's convenient collection of the minor seventeenth-century poets. But it cannot be said that Mr. Gosse was highly successful in his lucubrations. There is in his book no serious criticism of the great currents that moved through the age, and he failed to give vivid reality to so human a figure as Lodge. Some of his critical dicta are scarcely tenable, and he has never been impeccable in matters of pure scholarship. "Already," he says, for example, "in these Euphuistic romances we trace in embryo certain qualities which have always been characteristic of Anglo-Saxon fiction, a vigorous ideal of conduct, a love of strength and adventure, an almost Quixotic reverence for womanhood." It is a mighty word, this "Anglo-Saxon," but it would puzzle the most ardent advocate of racial distinctions to show how English Euphuism differed in these particular traits from its Italian original. And we should like Mr. Gosse to prove that "she [Julia] bore him [Herrick] one daughter, . . . to whom he addressed one of his latest poems." On the other hand, there are hints in this earliest volume of the sort of thing in which the critic was to show himself a master. The chapter on Captain Dover's Cotswold Games is a pleasant jaunt into one of the less-trodden byways of literature, and the sketch of Orinda needs only a little freer use of that matchless nymph's correspondence to be a charming portrait.

In such things Mr. Gosse was to display a skill and neatness by no means so common in English letters as one might suppose, or so easy to attain—in his light and facile handling of lesser and more curious topics. And his second volume, "Gossip in a Library," a series of very brief musings on the

BUPLIC LIB

rarer books in his own possession, is Mr. Gosse at his best, a most human pedant and entertaining fireside companion. The keynote of the volume is struck in a paragraph of the Introduction, than which the author has never done anything better:

I have heard that the late Mr. Edward Solly, a very pious and worshipful lover of books, under several examples of whose book-plate I have lately reverently placed my own, was so anxious to fly all outward noise that he built himself a library in his garden. I have been told that the books stood there in perfect order, with the rose-spray flapping at the window, and great Japanese vases exhaling such odors as most annoy an insect-nostril. The very bees would come to the window, and sniff, and boom indignantly away again. The silence there was perfect. It must have been in such a secluded library that Christian Mentzelius was at work when he heard the male book-worm flap his wings, and crow like a cock in calling to his mate. I feel sure that even Mentzelius, a very courageous writer, would hardly pretend that he could hear such a "shadow of a sound" elsewhere. That is the library I should like to have. In my sleep, "where dreams are multitude," I sometimes fancy that one day I shall have a library in a garden. The phrase seems to contain the whole felicity of man—"a library in a garden!"

That "sober certainty of waking bliss" remained, so far as we know, not for the meritorious author of these essays, and was never set forth in suitable English speech save by the creator of "Dreamthorp." But Mr. Gosse was to become librarian of the House of Lords, acquiring thereby, as we have heard one of his cynical friends declare, association with the two things he most coveted, rare books and titles—not book titles. At least there is no harm in repeating a bit of innocent gossip, of the kind that might go into one of Mr. Gosse's own anecdotal essays. His particular "Gossip in a Library," of which we are now speaking, deals, however, not with the living but with the dead, although it ends with a few words about the authors of "Ionica" and "The Shaving of Shagpat," who have only since then gone to that land "without folios," dreaded by Charles Lamb and all other true worshippers of ancient print. A number of the essays in brief discuss men and books of the seventeenth century, but the most characteristic of them draw on that treasure-house of anecdote and entertainment which a recent historian has called the Age of Whigs and Wigs. Who but Mr. Gosse ever heard of "Amasia; or, The Works of the Muses; in three volumes; by Mr. John Hopkins"? Well, the author of "Amasia" "was no poet," as our essayist observes, "but he possessed the faculty of writing with exactitude about himself"—a most rare and virtuous faculty—and out of his three volumes we have here seven pages of well-woven anecdote which lift the veil from an obscure corner of life in the year seventeen hundred. One of Mr. Hopkins's numbers is entitled "To Amasia, tickling a gentleman":

It was no perfunctory tickling that Amasia administered:

While round his sides your nimble fingers played,
With pleasing softness did they swiftly rove,
While, at each touch, they made his Heart-strings move.
As round his Breast, his ravish'd Breast they crowd,
We hear their Music when he laughs aloud.

This is probably the only instance in literature in which a gentleman has complacently celebrated in verse the fact that his lady-love has tickled some other gentleman.

Like other true lovers, Mr. Hopkins had to console himself with the shadowy muse in lieu of the lady who was destined by a fateful papa to wed another—tickled or untickled—gentleman. But he, though least of poets, has his reward: in these pages of Mr. Gosse's he is still young, and Amasia is forever fair. We cannot follow Mr. Gosse as he picks one rare volume after another from his shelves. Occasionally he is too brief for virtue. Who would not relish a long study, with generous quotations, of that "Diary of a Lover of Literature" which, with Wesley's "Journal" and Crabbe's "Poems," was the *délices* of Edward FitzGerald?

Yet, if occasionally too condensed, Mr. Gosse might have done well to follow more strictly his own motto from La Fontaine:

> Bornons ici cette carrière:
> Les longs ouvrages me font peur;
> Loin d'épuiser une matière,
> On n'en doit prendre que la fleur.

His next volume, the "Critical Kit-Kats," is made up of full-blown critical portraits, better altogether than the "Seventeenth Century Studies," but, to our taste, not so perfect as their shorter predecessors. Again we note the uncertainty of touch in critical matters of larger moment. Asking himself, for instance, why Keats lives among the English poets, he replies: "Originality of poetic style was not, it seems to me, the predominant characteristic of Keats. It might have come with ripening years, but it cannot be at all certain that it would. It never came to Pope or to Lamartine, to Virgil or to Tennyson"—and then an elaboration of this dictum. Most critics, we opine, would say that originality of poetic style was the one great native gift which Keats possessed when he wrote his "Endymion"—too licentious an originality if anything—and Virgil's style, beyond cavil, is one of the most individual and least imitable in the whole history of poetry. In some of the other essays in this volume Mr. Gosse proceeds more surely. From the "Walt Whitman," to name one of the best, a number of excellently judicious paragraphs might be quoted. There is at least matter for curious reflection in such a paradox as this:

Something mephitic breathes from this strange personality, something that maddens the judgment until the wisest lose their self-control. Therefore, I propound a theory. It is this, that there is no real Walt Whitman, that is to say, that he cannot be taken as any other figure in literature is taken, as an entity of positive value and defined characteristics, as, for instance, we take the life and writings of Racine, or of Keats, or of Jeremy Taylor, including the style with the substance, the teaching with the idiosyncrasy. In these ordinary cases the worth and specific weight of the man are not greatly affected by our attitude towards him. An atheist or a Quaker may contemplate the writings of the Bishop of Down without sympathy; that does not prevent the "Holy Dying" from presenting, even to the mind of such an opponent, certain defined features which are unmodified by like or dislike. This is true of any fresh or vivid talent which may have appeared among us yesterday. But I contend that it is not true of Whitman. Whitman is mere *bathybius;* he is literature in the condition of protoplasm—an intellectual organism so simple that it takes the instant impression of whatever mood approaches it. Hence the critic who touches Whitman is immediately confronted with his own image stamped upon that viscid and tenacious surface.

A better sentence than any of these, highly characteristic of the critic himself, and not in contradiction to what has just been quoted, though seemingly so, is the following:

When people are still young and like roughing it, they appreciate a picnic into Whitman-land, but it is not meant for those who choose to see their intellectual comforts round them.

But, after all, the real intellectual comforts (how beautiful the word "comfort," and how debased by its modern materialistic associations!) in these "Kit-Kats" are not the critical passages, but the more personal pages in which the author tells, always with gentlemanlike discretion, of his friendly relations with such men as Walter Pater and Robert Louis Stevenson and Lord De Tabley. We could almost wish that decorum had not restrained Mr. Gosse from relating more unreservedly the strange and vexed life of the last-named. But we must be content with hints at the deeper and more tragic aspects of that poet's career, while relishing fully the friend and book-lover in him. Who that has ever shared a treasure trove with a fellow-searcher will not delight in this anecdote that displays the collector's most honorable traits?

In 1877 he secured, by a happy accident, a copy of Milton's "Poems" of 1645, a book which he had never met with before. Too eager to wait for the post, he sent a messenger round to my house with a note to announce not merely the joyful fact, but—this is the interesting point—a discovery he had made in the volume, namely, that the line in the "Nativity Ode," which in all later editions has run,

Orb'd in a rainbow, and like glories wearing,

originally stood,

The enamell'd arras of the rainbow wearing,

"which," as he said, "is a grand mouthful of sound, and was so much better than the weak 'like glories.'"

Were it not for the fear of being too long, without Mr. Gosse's excuse of literary talent, we should like to comment on another anecdote which shows Lord De Tabley rebuking Browning for light treatment of a copy of Davenant's "Madagascar." "Oh!" exclaimed the irate collector afterwards, "I could not allow him to *patronize* Davenant." This, we think, the gift of happy personal reminiscence, whether of men he has known or

of rare books he has coddled, is the vein which makes of Mr. Gosse one of our most genial critics, and justifies the very comfortable (if we are not ourselves helping to debase that word) republication of his essays. The reader may discover for himself how far these qualities penetrate the "French Profiles," and the *Nation* has already pointed to their abundant presence in the "Portraits and Sketches."

CURRENT FICTION.

Clark's Field. By Robert Herrick. Boston: Houghton Mifflin Co.

We have always respected Mr. Herrick for his seriousness, and admired him for his power of presenting character and episode. But we have had occasion to deplore a lack of restraint and concision in the use of his abundant materials. He has seemed to yield too freely to the spell of what he has recently formulated as "the state of flux of our life, the complexity and bigness of the American social background." That is an amazing thing to contemplate; an appalling thing to reduce as a whole to terms of art. Mr. Herrick's imagination did not prove big enough for the huge canvas he first chose to employ. He would produce a series of vivid groups, each drawn with well-nigh photographic distinctness, but it was hard to get the meaning of the composition as a whole. In the later novels, he has steadily narrowed his scene, and as steadily broadened his interpretation. The flux and the bigness of American life are felt in the atmosphere of "One Woman's Life" or "Clark's Field," as they were not in the mere dimensions of "Together."

Of "Clark's Field" we have the happy feeling that we cannot speak too warmly. Here is another story of "one woman's life," but the woman is very different from the exigent butterfly who has appeared so often in this writer's pages. To be sure, we find the child Adelle in that atmosphere of middle-class squalor from which so many beautiful and heartless heroines have emerged of late. Her aunt keeps a boarding-house in a village which is rapidly becoming a part of the Eastern city of B——. Clark's Field is a fifty-acre tract "tied up" for two generations by the disappearance of a part heir. Adelle's grandfather has tried to sell it for $5,000, but has failed for lack of a clear title. When Adelle reaches her majority and comes into the property, it is worth a thousand times that. The difficulty of the joint heir has been obviated by the skilful hand of the trust company which is her guardian.

But before the hour of her full inheritance she has come a long way from the boarding-house at Alton. Mr. Herrick has pictured her first girlhood as plain, dull, without attractiveness or promise. The fashionable boarding-school to which the trust company sends her does not educate her mentally or morally. Still, there is something sound at the bottom of her "dumbness," something unfelt but inviolable. She becomes a spendthrift, an idler, makes a foolish marriage, suffers for her folly. But all the time there is within her a germ of character, of goodness, and of strength. This carries her through the butterfly phase, this gradually rouses her sluggish intelligence, and when a horrible personal experience comes to her, this lifts her above despair or apathy. We leave her a triumphant figure, a figure of beauty and power wrought from the most unpromising materials. Goodness and beauty are also in the figure of the Clark cousin, Adelle's kinsman in nature as in blood, who comes into her life by a road which realism would have none of. Indeed, the whole conclusion of the matter may easily be disposed of as vague and sentimental by an unsympathetic reader. But we believe that Mr. Herrick will find many sympathetic readers for this sincere and imaginative study of human life.

"If Mr. Herrick were older," said Mr. Howells not long ago, "I should say that he had learned from life how patient people are with disappointment, in the larger rather than the smaller experiences, and how beautiful and pathetic their resignation to fate is." We have more than once commented on the elegiac, almost plaintive, strain in Mr. Herrick's work. Unless as a matter of style, there is nothing of that here. For firmness of structure, singleness of effect, vigor, and hopefulness of spirit, the book stands by itself among Mr. Herrick's novels.

The Hidden Children. By Robert W. Chambers. New York: D. Appleton & Co.

It is easy to understand the popularity of Mr. Chambers's novels. He writes usually a thoroughly readable tale of adventure, and long practice has made him a master in the art of mixing the ingredients that go to the composition of such a story in exactly the proportions that please the public taste. His latest work is an admirable example of his style. It deals with that period of the Revolution when the colonists were waging war against the great Indian confederacy of the Iroquois, and when the proud gentry of County Tryon, dispossessed of their estates by the Committee of Sequestration, had joined forces with the marauding Indians and were spreading terror through the countryside. The broad outlines of history are retained, but are diversified with the individual adventures of the hero, a young ensign in Morgan's Rifles. And the hero is all that he should be—young and brave and pure, modest withal, and just sufficiently unintelligent in some respects to make the reader feel pleasantly that he is, after all, of common clay, even as the reader himself. Sentiment is mingled judiciously with adventure, and the heroine has all the graces as well as all the virtues that the heart of man can desire. Due heed is paid to the romantic aspect of the Indian, and we find again with a rush of reminiscent gratitude the stirring ceremony whereby the hero and a noble red man forge the bond of blood-brotherhood. Altogether, this is a brisk story of adventure.

Gideon's Band. By George W. Cable. New York. Charles Scribner's Sons.

The color of this long and sustained romance largely rises from its setting—the Mississippi steamer Votaress, bound from New Orleans to Louisville with a crowd of immigrants on the lower deck, and on the upper the young hero, son of the line's owner, and the young heroine, daughter of a keen commercial rival. It is rich in character contrasts, and through the book, subordinated as regards interest only to the lovers, move the Senator, the gambler, the bishop, the backwoods actor, the farmer, the roustabout, and the merchant. Out of this motley world naturally rises a story of considerable complexity, which it more than taxes the author's power to handle deftly. Cholera breaks out upon the lower deck, and a panic threatens which calls forth an appealing exhibition of heroism on the part of two or three. There are, too, certain sequels to a previous river disaster, which involve the attempt to conceal an ex-slave. The climax comes when mutiny, fear, wrath, smouldering on every deck in an atmosphere of unreason, are averted through a theatrical performance planned by the young people of the boat and by the "play-actors." Next to the superfluous complexity of the plot, the chief blemish is the author's ill-success in portraying the heroine. She grows from a hoyden to a poised young woman, it is true—but it is as the hoyden, giggling in times of crisis, untouched in times of real emotion, that we think of her.

Tarzan of the Apes. By Edgar Rice Burroughs. Chicago: A. C. McClurg & Co.

It is hard to imagine how more elements of mystery and thrill could be assembled between a pair of book-covers. We have heard of human children reared by beasts, but Mowgli is a feeble fancy compared with this hero. Tarzan is not only adopted by a sheape, he is heir to an English title. He not only travels by preference through the treetops, with or without passengers, but he kills lions by jumping on their backs and carrying the double Nelson to its spine-breaking finish. He teaches himself to read and write English without ever having heard a word spoken, and learns to speak it clubmanly in the course of a week or two. In his character of naked savage he wins the love of the American maiden, and shows the result of Norman blood by his chivalrous treatment of her. He also finds a treasure chest for her indigent popper, rescues her from a forest fire, and performs other feats too numerous to mention in this place. The crowning bit of ingenuity with which the author is to be credited is the means of his identification as the true Lord Graystoke. At six weeks of age he has left infant finger-prints upon a page of his father's diary, and the diary has survived! Only persons who like a story in which a maximum of preposterous incident is served up with a minimum of compunction can enjoy these casual pages.

WHIGS AND PITTITES.

Lord Chatham and the Whig Opposition. By D. A. Winstanley. New York: G. P. Putnam's Sons. $2.95.

This is a work of great merit, revealing care and thought on every page, and is probably the best account that has been written of a very chaotic and hence very difficult period. Since the appearance of von Ruville's Life of William Pitt, English scholars have turned eagerly to the old problem of interpreting the politics of the first half of the reign of George III. They have been inspired either by the hope of refuting von Ruville's aspersions on the character of that popular hero, William Pitt, or else by the scholarly results of the German savant's methods. The problem of Pitt had already engrossed the attention of Dr. Winstanley before the appearance of von Ruville's volumes; but he shows in the above work the German's influence by a more painstaking examination of the archival material and a greater care in the weighing of evidence. There is no indication of his intentional desire to take issue with von Ruville, although he by no means follows the latter's interpretations.

The theme of the book is politics; and no previous writer has shown an equal understanding of the "men and measures" of the period. Mr. Winstanley has made a careful study of the personality and the politics of each individual, so that he is able to give in brief pen-pictures the portraits of those politicians who have made the reign of George III so notorious. Here we find an excellent likeness of the Duke of Newcastle, with a rather more prepossessing countenance than is usually drawn. In spite of his many mannerisms and his suspicions, the old Duke was learned in the game of politics and his advice better than that of the younger men, like the Marquis of Rockingham, who were so eager to slip the mantle from his shoulders. The picture of Lord North is not less well drawn. His imperturbable good nature and his keen sense of humor made him a foe against whom the darts of sarcasm and invective were ineffective.

In spite of the title of the volume, we do not see so much of Chatham as might be expected. Naturally enough, the greater part of the book is filled with an account of the Chatham-Grafton Ministry, at which time the former was at home nursing his mysterious gout, the details of which Mr. Winstanley spares us. But Chatham is not left out of the picture, and the author brings him forward at the proper periods and displays him in all his majesty. Chatham is a favorite of Mr. Winstanley's, and he shows him off to the fullest advantage, although he is no blind worshipper of the inspired statesman.

The keystone of Mr. Winstanley's interpretations of the politics of the era lies in the conflict of two opposing theories of government: the one favored by the court was that of Bolingbroke, which disapproved of political parties; that maintained by the "Whig Opposition" was that party government was inevitable and salutary. George III believed that in Chatham he had found the ideal man to make Bolingbroke's theory a reality. Men were to be chosen by the Prime Minister, not for their party affiliations but for their fitness to govern. Mr. Winstanley shows how this plan completely broke down through the failure to persuade men to leave their political connections, through the sickness of Chatham and the weakness of Grafton, until under Lord North the King became the real master and the Whig party was broken.

The volume is so good that it is a pity that it is not perfect; but there is one fundamental error in Mr. Winstanley's interpretation for which the reader has to make many readjustments. Like so many English historians, he is infatuated with the name of Whig and reads back into the eighteenth century conditions which prevailed only after the death of George III. To him Whig generally means that faction which was formerly led by the Duke of Newcastle and Lord Hardwicke, but which, during the period under review, looked to the Marquis of Rockingham as its leader, and to Edmund Burke as its spokesman. He knows that there were other Whig groups, such as the Bedfordites, the Grenvillites, and the Pittites, and even Whigs among the court faction, but the fact that there are these other Whig groups has not led him, any more than it has other distinguished English historians, to modify his interpretation. For Mr. Winstanley the "Old Whigs" stand for the Whig party.

If Mr. Winstanley had considered more carefully the later history of this group of men, he would not have fallen into this error. They were those who made that "unhallowed alliance" with Lord North against Lord Shelburne; they formed the faction which divided at the period of the French Revolution, one group, the most weighty, showing their real colors by joining to form the new Tory party, the other becoming the centre of the new Whig party.

The period which Mr. Winstanley covers was one when there were no parties, only factions, which grouped themselves generally according to self-interest. Most of the groups were incompetent and self-seeking. Their leadership was in the hands of "standpatters," and that particular faction of the Old Whigs was of the most conservative character. Their philosophy was based upon the principle of *laissez faire*, and with Burke they gazed in awe upon the machinery of that "best of all constitutions" and would not mar its perfections by laying unhallowed hands upon it. It was this fundamental principle of theirs which prevented Lord Chatham from joining with them—and why he did not is a mystery to all Whig historians, including Mr. Winstanley. Lord Chatham and his following were most pronounced progressives, who believed that the Government should cure the evils existing in society. They would extend the suffrage; they would overhaul the civil service. They were expansionists; they advocated governmental control of East India and the development of the colonial possessions in the west of America. Thus the fundamental principles of the Pittites and the Old Whigs were irreconcilable, and they wouldn't unite. When they did, in 1782, it was only for a moment, and then they separated to renew their struggle.

If Mr. Winstanley had grasped this fundamental difference between the Pittites and the Old Whigs, he would probably have reached other interpretations of some events. When the Rockingham Ministry came into power in 1765, they tried very hard to induce Pitt to join them, but he said then, as always, that "measures not men" were what he considered; and during the whole of their brief period of power the Old Whigs never exhibited an interest in a broad progressive policy. They even nullified their repeal of the Stamp Act by passing the Declaratory Act, which was so contrary to the opinion of Pitt. When, in 1766, Pitt (or Lord Chatham) came into power, he persuaded individuals of the Old Whig faction to remain in his Ministry; but they soon left it, because, as they alleged, the Minister removed Lord Edgecombe from office; but before that was done, Alderman Beckford had announced what the new Minister's policy in East India was to be, and the Old Whigs showed by their opposition to the later measures introduced by the Ministry that they never could have stood on the same political platform with Lord Chatham. Did the Old Whigs use the removal of Lord Edgecombe as an excuse to leave a Ministry whose measures they could not support? Mr. Winstanley does not see the necessity even of asking this question; nor, because he identifies the Old Whigs with the Whig party which developed later, is he able to explain why Chatham turned always to the Duke of Bedford in his negotiations to gain additional strength for the Ministry rather than to the Marquis of Rockingham, even when the King expressed his preference for the latter.

THE NOBLE LECTURES ON DANTE.

The Spiritual Message of Dante. By the Rt. Rev. W. Boyd Carpenter. Harvard University Press. $1.50.

The six lectures contained in this volume are those delivered at Harvard in 1913 on the William Belden Noble foundation. Their purpose is primarily religious. "They are not intended as a contribution to the critical study of the 'Divina Commedia,'" the Preface states; "they are simply thoughts on religious experience as exemplified in Dante's poem."

The spiritual message of the "Comedy" is so clear and so compelling that it must remain deeply impressive in any faithful report, and it is impressive, indeed, in these lectures, which are enthusiastic as well as faithful. They are good in their exposition of the nature of sin as Dante conceived it; they are excellent in their insistence on the energetic quality of the divine love. Plain Dantesque truths are often plainly and effectively restated: "for ordinary mortals

the very sight of evil is bad, and may end in a paralyzed conscience"; "the readiness to bear the penalty becomes a remedial power"; "righteousness is as the salt of love, to preserve it from corruption"; "the power of evil is in the spiritual enfeeblement which results from evil indulged in."

The impressiveness of the lectures is, however, seriously impaired by their sentimentality. Human love is a fond theme with Bishop Carpenter; he treats phase after phase of it with zeal and zest, even to the rehabilitation of Rahab. Eight pages are spent in drawing and defending a wholly imaginary picture of the maternal love that Dante supposedly enjoyed in his childhood —this argument, among others, being offered in the defence: there is a story that before Dante's birth his mother dreamed that her offspring was a peacock; such stories do not circulate round an unwelcome child; *ergo*, etc. The Paolo and Francesca legend is set forth, like a favorite *novella*, in sweet phrasing and in full detail; the ugly historical facts are briefly told; and we are then bidden to forget the facts and remember the "pathetic romance" on the ground that the legend is what appealed to Dante!

Scarcely less unfortunate is the haphazard composition of the lectures. The Preface offers an apology: the book must represent the lectures as they were given, and they were not written out before they were given. But if the book was to represent the lectures as given, they should have been given in a form ready for publication. Dante held that the proper utterance of his supreme message required the most exquisite formal care. He who would report that message as Dante would have it reported should be systematic in plan, appropriate in detail, choice in imagery, and measured in diction. Bishop Carpenter's pages are repetitious in the extreme; certain ideas and groups of ideas are forced upon the reader with such frequency that resentment tends to cancel acquiescence. Irrelevant digressions and *exempla* abound, particularly in the first two lectures. The cold hands of William Pitt, Masson's portrait of Shakespeare, the disinterment of Rossetti's poems, the misfortunes of Jim Bowker, the "exercises" at Nauheim—what have these to do with the spiritual message of Dante? With regard to Dante's description of his emotion on first meeting Beatrice we are told that "it is all most true; but the emotion felt was emotion, as it were, in the cradle; the emotion described is emotion which is struggling out of the cradle, but the baby is the same." Elsewhere occurs this figure: "I am not attributing these thoughts to Dante, though they are the outcome of one of those pregnant fragments of thought which Dante has left hanging, as it were, on the hedges of the way along which his pilgrim feet have trod." Again we have: "The Florentine school rose to a higher level, and founded a school of love which bore the shield of a lofty purity"; "at the summit we meet those who are not so much sinners as those who lacked the help of Christianity." For phrasing such as this the "De vulgari eloquentia" has stern adjectives.

The student of Dante will be annoyed, moreover, by a considerable number of loose statements and downright errors. "There is a studied reserve in his writings: he does not darken sanctities with song." Darken, no; but did any other poet ever so illumine them? "The spirit of Dante's age saw woman as one might behold a glorious vision." Rather, the spirit of Dante and a very few poet-comrades. For the spirit of Dante's age, see the "Decameron." "It [the "Divine Comedy"] is not a work in which a great poet's vivid imagination plays over a theme of worldwide interest." But it is precisely such a work, and none the less so because at the same time "it is a personal record." Dante never watched the slow growth of Giotto's tower; the rise of the Provençal lyric is not the romantic movement; sins of impulse do not "grow into sins of wilfulness" in the Styx; Caina, not Caino, awaited Gianciotto; Aeolus did not cease to be a god when he let out the winds; there is but one angel in the boat of the redeemed; there was no local pride in Dante's inquiry if there were any *anima latina* among the envious; the two words "Agnus Dei" did not make up the whole prayer of the wrathful; it was not the *works* of Statius that Juvenal brought to Limbo; Guido Guinizelli was not a Provençal poet.

The book is well printed, and the illustrations are excellent.

THE NEW REALISM.

The Concept of Consciousness. By Edwin B. Holt. New York: The Macmillan Co. $3.25.

The volume before us, from the pen of a Harvard professor, is the latest production of the school of philosophers known as the new realism. The present volume hardly disturbs the impression that the main purpose of the school is to administer a refreshing shock of scandal to a bored philosophical world by parading a contemptuous disregard for all existing philosophy, along with an obsequious deference to natural science and mathematics. Mr. Holt's special brand of realism belongs in general with the airy mathematical Platonism (in Mr. Holt rather Neoplatonic) of Mr. Bertrand Russell, whose magnificent manner he seems to imitate in his style. But he lacks the Jovian self-assurance of Mr. Russell, his tone is often petulant and shrill, and his repetitious emphasis upon the finally "neutral" character of all "entities" betrays a certain sense of hollowness.

Mr. Holt's theory of consciousness is an elaboration of the theory of James embodied in the essay "Does Consciousness Exist?" which may be said to have begotten the new realism. James's point (by no means new in the history of philosophy) is that when I perceive, say, a tree, experience reveals but one tree, which is at the same time a real tree, having an objective existence in the material world, and a subjectively perceived tree belonging to the order of ideas in my mind, each according to the order, or "context," in which it is placed. Thus the "entity" tree, in Mr. Holt's terminology, is "neutral"; and "consciousness," on the one hand, and "matter," on the other, are but different configurations of neutral entities. For Mr. Holt, however, consciousness is an order determined by the relation of these to the nervous system. It is "that cross-section of the realm of being to which the organism specifically responds." Consciousness is therefore a mere relation, and logically, it would seem, not a more significant relation (if we may now speak of significance) than a cross-section of the world determined by reference to the dog-star or to my lead-pencil. As for the fact of error, Mr. Holt boldly takes the bull by the horns and puts error into the objective world. He does the same with volition. Knowledge of the past *is* past, *i. e.*, knowledge of the first century is, as far as it goes, identical with the first century; in the character of knowledge, it is simply the first century mutilated. Here, for convenience, he assumes that the nervous system can get in touch with an object without the intervention of sense-organs, the contrary notion being relegated to "the mind of the hod-carrier" or of the idealistic philosopher. And as for knowledge of the future, well, "If most persons know more of the past than of the future, it is chiefly because they do not take the trouble to look at the future" (253). This sounds as if the relational theory of consciousness were in desperate straits; and the impression is confirmed by a number of passages (187, 202, 209) in which empirical evidence is offered to show that consciousness "depends upon" the nervous system. Such statements, if they mean anything, must mean that consciousness is not fully defined by the relation of dependence itself.

Not less remarkable than the concept of consciousness is the concept of the "neutral entities" which constitute the "being" of consciousness and matter alike. The stuff of which they are composed—rather, the stuff which they are—is something which Mr. Holt calls "logic." And "logic" is created by the simple expedient, borrowed from the mathematicians, of affirming without argument—as axiomatic, perhaps—the highly debatable theory of real classes, *i. e.*, that the classes of things constitute an eternal order which is independent of any purpose of classification. The neutral entities then form a hierarchy of "logical" classes. Their neutrality is secured by the equally simple expedient of attributing subjective qualities to objective things and objective qualities to subjective things. Thus a collision of bodies is called a "contradiction" of propositions, and propositions are said to be "active" (in a sense not defined) and, we might say, to "do things" to terms.

From this it would seem that the neutral entities, instead of being "neutral" and having the qualities *neither* of consciousness nor of matter, have all the qualities of both; and, further, that consciousness and

matter have each all the qualities possessed by the other. What becomes, then, of the relational distinction of consciousness and matter, is not at all clear. Nor, we imagine, is it clear to Mr. Holt. We have to thank Mr. Holt for much that is stimulating, some of it amusing. "Never," however, writes Mr. Santayana, with this book before him, "was a group of thinkers so sophisticated and so ill-educated"; and never, we might add, have academicians set before the world a philosophy so half-baked. In following the derivation of entities through the deductive order of being, algebra, geometry, mass, physics, chemistry, material things, life, mind, the social sciences, and value (a unified nomenclature seems unattainable), we are reminded at once of the fantastic gnosticisms of the second century and of the amateur systems of philosophy that sometimes reach us from the mountains of Kentucky and Tennessee.

Notes

"A Modern View of Christ" is announced for publication early this month by Henry Holt & Company.

B. W. Huebsch announces the publication of "The Death of a Nobody," by Jules Romains; "Tales of Two Countries," by Maxim Gorky, and "Tid'apa," by Gilbert Frankau.

The Oxford University Press announces the immediate publication of the following pamphlets: "The Germans: Their Empire and How They Have Made It," and "The Germans: What They Covet," by C. R. L. Fletcher; "Just for a Scrap of Paper," by Arthur Hassall; "Bacilli and Bullets," by Sir William Osler; "A Reply to the German Address to Evangelical Christians."

The following volumes are included in the autumn list of the J. B. Lippincott Company: "A Woman in China," by Mary Gaunt; "The True Ulysses S. Grant," by Gen. Charles King; "The Life of Napoleon," by Major Arthur Griffiths; "The Celebrated Madame Campan," by Violette M. Montagu; "London," by Sir Laurence L. Gomme; "Colonial Mansions of Maryland and Delaware," by John Martin Hammond; "Our Philadelphia," by Elizabeth Robins and Joseph Pennell; "The Mystery of the Oriental Rug," by G. Griffin Lewis; "Stories from the Operas," by Gladys Davidson; "The Book Fancier," by Percy Fitzgerald. In fiction the list includes: "The Three Furlongers," by Sheila Kaye-Smith; "The Ward of Tecumseh," by Crittenden Marriott; "The Duke of Oblivion," by John Reed Scott; "Wild Mustard," by William Jasper Nicolls; "Betty's Virginia Christmas," by Molly Elliot Seawell.

The importations in the autumn list of the Macmillan Company include a new volume of "Essays," by Lord Cromer; "Joachim Correspondence," translated by N. M. Bickley; "Essays of Addison," chosen and edited with a memoir and a few notes by J. G. Frazer; "Enchanted Tulips and Other Verses for Children," by A. E. and M. Keary; "General Index to the Golden Bough Series," by James G. Frazer.

For reasons that need not be enumerated the Brontë sisters have recently become the chosen field for every kind of wild surmise, and there is a real place for so well-informed and, on the whole, so judicious a study as Mrs. Ellis Chadwick's "In the Footsteps of the Brontës" (Brentano's; $3.75 net). In construction her work is bad, sinning especially by continuous repetitions which render the book tedious reading. But her knowledge of the literature, a confused mass, is minute, and she has been able to correct Mr. Shorter and Miss Sinclair, to name the two most exalted Brontëists, in many less important details, and has brought a saner judgment to bear on the important matter of interpreting human nature. Since Miss Sinclair's rhapsody on "The Three Brontës" (see the *Nation*, January 30, 1913, p. 104), in which she uttered what may almost be called a shriek of protest against those who would hint that so wonderful a creature as Charlotte had fallen in love with M. Heger or so vast a feminine genius had been seriously influenced by a mere man, the four letters of Charlotte to her "master," printed in the London *Times* of July 29, 1913, have come like a thunderbolt to clear the air of murky conjecture. Mrs. Chadwick had known of these letters before their publication, and had even corresponded with the Heger family in regard to the propriety of publishing them. They are now used by her to substantiate her theory that Charlotte's work was all determined by that one profound experience in Brussels.

Possibly Mrs. Chadwick goes a little too far in her own thesis, and certainly there is slender evidence to suppose that Emily was strongly influenced by M. Heger. But the chief flaw in her estimation of the three sisters is one she shares with those critics with whom in other respects she so violently differs. Since Swinburne's heated eulogy of Emily, in 1894, there has been almost a conspiracy to exalt the author of "Wuthering Heights" at the expense of Charlotte. Now Mrs. Chadwick not only accepts this critical theory (in itself very doubtful; for there is reason to expect that taste will again swing away from the present hysterical praise of Emily's novel to a better estimation of the solid greatness of "Jane Eyre"), but she makes her literary task the occasion of belittling Charlotte's personal character relatively to that of the other two sisters and Branwell. Charlotte may not have loved children, and she may have been an uneasy person to live with, but she had, we think, more stability of character than her present biographer credits her with. For the rest those interested in the lives of the Haworth family will find all the details studied here with almost exasperating minuteness. But the book is for the reader who is already somewhat immersed in the recent Brontë literature. To such a reader it can be recommended very heartily.

To the general reader, the most interesting passage in "The Life of John Edward Ellis, M.P.," by Arthur Tilney Bassett (Macmillan; $2.50 net), will be the four pages of description of Gladstone's Home Rule speech of 1886. This was given in a letter of Mr. Ellis to his wife, and, without taking up the points of the speech in detail, it carries one along in such a way as to convey the impression of the speech, together with its effect from time to time upon its hearers. Mr. Ellis has an eye for the theatrical also, as when he notes: "The tension of mind growing at times almost painful was relieved just now by one of those incidents people might call ominous. Bringing his hand down twice with rapid gestures, Mr. Gladstone struck, not the familiar box, but the Mace, which emitted a ringing sound and seemed to totter on its supports. Men whispered to one another 'the bauble,' and tittered." The subject of this biography was a Friend, or Quaker, who represented Rushcliffe in Parliament continuously for a quarter of a century. In the course of this service, he declined to allow his name to be presented for Speaker, but was chosen by John Morley as his Under Secretary for India and became a Privy Councillor. Lord Bryce contributes the preface.

From some twenty thousand extant love-letters of Juliette Drouet to Victor Hugo, two or three hundred have been edited, with a biographical introduction, by Louis Guimbaud, and translated into English by Lady Theodora Davidson ("Love Letters of Juliette Drouet to Victor Hugo." McBride, Nast; $2.50). The letters cover a connection of fifty years' duration, throughout the course of which the beautiful third-rate actress, with a shady past and an illegitimate child, was faithful in thought and word and deed. Hugo put a stop to her career on the stage, where her good looks might have carried her far, secluded her from the world, never allowed her to forget her history, and, that he might know her every thought, ordered her to write to him at least twice a day, though they met almost as often. The letters give us the embarrassing spectacle of a grand passion. Juliette washed Hugo's shirts, forgave his infidelities, adored his "little feet," and was the humble servant of his wife and children. The biography is well put together, and the translation reads smoothly.

Belief that a problem is insoluble is an unusual reason for writing a book about it, but in the preface to "Democracy and Race Friction" (Macmillan; $1.25 net) Dr. John Moffatt Macklin confesses his conviction of the insolubility of the race question. Naturally, his book is in part a description, in part an explanation of the causes, of the situation. Its effect is that of a collection of essays rather than a unified volume. The same points appear in different chapters. The author has read widely and thought carefully, but gets nowhere. One of his best chapters is on The Philosophy of the Color Line, the conclusion of which shows his idea of the way things are going in this country: "It is doubtless true," he says, "that in spite of fifty years of freedom, the negro, especially in the South, enjoys as a race fewer points of contact with the white and is less an integral part of the social order than he was in the days of slavery." At another place he remarks: "The negro is on trial and the issue is largely in his own hands." But this view is contradicted by the whole tone of the book. Upon certain points he is illuminating, as that of the position of the educated mulatto, but the book, despite its scholarship, has an effect of superficiality.

"Voyage aux Etats-Unis de l'Amérique, 1793-1798," by Moreau de Saint-Méry, edited with an introduction and notes by Stewart L. Mims (Yale University Press; $2.50 net), now for the first time published in full, is an his-

torical document of considerable value. Upon the accession to power of Robespierre, in 1793, Moreau, who had incurred his enmity in the Constituent Assembly, fled to Normandy, and in November sailed from Havre for the United States, landing at Norfolk in March, 1794. Here he remained about two months as shipping agent for a French firm, and then went to New York, where poverty compelled him to work as a shipping clerk. At New York he made the acquaintance of De La Roche, a German nobleman, and in October the two opened a book-shop and printing-office in Philadelphia, where Moreau remained for nearly four years. The business was not prosperous, but the shop became a rendezvous for literary people and French refugees. Moreau himself published during this period his two well-known works on San Domingo, besides two lesser books, and was an active member of the American Philosophical Society. Here Talleyrand found him in May, 1794, and from October, 1795, until June, 1796, when Talleyrand returned to Europe, the two men saw each other daily. In 1798, however, the hostility to Frenchmen brought Moreau under the proscription of the Alien Act, and in August he set sail for France.

The manuscript now printed was prepared for publication by Moreau. Margry found it in the Colonial Archives, and Pichot used small portions of it in his "Souvenirs Intimes sur Talleyrand," published in 1870. Pichot's extracts have also been used by Moreau's biographers. In preparing the work for publication, Moreau added to the journal references to a number of later events, together with long descriptions of New York, Brooklyn and Long Island, and Philadelphia. Not much of importance escaped his notice, and the student of American manners, morals, trade, prices, and the like will find these pages entertaining and informing. Professor Mims has reproduced the original text entire, save for an unimportant and imperfect description of the Schuylkill bridge, which Moreau translated from an English account; and has added some useful notes, a sketch of Moreau's life, and an index.

Ireland has been generally neglected by the students of witchcraft. Indeed, it has enjoyed, and to some extent deserved, the reputation of freedom from the delusion which raged so long and fiercely in other parts of Europe, both Catholic and Protestant. But there are a few sparse records of trials and persecutions which show that the superstition was not unknown on the island, and that it exhibited there most of its familiar phases. These pieces of testimony Mr. St. John D. Seymour has undertaken to gather together, and they have furnished him the material for an interesting little volume, "Irish Witchcraft and Demonology" (Baltimore: Norman, Remington & Co.; $1.50). Though the work contributes not much that is new to the theory or description of witchcraft, it is of value in piecing out the history of the superstition. In addition to the familiar case of Dame Alice Kyteler (of the year 1324), Mr. Seymour has collected about a dozen definite instances of witches in Ireland, most of whom were brought to formal trial. To eke out this somewhat scanty material he has included one Irish-American witch, the well-known Mrs. Glover, described in Cotton Mather's "Magnalia," who was hanged in 1688. Since she insisted on using the Gaelic language in her testimony, much to the inconvenience of the court, she has a special claim to be reckoned among Irish witches. Mather, it may be remembered, records his regret that he had not learning enough to understand her without an interpreter—surely one of the earliest expressions of interest in Celtic linguistics on the part of an American scholar!

Many matters not strictly to be included under the definition of witchcraft, though in a broad way germane to the subject, are treated by Mr. Seymour. Tales of magic and of prophecy, of compacts with the devil, of ghosts and other apparitions, and of spectral evidence, are all introduced to illustrate the state of mind of the Irish people at various periods, and to show that the scarcity of witches was at all events not due to any unreadiness to believe in the supernatural or the uncanny. Particularly interesting to folklorists, and perhaps rather peculiar in the history of "Sadducism," is the almost indistinguishable mixture of the conceptions of witchcraft with the native Celtic fairy-lore, of which Mr. Seymour gives ample illustration. While the book is not heavily *dokumentiert*, it nevertheless appears to be trustworthy in the presentation of records. The author, too, shows a sufficient general acquaintance with the history of witchcraft and kindred subjects, though his statements are naturally here and there open to discussion. His references to James I, "that keen witch-hunter," for example, suggest that he has not pondered Professor Kittredge's defence of the royal demonologist in the volume of "Studies in the History of Religion," dedicated to Prof. C. H. Toy.

Another volume of the Journals of the House of Burgesses of Virginia has appeared ("Journals of the House of Burgesses of Virginia." 1695-1696, 1696-1697, 1698, 1699, 1700-1702. Edited by H. R. McIlwaine. Richmond, Va.), and it is presumed that one more volume will complete the series. The editor states that the text of these journals has been obtained from transcripts of copies in the English Public Record Office: "No copy of any one of these journals has come to light elsewhere." As is well known to those familiar with this publication, the work has been published chronologically backwards, so that, at last, we begin to see the end. "The journals *in their entirety* appear for the first time in print in the present volume. The spelling, punctuation, capitalization, etc., of the manuscript journals in the English Public Record Office have been faithfully followed, even in the abbreviations"; so that we shall soon have a complete printed record from the beginning. Can any State show a record comparable to this of the first State, which was settled in 1607? The journals in this volume extend from April 18, 1695, to August 28, 1702. Queen Mary died on December 28, 1694, and "for six years England had been engaged in that great war with France which England's allies—Holland, Spain, Austria, Sweden, Savoy, the Palatinate, Bavaria, and Saxony—had been waging since 1688." The contrast to the present condition of things is interesting.

The record of the session of April 18 to May 18, 1695, may be taken as typical. Virginia at this time consisted of twenty-three counties and one city, and the Assembly transacted its business by means of three standing committees—Elections and Privileges, Public Claims, and Propositions and Grievances. The Governor's speech at the first session of 1695 was concerned with the commands he had received from the King and Queen, namely, that he should send assistance to New York, should fit out vessels to see that the Navigation acts were not violated, that suitable salaries should be fixed by law for ministers, and that he should encourage the establishment of William and Mary College, which had been chartered in 1693. He also stated that, on account of Indian incursions, he found it necessary to continue the rangers on the frontiers, and he recommended that the money to be raised by the poll tax should be lessened by the imposition of a duty on liquors. The address of the House to the Governor argued that the Colony was in no condition to send assistance to New York; that the fitting-out of armed vessels to cruise along the coast was a question which the Lords of the Treasury expected the Governor to handle without recourse to the General Assembly; that the clergy were already sufficiently provided for, and that there was no occasion at that time for the Assembly to do anything further for William and Mary College. The promise was made that the law as to the rangers should be reenacted, and that the Governor's suggestion as to taxing imported liquors should be carried out. The address on the question of assisting New York did not please the Governor and Council, and they were able to persuade the members of the House to recommend £500 for the purpose. This act was made discretionary with the Governor and Council, the object of the proviso being to keep the money at home if, at the time of the application, Virginia's need appeared great. In general, the proceedings of the Assembly are characterized by similar disputes with the Governor and the Council, attended sometimes with more, sometimes with less, acerbity. The present volume, however, closes on a more placid note, for when we come to the final session here recorded, that of August 14-28, 1702, relations have been somewhat ameliorated—possibly because the Governor and the Council had differences of their own—and in the Governor's speeches and messages there is an absence of the rather irritable insistence on giving advice that marked many of his previous addresses. There was a change of Governorship in 1698, Colonel—later Sir Francis—Nicholson succeeding Sir Edmund Andros, but the disputes appear to have been inherent in the office.

The trip to western China and southeastern Tibet, which inspired F. Kingdon Ward's volume, "The Land of the Blue Poppy" (Putnam), was a commercial one, made in the interests of a horticultural firm; the area explored was very limited, a small rectangle at the junction of Burma, Yunnan, and Tibet, and the narrative is in the form of a daily journal, with the dates omitted. Instead, however, of combining to dull the interest of the reader, these factors unite in making the book one of the most enjoyable that have been produced on central Asian exploration. The author has a simplicity of style and directness of diction which produce very vivid pictures. In a word, this is a very well-written volume, pervaded by the pleasant personality of a Shanghai school-teacher, who, besides being a keen observer, has a sense of

humor, and displays tact and sympathy in his relations with the natives. The region is little known, and of especial interest, owing to its border position, which will make it the scene of much activity in future history. People and plants may be said to be the dominant subjects of Mr. Ward's book, and there are interesting discussions on the remarkable meteorological conditions of the region. Excellent photographs, and text on dull-finished paper make the volume attractive, and several botanical and other appendices and a full index add to its value for purposes of reference.

NOTES FROM ABROAD.

A figure of interest in the present upsetting wars is Paul Claudel, the French poet, whose work has been explained in several recent numbers of the *Nation*. At the outbreak, he was at his post as Consul-General of France in Hamburg. The sudden stop put to all railway and navigation service made it difficult for him to leave, and, as is known from other examples, the Imperial Government did not furnish facilities for travelling homeward to the representatives of the countries with which it was beginning war. His friends were becoming uneasy at receiving no news from Consul Claudel, when it was learned that he had made his way by himself into Denmark. He finally arrived in France, and at once took his place in the army. It must have been with a pang of regret that he shouldered this new enmity, for he had been greatly appreciated in Germany, where "Claudelian' societies existed for the study of his poetry, like the Browning societies of America. Perhaps his work is destined to the same cosmopolitan existence as himself.

Paul Claudel is forty-six years old, and is a native of that part of France "where the champagne chalk meets the ploughlands of Soissons"—the region now trampled by German armies. From a Paris college he went to prepare for the Foreign Office at the famous Ecole des Sciences Politiques, where there have always been American students. At twenty-one he published his first play—"Tête d'Or"—violent, mystic, and without a trace of the circumambient symbolism. He frequented Mallarmé, without enlisting in any of the literary schools which were then following each other kaleidoscopically in Young France. At twenty-five he left for his Consular service in the United States, of which there is a reminiscence in the American of his drama, "L'Echange"—the almighty dollar finding the unbuyable. Thence he was transferred to China, and was there for many years an authority in the international problems of troublous times. He came back to Europe at forty, for yet another race experience as French Consul in Prague and Frankfort, and last in the important post of Hamburg. All this exotic living has left its traces in his literary work, but his life has been that of a man, and not mere literature.

Paul Claudel's person breathes in air of robust health, with square head and clear, deep-sunken eyes, large-browed, and broad-shouldered. His haversack books are the Bible and a volume of Thomas Aquinas and "radiant Pindar." At Fou-tcheou, in China, he printed his translation of Æschylus's "Agamemnon," proof-read by himself from the hand printing-press of Widow Rosario—a curious pendant to Kipling's less difficult Indian editions. Paul Claudel has caught wonderfully the strong movement of

> The fire that from the height of Ida sent
> Its streaming light, as from th' announcing flame
> Torch blazed to torch.

Yet, when all this exotic quality has been allowed for in his work—Greek and Chinese, American, English, and German—its essential spirit is that which he promises to his child born out of due space:

> For thy baptism three bells wait in the tower where they rang for thy father—
> At ten of the clock when the garden is fragrant and every bird sings in French!

When the new Pope Benedict XV made his first apparition at the inner balcony of St. Peter's, to bless the myriads kneeling on the church pave below, it was visible that the sleeve of his white robe was pinned round his lean arm at the wrist. The Vatican tailor has explained. As the Pope's blessing is given immediately after the election, the tailor provides beforehand three robes in as many sizes, so that one of them may more or less fit the new Pontiff. Now the Pope is little and thin to a degree not foreseen even in the third and least *zimarra* of those prepared. The name of the robe, in varying orthography subject to Grimm's laws, may be traced through many centuries of our own literature.

Science

The subjects of the biographies in Prof. Howard A. Kelly's "Some American Medical Botanists" (Troy, N. Y.: The Southworth Company) have had their names associated with the generic or the specific name of some plant; and since the list runs from early times to the present, the author has had abundant opportunity to gather and present a great amount of interesting material. The work has evidently been a labor of love in the moments of relaxation in a busy professional life; hence the treatment is throughout sympathetic rather than critical. The illustrations are excellent, and will enrich the library of any botanist.

Professor Curtis, of Columbia University, in the "Nature and Development of Plants" (Holt), gives to the elementary student of botany an admirable guide to the subject. He has been successful in simplifying the terminology, and he has thus freed the volume from many deterrent features. Moreover, he has interwoven a good deal of practical matter which will prove both useful and interesting. The work is obviously to be used in connection with a thorough lecture course, supplementing the text, and with laboratory practice. Many of the illustrations are new and are worthy of high commendation, although a few of them need a little more explanatory text. Doubtless, this additional information would always be supplied by the teacher. It is gratifying to notice that this volume is now in its third edition.

In "Making Fences, Walls, and Hedges" (McBride, Nast; 50 cents net), W. H. Butterfield gives most useful information. Fences, whether of wood, iron, or wire, have a right and a wrong way of being made. Gates, correctly weighted, are a specialty in themselves. Walls of stone, brick, concrete, and a combination of two or more of these materials receive attention in a separate chapter. The author gives a valuable estimate of the approximate cost of the different materials used in both fences and walls. The last chapter, on hedges, is most interesting. It shows their advantages and disadvantages, tells how to plant them and how and when to prune them, and enumerates a large variety of hedges in tabular form with the characteristics of each.

For twenty years it was Professor Slingerland's work as assistant entomologist at Cornell University Experiment Station to make special study of the insect problems met by New York State fruit growers. Some of the results were published by the station in bulletins, but a mass of valuable material still remained unpublished. It was with the idea of getting this additional information into shape so that it could be read and used by farmers that Professor Slingerland in the last months of his life and in spite of rapidly failing health worked devotedly in a vain attempt to complete the volume before us—"Manual of Fruit Insects," by Mark Vernon Slingerland and Cyrus Richard Crosby, edited by L. H. Bailey (Macmillan, $2). After his death it fell to Professor Crosby to collect and combine into a consecutive whole the copious unpublished notes. The outcome is a volume of nearly five hundred pages in which the more important insects injurious to deciduous fruits are concisely described and the main facts given relative to their distribution, life-history, and habits, the nature and extent of the injuries they inflict, and the means of control. The numerous illustrations are mostly from Professor Slingerland's own photographs, and the various references at the end of the discussion of each insect indicate where the reader may find still further material bearing on this important study. When one reads that the minor pests have not had even honorable mention in this insect manual, and nevertheless finds that the destructive insects mentioned total something over two hundred, one is inclined to think that if kindly old Cowper had had an orchard he would not have written so sadly about dropping from his calling list "the man who needlessly sets foot upon a worm." In fact, even a cursory study of these pests in their various forms is sufficient to convert one to a Tackleton frame of mind towards all creeping and flying insects, and make one promptly "scrunch 'em, *so*."

Business men are beginning to find that "it pays" to safeguard the lives and health of workers, to give them light, fresh air, sanitation, education, incentive to better themselves, and many employers will welcome the appearance of Prof. W. Gilman Thompson's book, "The Occupational Diseases" (Appleton), as the first comprehensive treatise on this subject by an American authority. Dr. Thompson's book is plentifully illustrated, and quotes many authorities. Symptoms, treatment, and prevention of a long list of diseases are treated in detail, and the hazards of various occupations clearly stated. The general pathology and etiology of the subject are followed by a chapter on general remedial measures, in which the section on prophylaxis is very complete and of great assistance to all workers in this field. The various appendices summarize a large part of the subject-matter of the book in tabulated form, as well as the main provisions of existing laws relative to the reporting of occupational diseases by physicians.

Drama and Music

"THE MIRACLE MAN."

Mr. George M. Cohan's dramatization, now running at the Astor Theatre, of Frank L. Packard's novel, "The Miracle Man," is of interest mainly because of the comparison which it invites with a play on a similar subject by the late William Vaughn Moody. "The Faith Healer," like the present piece, attempts to set forth dramatically the work of a miracle man. Readers of the *Nation* will recall Mr. Moody's rich characterization of the young shepherd who wrought wonders in a household in the Middle West, how the author was concerned chiefly with the shifting moods of his central character—the doubts and fears of Michaelis concerning his power, his enthusiasm and despair, his temptation at the bidding of love to become an ordinary mortal, and his final triumph. One will not have forgotten, either, the wealth of contrast and variation which the theme receives from surrounding personages. There is the Rev. Mr. Culpepper denouncing from his stronghold of orthodoxy the miracles as blasphemous; there is Dr. Littlefield's explanation of them as merely the workings of natural forces, and there is the buoyant symbolism exhaling from eloquent diction. "The Faith Healer" is the product of an author possessed of fine subtlety, as well as an acquaintance with fundamental human traits. Though Mr. Moody could not articulate what his play signifies, even dramatically, he at least conveyed the impression that the theme was placed on a worthy dramatic plane.

Yet "The Faith Healer," for whatever reason, met with small success. Mr. Cohan has produced a play which, measured by most of Mr. Moody's standards, is almost laughable; and, if one may judge by the attitude of his audiences, has achieved a success. The reason for the success is to be found not in any accumulation of sensational material, sensational, that is, in the accepted sense today. The only emphasis upon sex is seen in a repentant Magdalen, who can be matched by Mr. Moody's similar Rhoda. Moreover, the setting is a peaceful little village. The plot is simple in the extreme. A patriarch of Needley, Maine, is skilled in the faith cure. A man of righteous life, he has only one sadness, a yearning to have by him his sole relative, a grandniece whom he has never seen. This is opening enough for a crook from New York, who summons two of his pals and arranges that the girl with whom he has been living shall pass herself off as the niece. The point of the scheme is this: The patriarch, who has refused hitherto to accept pay for his services, can be induced to take it for the sake of his niece. This duly happens, and, aided by the impostors, who publish throughout the country an account of the benefits which they and others have received, the business rolls up to enormous figures.

Now comes the surprise. Beginning with the girl, who even at the start was not insensible of the charm and love of the patriarch, all four rogues at length succumb and are regenerated. But the patriarch has suddenly died. Was he aware of their trickery? "Oh, I hope he was," cries the girl in anguish, revealing an unsuspected depth in her nature.

The patriarch himself is but a *motif*, and as played by William Thompson, is fleshless. Even with the empty lines assigned to him, an actor of Mr. Thompson's standing might have done more than he did, though it is clear that the dramatic interest has been intentionally centred in other characters. And therein undoubtedly lies the popularity of the work. To most audiences a study of a faith healer will seem a bit of special psychology—which would have been the case with even Mr. Kennedy's Servant in the House if he had not been richly set off by other characters—whereas the effect of the seemingly supernatural upon normal people is a phenomenon with which all are familiar. To do the one thing very significantly would require a Shakespeare; the other problem does not demand extraordinary powers.

With so much said, "The Miracle Man" may be dismissed lightly. These rogues are crudely drawn, though to our thinking they do not exceed the bounds of credibility. George Nash was well picked for the arch offender, "Doc" Garfield, and Gail Kane, save for an elongated slouch, was attractive as the girl.

F.

"THE HAWK."

William Faversham will undoubtedly score a considerable popular success at the Shubert Theatre with "The Hawk," the new vehicle with which he has elected to celebrate his return from Shakesperean rôles to the modern drama, in which he first made his reputation. "The Hawk," from the French of Francis de Croisset, translated by Marie Zane Taylor and adapted and staged by Mr. Faversham, is by no means a great play; indeed, though described as "a drama of modern French life," it might as well be a drama of contemporary life in any age or country, for it is simply old-fashioned melodrama, redeemed from the banal by a touch of novelty in the handling of the theme. There is our old friend, the gentlemanly adventurer, who lives by his skill with the cards, and, on being found out, reveals the real nobility of his nature, and there is the love interest centred in a somewhat etherialized triangle.

Count George de Dasetta, the Hawk, infatuated with his wife, first takes to fleecing his friends at the card table in order that he may provide her with the pretty gewgaws that her soul loves, and even leads her to act as his confederate. But Marina, the wife, meets a platonic affinity in the person of René de Tierrache, and is influenced by his high idealism to desire a better way of life. She appeals to her husband to end it all, but it is too late; they are on the toboggan and cannot stop. Then she tells him that René has caught them cheating, but will not expose them. This is a powerful scene, and the situations leading to the climax are well worked up. There is only one reason that could make René spare them, and, accused by her husband, Marina confesses that the love of René and herself, though still pure, has ceased to be platonic. De Dasetta solves the difficulty by disappearing, and in the last act we find René and Marina, assisted by a *deus ex machina* in the person of an American millionaire, Eric Drakon, searching for the absent De Dasetta in order that he may, in accordance with French law, give his consent to a divorce. Of course he turns up opportunely, penniless and addicted to morphine, and the surprise of the play, well maintained until the very end, comes when Marina, moved by his condition and his unselfish love for her, decides, after all, to cast in her lot with him.

The machinery of the play creaks badly; exits and entrances are arbitrarily arranged, but the psychology of the ending is interesting, and the admirable acting of Mr. Faversham as De Dasetta, and of Mlle. Gabrielle Dorziat as Marina, ably seconded by Mr. Frank Losee's Drakon, are sufficient to insure the success of the piece. In Mlle. Dorziat Mr. Faversham introduces to the American stage an actress of unusual talent and technical finish that is delightful to see. Mr. Conway Tearle's Hamletesque interpretation of René might perhaps be a little less sombre, but it is adequate.

S. W.

"IT PAYS TO ADVERTISE."

"It Pays to Advertise," by Messrs. Megrue and Hackett, now on exhibition at Cohan's Theatre, is an amusing and meritorious play in its kind—a farce of considerable point and sparkle, skilfully done. The central idea of the piece—a rich father inciting his lazy son to labor by entering into collusion with a girl whom the son loves and whom the father apparently opposes—does not sound particularly promising or new. But in the treatment it becomes fresh, enjoyable, and not without its novelty, because the authors have connected the motive with the psychology of advertising—which has much interest in a country where the art and business of advertisement is at home. Behind the story there is thus a thought about life; not a deep or big one, to be sure, but still a thought, and this is particularly commendable in a farce, in that it is just the type of play where an idea is most likely to be wanting.

The theme is handled with decided ingenuity as to construction. The situations are well managed, with an eye to proper gradations, and those who have an eye to technique will recognize the neat use of counterplot: the son, planning to get the best of the father, is in turn plotted against, and various changes are rung on this involvement. The final act—that particular danger spot to the dramatist—sustains the interest and contains some of the best work of the play. If act one seems a trifle long, it can hardly be said to contain superfluous material. The situations are cleverly effected, and the dialogue for rapid-fire idiom and the contemporary note is excellent. The characterization, too, is clean cut and happily contrasted, this being particularly true of the two young men whose attempts to boom the market with 13 soap as business rivals of the father of one of them furnish the action of the play. Rodney the son is slow, simple, uninventive; Peale, his advertising partner, quick, slangy, and resourceful. They make admirable foils to each other. The refreshingly clean tone and genial humanity of the drama make one regret all the more a lugged-in bit of telephone business in the third act; it is quite out of key and gets but a cheap laugh at the best.

The only character that perhaps transcends the justifiable license of farce is that of the alleged French Countess so capitally played by Louise Drew. One hesitates to say it when so much is done with the part, but this young woman is too much for credence when surrounded with such a believable group of people. But she is great fun as played by Miss Drew, whose fluent manipulation of French is good to hear. The playing of the others is expert, and a good all-round performance the

result. Notably is this true of Mr. Cope, as the irascible, shrewd, kindly father. Will Deming's Peale, the irrepressible genius of publicity, has the proper gusto and bonhomie, and Grant Mitchell's Rodney, which in the first act threatened at times to be underplayed, grew steadily in excellence as the character developed. A word of approval also goes to Miss Shepley for a very natural and vivacious performance as Ruth. R. B.

The Boston Symphony Orchestra seems to have been the only American organization seriously affected by the war, and even that not sufficiently to jeopardize its season, as was at first feared to be the case. The other leading orchestras of the country, such as the New York Philharmonic, the Chicago Symphony, and the Philadelphia Orchestra, lost only two or three players each, and the New York Symphony announces that none of its members were liable for military service. Saslavsky will continue to be the concert master; Barrère, first flute; Langenus, first clarinet; Renard, first 'cellist. The only newcomer is Henri de Busscher, formerly first oboe of the Queen's Hall Orchestra in London, and, previous to that, of the Ysaye Orchestra in Brussels.

Louise Homer, Yvonne de Tréville, the New York Vocal Quartet, and Mme. Schumann-Heink will be heard in recital or concert before the end of the year under the auspices of the Brooklyn Institute of Arts and Sciences, at the Academy of Music. Julia Culp will be heard in January, and Emilio de Gogorza in February. The Brooklyn Oratorio Society is expected to give "The Messiah." The Boston Symphony Orchestra, under Carl Muck, will give its usual series of concerts, while the New York Symphony Orchestra, under Walter Damrosch, announces a series of four concerts, and another series of five for young people, both with prominent soloists. There will also be violin and piano recitals by prominent soloists and a series of lectures on musical topics, including five by Louis C. Elson, who will talk on the concerts of the Boston Symphony Orchestra.

One of the leading Chicago critics, Glenn Dillard Gunn, has sheathed his pen and taken in hand the bâton, with the special object of popularizing American music. Last season he led the Chicago Symphony Orchestra (founded by Theodore Thomas) in two concerts with American programmes, and on both occasions Orchestra Hall was virtually sold out. Two more concerts will be given this season. At the first, on November 2, the principal work to be played is the first MacDowell concerto, in the revised edition published by Breitkopf & Härtel. The soloist is to be chosen by competitive examination, the winner receiving a cash prize of $200, awarded by Charles G. Dawes. There is an amusing significance in rule four for this contest: "Judges will be chosen from representative musicians of Chicago, *pianists excepted.*"

Maud Powell will begin her tour on October 12. It will cover the country from coast to coast, from North to South. Her success is the more remarkable, inasmuch as, like Kreisler, she makes no concessions to a supposed demand for trash. She has found that most audiences really do not like so-called "popular" programmes. At the same time, "American audiences do not care for long, introspective things. Some sort of poetic or dramatic point is necessary—the music must paint a picture."

Art

Prof. W. Dörpfeld continued during this season his excavations in the vicinity of the recently discovered Temple of the Gorgon at Corfu, and some important finds were made. Of these the most interesting are large red terracotta fragments which, apparently, formed the gutter ledge running along the temple roof above the metopes and triglyphs. There are traces on them of a continuous pattern of leaves and rosettes which resembles the pattern upon Etruscan terracottas. Two tiles have also been found inscribed "ΕΠΙ ΔΙΟΝ" and "ΕΠΙ ΑΣΚΛΗΠΙΟΔΩΡΟΥ." The theory is that they were baked during the Prytaneia of Dionysias and Asklepiodoros. Professor Dörpfeld has also been searching upon Cape Kephali for further traces of the prehistoric settlement found there last year.

The epoch-making discoveries of the Bronze Age sites of Crete have been of such absorbing interest both to archæologists and to the public that it is little wonder that the succeeding period—the early Iron Age—with its monotonous geometric style, should have been rather neglected. But this period, though artistically uninspired, is historically of great importance. For it represents the link between the Minoan age and that of classical Greece; and it is only by gleaning all the evidence at our disposal that we can obtain more knowledge of the series of Northern invasions which swept away the great Minoan power and resulted finally in the establishment of historic Hellas. A systematic excavation of a geometric site in Crete is therefore of great value, and we owe a debt to Miss E. H. Hall for having carried it out. The results of her work are given in the anthropological publications of the University of Pennsylvania Museum for 1914 (Vol. III, No. 3, "Excavations in Eastern Crete, Vrokastro"). Vrokastro, the place selected by her, is a steep, limestone spur, situated on the east side of the valley of Kalo Khoris, which had for some time been regarded as a promising place for geometric remains. The objects found, which consist chiefly of bronzes and vases, and were discovered mostly in ruined houses and in tombs, range from the Middle Minoan III period to geometric times. In the main settlement on Vrokastro three epochs could be distinguished: the late Mycenæan period, the period of quasi-geometric style, and the geometric period, corresponding, as the author tries to show, to the three great invasions of Crete from the north, those of the Mycenæans, the Achæans, and the Dorians. With regard to the objects themselves, though nothing of great note was unearthed, there are some fine specimens of vases and bronzes of the usual types. One of the most interesting pieces is a bronze tripod of a somewhat rare shape, of which specimens have also been found at Knossos and Athens, and in Cyprus.

A mildly encouraging exhibit appears in the Studio "Year-Book of Decorative Art" (Lane; $3 net)—one not wholly inimical to the hope that civilization may not always proceed on anti-artistic lines. It covers, as usual, a year's progress in several European countries. The exposition is mainly pictorial; the text, brief and perfunctory. The showing would certainly be improved by an American section, for in the applied arts workers resident here reach a very high standard. The tone of the compilation could not fail to be raised by examples of recent work by such artists as I. Kirchmayer, wood sculptor; Mrs. Robineau, potter; Frank Koralewski, iron worker; Arthur J. Stone, silversmith; Charles Connick, stained-glass designer, and others. One feels that, except possibly for the French, these craftsmen are far above the average of those admitted to the year-book. Despite this omission, the Studio's display of houses and their furnishings is impressive.

While in France the arts and crafts revival as a distinctive movement has been perhaps less prominent than elsewhere, the French designers and artisans are so well trained, and their attitudes so professional, that their section quite outclasses the other exhibits. Theirs is mostly serious, logical work in accepted styles; though E. A. Taylor, who writes the introduction, has reason for saying that "for a time art has danced to strains from the Russian ballet, leaving here and there lingering notes on dress, fabrics, wall papers, and cushions." One especially likes M. Chigot's stained glass, Mme. Fernande Maillaud's woollen tapestries, and Edouard Sandoz's wood carving.

British, German, and Austrian craftsmen are determined at all costs to be artists, and their efforts, by comparison with those of the French, often look self-conscious and amateurish. Yet they are doing interesting things. The pictures of English town and country houses give a sense that British architecture is to-day in a healthier state, is less feeble and affected, than at any period since George III. The accessories are not quite so good as the houses—a condition for which the letter-press blames the art schools, though it may be suspected that South Kensington is a symptom, not a cause. When a master like Frank Brangwyn designs a chest for reproduction in incised lacquer one gets, of course, something that is worth while. The Germans are shown by their arts and crafts to be, as of yore, a proud, energetic people, who allow no known style or artistic impulse to get by them. The Austrians and Hungarians are all this, and then prone to devise a few futurist notions of their own.

In "How to Make a Country Place" (Orange Judd Co.) Joseph Dillaway Sawyer writes "an account of the successes and the mistakes of an amateur in thirty-five years of farming, building, and development"; and gives the reader what he considers a "practical plan for securing a home and an independent income, starting with small capital." The author purchased a farm, which by good fortune happened to be in a position to meet a demand for suburban occupancy; and being an enterprising, and evidently an exceedingly capable man, he apparently turned his investment to very good account. He tells here the story of the resultant development with the enthusiasm born of success, and with an enticing optimism that is scarcely warranted by general experience. The book is crammed with all sorts of material relative to farming, horticulture, and building, all being treated in an amateurish fashion. Of the 412 pages, 50 are given to indices, and nearly 150 to photographic plates of the greatest variety, illustrative of the author's many interests, but often having little relevancy to the subject he professes to discuss.

Finance

THE "$100,000,000 GOLD POOL."

The consent, in a body, of the banks of New York, Chicago, and St. Louis to subscribe from their own reserves their pro-rata share in a fund of $100,000,000 gold, to which (also pro rata) banks at all other "reserve cities" are expected to subscribe, raises a number of extremely interesting questions. The purpose of this so-called "gold pool" is well known. It is designed to guarantee the meeting of the country's maturing dues on the international market.

To insure such payment (if export of gold should be required by the condition of the international account and the state of the foreign exchanges) this large amount of gold is to be collected from bank reserves, each institution contributing in the ratio of its own present gold holdings to the gold in all the reserve city banks. The fund, when collected, is to be administered by a committee of New York bankers, who shall decide when and to what extent the gold shall be sent abroad.

This is a most unusual operation. Except for the recent guarantee of exchange or gold, by New York city's banks, to meet the city government's $82,000,000 maturing foreign obligations, no concerted action, even remotely resembling this, has been witnessed in our financial history. The pledge by the banks and the international bankers, during the national Government's grave financial crisis in 1895, to provide $65,000,000 gold for the Treasury's redemption fund, and meantime to protect the Treasury against loss of its own gold through presentation of Government notes, was quite as unusual an event.

But the bankers of 1895 were undertaking to stop gold exports which were in active progress; they even promised to get half of the gold for the Treasury from abroad. The bankers of 1914 are doing almost exactly the opposite. They are engaging to provide the gold for export, if it is needed for that purpose, and they are doing this when actual gold exports seemed to have halted. Their action is approved, and the general coöperation of the banks is unanimously urged by the Federal Reserve Board. Just what was the situation which required such action?

Briefly, the situation is that the breakdown of international financial operations, which occurred when the war began, left the American market heavily indebted on current account to Europe. It was not merely a matter of the very large foreign holdings of American securities which might or might not hereafter be resold on the New York market. That part of the problem stands by itself. But a great mass of short-term indebtedness had been placed in London by our cities and corporations before the war, and its maturity was near at hand. In all, there was possibly three or four hundred million dollars thus involved in the next few months.

The expectation of the borrowers had been that, on the maturity of such loans, they could be renewed if it was so desired. But the worldwide financial panic at the opening of August, the derangement of banking and credit facilities on all great money markets, and the financial problems created by the war itself, threw the greatest uncertainty on the question of renewal. Our large grain exports provided for a good many London payments; but, unfortunately, while wheat shipments from America to Europe increased greatly beyond their usual value, cotton exports fell to insignificant proportions.

There were two alternatives—to pay our accruing foreign debts in gold, if ordinary exchange bills should not be created in sufficient quantity, or simply to sit still and apply to ourselves a sort of unofficial moratorium. The first threw into doubt the question of our own gold supply; it also foreshadowed irregular and conflicting policies by different banks. The second threatened grave impairment of our foreign credit. This was the reason why, after having insured, through joint action of the New York banks, the meeting of New York city's maturing foreign indebtedness, the plan of raising from all the reserve-city banks a fund of $100,000,000 gold, to be used for export if, when, and as required, has been pursued.

It remains to be seen how much will be required. Experience teaches that the surest way to get a loan renewed, when the borrower so desires, is to show that he can and will pay it off if the lender insists. The surest way to make the creditor implacable is to give him ground for thinking that payment is in doubt. This is the real ground of the present important move. The existence of such a $100,000,000 fund is fairly good guarantee that it will not have to be sent abroad *in toto*. And if it were to be thus sent, the banks can spare it. In the last compiled report (June 30) this country's national banks held $625,000,000 gold in their reserves; the State banks and trust companies possibly as much. Payment from their reserve by the New York city banks of their pro rata share in the $100,000,000 requisition ($45,000,000), would actually reduce their ratio of reserve to deposits from last week's 23½ per cent. to something like 20 per cent. —which would still be well above the ratio preseribed in the new banking law.

The comment of the Federal Reserve Board on the project is that "the evidence of the ability and desire of American bankers to furnish the means of discharging the foreign debts of the merchants and manufacturers of the United States will reopen avenues of credit, and facilitate the payment of this country's foreign indebtedness through the export of its products." This inference is altogether reasonable. The effect on our foreign credit of such an attitude must necessarily be very great. Its effect in bringing the foreign exchange market to a workable basis will be equally important. But, since our export trade, even to neutral ports, has been cut down substantially by the difficulty of arranging international payment, it is quite as certain that the success of the "hundred million gold pool" would instantly stimulate our foreign trade.

"Some Inf'mation For Mother"

It tells how one man answered the questions of a little girl about reproduction. Read it and perhaps it will aid you in satisfying the "How?" and "Why?" of your child.

15c single copy

The New York Evening Post

20 Vesey St.

"I have wanted to write you to let you know what doubtless you do know—that The Evening Post editorials are read by an ever-increasing number of thoughtful people with deep appreciation. Your editorial writers have a wonderful chance to-day. Those who in times of peace may have passed you by are watching eagerly for what you have to give them."

The above extract is from a letter from one of our readers and voices the sentiments of many of our subscribers who write us daily expressing their appreciation of the manner in which we are handling, editorially, the European crisis. The busy man or woman finds its difficult to sum up correctly the happenings of the day's news—the dispatches from all parts of the war zone tending more to confuse than to enlighten the reader. The Evening Post editorials interpret the day's news in an intelligent, unbiassed, readable manner and to quote from another letter received "it is the best newspaper editorial page published in the United States."

If YOU want the BEST read

The New York Evening Post

daily and learn to talk intelligently on the finer details of the war.

To Be Published This Autumn

THE UNKNOWN GUEST — **Maurice Maeterlinck**
The unknown guest within ourselves, sometimes termed the psychic self, has called forth this strangely beautiful and exquisitely worded book.
Bound in uniform style with the rest of Maeterlinck's books. 12mo. $1.50 *net.*

THE MASON BEES — **J. H. Fabre**
Fabre is unrivalled both as a man of letters and a man of science, writing with a charming grace and observing his insect world with the accuracy of a mathematician. 12mo. $1.50 *net.*

PHIZ AND DICKENS — **Edgar Browne**
The author, a son of the late Hablot K. Browne ("Phiz"), gives an account of the Dickens circle from the standpoint of a contemporary. *Illustrated. Large* 8vo. $4.00 *net.*

THE ROMANCE OF TRISTAN AND ISEULT — **J. Bédier**
This version of the old story is drawn mainly from fragmentary French poems of the twelfth century, also including many of the incidents familiarized by Wagner's opera. The work was crowned by the French Academy. *Translated by Hilaire Belloc.* 12mo. $1.00 *net.*

THE REAL ARGENTINE
Notes and Impressions of a Year in the Argentine and Uruguay — **J. A. Hammerton**
Mr. Hammerton travelled slowly, not as a distinguished visitor nor as a hurried tourist. His aim is to give an accurate, unvarnished account and at the same time to make it thoroughly interesting.
Illustrated from photographs taken by the author. 8vo. $2.50 *net.*

INTERNATIONAL PERSPECTIVE IN CRITICISM: — **Gustav Pollak**
Goethe, Grillparzer, Sainte-Beuve, Lowell
A plea for literary cosmopolitanism, for an appreciation of the beautiful in human thought and expression that disregards nationality and race. 8vo. $2.00 *net.*

A STUDY OF GOTHIC ARCHITECTURE — **T. Francis Bumpus**
A general survey of Romanesque and Pointed Gothic Architecture in Europe, with a special consideration of that in England. *Illustrated.* 8vo. $3.00 *net.*

THE MYSTERY OF THE KINGDOM OF GOD — **Albert Schweitzer**
Professor Schweitzer of Strassburg University is the author of "The Quest of the Historical Jesus." This sketch was written a few years previously and is the work on which his later book is based.
Translated with an Introduction by Walter M. Lowrie, M.A., Rector of St. Paul's American Church, Rome. 12mo. $1.25 *net.*

THE RIVER AMAZON From Its Sources to the Sea — **Paul Fountain**
A traveller of wide experience describes minutely the forests, the various tribes of Indians, the flora and fauna of the region. *Illustrated.* 8vo. $2.50 *net.*

BRAZIL AND THE BRAZILIANS — **G. J. Bruce**
The account of the author's tour through Brazil and a record of the country and its inhabitants at the present time. *Illustrated.* 8vo. $3.00 *net.*

JEWISH LIFE IN MODERN TIMES — **Israel Cohen**
An account of the life and labor of the Jewish people all over the world at the present time.
Illustrated. 8vo. $3.00 *net.*

MEMORIES OF THE KAISER'S COURT — **A. Topham**
Miss Topham was for nearly seven years governess to the Emperor's only daughter. She gives a most interesting account of the domestic side of the German Kaiser. 8vo. $3.00 *net.*

JOHN HAY: AUTHOR AND STATESMAN — **Lorenzo Sears**
A brilliant account of a singularly charming American statesman and gentleman. Mr. Sears is the author of "American Literature," "John Hancock," etc. *Small* 12mo. $1.00 *net.*

LOMBARD TOWNS OF ITALY — **Egerton R. Williams, Jr.**
The last book in the author's trilogy on Italian towns, telling of the history, legends, art treasures, and something of the Lombard beauties. *Illustrated.* 8vo. $3.00 *net.*

Dodd, Mead & Company, 4th Ave. and 30th St., New York

The Nation

VOL. XCIX.—NO. 2571 THURSDAY, OCTOBER 8, 1914 Reg. U. S. Pat. Office. PRICE TEN CENTS

Free Library 1914

NEW MACMILLAN BOOKS OF SPECIAL IMPORTANCE

MR. WELLS'S NEW NOVEL

THE WIFE OF SIR ISAAC HARMAN

By H. G. WELLS, Author of "The Passionate Friends," "Marriage," etc.

"Whether he is writing fantastic romances or analyzing present conditions, Mr. Wells always has the merit of being interesting. The foremost novelist of the times . . . in his latest novel, 'The Wife of Sir Isaac Harman,' he has found abundant opportunity for the writing of an ultra modern story and for the expression of multitudinous opinions upon every aspect of contemporary life and human nature." *$1.50 net*

A HISTORY OF ENGLAND AND GREATER BRITAIN

By ARTHUR LYON CROSS, Ph.D., Professor of European History in the University of Michigan.

The best comprehensive one-volume work ever published on the British Empire of to-day. Included in the volume are the facts necessary to give a coherent view of the larger factors influencing national and imperial development from the earliest periods to the present time. *Maps. 1165 pages. $2.50 net*

THE GREAT SOCIETY: A Psychological Analysis

By GRAHAM WALLAS, Author of "Human Nature in Politics."

"A more comprehensive application of the principles of psychology to everyday life than has been done by any other writer upon this subject. The author deals with the general social organization, with especial reference to the difficulties which have been evolved by the developments of industry and the complexities of modern life, . . . and shows how psychology helps in the solving of some of their problems and the straightening out of some of their entanglements."—N. Y. Times. *$2.00 net*

WORK AND WEALTH: A Human Valuation

By J. A. HOBSON, Author of "The Industrial System," "The Evolution of Modern Capitalism," etc.

"Discusses philosophically and with high courage the great problem that is the center and starting point of all economic contentions. Modern industry, says Mr. Hobson, is inhuman, and vitally wasteful. The author in seeking converts for his propaganda condenses sharply, by assertive devices, where a doctrinaire would be inclined to explicate and amplify. The closely reasoned pages constitute a significant sign of the times and an encouraging prophecy for the future."—Philadelphia North American. *$2.00 net*

THE UNCONSCIOUS: The Fundamentals of Human Personality

By MORTON PRINCE, M.D., LL.D.

"A contribution to the subject that is valuable alike to the physician and to the psychologist; to the physician for its suggestiveness of method in treating those unfortunates who are troubled with what are roughly classed as nervous diseases; and to the psychologist for the accumulation, and more or less orderly consideration, of a great mass of facts that are significant for him as well as for neurologists."—The Nation. *$2.00 net*

FEEBLEMINDEDNESS: Its Causes and Consequences

By HENRY HERBERT GODDARD, Ph.D., Director of the Research Laboratory of the Training School at Vineland, New Jersey, for Feebleminded Girls and Boys, Author of "The Kallikak Family," etc.

A consideration of 327 cases of feeblemindedness which have come under Dr. Goddard's personal observation in his official capacity. The work differs from most of those in the field in that it is what may be termed a source study. Instead of generalizing on the subject of feeblemindedness, presenting arguments for this theory and that, and concluding with vague speculations, Dr. Goddard gives facts and allows the reader to draw his own conclusions. *Illustrated. $4.00 net*

COLLEGE PHYSIOGRAPHY

By the late RALPH S. TARR, Professor of Physical Geography, Cornell University. Edited by Lawrence Martin, Associate Professor of Physiography and Geography, University of Wisconsin.

The magnum opus of a mature scientist, author of a series of geographies and physiographies, generally recognized as the best and most successful in use. Throughout this new book the co-ordination of man's activities with his natural environment is clearly, logically and interestingly developed. The diagrams, half-tones and colored maps which have been selected with great care, illustrate the work most effectively. *$3.50 net*

METEMPSYCHOSIS

By GEORGE FOOT MOORE, A.M., LL.D., Frothingham, Professor of the History of Religions in Harvard University.

INGERSOLL LECTURE FOR 1914

16mo. Cloth. 95 pages. 75 cents.

The history of a doctrine as ancient and as interesting as any which have ever elaborated theology with their picturesque detail. That a doctrine so strange at first sight has any practical significance to-day may prove a surprise, but it is amply upheld by this essay on one of the oldest phases of immortality.

LONGMANS' NEW PUBLICATIONS

JUST READY

GEORGE THE THIRD AND CHARLES FOX

The concluding part of "The American Revolution"

By the Rt. Hon. Sir GEORGE OTTO TREVELYAN, Bart., O.M.

Volume II. With complete map and index. $2.25 *net* (Weight, 32 oz.)

This second, and final, volume of "George III and Charles Fox" brings to a close the series of six volumes, of which the first four are entitled "The American Revolution." This contains a narrative of the events in England, and on the Continent of Europe, which had a bearing upon the struggle in America; and it tells the story of General Nathanael Greene and the War in the Carolinas, of Doctor Franklin and John Adams in Paris, and the campaign of Yorktown.

ALREADY PUBLISHED

GEORGE THE THIRD AND CHARLES FOX

Volume I. Crown 8vo. Gilt top. $2.00 *net.*

THE AMERICAN REVOLUTION
